PROF. GLADSTONE recently exhibited before the Physical Society photographs of devices invisible to the eye, drawn with colorless fluorescent substances, as quiuine, esculine, and others, upon white paper.

THE National Union of Andersonville Survivors will hold their third annual reunion at Norwich, Conn., on the 12th of April. Gen. Sherman, Gen. J. B. Hawley, and the Hon. James G. Blaine have been invited to be present.

MR. ROBERT DALE OWEN, the New Harmony (Ind.) Register says, has so far recovered his health as to be able to resume his literary labors, and he expected to leave for New York City soon. He intends to sail for Europe about June 1.

SECRETARY BRISTOW has promised to attend the Wilbraham, Mass., Academy celebration on June 21, unless some unforeseen emergency keeps him away. Senators Boutwell and Dawes have also promised to be present, and it is expected that Mr. Blaine will attend.

Traveler's Guide.

CALIFORNIA.

Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?

The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTH-WESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oshkosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.

This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.

This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.

For rates or information not attainable from your home ticket agents, apply to

MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

THE PALACE HOTEL TRAIN
BETWEEN
NEW YORK AND CHICAGO,
via Cleveland.

Leaves Erie Railway Depot, foot of Chambers St. New York,

9:00 A. M., Daily except Sunday. Drawing-Room Sleeping Coaches through to Chicago; but one change of day cars.

7:00 P. M., Daily. The Palace Hotel Train to Chicago. Drawing-Room Sleeping Coaches and Pullman's Hotel Dining Car, through without change; but one change of day cars

The only line running Hotel Dining Cars out of New York. A ride of nearly a thousand miles without leaving the car to eat, drink or sleep!

Sewing Machines.

"GENERAL FAVORITE"
No. 2,
Recently perfected and offered to the trade by the
WEED SEWING MACHINE COMPANY,
Possess many advantages, both in construction and capacity, over machines now in use by
MANUFACTURERS.

The Machines made by this Company have always been noted for simplicity, a merit which has been preserved in this new style and combined with great strength, especial care having been taken to provide against the wear and tear of use in Factories running by

STEAM POWER.

Actual WORK is the only test of a sewing machine. The Weed Co., desirous of thorough investigation, are prepared to place these machines on trial, feeling confident that practical work will convince intending purchasers of their merit. Manufacturers will please examine if our claims are not correctly made on the following points:

CONVENIENCE.

The large space under the arm. From needle to foot of arm, 9 inches; from needle to bend of arm, 11 inches; from bed to bottom of arm, 5 inches. Easily oiled, threaded and cleaned.

SIMPLICITY.

No cams or cogs are used, a continuous circular motion, preventing vibration, and rendering a high rate of speed possible, while noise is reduced to the minimum, and for foot power the ease of working is increased to a wonderful degree.

DURABILITY.

The wearing parts are forged and hardened. Lost motion can be taken up with a screw-driver, thus saving cost of new parts, and time consumed in fitting them. The shuttle being carried, instead of driven, wears much longer, and skipping of stitches is avoided. The needle socket is hardened and so constructed that a needle, when broken in the bar, can be readily removed. Address

WEED SEWING MACHINE COMPANY,
HARTFORD, CONN.

NEWS CONDENSER.

— There are 1,409,448 slaves in Brazil.

— The recent Census gives these figures:—New York, 1,060,000; Philadelphia, 800,000; St. Louis, 450,000; Chicago, 410,000; Boston, 340,000; San Francisco, 250,000.

— San Francisco's Board of Education will close all the public schools during the last two months of the fiscal year, because the school fund is totally exhausted.

— A Lassen County, Cal., farmer recently had two thousand sheep starved to death. His feed gave out, and the deep snow prevented the sheep from reaching grass.

— Potter Valley, Mendocino County, Cal., is proud of a female physician, who during the recent storm swam across three rivers to attend a patient with the measles.

— A firm in Treves, Germany, manufactures fire blocks of refuse tan, just as it is taken from the pits. They are said to equal in flame-heating power the best stone coal.

— A boiling lake, two miles in circumference, has been found in the island of Dominica. It is on the top of a wooded mountain, and is 2,500 feet above the level of the sea.

— The peculiar bent of the German mind is shown by the fact that out of the 12,516 books published in Germany in 1875, only 900 were devoted to fiction and the drama.

— It will cost about $30,000 a year to maintain the new public buildings of Buffalo, N. Y. The gas alone costs $16 per hour. The old city buildings are to be torn down at once.

— A piece of scroll ivory veneering, 66 feet long and 10 inches wide, containing nearly 50 square feet of surface, was sawed from an elephant tusk the other day at Deep River, Conn.

— The Russian estimates for the current year are, total revenue, 570,000,000 roubles; expenditures, 659,914,000 roubles. According to Wilkins Micawber this is "bliss" for Russia.

— The prosecutions against open betting for ready money on race-courses in France have been abandoned, and the book makers were in as full force as ever at Auteuil the other day.

— A hunter shot a wild turkey near Nashville, the other day, and when he went to pick it up, found lying near it a half-decayed pair of saddle-bags, in which were $36,000 in gold and bonds.

— The mysterious music at North Chili, N. Y., has been found to proceed from a sawmill ten miles off, the humming vibrations of the air being distinctly noticed with a favorable wind.

— The shoe factories of the City and Easton company and S. H. Lane, together with a number of outbuildings, at Rockland, Mass., were burned recently. Total loss about $15,000; partly insured.

— The Hudson river ice companies have housed 406,300 tons of ice, and stacked 29,500 tons. The crop is said to be one million tons short. There is a feeling of insecurity as to summer rates for ice.

— A Chinese woman went to the Court House in Winnemucca, Va., the other day, and offered to go to jail for five years, if at the end of that time she might be free from the tyranny of her husband.

— A year ago a Norwegian in Decorah, Iowa, got drunk and froze his feet and hands so badly that they had to be amputated. His wife has just got a judgment for $9,500 against the druggist that sold him the liquor.

Wit and Humor.

SPARKS AND SPLINTERS.

Jug not lest ye be jugged.

Always operating for a rise—emetics.

Grace before meat—a handsome woman at market.

The following dialogue was overheard the other day:—He—"Araminta, *je t'adore?*" She—"Shut it yourself!"

Why is a minister near the end of his sermon like a ragged urchin? Because he's toward (tor'd) his close (clothes).

"I wonder why my mustache doesn't grow under my nose as well as the corners of my mouth?" Soph—"Too much shade."

Sheridan told Lord North that he had taken a new house, and that everything would now go on like clock work. "Ah!" replied his Lordship, "tick-tick."

"Oh, yes! a pretty story! very probable, Joseph! You've only been to the 'Devisory Council,' indeed! Where did the five kinds of hair on your coat come from?"

Breathes there a man with soul so dead,
Who never to himself hath said,
I will a family paper take,
Both for my own and children's sake?
If such there be,let him repent
And have this paper to him sent.

When you go to Vienna and hear somebody say Hochquellchwasserlettingstohrenfalalitaten you may know that "the water pipe has busted." For our part, we should be apt to think that a whole reservoir had "busted."

A Western editor did not wish to hurt the feelings of a gentle poet, but apologized for the non-appearance of a long and tender poem by saying:—"Beautiful Spring" was crowded out of our Sunday edition to make room for an account of the great snow storm.

One of the female revelers in pink tights got mad and wouldn't march in the Cincinnati procession the other day, because a man saw her fall down, and yelled out—

A pink trip slip
For a three-cent fair!

A pretty little Ohio schoolmarm tried to whip one of her pupils, a boy of fifteen, the other day, but when she commenced operations he coolly threw his arms around her neck, and gave her a hearty kiss. She went straight back to her desk, and her face was just "as red."

She waltzed like a June at a hop; I vowed the question I would pop; and as her partner tendered her a seat, my throbbing heart with anxious pang did beat. I tripped beside my lovely charm, I bowed and gently touched her arm. "Engaged for next?" I said "My darling Kate?" "Go 'way," she said. "You hit my vaccinate."

Consumers Importing Tea Co.,
No. 8 Church Street.
P. O. Box 5,509. New York City.

This is a combination of capitalists to supply the consumers of Teas throughout the United States on the mutual principle.

We have experienced agents in all the best districts of China and Japan to select Teas especially for our trade.

We expect every consumer of Teas to render us all the assistance they can in carrying out our enterprise, as we make a specialty of SUPPLYING CONSUMERS ONLY (and allow no middlemen to make any profit on our importations), which will enable us to supply them with Teas at prices lower than have ever been known, and of those fine qualities that seldom reach the interior, being sold only to the large cities and among the very wealthy.

Hoping the consumer will take an interest in our enterprise, and send at once for a circular with full explanations of how to proceed to obtain our goods, we remain,

Most respectfully yours,
Consumers Importing Tea Co.,
No. 8 Church St.,
P. O. Box 5,509. New York City.

Entered, according to Act of Congress, in January, 1874, by the Consumers Importing Tea Co., in the Office of the Librarian of Congress, Washington, D.C.

ARE YOU GOING TO PAINT?
USE NONE BUT THE
AVERILL CHEMICAL PAINT!
MIXED READY FOR USE.
PRICE REDUCED.
OVER 300,000 HOUSES HAVE BEEN PAINTED WITH IT.
ONE HUNDRED BEAUTIFUL TINTS AND COLORS.
IT IS THE MOST DURABLE PAINT MADE.
IT IS THE HANDSOMEST PAINT MADE.
IT IS THE MOST ECONOMICAL PAINT IN THE MARKET.
IT IS THE STANDARD, AND ONLY RELIABLE MIXED PAINT.
IT IS GUARANTEED TO BE SUPERIOR TO ALL OTHER PAINTS.

It has received the highest endorsements from thousands of persons who have used it in various sections of the Country.

Sample Cards, together with testimonials from owners of the finest residences in the Country furnished free by the

Industrial Topics.

OLD METHODS AND NEW.—A CONTRAST.

The progress which has been made in the life, manners and surroundings of American farmers is greater than that of any other portion of the community. In the early settlement of the country, poverty, a rude agriculture, poor houses and other farm buildings, and ill-conditioned stock were the rule. These have been replaced by wealth and all the surroundings of scientific thought, combined with thorough farming. The log cabin is replaced by the elegant and comfortable frame or brick dwelling, and commodious and well-filled barns show that the farmers' friends are not forgotten. It is not all the spirit of the age which has made this change, for side by side in many sections of our country you will find representatives of both classes of farmers—the one intelligent and enterprising, and the other the reverse. Thanks to the influence of widely-disseminated agricultural newspapers, and of late years the Order of Patrons of Husbandry, the better and more intelligent class of farmers is increasing, and the view on the right of our illustration is now rarely seen. That there is a great work to be done cannot be disputed, but the progress already made is a sure augury for the future.

THE OTHER SIDE.

The papers are telling us just now of some one in New Hampshire who was captivated by the interesting stories told about the profits of fruit-growing, and who went to Vineland to follow this easy and respectable occupation, whereby to fill his pockets full of "rocks." But it turned out the other way. He found the farm and the vines already to his hand, a perfect bargain. It does not seem to have occurred to him that if this farm was a perfect fount of flowing profits, it would not have been offered at such a tremendous bargain. Of what use, indeed, would be such reflections against the columns of figures showing the tremendous gains that had been made? Figures cannot lie, and the New Hampshire man went in. But the grapes, or the market, or something went contrary the moment the deeds were signed. At the end of one year there was a balance of two thousand dollars on the wrong side. The next year it was worse—three thousand dollars. All he had was gone, and he departed for his native granite hills a sadder and a wiser man!

This is not a solitary case. It is the lot of hundreds of unfortunates every day. The novelty is to find it recorded in our papers, so customary is it to paint all so lovely in regard to farming and gardening affairs. We are often told of the man who found ten acres enough; but we do not often hear of him who found it more than enough—entirely too much of a good thing. It is a very healthy sign when both sides of a question can be fairly heard, and it was this that gave us so much pleasure in reading the letter of our disappointed friend.

Every one should remember, when he reads accounts of some tremendous profits in one calling, that they are quite exceptional; that they are generally balanced by tremendous losses, of which we hear very little. Land agents and speculators are only interested in the one side. There are plenty of fair men in the business, but they cannot be expected to do more than show the fair side. It does no harm for the buyer to remember that there is and must be another side. With all its losses, farming and fruit-growing is as good and better than most pursuits. The thorough business man—one who understands his business—seldom loses. We are not addressing these, but those who believe they have only to plow a piece of ground or pluck a bunch of grapes in order to be at once rich.—*Germantown Telegraph.*

"The moral of a thing lies in its application," as Major JACK DOWNING used to remark. In this case the application is, perhaps unconsciously, omitted. As we read our contemporary, sometimes farming pays largely and sometimes it does not pay, and all without assignable reason. It only remains to be added that good farming, using skill and economy, always pays, while poor farming does not. We don't mean that money cannot be wasted in farm operations; but where it is used wisely, the more spent the greater the amount earned. In other words, farming is subject to the same laws which prevail in all other industrial operations.

FAULTS OF SOUTHERN FARMING.

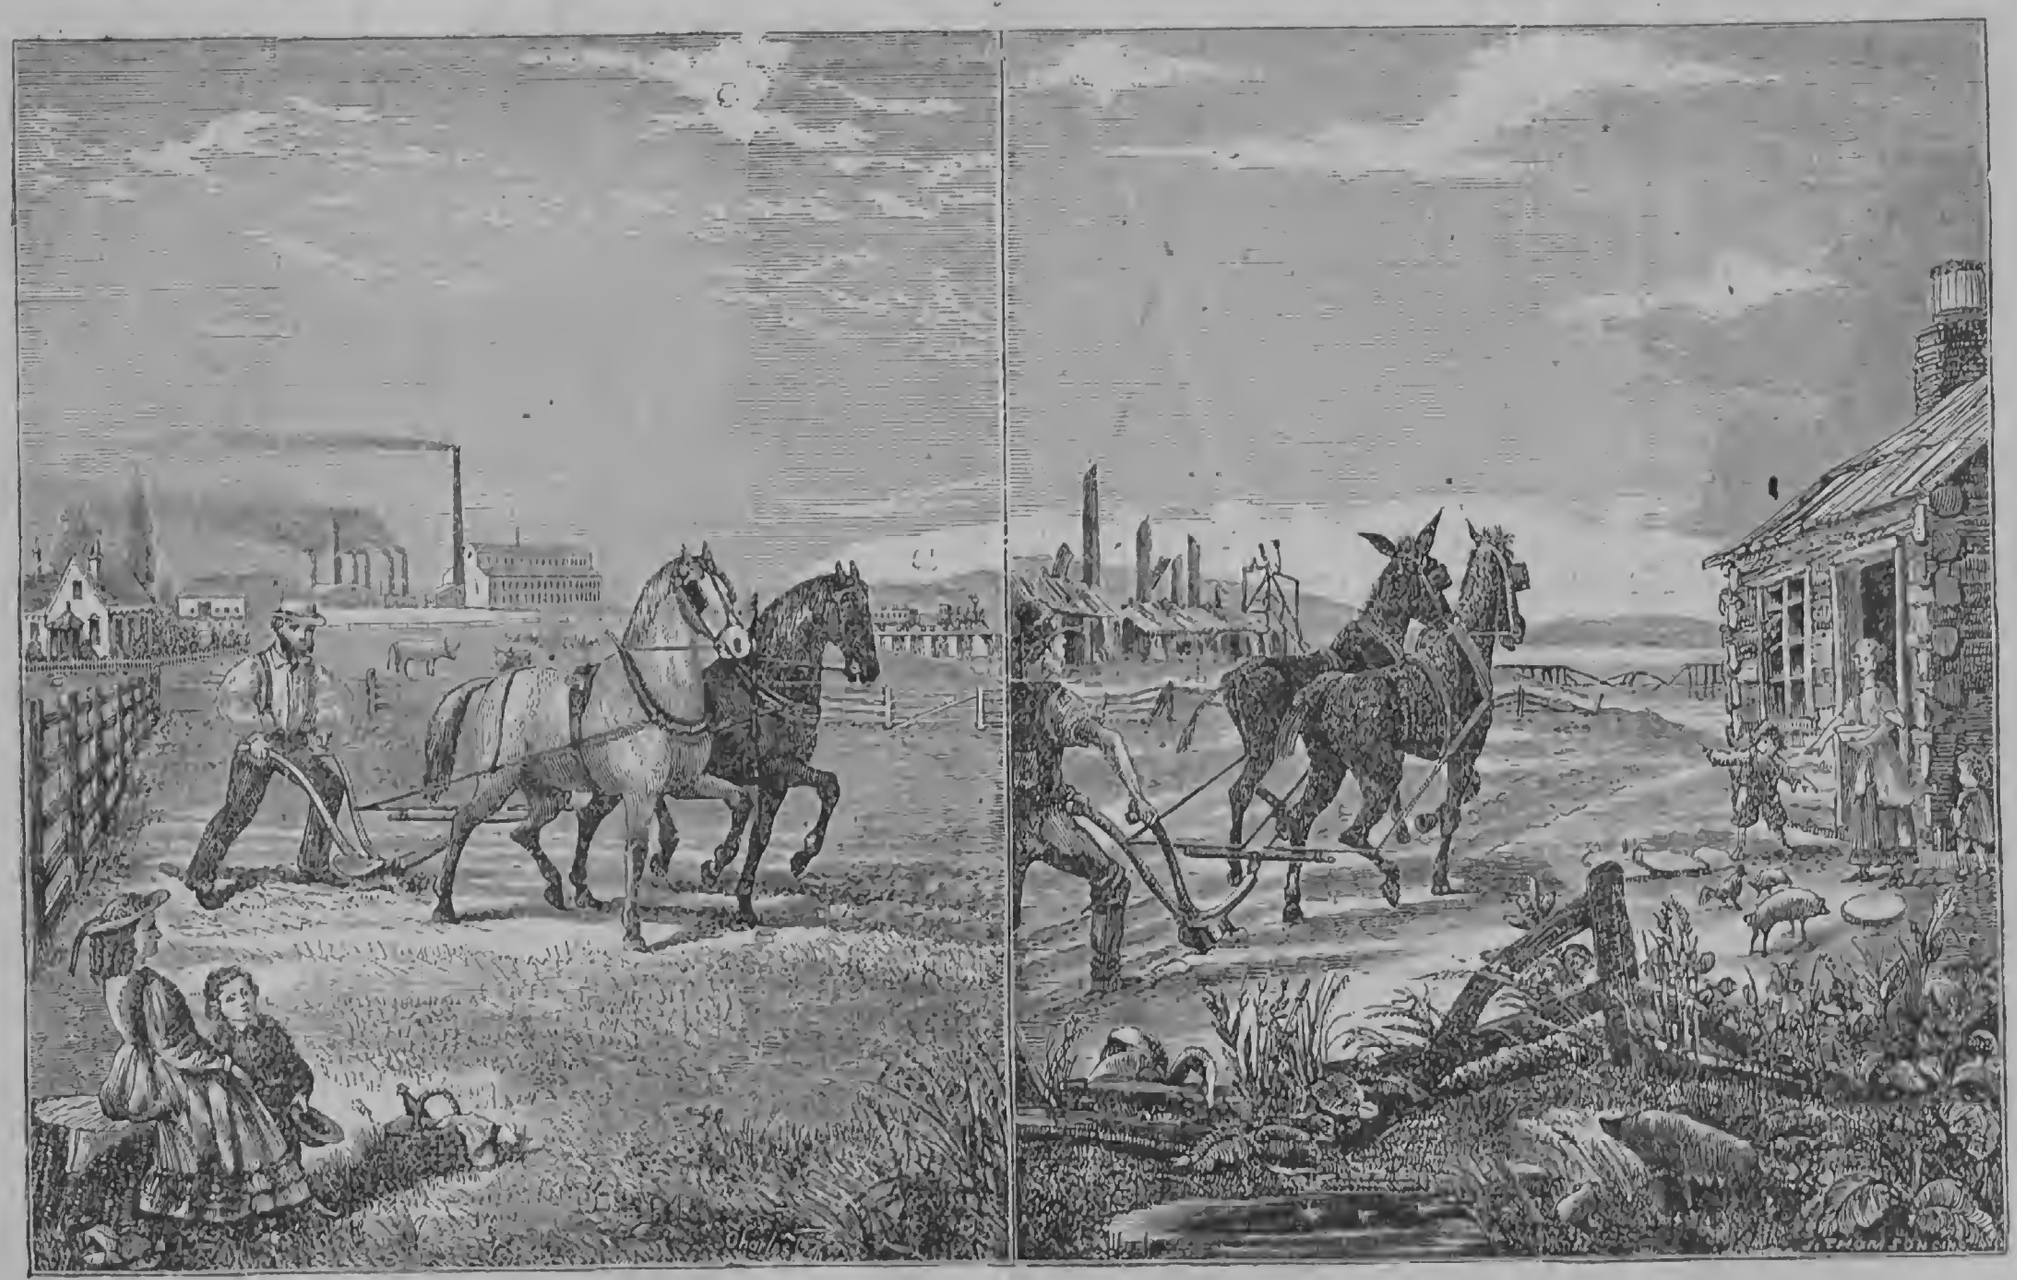
H. V. R. writes as follows to the Cincinnati Commercial from Tennessee. We suspect that he has made the picture from the worst side of Southern farming, which is too common in all sections:

The trouble in every Southern State is over-buying and under-production. Then the waste is dreadful. Unless a man has lived, say among the farmers of Western New York and then among the farmers of Tennessee, he can not appreciate the great difference in this particular. The New York farmer fattens his hogs upon what, in Tennessee, is thrown to the dogs. The yearly waste in the Southern States is past all computation. The refuse from the table is wasted; kitchen slops are wasted; stable and barnyard manure is wasted; wheat straw, in fact all straw and cornstalks are wasted. There is no saving anywhere. It is a carnival of waste from the Ohio river to the Gulf. And this is one of the things that is the matter, and the chief reason that we hear the eternal complaint that "there is no money in the country."

INDUSTRIAL NOTES.

The Price of Sumach.—From present appearances the price of sumach will be very high during the coming year. Advices from Sicily regarding the crop are anything but favorable, and the light stocks on hand and to arrive have caused holders to advance the price suddenly from $122.50, at which it has been quoted for some time, to $130, within a week. Many holders are asking $135, and even $140 is talked of as soon being the figure for the best Sicily brands. American sumach is also reported to be in short stock, and a corresponding advance has taken place in that variety.

New Use for Gypsum.—It is said that gypsum, mixed with four per cent. of powdered marshmallow root, will harden in about an hour, and can be sawed or turned, and made into dominoes, dice, etc. With eight per cent. marshmallow the hardness is increased, and allows of its being rolled out into thin plates, and painted or polished.



OLD METHODS AND NEW CONTRASTED.

Field Crops.

INQUIRIES ABOUT BEANS.

Will some person of experience please give me some information through the columns of the Rural in regard to the raising and management of Marrowfat Beans? What time in the season should they be planted? What kind of soil is best adapted to their welfare, how thick should they be planted? Also are they as prolific as other varieties, such as Mediums and Navies? Any information on this subject will be thankfully received.—Joseph Binsley, *Gavers, Col. Co., Ohio.*

The small or medium beans are most largely grown in localities where beans are extensively cultivated for market. Near Brockport, N. Y., many farmers grow five to twenty acres or more per year. The beans are planted with a horse planter made in Brockport, in hills ten inches apart, and rows about two feet or twenty-eight inches wide. This allows room to run a light cultivator through, and where the soil is reasonably free from weeds most of the cultivation is done by horse-power. If weeds appear they must be destroyed promptly or the crop will be ruined. Weedy beans are very expensive harvesting, and often not worth gathering. Fifteen to thirty bushels per acre are grown, varying greatly on account of soil, season, &c.

Beans are very impatient of wet, and must never be worked when the dew is on the leaves. In a damp, rich soil they are apt to grow too luxuriantly and ripen unevenly. This also is the trouble when planted on soil that is too dry. Often on dry clayey or sandy knolls the beans will be one or two weeks later coming up, and will remain behind during the season. Uneven ripening makes harvesting much more difficult as some of the beans will shell with over-ripeness while others are not fit to fall, and if stacked with the crop will mildew and spoil. Evenness of ripening is one of the chief points in growing field beans successfully. The medium bean is preferable because it generally ripens more perfectly and evenly than other varieties. Whatever kind of soil is chosen it should be as nearly uniform as possible. It will not hurt to have the field moderately rich, provided the season is a dry one. The yield of beans will be larger and they will ripen. In a wet season beans are a hard crop to grow. Weeds in summer and mildew in harvest time speedily destroy all profit.

We have had to modify our belief that beans exhaust the soil only slightly. Farmers who have grown beans several years in succession find the crop falling off. They make little material to work up into manure, and are in this respect about as bad as potatoes. Beans contain a good deal of nitrogen and (presumably) exhaust the soil of that element. In practice it is found that they are a poor fallow crop for wheatt, and the usual practice now where beans are largely grown, is to follow them with barley and that with wheat. One reason why beans seem to exhaust the soil may be that the field is rarely manured for them. We should advise our correspondent to plant the medium beans, and on a small scale at first till he sees how the crop succeeds. If his land, like much in Ohio, is a rich black muck the beans will be apt to run too much to vine, diminishing the yield and greatly increasing the cost of harvesting.

CAUSE OF SCABBY POTATOES.

For several years past, in localities where potatoes are grown largely as a farm crop, farmers have been troubled by a disease which removed the outer thin skin from potatoes, giving them a "scabby" appearance and making them unsalable. It is found too that sometimes these scabby potatoes are more predisposed to rot, though in dry seasons they often keep without injury. Various theories have been suggested as to the cause, a common one among farmers, being that the scabby appearance is due to worms or insects. Still this theory does not hold good in many cases. Dr. Michener in the Scientific Farmer, suggests as a much more probable explanation that the scab is due to a fungus growth on the potato. We are inclined to believe this is the true theory, and copy what the doctor has to say about the effects of fungus and the remedy:

When potatoes are eaten by larvæ, and the injury is recent, we find the flesh of the tuber fresh, white, smooth and inclining to heal or skin over, as we observe it to do when cut with a knife; yet who has ever seen such an appearance in the disease before us? I have sought for it again and again, but without success. On the contrary, whenever and wherever I have seen the injury which we are considering, from the smallest speck up to the more extensive destruction of the organic tissue, the appearance has constantly been the same.

It appears to be admitted that if we plant diseased tubers we may expect to grow diseased potatoes, even where there are no wire worms present. Such as men sow, such shall they also reap. It has been pretty fully ascertained that there is something left remaining in the soil where diseased roots have been grown that is capable of affecting healthy potatoes planted therein the following year, in a similar manner.

I once planted selected potatoes in the same ground for four successive years. The number of diseased tubers rapidly increased from year to year, until the last year half the crop was destroyed. An intelligent and observant friend of mine planted a few rows of potatoes across his lot. They proved to be a good deal injured. The next year he planted the same ground, with a corresponding strip alongside, which had been cultivated in some other sort of crop the preceding year. The result was, the crop in the old potato ground was almost worthless, while that in the contiguous portion was only slightly affected. All the conditions of soil, culture, manure and seed, were similar.

We know that insect depredators do often manifest wonderful discriminating powers in the selection of their food. But the Fungi, which constitute a still more predaceous class, are in a much greater ratio selective in the choice of their food, as well as in the places for their nidification. They are, indeed, so numerous and so discriminating that almost every plant appears to have some specific fungoid growth peculiar to itself. The thing under discussion may yet prove itself to be a Fungus peculiar to the potato, and not to be found anywhere else.

From what has already been said it may be of the utmost importance to plant none but the most perfect and clear tubers, and to avoid replanting the old potato grounds. It may also be prudent not to plant those varieties which have been found most obnoxious to the disease. If the germs inhere in, and are liable to be planted with, the potato, and I think that is the correct view, it would seem to suggest the use of some means for disinfection of the seed before planting. For this purpose I would recommend the trial of a solution of carbolic acid in water, of such strength as the tubers will bear without injury. The proper strength can only be ascertained by careful trials. Thus:—Take carbolic acid—an ounce; water—a gallon; mix when ready to plant; immerse the sets in the solution for five minutes; then remove, and rinse the acid off before planting.

As the Fungi are mostly found in connection with diseased, or dead and decomposing organic substances, from which they may sometimes pass over to healthy, living organisms; it may be a question worthy of your consideration: How far the fertilizers used may have aided in the production of the disease? To what extent was it known before their introduction? And how far has it been increased under their use?

POP-CORN AS A PROFITABLE CROP.

The Chicago Tribune has a letter from a boy, or young man, who tried an experiment with pop-corn. He planted one acre, and sold 47 bushels of corn for $47, and the fodder from the 1 acre for $5, this giving him a clear profit of $27.42.

We commend this statement to the boys on the farm. Those who have never grown pop-corn will scarcely credit the statement, but those who have, and understand how close the rows can be, to each other, and how many perfect ears every hill turns out, will not be surprised at the figures. There are several varieties, white and rice-like kernel, variegated, showing on one cob many different colors,—and all should be planted some distance from other corn. The yield is always good and the ears are nearly uniform in size. A good article always brings a good price, and, since pop-corn balls and other preparations in which pop-corn appears have been in favor, there has been a good demand for it. Pop-corn should be planted on good soil, and treated generally as other corn. It matures early, and the ground can be cleared for winter wheat or other fall crops.

SOWING CLOVER SEED.

A correspondent asks us if he should sow clover seed on his spring grain before sowing the grain, so that one harrowing will answer for both and also how much to sow per acre. It is not best to harrow after sowing clover seed, as it covers the small seeds so deeply that many of them will not germinate. If the ground is in proper tilth no covering will be needed, as the seeds will naturally be washed under fine particles of soil by the first rain. With winter wheat or rye, it is a good practice to harrow the surface before sowing clover seed. Or with winter grain the seed may be sown on frozen ground before it is dry enough to harrow. Freezing and thawing will cover the seeds sufficiently. One peck of clover seed per acre, should be sown on all land where clover seed has not recently been grown.

FIELD NOTES.

White Burley Tobacco.—In Ohio, an experiment, and on a larger scale than before, will be made the coming season, with what is known as "White Burley" Tobacco, and if successful the culture of Seed Leaf in that State will, in the future, be either entirely abandoned, or at least be very materially diminished. The Connecticut Seed Leaf Tobacco in Ohio has grown too rank, and does not keep up the original standard for quality.

A Good Rotation.—Geo. Kepler of Wayne Co., writes to the Indiana Farmer as follows:—"My method of farming is to have four fields and a regular rotation of crops. First clover, then barley and buckwheat, then corn, among which, in the fall sow wheat or barley, and sow clover in the spring on the wheat. I have made over $50 to an acre on barley, which is immediately followed by buckwheat or turnips, as a catch crop the same season. I sell no straw, hay, fodder or corn, feeding that and buying bran besides.

Farm Economy.

DIFFERENT KINDS OF MANURE.

Would you advise a mixture of hen manure, plaster and ground bone as a fertilizer for wheat, to be drilled in with the wheat at time of sowing. If so, please say in what proportion the mixture should be made. Or would it be advisable to add ammoniated superphosphate of lime and leached ashes, or either, with the plaster and bone, and in what proportion of each, and how long after composting before fit to be used. Please give formula in "Rural New-Yorker," and oblige—Ignoramus, *Wash. Co., O.*

There is no objection to using hen manure mixed with plaster and ground bone, but whether it would prove more or less useful than other mixtures depends on the needs of the soil, and can only be determined by trial. Hen manure must be thrown in a heap and allowed to heat slightly to remove its moisture, or it cannot well be drilled. Even after heating and mixing with plaster, we think the mixture would need to be run through a coarse sieve to prepare for drilling. Ground bone is less effective as a manure than an honestly made superphosphate, as the bone is only slowly soluble.

There is no "formula" for making manure for all kinds of soils. If your land is not deficient in phosphates neither ground bone nor superphosphate would be of any value in the mixture. An ammoniated superphosphate is always valuable, as crops never have an over-supply of ammonia. Still, if the ammonia is what is needed, the hen manure alone could supply it without the addition of bones. Hen manure itself also contains considerable proportions of phosphates, varying in amount with the kind of food. Fowls fed on scraps of meat make richer manure than when fed on grass. Wheat makes manure richer in phosphates than corn, and shrunken wheat or bran makes manure with more phosphates than plump grains, with larger proportion of flour. If fowls were fed on fish, and their droppings kept dry, the manure would be as rich as guano. Hen manure, like every other, is an indefinite quantity. We should probably find on analysis that the droppings of roosters are richer in phosphates than those of hens, whose food is largely used in forming the shell of its egg, possibly, also, the hens making richer manure when not laying than when one egg per day is imperatively demanded. In all manures which pass through birds or other animals the phosphates are readily soluble and available for plant food. Hence a small percentage of phosphates in hen manure may give a larger supply to plants than the larger percentage of insoluble phosphate in coarsely ground bone. We do not recommend the latter anyway. If not made soluble by the use of sulphuric acid, bone should be ground as finely as possible. Fine bone flour, composted with hen manure, would be thereby made soluble; but merely pounding or breaking bones into coarse lumps is of little use.

Ashes may or may not prove valuable, according as potash is deficient or abounds in the soil; trial only can tell. If potash is needed, it is better applied separately, rather than composted with other manures, as it wastes ammonia. There are no "right proportions" for applying manures suitable in all cases. Use as most convenient, and make trials of different proportions to decide what is best for your own soil.

COOKED VS. RAW CORN.

The Scientific Farmer has the following correspondence and remarks on the above subject: Mr. M. Stalker, the able and careful superintendent of the Iowa Agricultural College Farm, has been making some experiments in feeding hogs with the following, which he publishes through the college paper. He selected 15 hogs of the same age and breed, nearly the same weight and condition, prepared for the experiment by the same feeding and treatment from pigs. He divided these hogs into pens of three each; for the first 2 months fed equal dry weights of dry corn, soaked corn, boiled corn, dry meat, and cooked meal. Then for nearly two months he continued to each pen the same form of corn, giving, however, as much as the hogs would eat. The result of four months of feeding showed that the different forms of corn had made the following live weights of pork:

1 Bushel of dry corn,	13	lbs. of pork.
1 Bushel of soaked corn,	10¼	" "
1 Bushel of boiled corn	10	" "
1 Bushel of dry meal,	13 2-5	" "
1 Bushel of cooked meal,	5 9-15	" "

I am about to commence feeding hogs on boiled corn, thinking to improve it in that way, but, from the above, one would infer that cooking would be a disadvantage. In the Country Gentleman, late in 1875, I noticed an article from a feeder, saying that he had been cooking corn for stock for four years, and that it had been a detriment to him until within a few weeks past, when he discovered that he had been cooking under *too high pressure*, making the food too hot, thereby destroying some of the nutriment of the feed. He made an illustration something after this fashion: he bought a new stove, and his cook burnt the bread before she understood the stove. He found by actual test that he could hold his hand in the oven that burnt the bread for two or three seconds, but that it was impossible to plunge his hand in his steam box with sixty pounds of steam.

Some feed pigs with corn that has passed through cattle, but many think they could cook it cheaper in a steam box; at the same time all agree that corn prepared by passing through cattle is a good feed for pigs. Please give us what light you can on this subject, and the best way to *push* pigs running on grass and clover in Illinois.—Reader.

Prof. Goessmann says that of uncooked Indian corn, containing 10 to 12 per cent. of water, about 93 per cent. is indigestible as swine food—differing somewhat with the varieties. Cooking could improve upon this but very little. The same is true, to a certain extent, of most of the grains. The benefits of cooking are most marked upon hay and coarse fodder; that is, with those foods which contain a large percentage of cellulose—coarse fiber—upon which it acts to disintegrate and break down, and release the nutritious portions, which in raw grains are easily laid hold of by the digestive functions.

With a content of moisture of from 10 per cent. to 12 per cent., Indian corn contains from 54 per cent. to 64 per cent. of starch, besides albuminoids and fats, and only 25 per cent of cellulose; wheat grain contains 2.1 per cent. of cellulose, hay contains 25 per cent. of cellulose, and wheat straw 36 per cent. of cellulose.

A fine mechanical condition in food is conducive to ease of digestion, as shown in the experiment in the difference between meal and whole corn; beyond this it seems hardly profitable to go in the preparation of grains.

The apparent injury which the figures seem to show, we think, is due merely to the fact that cooking greatly increases the bulk of grain, hence the swine would soon get filled with it and eat less than of the dry, uncooked material, for the report says they were allowed as much as they would eat after the second month.

Recent German experiments substantiate these statements, while it is an almost universal practice—based on experimental knowledge—in that country to cook coarse fodder, and some of the grains.

MANURING TO DESTROY WEEDS.

Suitable food for crops, says an English journal, enables them to conquer the weeds. In regard to clover, it was found that when the land was wholly unmanured, the weeds formed 57 per cent. of the entire yield, but that the application of gypsum reduced the proportion of weeds to 2 per cent. Nitrogenous manures had very slight effect, and phosphatic manures but little more. We must not from this, however, consider gypsum as an antidote to weeds in general, since it is a specific manure for clover, and gives it a power to struggle successfully with the weeds, and crowd them out.

It is commonly observed that the first effect of large quantities of barnyard manure is to make the weeds grow more vigorously. This is partly because the manure is usually filled with weed seeds, and also because the increase in fertility encourages seeds to sprout, which, with poorer soil, would have remained dormant. The light, warm and rich soil will sprout weed seeds to a greater depth than that which is heavy, cold and poor.

On the other hand, where grain crops are sown, multitudes of these weeds are smothered and destroyed by the stronger growth of the grains. Almost all annual weeds start from seeds as tiny and as feeble as turnip or onions, and the first appearance of the weed is most insignificant. On the other hand, wheat, corn, oats and barley have a grain of considerable substance, and the blade and root are correspondingly vigorous, not only outgrowing the weed, but enabling the farmer to cultivate his sown or drilled crops with little injury to the grain, but complete destruction to the weeds. A light drag passed over drilled oats or barley, just as the grain is well up, will hardly disturb a single spear, but will bury and up-root millions of tiny weeds. In this way a field may be kept clean, and, where spring grain is to be followed by wheat, the labor of fitting the stubble is much lessened.

Dairy Husbandry.

FILLING UP THE HERDS.

THE practice with many dairymen for a number of years past, has been to fill up the herds in spring to the utmost capacity of the farm, and not unfrequently pastures are overstocked. Overstocking not only seriously injures the productiveness of pastures, but it decreases greatly the yield of milk in the whole herd, thus making a less return in butter and cheese than there would be if some of the poorer animals of the herd had been disposed of early in the season and more food left for the remaining portion.

We can point to dairies of common cows in Herkimer County of 40 animals and upward to the herd, that made last season an annual product of cheese and butter amounting to $60 per cow, and the dairy products were sold at the Little Falls market at the regular market rates for fine goods. Contrast this with herds on overstocked farms, where the yield has been only $25 to $30 per cow, and the difference in profits from dairy farms where the two systems are practiced will be seen to be very large. Forty cows averaging $60 per cow, turn off the same amount of money as 80 cows averaging $30 per cow; in other words, the extra 40 cows must be milked and cared for at no profit.

Good judges in regard to the markets for dairy products are of the opinion that we cannot hope to obtain any better prices for dairy goods the coming season than those of last year; while the impression with some is that prices may go lower. It behooves dairymen then to consider well before purchasing cows at high rates to fill up their herds, whether an increase of stock will yield a profit or entail a loss. It is always safer to understock a pasture than to overstock it, and in regulating the size of the herd for a given amount of land a liberal estimate should be made to meet the exigencies of an average season rather than basing calculations upon an extra good year for grass. Above all, if dairy stock *must be* purchased, avoid culls and refuse animals that are only cows in name. It always pays a dairyman to buy the best cows that can be had even at comparatively high prices. Poor milkers at best are only a burthen and should be avoided as a positive evil, entailing loss rather than profit to the farmer.

We have recently received letters from dairymen in different parts of the country, stating that they propose this year to have smaller herds than usual and to pay more attention to raising grain for home wants than to depend on purchasing from abroad as formerly. We think the plan a good one and believe this course will result in more clear profit at the end of the year than in stocking up to the utmost capacity of the land.

The old stock of cheese promises to go out, leaving a good market and fair prices for rich, well made cheese of the early make; but prices will be likely to fall during the summer, and dairymen should not base calculations on high rates. There never was a time when good management and economy were more imperative than now. Those who strike off useless expenses and count the cost of what they buy, will be likely to escape many of the troubles incident to this extravagant age.

COWS CALVING IN THE FALL.

I. W. WANZER, in the Practical Farmer, gives in detail the usual manner of managing dairy cows in the section of Illinois where he resides. In the first place he says, "We arrange so that a proportion of our cows come in through the fall and on through the winter, thus keeping up the dairy supply."

Warm stables are provided so as to be comfortable to animals and milkers, and care is taken that the feed of the cows be such as will promote good health and produce the largest flow of milk. The grass—timothy and clover—is cut when in full blossom, and care is taken not to cure it too much. For a change, Hungarian grass is used, cutting it when in the dough. This fed part of the time, he thinks is as good as a change of pasture to the summer cow. Corn stalks are fed once a day through the winter. For ground feed an effort is made to combine the elements that will produce the largest flow of milk and at the same time keep the cow in good condition and not too fat. And it is found that one part corn meal, one part ground oats and one part bran, will bring the best results. With these conveniences and kinds of hay and ground feed, good water and good care, a cow yields as much milk during six months in winter as in summer, when the cow feeds on grass.

Mr. WANZER says in the summer management of cows good, sweet, tame pastures and pure water are indispensable, and he is of opinion that a little grain should be fed to cows all summer. When the milker is to milk a cow, he first feeds her and then sits down to milk. The result is, the cow stands quietly, gives her milk at once, and the flow is increased. Sowed corn is considered an important help to meet the wants of the herd in dry times. He estimates the cost of keeping a cow six months in winter at $62, the items being for ground feed $36, hay $20, and care $6.

This we suppose is for cows giving a full supply of milk. Winter dairying has been urged by some on the ground that it is a better time to manufacture dairy products, as there is not so much liability of their being affected injuriously by the weather, and some claim that as large if not larger products can be made than under the usual summer dairying.

REGULATIONS IN REGARD TO THE DAIRY DISPLAY AT THE CENTENNIAL.

AT a meeting of the Executive Committee of the Centennial Dairy Committee, held at Utica, March 17, regulations in regard to the time of manufacture, delivery, shipment, and other disposition of dairy products, were adopted as follows:

Cheese intended for exhibition should be branded with the owner's name and the date of manufacture.

Cheese for exhibition must be manufactured between the first and the fifth days of June, July, August, September and October of the year 1876.

Of cheese one year or more of age, the processes, temperature, salting, curing, and general handling, must be described in writing.

Butter in packages or any patent mode of packing should be accompanied by a written statement, giving date of manufacture, quantity of salt used, and manner of churning, handling, packing, and treatment after packing.

Cheese on the shelves of the curing and display room will be treated in the same manner as upon the shelves of the home factory.

Cheese and butter in all cases will receive such treatment and care as shall be required to keep and show the product to the best advantage.

Date of shipment of cheese or butter will be fixed from time to time, and the parties will be notified as to dates of forwarding and mode of shipment.

Any rule hereby adopted will be subject to such change or alteration as may from time to time become necessary, and to any changes required by the rules and regulations of the commission.

The following charges are to be demanded from persons placing dairy implements and dairy machinery in the dairy building to be erected on the grounds: For cheese vats not to exceed four in number, $80 each; scale for weighing milk, $100; full set of curd knives, $5 each; curd grinders, $5 each; weighing can, faucet, and conductor, $10; delivery cans, $5 each; dairy pans and coolers, $25 each, not to exceed ten in number; churns $5 each, not to exceed four in number; butter workers, $5 each; butter packages or pails, $3 each; boiler and engine, $500.

BUTTER AVERAGES.

MESSRS. EDITORS:—In the RURAL of Feb. 19, Mr. L. P. WOLCOTT reports a pound of butter from 13 lbs. 13 ozs. of milk taken from two grade Jersey cows that have not had calves for over a year, and thinks, in order to make my statement good, I ought to reduce that to 11 pounds. I have the advantage of him one way—no one will ever know what I would have done with it, especially as a neighbor of mine claims to have made a pound of butter from nine pounds of Jersey milk. Mr. WOLCOTT does not seem to be aware of the fact that a cow's milk becomes very much richer as she dries off.

My statement was that the *average* butter maker with any method, would save two pounds of milk to the pound of butter. The only qualification that this statement needs is that the test should be a fair one. That is, with the full season's milk of a herd of not less than ten cows, Mr. WOLCOTT shows by the manner in which he handles his milk that he is probably much above the average butter maker, nor do I mean by simply complimenting him to beg the question. What I mean is this:—The best average from a season's yield of a herd of cows known to us is that of the Hon. HARMS LEWIS of Herkimer, which was 23 pounds of milk to the pound of butter from Short-Horns. Now Mr. LEWIS is a finished butter maker. The average butter maker would probably require over 25 pounds of milk to the pound of butter. I think any one can do as well with my method as Mr. LEWIS has done with his shallow pans.

Louisville, Ky. L. S. HARDIN.

A NEW WAY OF MOLDING BUTTER.

AT the Vermont Convention we saw a new device for molding and putting up butter prints. The mold consisted of an oblong, brick-like box, with hinges on the sides so as to be opened out. The butter to be molded was pressed or pounded into this box until it acquired the proper shape and then the sides were opened or let down, thus allowing the butter print to be easily removed. The mold is made of any weight desirable, but in order to make the prints of suitable size for the table, a silver-plated wire is employed to cut the blocks of butter formed in the mold. In this way flat, square pieces an inch or more in thickness are easily made, and these are arranged on tin slides, one above the other, around an ice box in the center, the whole fitting in a larger box and then sent to market. The plan appeared to be practical, cheap and convenient, and the inventor claimed to have had great success in marketing this new style of prints.

The Herdsman.

THE COMMON GADFLY.

AT this season of the year warts or warbles may often be found in large numbers on the sides and back of cattle. On pressing these bunches a frothy substance will be squeezed out, sometimes slightly bloody, and, if pressed very hard, a large, blackish grub, tapering at both ends. This is the larva of the gadfly, which lays its eggs on the skin in summer and early fall. If left alone the larva comes out of itself in April or May, drops on the manure pile and very soon becomes a perfect fly, ready to perpetuate its species. They are most often found on animals in poor condition, as such most frequently have the rough, staring coat, in which the fly can easily deposit its egg on the skin. Possibly a good way to prevent the fly from laying its egg would be to smooth down the hair with grease, or apply some substance which should be poisonous or offensive. A writer in the Chicago Tribune argues that these insects are very injurious, and we copy what he says on this subject, as also how to get rid of them.

It may be that the presence of a few grubs is not a source of serious damage; but it is an indisputable fact, observed quite often, that numerous grubs, or larvæ, cause always considerable emaciation, and, in some cases, even loss of life. I myself had once an opportunity to make a post-mortem examination of a heifer killed by these larvæ. The hide, for at least a foot on each side of the vertebral column, was not only perforated by a large number of grub-holes, but also perfectly separated from the body; for the tumors, or cavities, containing the larvæ, or maggots, were so close together as to make them continent; and at least one-third of the whole surface of the body presented, after the skin was removed, an uninterrupted, suppurating field. As no other morbid changes of any consequence presented themselves, there can be no doubt as to the cause of the animal's death. Of course, after the larvæ, or grubs, have made their exit, and after the tumors have healed, the usually emaciated cattle will improve rapidly, and almost visibly; for then the food consumed is for their exclusive good. This observation has probably lead to the mistaken idea that the grubs of the gad fly exert a sanitary influence upon their abode-animals. That the constant irritation and the continued suppuration caused by those larvæ, and their feeding upon matter and expudation proceeding from the body of the abode-animal, must be very injurious to the latter, must interfere with its natural growth and development, and, in consequence, be a source of loss to the owner, is too self-evident to need any further proof. The question is, How can such losses be prevented, and how can the gad-fly, or its brood, be destroyed? To find the pupæ, to catch the flying insect, or to prevent it from depositing its eggs, is a matter of difficulty, and almost impossible; but to destroy the larvæ before they have arrived at maturity, is quite easy,—for their exact place beneath the skin is indicated plainly enough by the presence of the tumors, and is easy of access on account of the openings in the skin. The simplest way to get at these larvæ, and to kill them, is to enlarge the opening of each tumor with a narrow-bladed knife, and to draw out the larva by means of pincers, or with a small hook. Even a large herd of cattle may thus be freed very easily from the larvæ in one day by one person; and if every farmer would do it a few years in succession, the gad-fly would very soon become too scarce to do any damage. Bracy Clark recommends another method. He advises to destroy the larvæ by injecting into each tumor some corrosive fluid,—for instance, a solution of corrosive sublimate or of sulphate of copper; or to kill the same by pricking them with a red-hot needle. If injections are to be used for that purpose, I would prefer carbolic acid diluted with about one or two parts of glycerine, and two or three parts of water. Still, the former method, consisting in enlarging the openings and extracting the larvæ, deserves preference, as the consequent suppuration will be much less and the healing much quicker if the larvæ have been removed.]

BRAN AS A FEED AND FERTILIZER.

CAN you inform me through your paper, or otherwise, whether Wheat Bran is of any value as a fertilizer? and if so, what is the value per 100 lbs. for this purpose? G. E. M., *Lowell, Mass.*

There can be no doubt that bran possesses very considerable fertilizing properties. Chemical analysis shows that it abounds in phosphates, and, in fact, contains most of the elements which the wheat grain possesses. According to a table which has been widely published, and which we presume is approximately correct, the manure from a ton of bran is worth a little more than $14, which would make its manurial value something more than 70c. per 100 lbs. Still we should not think of using bran directly as a fertilizer, for the much better way is the common one of feeding the bran and using the manure thus made. No doubt considerable of the bran is utilized in the animal, and especially where it is fed to milch cows. This is by no means lost, for either meat or milk is worth much more than the bran. Besides, the fertilizing material, in passing through the body of an animal, absorbs the various dead matters thrown off from the body, and is, besides, partially prepared or "cooked" by animal heat, so as to be more readily soluble as plant food.

Dry bran in the soil, unless in a very wet and warm season, will not become freely soluble and fit for use by plants. The experiment has been tried of using raw corn meal as manure for corn, but we believe it has not proved profitable. Bran is less promising material for manure than corn meal, as it decomposes much less readily and contains less nitrogen.

Whenever bran can be bought for $20 to $22 per ton, it is a profitable feed for milch cows, and in smaller quantities for idle horses and growing stock. Horses working every day need stronger feed, but for horses lying idle in the stable bran has an excellent laxative effect, keeping the bowels in good condition and prepared for the higher feeding which should always be commenced as the working season approaches.

FEEDING BEETS TO MILCH COWS.

NOTICING the statement of "A Gentleman near New York City" concerning feeding sugar beets to his cows, and also a reply by A. B. ALLEN, I offer your readers a bit of my experience. Last year I raised a lot of mangolds and carrots. The mangolds were gathered first and put in the cellar; afterward the carrots were gathered and corded up on top of them, so that when I began to feed them to my cow the carrots came first. The cow gave about her usual quantity of milk, excepting the usual shrinkage on the accession of cold weather and being put upon dry fodder. Fearing that the beets would not keep as well as the carrots, and also thinking that they possessed better milk-producing qualities, I was anxious to get at them. Accordingly I removed part of the carrots and commenced feeding beets, when, to my surprise, my cow began to fall of her milk, until the deficiency reached about one-third. Wishing to test the matter still further, I changed back again to carrots, when her milk increased to about the usual standard.

The quantity fed was about the same in either case—about a half bushel basket three-quarters full. If there was any difference it was in favor of the beets. This was a matter of wonder to me, and while I was cogitating upon it, "Daily Rural's" statement came to hand. And now I have concluded to hereafter give carrots more attention and beets less.

I think the difference Mr. ALLEN makes between large and small beets is altogether too wide. If his statement is true, we had better be careful and not raise large, thrifty, vegetable crops of any kind. I think my cow would prefer any size beets to chips; am going to try her on some 11-pounders. Probably the difference between very large and small ones is about one-third. REUBEN ANDREWS.

Perry Center, N. Y.

PEDIGREE vs. PERFORMANCE.

A CORRESPONDENT writes:—If I was purchasing stock, I would not give 10 cents for the best pedigree they could get up. I would sooner trust my own eyes than all the pedigrees they can produce. If a horse wins a race, the judges do not stop to inquire into his pedigree before awarding the premium.—*Toronto Globe.*

The above paragraph has a very taking sound and will quite likely prove popular. But what does it mean? Simply this, if anything:—that pedigree is no indication of value, which is most untrue. No doubt, if a horse wins a race, his superiority in speed attests his value; but it is absurd at this day to say that a carefully-bred horse is no more likely to win a race than a scrub. When it comes to breeding, the superiority of the pedigreed animal is still more manifest. The accidental superiority of an animal in any direction is rarely perpetuated in his (or her) offspring. The superiority which is the result of careful breeding for generations back is almost certain to be perpetuated in stock from carefully-bred animals.

The Horseman.

"OLD JOHN LAWRENCE."

One of the earliest, if not the earliest book, written on the trotting horse, was by John Lawrence of England, in 1800. It is interesting to note how accurate his observations were: "If a young trotter be obtained, it will be perceived in an instant whether he has a natural great bent of speed. But if not, granting that he be thorough shaped, and can trot a mile in four minutes handsomely, he may improve and become capital for a long distance. In training a young trotter, take a long time; keep him almost always within himself; never trot him with a slack rein, nor suffer him to hitch, lead with one leg, or get into a confused run between trot and gallop, but accustom him to pull well and steadily at you. Always oblige him to finish his trot in a walk, never in either canter or gallop; in which latter case cause him to turn round, as is the custom in trotting race. No hack is fit to trot any considerable distance until rising six years old; but it is remarkable that trotters, unlike gallopers, do not lose their speed from old age, many having been known to trot as fast at twenty, and even near thirty years of age as they did in their prime—a solid recompense, surely, for the extraordinary care which these horses demand. As it is obvious that the damage which trotters receive in their feet, joints, and sinews, arises from their violent and incessant thumping the hard road, common sense will naturally prescribe moderate and sparing exercise and soft ways. And whenever you see a fellow wantonly rattling his horse over a pavement, you may fairly presume a natural affinity between the skull of the jockey and the materials with which his course is strewed; and, even if you go so far as to wish a happy contact between them, humanity herself will forgive you."—*Spirit of the Times.*

SCRATCHES IN HORSES.

A correspondent writes:—My horses are all taking the scratches, or at least their legs are getting rough. What is the best thing I can do for them to keep the hair from coming off?—A Young Farmer.

Want of proper care of the horses' legs is probably the origin of the trouble which may result in the disease called "Grease," or more generally "scratches." If perspiration is obstructed, it results in horses as in men in making the blood foul, which causes blotches on the body. In the horse perspiration is most active in the cavity just above the heel. In winter this is often closed up—sometimes by filth—as well in driving as from standing in filthy stables; but more frequently by catching cold after hard driving and the horse is left to stand in the cold with his legs unprotected. Any of these causes are liable to originate the disease. It is seldom found in summer and never originates among horses in pasture. In the early stages the following remedy is recommended:

Slippery elm, powdered, ½ pound; fine salt, 2 ounces. Mix with hot water and when cool apply on a cotton cloth. If this does not afford relief the disease has probably affected the general health of the horse and a cure will be more difficult and require more time. Drawing poultices in advanced stages are out of order, as they tend to increase the secretion of matter which, owing to the bad state of the blood has been too profuse. The cavities above the heels should be carefully kept open. After this is done the legs should be poulticed with some astringent substance as bayberry bark or burnt alum with slippery elm.

NOTES FOR HORSEMEN.

Whale Oil for Bots.—The Popular Science Monthly says whale oil was poured on a piece of a horse's stomach that was covered with bot-worms, and it made them let go their hold and die immediately.

Poll Evil.—As soon as the sore is opened wash with castile soap, clean; then take lunar caustic, and be sure to get into the bottom of the sore; leave it in six hours. Then make a wash of white vitriol and rain-water, not very strong, stirring it thoroughly with the castile soap, and wash the sore with it every morning. This has cured many valuable horses for me.

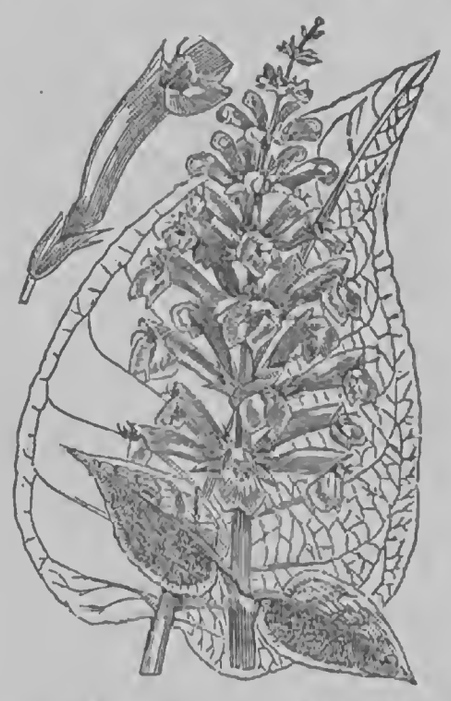
Staggers.—In this disease much depends on the treatment and on the management of the animal after an attack. In the first place, bleed freely from the neck—from six to ten quarts. Give immediately an active purge, throw up injections, and keep the animal's head wet with ice-water. In most new cases this treatment will effect a cure. Be careful to keep the bowels relaxed by giving two or three bran mashes weekly.

Lampass, or the Groom's Fancy.—When an animal does not take his accustomed amount of feed, whether it be a colt just getting his molar teeth, or a very old horse whose molars have become defective, the cruel operation is too often performed of burning the enlarged palate with a red-hot iron. If a colt is off his feed, treat him as a baby; he is then getting new teeth, and should have a soft diet—mashes, etc.—but do not allow the blacksmith to perform the unnecessary, injurious, and cruel operation of burning the lampass.

Floricultural.

SALVIAS.

Salvias, now that we have blue (*S. patens*), purple (*S. Horminum*), red (*S. splendens*), white (a variety of *splendens*), and red and white



flowers, as well as variegated foliage,—are among the showiest of our bedding plants, and—owing to their rank growth and spreading habit—they are better in the garden than in the conservatory.

For those, however, who seek their gay colors for winter flowering, we have selected *S. Boliviana verticillata* as one of the best—the little sketch representing, as well as so small a sketch can, the flower and leaf. Mr. E. G. Henderson of London says that it forms a neat, robust plant, two or three feet in hight, producing terminal and axillary spikes eight to ten inches long. The flowers are arranged in close whorls, each, in the chief spikes, containing thirty to fifty blossoms, and each spike having seven to ten flower clusters. The scarlet flowers, about one and a half inches long, are produced in succession for a considerable period.

A writer in the London Garden speaks of it as one of the best for winter flowering, and that, as with *Primula Japonica*, it continually throws out flowers from the whorls, as well as from the laterals.

LAYING OUT GROUNDS.

We hope that those of our readers who own homes, however small, with naked yards, front or rear, will manage to procure a few shrubs this spring. Procure *one* if you can do no better, and trust to it that, with kindly care, it will so please as to create the "will" that provides the "way" to others. Let those who have fine houses and unplanted grounds plant at once. No other outlay will secure a better return—no other feature of the home will more endear it to its occupants.

Volumes have been written upon Landscape Gardening—but we sometimes think that such works are of benefit chiefly to those who need them the least—and that no rules, however explicit, can guide a person, in laying out and planting grounds, who has not a natural love of plants and a natural taste to assist in their selection and arrangement.

The shortest distance between two points—a straight line—is the very best direction for streets or the limits of property; but it ought never to describe the boundaries of sylvan walks—of flower-beds or of the lawn. Nature abhors straight lines. How beautiful soever may be the trees, shrubs and flowers, and how skillful soever their display—straight marginal lines give a labored, an artificial look that it is the first aim of the good gardener to conceal. Not to stumble over the post while we avoid the pillar—lines that are too curved are also objectionable. The walk or carriage-drive leading to the public road should, of all paths, be the most direct; and in these, any curve sufficiently decided to lead one perceptibly out of his way and suggest the wish to "cut across" should be avoided. In by-paths leading to shady nooks, rock-works, rustic arbors—the curves, if only concealed by foliage so that their entire outline does not present itself to view, may crook without limit. The impression that we do not know whither we are going or to what beautiful surprises we are being led by these obscure paths—if ever so faintly produced, is one of the best proofs of taste and skill.

Arranging flower-beds, walks, grass-plots, trees, shrubs, mounds, vases and the like in *pairs* is another senseless proceeding—as if every object were so unfinished in itself that it must have a counterpart similarly placed to perfect it. But if we adopt the curvilinear style of gardening—as there are no rectangles that require sentinels stationed in every corner—the family of twins will be likely to receive at the outset "marked coldness."

In distributing plants, let us avoid dotting the ground at regular distances as if it were laid out in squares and each square were allotted one tree or shrub for its center and only ornament. The effect is meaningless, and far more distastefully so in the curvilinear than in the rectilinear plan, since in the latter it is in accord with everything else. Groups of trees and shrubs of varying sizes (always proportionate to the extent of the grounds) may be placed here and there, inclining on the whole, however, not to obstruct the view from those parts of the dwelling most frequented, and yet so placed as to conceal, except by glimpses, as far as possible the public road and all boundary lines, so that the actual termination of the grounds in all directions is obscured, and one may revel in fancied seclusion. These groups must not, however, be planted as if they were one huge tree, but in some instances connect with other groups—while occasionally they may be relieved by lower-growing specimens in the immediate vicinity. But of all violations of susceptibility to all that is beautiful—to delicacy of feeling and good judgment, the introduction of statuary to the grounds about one's home, is the most absurd. Bronzed animals, such as deer, dogs—or even lions and panthers—may, if placed in thickets or half exposed, be admitted; but white, nude statues of gods, goddesses or mythical heroes, flaunted out in the broiling sun, or left to freeze and thaw during Winter's snows, are painfully inappropriate. Who ever did select his favorite spot near one of them? But in the moonlight—bless our stars! We are not superstitious—but their general aspect is not reposeful—and we should select our nook so that many trees and shrubs might intervene to exclude these unhappy, friendless things from view ere we gave ourselves over to balmy, perfumed air—the deep shadows and the—the other enchantments of summer nights and ornamental grounds.

In selecting plants, our first thoughts should be about their *hardiness*, especially if a professional gardener be not employed and the proprietor is unable or unwilling to give or is incapable of giving discriminating attention himself. Trees not perfectly hardy for the locality may thrive for a season or so—but they will be sooner or later killed or so injured as to destroy their beauty. If your catalogue does not give this information explicitly, the editor of your horticultural paper will. New and alluring evergreens whose hardiness for a given section has not been thoroughly tested, are often causes of bitter disappointments. We once procured a Lawson's Cypress (*Cupressus Lawsoniana*). It lived through two winters—grew with the great rapidity and luxuriance for which it is noted, and we prized it as the finest species of evergreen we had ever seen. The third winter killed it root and branch.

We cannot afford to ascertain in the home grounds by experiment whether trees are hardy or not. It takes too long for them to grow—or rather, too long for others to grow to fill their gap. Reliable information is too easily obtained, and the trifling trouble will be repaid many fold.

Arrange flower-beds in a S. or S. E. exposure. Do not attempt complicated designs, or even angular figures, of any description. Reserve all study upon this subject for the selection of carpets and oil-cloths—wall-paper and frescoing. Have the beds conform to the paths, leaving grassy margins between, always wider than the lawn-mower. If flower-beds are cut out of the sod, it is quite easy to change them from one shape to another—to make them larger or smaller, or to re-sod and construct new ones in different places. Unless the ground is naturally rich, we are well rewarded by removing eighteen inches of earth and replacing it with leaf-mold or sod—old manure and sand, in the proportions needed. All should be thoroughly intermixed and leveled smooth, ready to receive the plants. Box and other edgings are very pretty if *well kept*—but, to our taste, there is nothing to compare with a clean, velvety sod for margins.

The best floral effects are only obtainable when the flower-beds are contiguous. To soften the effect of too much color, make the tropical bed central, and here display by the use of such plants as the Wigandia, Rheum, Dracæna, Aspidistra, Palm, Hibiscus, Dwarf Catalpa, Agave, Yucca, Aralia, Solanum, Musa (enseto), Ficus,—colors and foliage that will lend dignity and character to all. An occasional low-growing tree, such as the Crataegus, Pavia, Chionanthus, Rhus, Gleditschia (sinensis inermis), Cornus, Cercis, Alnus (laciniatus imperialis), Magnolia, Salisburia—or shapely shrubs, as Spiræa (prunifolia), Rhododendron, Azalea, Calycanthus, Cydonia, Hydrangea, Mahonia, would be in keeping. But whatever subjects be selected—whatever plan decided upon for the flower-beds—let us not forget that "everywhere *Nature* sets her flowers in clouds of refreshing green."

E. S. Carman.

Entomological.

DESCRIPTION OF THE ARMY WORM.

The army worm, which has attracted much attention in certain portions of the United States, New Brunswick and Novia Scotia, is so little known outside the ranks of the naturalists that a description of it will be acceptable to all who have read the accounts of its late ravages.

It belongs to the order *Noctua*, genus *Leucania*, and is known in Great Britain, where fifteen species of the moth have been found. It figures in Newman's "British Moths," and Haworth names it *L. unipuncta*, from the single white spot which appears on each of its upper wings. It is familiarly known as the American Wainscot Moth.

The perfect insect will soon be found in abundance in those localities recently subjected to the unwelcome visitation of the crawling and devouring armies, and it may be readily recognized by reference to the following description from the American Entomologist:

"The eggs hatch during the early part of May in the latitude of South Illinois and Missouri, and the young worms may feed by millions in a meadow without attracting attention; but when they have become nearly full grown and have stripped bare the fields in which they were born, they are forced from necessity to travel in search of fresh fields, and it is at such times they first attract general attention. A curious instinct leads them to travel in vast armies, and as they are now exceedingly voracious, devouring more during the last three or four days of their worm life than they had done during the whole of their previous existence, they are apt to strip the leaves from the blades of grass or grain on their way. On the other hand, they are attacked by at least five different parasities, and when we understand how persistent these last are in their attacks, and how thoroughly they accomplish their murderous work, we cease to wonder at the almost total annihilation of the army worm the year following its appearance in such hosts. Furthermore, there may be influences at work, other than parasitic, which cause an increase or decrease the number of this pest. It is a significant fact that almost all great army worm years have been unusually dry, as Dr. Fitch has proved by record.

"The army worm, like other insects, hatches from an egg, and this egg is evidently deposited by the parent moth at the base of perennial grass stalks. The worm varies but little from the time it hatches to the time when it is full grown. Some specimens are a shade darker than others, but on many thousands of specimens examined we have found the markings very uniform. When full fed, which is generally about four weeks, from hatching, it descends into the ground, where it forms an oval chamber, and changes to a shiny, mahogany-colored chrysalis. Sometimes it scarcely penetrates beneath the surface, but forms a rude cocoon under what dry herbage there happens to be on the ground. Thus the worms vanish from sight very suddenly, and this sudden disappearance is as mysterious to those who have no knowledge of natural history as was their abrupt advent.

"After remaining in the chrysalis state about a week the perfect moth appears. The general color of the moth is light reddish brown or fawn color, and it is principally characterized by, and receives its name from, a white spot near the center of the fore wings, there being also a dusky oblique line running inwardly from the tips."

PROTECTION AGAINST THE WIRE-WORM.

I give you my experience with the wire-worm. Being troubled with the little pests one year, I was advised to soak my seed corn in a solution of copperas and saltpeter, using one-fourth of a pound each to a bushel of ears of common eight-rowed corn. The result was that my seed all grew, and I lost none by the wire-worms, and I never saw corn have so dark and vigorous a color before. Since then I always soak my seed twelve hours after being shelled. I do not know as it would affect the cut-worm, but I have never been troubled with them since I used the solution of copperas and saltpeter. Neither was I ever troubled with them when I plowed my corn in the fall, which I would invariably do on old sod. Some farmers exterminate them by hunting them out in the hill and killing them by hand, but this is slow and tedious work, and is liable to be slighted by hired help. An ounce of prevention is worth a pound of cure is a proverb true in this case.—J. B., *in Country Gentleman.*

Pomological.

MANAGEMENT OF ORCHARDS.

At a recent meeting of the Penna. Fruit Growers' Society, John I. Carter, Superintendent of the Experimental Farm in Chester County, read the following paper on making orchards profitable:

"I believe that judiciously-selected and well-managed orchards will pay, and that farmers will find it profitable and greatly to their interest to give more attention to this department of their farms. It is common to say that if farmers grew much more fruit they would soon over-stock the market, forgetting that as the supply increases, and as their products are freely offered in the market the tastes of the people grow in that direction, and fruit becomes a necessity, when before it was only a luxury. I remember twenty or twenty-five years ago, when dwarf pears first became popular, and an impetus was given to pear culture, it was confidently asserted that this branch would soon be overdone, and that pears would be a drug upon the market. Yet, notwithstanding the great increase in production, we had no difficulty in selling our pear crop this year at better prices than ever before. Hence, I think farmers need have no fear of a permanent glut of really good fruit, but might very safely make considerable additions to their orchards and give them more careful attention. One word more as to the varieties to plant. I intend my remarks on this point, as well as on some others, to be more appropriate to farmers than to amateur fruit growers or regular orchardists. Both of these classes would probably plant many varieties as specimens, as tests, and to keep up a complete succession; but for plain farmers, who want reliable, easily managed trees and marketable fruit, but few varieties are needed. Among the apples the Malden's Blush, Smokehouse, and Smith's Cider would be the three safest as stand-bys. Among the pears the Bartlett, Seckle and Lawrence would occupy the same position; while the Governor Wood and early Richmond cherries would generally be safe to rely on. These varieties do well almost anywhere in Eastern Pennsylvania, and the fruit is known and valued in the market. For my part I do not like any of the above-mentioned apples as eaters, but they sell and the trees are good bearers and hardy.

I do not mention peaches in this connection, because we can make no successful competition with this fruit with our Delaware and Maryland neighbors. In regard to the treatment of orchards, I believe it is with trees as with any other crop we raise, judicious manuring and good cultivation give the most paying results. Trees cannot grow too rapidly, provided it is a healthy growth, such as would result from a timely supply of all the needed ingredients and conditions wanted to make it such. And when bearing time comes there must be no cessation of food and care, as is too often the case.

I have always objected to Mr. Meehan's practice of non-cultivation, principally because it too often led farmers into a neglect of their orchards at the very time they needed most attention. In following his plan they too often stopped at the grass and neglected the manure.

To secure healthy trees and good crops of fruit, not only requires the ground in good mechanical condition, but a plentiful supply of available food of such variety as meets all the requirements of the trees. Experience has shown that in many localities we cannot grow a perfect crop of wheat with a purely nitrogenous manure. We can make, perhaps a great weight of straw, but not that bright, perfect stalk farmers like to see and bearing a head of well-developed grains. We must use mineral fertilizers, or in some way make those in the soil more available. So it is, I conceive, in growing perfect trees or making perfect fruit. We must insure them an abundant supply of mineral fertilizers. I think this was demonstrated in our orchards the past season. We had the most perfect fruit we ever had; indeed, the finest I ever saw. Some of our Bartletts weighed seventeen ounces each, and otherwise perfect. Our Seckles brought from $4 to $6 per bushel, and our apples were fine, though this was our off year. Our orchards have heretofore been rather unthrifty in growth and bearing, but latterly we have been giving them better cultivation, and using phosphoric fertilizers freely on the hoed crops between the trees.

Our treatment last season was about as follows: We gave them the usual winter pruning, which was slight, merely cutting out injured limbs, and water sprouts, and those that interlocked, and cut back some of the most wayward and rampant, keeping the tree in reasonably good shape, with as little pruning as possible. We then washed or painted the trunks and larger branches with a composition of one-half bushel of muriate of potash, the same quantity of cow manure, five pounds of sulphur, and one barrel of water. Previous to this and during the winter, a light coat of yard manure had been applied. The ground was then carefully plowed, and planted with potatoes, giving them a good dressing of acidulated South Carolina rock. Immediately under each tree we sprinkled five pounds of muriate of potash. We find this muriate the cheapest form in which we can buy potash. It costs about 2½ cents per pound, analyzes about 45 per cent. of potassium. As the ground contained plenty of lime, we thought we had furnished the most needed materials for maturing wood and making healthy trees, and the result fulfilled our expectations. The trees held on their fruit, and retained their foliage late in the season. We suffered very little from blight or disease.

Of course we do not raise and sell crops on our Experimental Farm to the best pecuniary advantage, and our limited means prevent us from doing any of the many things undertaken very well; but we marketed this year about $130 worth of Governor Wood cherries, from twelve or fifteen trees; and over $100 worth of Bartlett pears from 150 bearing trees; and sold $100 worth of apples from an orchard of the usual farm size. Special attention to thinning fruit, and marketing to the best advantage would have increased our receipts, and I only mention these figures to show what can be done in an orchard with but tolerable treatment.

Insurance Department.

INSURANCE NOTES AND NEWS.

Proposed Insurance Laws.—A bill has been introduced in the Assembly of this State to permit the policy holders of mutual and stock and mutual life and health insurance companies to choose the directors and trustees of such corporations, each one being allowed one vote for every thousand dollars of insurance. To this is added a clause providing that no officer of one company shall hold any official position in any other. The last part is decidedly good. Unless he is a mere figure-head—in which case he has no right to occupy the place—no man can perform the duties of more than one office well, if at all, and the possession of duplicate power presents too many and strong temptations to abuse of privilege. The first part is impracticable. We are sorry to say it, but such is the case. The State can neither override, abridge, nor alter the charter of the corporations, which prescribes the manner of elections and the distribution of suffrage. Besides, it may be questioned whether a life insurance company can be successfully managed as a popular or democratic institution. Legislation upon these matters needs to be a great deal more crucial and wisely devised, or less open to the imputation of being a parasitic industry.

Industrial Life Insurance.—There has, we believe, been no successful endeavor to introduce into this country that sort of insurance called "Industrial," though it is successful elsewhere, especially in England, where one company, the special patron of this kind of insurance, issued, it is said, in 1875 more policies than all the other offices combined. This company, the Prudential, insured at every age and for any amount and premium, taking sixpence a week or a fortnight, and issuing policies to parents or guardians upon the lives of young children. Its chief usefulness lies in insuring poor people's lives for very small amounts, and for really small, though relatively high, premiums. Just why some of the more enterprising insurance managers do not embark in a similar enterprise is not readily explained, but it would seem to be worth a trial, especially in the great cities, where the character of the proposed beneficiaries assimilates more closely to that of its patrons elsewhere.

Foolhardiness Extraordinary.—The Coroner's investigation of the terrible explosion that occurred recently in Westchester County, near this city, disclosed the astounding circumstance that the employes engaged in the manufacture of nitroglycerine and its almost equally dangerous compounds were in the habit of smoking their pipes while at work, and that a match carelessly thrown among the inflammable *debris* caused the disaster. Ordinarily people shrink with horror from the proximity of such deadly substances, but these people had become so familiar with danger, this particular danger, that they despised it. And it is much the same habitual contact with kerosene that leads equally careless people to blow down the chimneys of coal-oil lamps and otherwise imperil their lives and property, in sublime ignorance of the risk of disaster and death.

Incendiary Fires in Albany.—If the extent of incendiarism elsewhere is to be measured by that which is said to prevail in Albany, the alleged excessiveness of fire insurance premiums is readily explained. Out of 70 fires occurring in ten months of 1875, 40 are attributed to incendiarism, and of the total loss (252,000), eighty per cent. (210,000) is ascribed to the same cause. Much of the expense entailed by intentional fires falls upon the owners of farm and other property. These people are not only too honest, as a general rule, to burn their property for the sake of the insurance, but they lack the incentives provided by fluctuations of value. But if they do not sin in this way, they bear no small share of the burden of increased and increasing premiums entailed by others' sins.

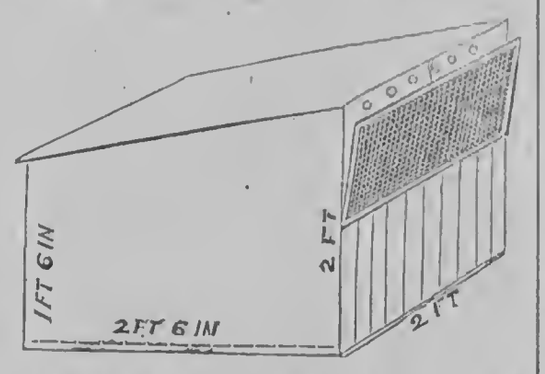
A Double Calamity.—During a recent great fire in Charleston the police were unable to protect the burning and adjacent buildings from a mob of drunken and brutal whites and blacks, who broke into and pillaged the stores and dwellings of their contents. Though the loss by fire amounted to a few hundred thousands only, partly covered by insurance, that from pillage is thought to be greater.

The Poultry Yard.

PLAN FOR A POULTRY COOP.

Enclosed I send plan of chicken coop which I have used for the last two years and find it superior to any that I have seen:

Coop to be 2 feet 6 inches long, 2 feet wide, 2 feet high, front, 18 inches back, dotted line



represents tight board bottom on slant of half-inch to the foot toward front of coop to run off any wet that may enter. Front of coop boarded tight half way with holes bored slanting near top for ventilation. A, wire door on hinges which shuts down over lower half at night and fastened by hook and staple. Pin back end. I make a door 7x10 inches to put in hen and chick, also to clean out coop. They should be made of half-inch material to be as light as possible. By having a tight bottom and shutting up tight at night you are entirely free from any harm that rats or skunks can do, and yet you have a good ventilation at all times. By buying empty shoe boxes at the stores and getting good-sized ones, they can be used to good advantage, and save expense, the wire netting can be had at any hardware store, but it should be pretty firm so there will be no danger from rats. If bottoms of coops are covered with hay chaff and cleaned out once a week, hens and chicks can be kept in good condition. H. D. Wellington.

East Lexington, Mass.

FEEDING POULTRY.

Our novice buys a poultry book and on one of the first pages reads, "never over-feed." "Never allow any food to lie about." "Never feed from pan, trough, basin, or any vessel." Feed only while the birds will run after the feed, and not at all if they seem careless about it. "Do not feed raw meat." "Do not feed one kind of food continuously, a change from corn to wheat, from wheat to rye, from rye to barley, etc., will give better results."

After reading this and much more of the same strain our novice considers himself a master of the profession, and goes in; but December comes and goes and no eggs; January melts into twenties and no eggs; he consoles himself that it is very cold weather and his house is not very tight, (though it is as warm as he could make it) and it freezes bad in it; he rings the changes in food and lets none lie about, but no success. He happens one day to be in the grocery when in comes a countryman with a big willow basket wrapped in paper and blankets, and out of it comes eggs, layer after layer of fresh eggs; one of the bystanders says, "Well Jonx your hens are doing well this year." "Oh yes," says Jonx, "they are buying my groceries for me." "How many have you," asks novice. "Well about 50 I guess, don't know exactly." You must have a warm house, says novice. "No I have lost many eggs by freezing, and my Leghorns all froze their combs and feet." "What do you feed?" says novice. "Well, in cold weather, mostly corn; though I give some raw meat that I get from the butcher, and they have a feed of boiled turnips once a week, and raw onions, twice a week, and when we cleaned our grain I fed them on screenings for a while." "How do you feed?" "Well, that depends, if the barnyard is not covered with snow, I feed in a hopper, if it is, I throw the feed in a pile of chaff on the floor so as to keep them busy all day scratching for it." "You say you sometimes feed with a hopper, don't they over-eat?" "No, at least they keep on laying just the same." "What kind do you keep?" "Dunghills crossed with a light Brahma rooster, but I have done it for several years, and now my stock could not be told from full blood Brahmas by a common observer." "Don't your Brahmas want to set too much?" "No, all set once and they rarely offer a second time, but my best sitters are my best early layers." "What kind of a hen house do you have?" "Well you see just below my house is a steep, gravelly bank, and I dug into the side of it and built me two log houses, each 12x18 feet, 30 feet apart, they were 4 feet high to the eaves, were roofed with logs, flattened like R. R. ties, then the cracks filled well with cement, and the whole covered with gravel from the bank, and between the two houses a sort of a shed was made and covered with gravel; the south end between the logs and the roof was only rough boarded and not battened as I consider air of more good than warmth; on the south side we put in each house two common slide windows of 10x12 glass." "Do you give fresh water daily?" "In summer; but not when there is snow on the ground." "How many eggs have you had this winter?" "I don't know, how many have I brought you Mr. Brown?" Mr. Brown goes to his ledger and in a few minutes says, "from Dec. 15, till date (Feb. 10) you have brought me 100 dozen eggs."

Novice goes home and ponders over those things and the next day goes out and visits some of his brother poulterers, he finds one who feeds his fowls every morning a mess of cooked corn meal, all they will eat, and he keeps a hopper of corn always before them, they are very fat and lay regularly and heavily, and when the breeder wants to market them he can sell them at much above the market rate. He finds another who feeds on wheat screenings entirely, and always puts it in a pile of chaff so as to make the fowls scratch for it; his lay well too. Novice goes home with the opinion that it pays to feed fowls well and that fresh meat won't hurt them, that fresh air is more good to them than warm houses, and he acts on his opinion and the next winter and each succeeding one he has as many eggs as any one. A. M. Van Auken.

Fort Howard, Wis.

HENS THAT DON'T SET.

The nonsitting varieties of fowls comprise the different kinds of Hamburgs, Spanish, Leghorns and Polands, and also some of the French fowls, yet, we often meet with individuals of the foregoing breeds which are medium sitters. Non-sitters, if well bred, will not give one confirmed case of sitting among fifty birds, though they sometimes sit for a few hours or a day, but soon leave off. They often have periods of leaving off laying for several days or a week. These correspond to the sitting fever of the incubating breeds. The instances of fowls sitting steadily, although belonging to a breed of pure non-sitters, show reversion to the primitive type when incubation was universal. A cross between two different breeds of non-sitters will produce a race that will sit as regularly and persistently as any fowls. Some crosses between breeds are very desirable, but non-sitters should be kept pure, or the trait which constitutes their principal value will be lost. Where many fowls are kept it is better to have the larger part consist of some non-sitting breed. A great saving may be made in a sitting breed to produce a few good mothers. The rest, say three-quarters of the whole of your stock, should be of some breed of non-sitters. It is as easy to take care of 200 non-sitting hens during the warm season as 100 of a sitting variety.

POULTRY NOTES.

There is a vast difference in the flavor of eggs. Hens fed on clear, sound grain, and kept on a clean grass run, give much finer flavored eggs than hens that have access to stable and manure heaps, and eat all kinds of filthy food. Hens feeding on fish and onions flavor their eggs accordingly, the same as cows eating onions or cabbage, or drinking offensive water, imparts a bad taste to the milk and butter. The richer the food the higher the color of the eggs. Wheat and corn give eggs the best color, while feeding on buckwheat makes them colorless, rendering them unfit for some confectionary purposes.

Breeding Fancy Poultry.—A great many beginners in poultry breeding fail through confining their fowls too closely, keeping one cock in a small pen with one or two hens. This is the natural result of trying to breed purely. Beginners usually have only two or three choice fowls, and turning these out with a flock of dunghills destroys all chances of purity. One cock may be kept with 15 or 20 hens, and, by having only this number, the eggs from the pure breed fowls will be full blood, while the others will be half breeds, and all will be more sure of hatching than if fewer hens were kept with the cock.

Diary of a Ruralist.

DAILY RURAL LIFE.

From the Diary of a Gentleman near New York City.

TRANSPLANTING EVERGREENS EARLY.

March 27. In consequence of the teachings of a few writers on horticultural matters, the idea has become quite prevalent that evergreens should not be transplanted as early in spring as deciduous trees. I have frequently read carefully-prepared essays upon this subject, in which the authors attempted, with all the science at command, to show why evergreens should not be moved as early as other trees and shrubs; still, with all this contrary teaching, I have practiced early planting all my life, and with uniform excellent results. I will admit, for the sake of argument, that evergreens can be transplanted after growth commences in spring with more certainty of success than with some kinds of deciduous trees; but it does not follow that early planting would not be still safer and better. By early transplanting, I mean as soon as the frost is out of the ground and cold, freezing weather is over in spring. By moving evergreens at this time we get the benefit of the early spring rains, which carry the soil in among the roots and fill up all interstices which may be left in planting, and when the weather becomes warm enough to excite growth the roots are in close contact with the soil, where the first new fibers can find sustenance without pushing out to any great length. Then, again, evaporation from the leaves, which causes shriveling of the shoots, is not so likely to follow in cool, moist weather as in dry and warm, which usually comes late in spring. I move more or less evergreens every spring, of various ages and sizes, and it is a rare occurrence to have one die if the operation is performed early. The frost is as yet scarcely out of the ground, still I am making preparations to-day for setting out an arbor-vitæ hedge, with plants six to eight years old, and if one in a hundred fail to grow I shall be very much disappointed. I also make a practice of moving pines, spruce and other kinds of hardy evergreens as early as possible, and never experienced the least difficulty in making them all grow.

More trees of all kinds are lost through planting too late in the season than from all other causes combined, and I fear that we have borrowed this idea of late transplanting of evergreens from nursery agents, who, for the purpose of prolonging the season of sales or to ease the minds of their customers on account of losses in consequence of their late delivery of goods, urge that late transplanting of evergreens is preferable to early.

PRUNING RASPBERRIES.

March 28.—We have been pruning and tying up the canes of our black cap raspberries to-day. This operation is necessary to insure large and clean fruit. If the long, slender canes were left unpruned there would be a great number of berries, but of large or medium size, consequently, by cutting back the canes one-third to one-half the length, the size of the fruit upon the remaining portion will be enough larger to make the yield in measure equal to what it would be if the canes were left intact, besides large berries are more juicy and better in flavor than small ones. If the cultivator practices summer pinching of the young growing canes and laterals, less spring pruning will be necessary; but generally the cultivator of such fruits is too busy with other work in summer to give much time to such operations, hence it goes over to the usual season of pruning.

I went out among my raspberries this morning, expecting to order the destruction of the larger part of the plants of all the black cap sorts, for I have no use for a hundredth part of the fruit annually produced in my garden, even with the help of all the birds, which are always welcome, and help themselves very liberally, but the winter has been mild, and the plants looked so fresh, healthy and vigorous, that I concluded to let them stand another season.

How it is that so many farmers, and other people who have land on which to grow such things, have no berries, or, at most, a very short supply from their gardens, is beyond my comprehension, for of all the cheap and easily produced articles in temperate climates, the small fruits are unsurpassed. It is no wonder that they are so often a drug in the market, because raised with such ease and abundance. After pruning the plants in spring it is well to top-dress them with manure, unless growing in very rich soil. Large and fine fruit, like large and fine cattle, are only to be obtained by corresponding liberal feed.

DO BEES GATHER, OR MAKE HONEY?

I notice that Prof. CHAS. V. RILEY, the eminent entomologist of Missouri, has asked apiarians the above question, and now awaits their reply. It seems an odd kind of a question to ask after so much has been written on aplaculture, still it is an open one, and I expect to see some curious answers. Perhaps it will be settled on old SOLON ROBINSON'S theory that "nobody knows anything positive about anything."

Such questions as this about honey do good in leading people to observe, read and study up a subject which they might otherwise pass over without giving it a thought. Prof. RILEY claims that bees *make* honey, and, of course, it is different from the crude saccharine substances gathered by the bees from flowers. It has long been claimed that the honey of mountainous districts is higher flavored than those of low, and the honey gathered in spring better than that of autumn. It is also claimed that young swarms make better honey than old ones. If this be true it looks very much as though bees made honey instead of simply gathering it. They may hastily store up sugar when given them in liquid form without changing its character, but it is a question if this could be truly called honey. But with the two mooted questions now up for discussion, viz., "Do bees make or gather honey? and can or do bees puncture the skin of peaches, grapes and other fruits and then suck out their juice?" there is a chance for some lively talk the coming season.

Arboricultural.

TREES ON "HIGH, DRY, WINDY PRAIRIES."

Your "Gentleman near New York City" does not exactly hit the mark in respect to tree-planting on "Western high, dry, windy prairies." Having lived on these prairies, in Nebraska, for the last four years, not so very far from your Kansas inquirer, and being somewhat extensively engaged in tree-planting, I have some opportunities of knowing something about the matter.

NO TROUBLE IN RAISING TREES.

There is here no inherent uncongeniality to trees and tree-culture. Your "Gentleman near New York" seems to share in some degree the views of Prof. WHITNEY of New Haven, who some years since maintained that prairie soil lacked elements, or at least an element, essential to tree growth. He failed to specify what it was, but surmised that it consisted, at least partially, in "the extreme fineness of the particles of the soil."

But the Professor's views, and those also of your "Gentlemen near New York," so far from being confirmed, are flatly contradicted by the experience of every homesteader and tree grower on these "high, dry, windy prairies." Trees *are* raised here, and as easily as in any other part of the country whatever, and that settles the question;—the proof of the pudding is always in the eating. I am raising trees by the ten thousand, with less labor and expense than any man can raise them anywhere outside of the "Western high, dry, windy prairies."

NO MYSTERY.

It is deemed a mystery by our Eastern readers why, if there is here no uncongeniality to trees, they do not therefore grow more extensively on these prairies. But there is no mystery to any common-sense observer on the ground. One thing sufficiently and clearly accounts for it—it is *fire!*

The annual prairie fires render trees a simple impossibility by destroying the seeds that get scattered, and even the young trees that spring up here and there between the yearly burnings. There is no wonder about it to a man with his eyes open and his wits about him.

The only wonder is that any trees have escaped the destruction of the fire. And yet, all along the streams, where moisture prevents the burning, and on more barren places, not producing vegetation enough to burn, trees are growing and increasing at a very considerable rate. When we speak of an increase of rain-fall being induced by an increase of trees, many say, "That is impossible, since there are not yet planted forests enough to produce any noticeable results." But the fact is that Nature herself is constantly and gradually increasing tree-growth in this prairie country—at points where streams, or canons, or "draws," or other agencies, obstruct the advance of fire.

OBSTACLES.

I said there is no "inherent" uncongeniality. Still there are peculiar obstacles. The principal are winter winds and summer heat—the former killing some of the tenderer deciduous trees, and the latter "burning out" some of the tenderer evergreens. And yet the list of trees that for these causes do not grow well here is not longer than that in other places that, for local reasons, do not flourish. Besides, in process of time, when trees that do prosper here are generally raised, both of these obstacles will disappear. Groves will both break the winter winds and moderate the staring summer heat.

INDIGENOUS TREES.

These prairies have indigenous to them some of the best trees to be found in the whole catalogue of our dendrology. There is the cottonwood, the box elder, the ash, the maple, the black and white walnut, the oak, the elm, the red cedar, and in some places the yellow pine.

The cottonwood has been depreciated far below what it justly merits, and it will eventually compel an estimation far above that in which it is now held. The Creator could not well make a tree better adapted for the commencement of a tree plantation on these prairies. It is hardy, quick of growth, easy to propagate, sure to grow, and, if properly handled, produces a dense, high grove in an almost unprecedentedly short time, admirable for fencing if properly treated, and for fuel, for frame timber and general farm purposes.

The box elder is esteemed at the East as an ornamental tree. Here it is that and much more. It also is indigenous, hardy, of quick growth, good for wind-breaks and for timber, easily grown, and is almost equal to the hard maple as a sugar tree.

Of the other trees I need not speak. They are too well known and universally appreciated, and they can all be grown here as easily as anywhere else—many of them much more easily.

HOW TO GROW THEM.

Cottonwoods generally grow well from cuttings, providing the cuttings are in good condition when planted. The more vigorous the shoot from which they are cut the better. Cut them 8 to 10 inches long, just as the sap is swelling the buds, put them speedily into the ground, and they will seldom fail to grow.

They may be planted be a person striking a spade down the length of its blade, shoving the handle forward, so as to leave space behind it, and then shove the cutting down into this space, withdraw the spade and step immediately in front of the cutting, so as to press the ground closely around it. They may also be dropped into a shallow furrow and covered with a plow. In this case the ground should afterward be rolled, so as to press the earth close around them. It is not certain but this is the better way.

But cottonwoods seed themselves readily on the sand bars along all the rivers and streams in these parts. They can, when one and two years old, be easily pulled up with the hand—a thousand an hour—costing nothing but the pulling up and conveying to the point desired. They can be planted in a manner similar to the cuttings. If one does not live near one of these streams, he can get seedlings from some one who does, without the intervention of any nurseryman.

Box elder and ash are best propagated from the seed, which ripens in the fall, but does not generally drop to the ground until spring. It may be gathered any time before it falls and planted in nursery rows in the spring, to be set out where they are to grow the next spring.

Black walnut and butternut are best planted where they are to grow, immediately after the falling of the nuts and without "shucking" them. Drop them in furrows, as the land is plowed, four to six feet apart each way, covering with the plow. Sometimes they will not all come up until a year from the following spring. They do not transplant well. Acorns may be planted in the same way—as indeed may also ash and box elder.

All these young trees need cultivating for the first two or three years. A good plan is to plant corn with them, especially the first year. The shade of the corn is a help to the trees and the trees do not injure the corn, and the crop amply pays for the first plowing and the after cultivation.

Our Kansas friend doesn't want to put his cuttings out in a bed, but where they are to grow—doesn't want to apply to "nurserymen," as Nature has provided a better and more abundant supply than they have or can. He *had* better get seeds of box elder, ash, walnut and oak and plant them himself.

The fact really is that "A Gentleman near New York" is not very well qualified to give advice about Western tree-planting, without a Western experience. A. D. WILLIAMS.

Kenesaw, Neb.

REMARKS ON THE ABOVE.—I like a good, generous criticism, but fear that my critic in this instance has presumed upon knowledge which he does not possess. Reversing the order of his remarks, I must ask him how he learned that the "Gentleman near New York" is "not qualified to give advice about Western tree-planting," and how he happens to know that the said Gent. has not had "Western experience?" Would it be impossible for a man to reside at the present time "near New York" and at some previous period on the prairies or elsewhere?

Now, the advice which I gave my Kansas correspondent is just the kind which I think he needs, and it was not given at random, without "Western experience" in the business, and for the purpose of soothing the feelings of Mr. WILLIAMS I will say that my first visit west of the Mississippi occurred twenty-nine years ago last September, and that I have not only had more than twice four years of practical horticultural experience in the West, but have "leafed" about frequently, and recently, over the prairies and plains from Texas to Nebraska and West to Utah. I therefore claim the right to at least guess how forest tree-planting might be safely conducted on the plains.

If there is "no trouble in rearing trees," it is very strange that so many fail and are constantly seeking advice. My critic also says that it is "deemed a mystery by your Eastern people why, if there is no uncongeniality to trees," &c. But in this he is mistaken again, for it is plain as a "pikestaff" to any one who has passed over the plains from Omaha to Cheyenne, or from St. Louis to Denver, why trees thrive in some localities and not in others. Few persons of experience, I think, will agree with you in undervaluing nursery-grown trees, or of transplanting once or twice before finally planting where the tree is to grow to maturity. Cottonwood will answer as a makeshift at the start, but in intrinsic value it is the very lowest in the scale, just a little better than nothing for timber or fuel. Because you are near timber and get the various kinds of trees from the native forests, it does not follow that everybody else is as favorably located, and hence my advice to those differently situated to purchase the young seedlings from the nurseries instead of trying to raise them, unless they have had experience in such matters.

DAILY RURAL LIFE.

Patrons of Husbandry.

NATIONAL GRANGE AMENDMENTS.

THE Master of the National Grange has issued a proclamation announcing that Nos. one, three, four, five, six, seven, ten, thirteen and fourteen of the Amendments proposed at the meeting of the National Grange have been ratified by three-fourths of the State Granges and are now part of the National Constitution. The amendments which have been adopted are summarized as follows:

1. Amend the preamble under the head of "State Grange," by substituting the following for section 1:

"Section 1. *Fifth Degree.* Pomona (Hope). Composed of Masters and past Masters of sub-Granges, and their wives who are matrons; provided, that past Masters and their wives who are matrons shall be honorary members, eligible to office, but not entitled to vote, and provided that when the number of subordinate Granges in any State becomes so great as to render it necessary, the State Grange may, in such manner as it may determine, reduce its representatives by providing for the election of a certain proportion of those entitled to membership in the State Grange from each county, and the members so chosen shall constitute the voting members of the State Grange."

3. Amend the Constitution under the head of "Orginazation of State Granges," in the fourth line of pages, by striking out the words "not to exceed three."

4. Amend the preamble to the Constitution under the head "National Grange" by inserting between the words "Master" and "of," where they occur in the second line of said paragraph, the words "past Masters and their wives," and also by adding at the close of said paragraph the words following to wit:—"Provided that only those members of the National Grange, who are Masters of State Granges, and their wives who are matrons, shall be entitled to vote therein; and provided further, that past Masters and their wives who have taken the degree of Pomona, and all former members of the National Grange, shall be honorary members of the National Grange, eligible to office therein, but shall not be entitled to vote."

5. Amend article 1, section 1, of the Constitution by inserting the word "district" between the words "state" and "on," where they occur in the second line of said section.

6. Amend article 1, section 2, of the constitution, by inserting between the words "practicable" and "on," where they occur in the fourth line of said section, the words following, to wit: "In the district grange annually at such time as each district Grange may determine."

7. Amend article 1, section 2, of the Constitution by striking out the word "three," where it occurs in the sixth line of said section, and inserting in lieu thereof the word "two."

Amend article 5 by adding the following after the word "refunded," in the seventh line of said article:—"And no petition shall be received from a rejected applicant until six months shall have elapsed after such rejection."

13. Amend article 7, section 3, of the Constitution, by striking out the word "ten," where it occurs in the third line of said section, and inserting in lieu thereof the word "thirty."

14. Amend article 8, section 7, of the Constitution by striking out the word "one," where it occurs in the first line of said section, and inserting in lieu thereof the word "two."

Domestic Economy.

MENDING TIN WARE, AGAIN.

In the Rural of Feb. 19, page 123, I read an article upon this subject. In my younger days I learned a trade requiring the nicest use of the soldering-iron, so called, though the iron is or should be copper. I always do our own soldering of every description, and considerable for the neighbors. A satisfactory soldering-iron will cost (at hardware store) half a dollar or more—one costing much less will not hold heat long enough. To do good work the soldering-iron must be kept well tinned at the point or where it is to come in contact with the work. To tin the iron proceed as follows: Take a brick and hollow one side about the size and shape, but a little deeper than the bowl of a tablespoon. Fill this place half full (or more) of pulverized rosin. The "iron" should have four equal faces, tapering gradually to a point. With a middling coarse file brighten the faces of the iron to the point.

Now heat the iron, but *never* let it get red hot. By holding it near your cheek you will soon learn when it is hot enough. When heated, wipe the faces quickly on an old cotton cloth slightly wet, then with it melt enough tinman's solder to fully fill the bowl of a large teaspoon, letting the solder as it melts drop into the cavity of the brick with the rosin. Now plunge the iron into this melted solder and rosin, rubbing it violently back and forth—first in and then out. The brick will keep the face bright till the solder adheres to it. Keep rubbing all four of the sides till each is thoroughly tinned. If any spots of the iron refuse to take the tin, brighten the same with the file while the iron is hot and then rub it in the cavity. To prepare the fluid spoken of in former article, drop small pieces of zinc into the muriatic acid, one at a time, waiting till each is dissolved, and keep adding till the acid will dissolve no more.

For soldering tinware, it is far better to scrape the tin bright and apply pulverized rosin than to use the liquid, but if the tin is worn off then the liquid must be used. Its use, however, rapidly corrodes the soldering-iron, which will have to be filed again before it can be tinned. Red heat also takes the tinning off. To scrape your work, use an old three-cornered file, ground sharp towards the point. Keep the brick for future use. Always wipe the iron after heating to remove ashes, etc. M. P. P.

ORIGINAL RECIPES, ETC.

To Cook Beans.—When beans are kept over a year or more they become rather difficult to cook tender. One way to accomplish it is to soak them over night in soft water, and in the morning put them to boil, putting a quarter of a teaspoonful of soda into the water. The water must be turned off as soon as it boils, and changed two or three times. Have a teakettle of boiling water ready to cover them when the other is poured off, as cold water hardens them again. After they begin to crack open they should be put in the oven, with a piece of pork previously freshened, and water enough to keep them from burning, and bake a couple of hours. Beans are a healthful and convenient dish and should often appear on a farmer's table, being as good or better when cold than they are when just cooked.

Bean Porridge.—When the beans are skimmed from the kettle to be put baking, leave a teacupful or more of the beans in the kettle. Set the kettle on the top of the stove where the beans will slowly cook fine. Then season the broth with sufficient salt, pepper and butter, to make it relish, and, with good Graham bread, it makes a soup fit for a king or a dyspeptic.

Fruit Cans.—Those who have emptied their fruit cans of their first contents, and are fortunate enough to have green apples, may now fill them with apple sauce for future use. Flavored with lemon or black raspberries, and put up hot, like other fruit, this sauce is preferable to good dried apples. Some chop cabbage fine and pack tightly in glass cans, covering it with cold cider vinegar, seal them up, and find them an excellent resource when the warmer season comes on. It keeps well in this way. —Farmer's Wife.

Ginger Bread.—I send a good recipe for ginger bread:—one pint molasses, one-half cup butter, one-half cup sour milk, two teaspoonfuls ginger, one of soda, two eggs, four cups flour.—F. W.

Hard Soap.—Will some one give, through the Rural, a good recipe for making hard soap, such as the grocers keep for sale?—F. W.

SELECTED RECIPES.

Fried Chicken.—Cut a cold chicken into small joints and put them in a deep dish, covering them with some chopped parsley, onion, salt, pepper, and a little salad oil, and squeeze over all the juice of a lemon; let the chicken remain in this three or four hours, turning the pieces every now and then; then take them out, dredge each piece with flour and fry them. Pile high on a dish, and pour a good gravy sauce, seasoned, and flavored with sweet herbs, around it.

Meat and Rusk Puddings.—Chop any kind of cold meat with salt pork or ham, season it well with butter, pepper and salt, and add two or three beaten eggs. Then make alternate layers of wet rusk crumbs, with milk, or cold boiled hominy or rice, and bake half or three quarters of an hour. Let the upper layer be crumbs, and cover with a plate while baking, and when nearly done take it off to brown the top.

To Cook Oatmeal, Etc.—In cooking oatmeal, hominy, wheaten grits, cracked wheat, or any of those nice breakfast dishes, cook it in a covered tin dish set in a kettle of boiling water; in this manner there is no danger of scorching. Cornstarch pudding, sea-moss, farina, and all other articles mixed with milk, can be cooked in the same way.

Cheap Curtains.—One of the most agreeable materials for curtaining windows is coarse unbleached cotton. The irregularity of the thread and the roughness of the surface gives its soft folds much the charm of a Russia crash, and its hue warms the light of cool, north windows almost to the glow of sunshine.—*Housekeeper.*

Cranberry Roll. Stew a quart of cranberries in sufficient water to keep them from burning. Make it very sweet, strain and cool. Make a paste, and when the cranberry is cold, spread it on the paste about an inch thick, roll it, tie it close in a flannel cloth, boil two hours, and serve with a sweet sauce.

Rye and Indian Mush.—Use two parts rather coarse corn meal and one part rye meal, stirring in the corn meal first and cooking awhile if desired, then adding the rye meal, stirring very carefully; cover close and cook slowly one hour or more.

Hygienic Information.

GOOD REMEDIES.

Mr. Editor:—I send you some well tried remedies. Having tested them, I know them to be good:

To Cure White Swelling or Scrofula.—Scrape common elder bark, bitter sweet, mullein leaves—equal parts. Boil together in a little water; then put in a little golden seal. Stew all in fresh butter and mutton tallow, equal parts, until well done. Then strain and put back in pot, and put in beeswax and pine tar. Stew them all together. For use, spread on a cloth and apply as a poultice.

For Sore Eyes.—Take two tablespoonfuls honey, teaspoonful salt, tincture of balsam buds, one tablespoonful, teaspoonful gum pine. Make a paste and put it over the eyes. A thin cloth to go on the eyes first.—A Farmer's Wife.

Cure for Croup.—A piece of lard as big as a butternut, rubbed up with sugar, divided into three parts and given at intervals of 20 minutes. —B. C.

Cure for Toothache.—Take a lump of lime as large as a hickory nut, put it in a quart bottle of water, and rinse the mouth with it frequently. —B. C.

THE TRANSFUSION OF BLOOD.

A Phila. correspondent writes:—"I saw lately a letter written by Charles Reade to a young lady medical student of this city. She had written to him inquiring about the case of transfusion of blood mentioned in his novel, 'Griffith Gaunt.' He replied that the instance was a real one, and gave the particulars of the occurrence, also citing several authorities that mentioned similar cases. He said that when 'Griffith Gaunt' first appeared he was assailed by many members of the medical profession who did not believe in the transfusion of blood, and accused him of perverting the facts of science in his desire to be sensational. He concluded by saying that in defending his position he had become deeply interested in the study of medicine, and desired his correspondent, with whose professional aspirations he had much sympathy, to keep him posted regarding her researches on this particular subject, and her general progress and success in her profession."

TOO MUCH MEDICINE.

Some one, writing on the excessive use of medicine and the recuperating power of Nature, says:—It would be utterly impossible to tell how many constitutions have been impaired, how many digestions ruined, how many complexions spoiled, and how many purses emptied, through medicine. What is that you say—that a stitch in time saves nine, and that the right medicine quickly taken averts danger? Very likely. I quite believe that. But in ninety-nine cases out of a hundred, where is the danger? and what is the emergency of the case? Medicine is often the precursor of after misery; and the poor constitution has to pay dearly for its medicinal fillip. The wiser philosophy of the present day is gradually delivering us from these potent perils. Nature has a self-righting power within her; there is a kind of vis-medicatrix in the physical frame. Treat the body kindly; let as much pure air as possible get to the lungs, and as much fresh water as possible be applied to the flesh, and as much healthy exercise as duty permits be given to the muscles, and early rising as circumstances allow be afforded for the recruitment of the brain, and then medicine will be a very avoidable affair.

APOLEXY AND INTOXICATION.

The British Medical Journal speaks of the difficulty often existing in distinguishing between intoxication and fatal apoplexy. Apoplexy from cerebral hemorrage imitates not only the comatose stage of drunkenness, but occasionally the "uproarious" form, when the drunkard seems determined to show what can be done in the line of noise. A recent case exemplifies this remark. A gentleman was found lying in the gutter by a policeman, and as the gentleman sang "Tommy, make way for your uncle," and also said part of the Lord's prayer, he was supposed to be drunk, and was taken to the police office. Later on, as he seemed to be in a fit, he was sent to a hospital, and died there next morning of apoplexy from disease of the brain. Dr. Hughling Jackson has recorded the case of a man who, during fatal coma, elaborately twirled his mustache. It was afterwards found that this was a very common trick of his.

ANTIDOTE FOR RATTLESNAKE BITE.

A writer in the St. Augustine (Fla.) Press says that a post-office agent traveling in Texas, tells of the successful use of the gall of a rattlesnake as an antidote for the bite of that reptile. In the case spoken of relief was almost instantaneous to the patient, who was writhing in paroxysms of great pain, rapidly swelling and becoming purple. A friend of the writer, who had spent several years in California and New Mexico, saw the same remedy successfully used among the Indians in the latter country. In one instance an Indian's dog near the camp was bitten in the nose by a large rattlesnake. The Indians immediately opened the reptile and administered the gall. The cure was rapid and effectual.

Around the Republic.

SOUTHERN MISSISSIPPI.

Having visited the South every year for four successive seasons, and having given considerable attention to the climate, resources and possibilities of the country, I venture to offer the Rural a few thoughts which may be suggestive to persons seeking homes.

Last year I spent several weeks in Pike Co., Miss., one of the southern tier of counties; and this year I have repeated the sojourn with increased pleasure and with confirmed good opinion of this part of the State. This is the region of the long-leafed pine, immense forests of which spread over the highlands between the rivers. The bottom lands along the Bogue-Chitto (a branch of Pearl River), the Topisaw and other streams in Pike and adjoining Counties, are rich as prairies, and far more inviting to agriculturists. The timber along the water courses consists principally of beech, oak, magnolia, gum, cypress, etc., with considerable hickory and some walnut. The forests afford ample material for the manufacture of agricultural implements, wagons, cabinet organs and other wares which must soon be in great demand all over the South. The splendid pines are the delight of builders and carpenters, and stand waiting the ax and saw. The lumber obtained here is of the best quality, and the variety sufficient for all practical purposes.

The climate along this belt of latitude is delicious. There is just enough saltness in the Gulf breezes which stir through the pine forests, to breathe health and wholesomeness over the land; and the sun is so clear and the air so pure that malaria is unknown. Indeed, persons seriously affected by pulmonary diseases, by a few months' residence at McComb City, Summit, or Magnolia, (on the railroad which runs north from New Orleans to Chicago, and directly through this elevated region of Southern Mississippi,) have become robust and strong again. One or two striking cases of this kind have come under my personal observation, and I speak from facts in hand. Snow is rarely seen in Pike County, and ice seldom forms to a greater thickness than an eighth of an inch in the coldest weather. Garden vegetables may be grown almost the year round, and strawberries have ripened here nine months in the year. There is a tonic in the atmosphere which is refreshing to persons accustomed to the extremes of heat and cold in the North. Although in midsummer days there are more hours of heat, the thermometer seldom rises to 100, while the nights are usually breezy and cool. It has been hotter on July days in Minnesota than in Mississippi!

This country is full of promise to the immigrant. These broad, rich acres of cotton land, bordered by abundant timber and traversed by living streams, are lying waste, waiting for the hand of intelligent industry. Far westward the best lands are being taken—the tide of emigration has swept up to the thin sage-brush barrens which verge the Rocky Mountains; but here, southward, are vast regions of richer soil and grander possibilities, which need only to be seen to be secured and developed. On the Bogue-Chitto bottoms are farms of hundreds—and in some cases thousands—of acres, which can be bought for seven to ten dollars per acre, where, in one or two years, the cotton crop alone would more than pay the entire purchase prices. There is one farm six miles from the railroad—a beautiful situation—2,300 acres, about one half in timber. The balance is good fencing, with comfortable dwellings, cotton gin, barns, etc., which is in the market at $12,000. Last year's cotton crop netted $4,800, to say nothing of the corn and other productions. It is owned by an aged gentleman who wishes to retire and who does not care to manage the negro laborers. Other farms of similar features and productiveness are for sale for similar reasons. Such opportunities for investment of means and employment of skilled labor I have nowhere else found in the country, and I have been over the ground several times from Maine to California and from Michigan to the Gulf of Mexico.

It is the desire of the Southern people to have white settlers from the North. Nobody is more welcome here—all political comments to the contrary notwithstanding—than the industrious Yankee who comes with his means, his family and his ingenuity, to aid in developing this country. There is room for every honest worker. The old citizens are anxious for the new order of husbandry—for the era of drills, subsoilers, reapers and threshers. These over-large and ragged-edged plantations need to be divided into farms of manageable dimensions—to have deeper plowing, straighter fencing, orcharding, clovering, grassing; in short, the radical reconstruction of an Improved Agriculture, rather than the annoyance of itinerating speculators and political reconstructers.

I have been in the rural districts, among the out-of-the-way planters and old residents of Mississippi, and I have found but one sentiment on this subject:—It is hearty welcome to every immigrant who comes to stay, to work, to join interests and hopes and responsibilities with the common people. And there are no prejudices here against the negro which need crowd him to the wall. There is a disposition to give the black man a chance, to educate him to an intelligent appreciation of his privileges as a voter and a citizen, and in every effort to elevate the colored race by school and church and State, the native Southerner is ready to advise, to help, and to abide the results.

I am sure the Rural, which I have read and enjoyed for twenty years, will allow me to make these statements in the interest of this section of our country; for among your readers, Mr. Editor, may be many who are thinking of homes in the West or South, and who, if here, might become factors in a commonwealth which, in a few years, would excel even New England for thrift, for culture, and for congenial society. I dare not permit my pen to express my own enthusiasm touching this subject, lest I might perchance, create discontent among farmers who are already comfortably located, and who had better remain where they are; but to all who seek more land, a more congenial climate, a new society, and new productions, with an almost certain prospect of rich returns for every investment of money and labor, I am sure Southern Mississippi offers inducements which are worthy of candid consideration. And all this I say the more freely, since I have no personal interest in the matter, my own business being of such character as to hold me in the North; but to the young man who wishes a pleasant home in a productive land and who is willing to cast his lot in a State which is sure to emerge from present comparative obscurity and confusion into the might and majesty of a redeemed Commonwealth, I point with good conscience to Southern Mississippi.

Persons who desire facts about soil, productions, climate or other points, may do well to address Col. M. B. Hillyard, McComb City, Miss., who is a Christian gentleman whom I have known for some time, and whose word is authority. Alexander Clark.

THE RURAL HOME'S "SOUR MILK."

ON Feb. 26 the Rural Home made an outrageously false charge against the Dairy Editor of the RURAL NEW-YORKER, in this—that there had been a "marked omission" of Mr. ARNOLD's addresses at dairy conventions "in every report where Mr. ARNOLD has taken part which the R. N.-Y. *has printed of late years*."

In our reply we called the attention of the Editor of the Rural Home to a report of the Pennsylvania Dairymen's Convention in January last, where Mr. ARNOLD is mentioned in these columns in very complimentary terms. Convicted of his misstatement, the Editor of the Rural Home complains that the report in question was not made by the Dairy Editor of this paper, and he again reiterates the charge from this point. We now call the attention of the Rural Home to *our* report of the American Dairymen's Association, printed in the RURAL NEW-YORKER of Feb. 5, 1876, in which there is a brief abstract of Mr. ARNOLD's address, and we say again that this was made by the Dairy Editor of the RURAL NEW-YORKER, and appears in good, plain type in our columns *only twenty-one days* previous to the R. H.'s sweeping and wholesale misrepresentation of our "*omitting to notice*," and which the Editor then falsely charges to jealousy of Mr. ARNOLD. In all the conventions this year in which we have been present with Mr. ARNOLD he has been noticed in these columns, either by ourselves or others, with the exception of the Vermont meeting, at which we were not present on the first day, and at which we heard *no* address and only a few brief remarks of no particular importance, and which were called out in answer to questions. We did not report the complimentary resolutions because we believed, and have been informed, they were questionably got up, and upon this we stand ready to be corrected, if wrong, by those who know. We did not say, or *imply*, as the Rural Home has it, that Mr. A. was not invited to that meeting. The Rural Home is now forced to admit that Mr. A. gave no formal address, but says he made an "*off-hand*" *address* on "curing cheese." This, we suppose, was one of Mr. A.'s short answers to questions propounded and now claimed as an address, for we are informed by an officer of the Vermont Dairymen's Association that Mr. ARNOLD *did not* make an address at the Vermont meeting.

Of the conventions of 1875, we were present at three in company with Mr. A., and at two of these he gave no formal address, and for the third he is noticed in the RURAL NEW-YORKER. In 1874 the Dairy Editor of the RURAL NEW-YORKER noticed Mr. ARNOLD in the RURAL of Jan. 10, in the RURAL of Feb. 21, and in the RURAL of March 14, giving quite full abstracts of his addresses. We have named the papers, so that the sapient editor of the R. H. can refer to them at leisure and cogitate over his *false statements* that we have ignored Mr. A. "in the RURAL for years past."

Now, after this showing, what can be said of the very astute Rural Home and its editor, who has thus wantonly falsified facts and made an entirely unprovoked attack upon us?—making charges upon us which he cannot sustain—charges the object of which, it is apparent, are for the purpose of injuring us and to help a *personal* object of his own.

We have no space in the columns of the RURAL NEW-YORKER to devote to personal matters of this character, but we have felt compelled to show that this brazen charge of "jealousy," made by the Rural Home, is utterly false and without a shadow of foundation. After these misrepresentations from the Rural Home, the public need not be surprised at any misstatements made through the HOPKINS and ARNOLD organ.—X. A. W.

HIRING FARM HELP.

PRIVATE letters from Western New York say that the wages of farm hands open much lower this spring than for several seasons past. From $16 to $20 per month and board seems to be the usual price this year. This reduction is a natural result of the very unfavorable outcome of last year's operations, and is what we may have expected. Fewer potatoes and other hoed crops will be grown, and in every possible way farmers will try to reduce expenses of hired labor. The effort to do this has already resulted in a reduction of wages which on many farms would constitute a considerable item of profit if the same amount of help was hired as last year. Yet in the great majority of cases less will be hired and the saving to farmers will be both ways.

Is this the wisest policy? We know very well that farmers are less disposed to hire help under the gloomy outlook based on last year's failures than when everybody is hopeful, wages are high, and all are hiring largely. Yet it is altogether probable that now is a more favorable time to hire than for several seasons past—better possibly than we may have again in years to come. Odd jobs of underdraining and the like can be better undertaken the coming summer with a low rate of wages than in ordinary times. For those who have not money to spare for such work, it is equally probably that extensive farming operations, cropping and manuring will pay fully as well the coming year as usual. Low wages indicate that farm work next summer is to be generally conducted on a reduced scale. Fewer crops will be put in, or they will be less carefully and thoroughly cultivated. The chances are that all farm crops, being grown in smaller quantities than usual, will command higher than average prices. With lower wages of help and a fair season, those who crop largely the coming year will be apt to make a hit. It is a rule with some shrewd farmers to plant or sow largely of "cheap seed." It would seem to be an equally wise dictate of prudence to hire a good deal of help and get a large amount of work done when wages are low. With good crops and prices next season, wages will probably be considerably higher next spring, and then rather than now will be a good time to hesitate about employing much labor.

RURAL NOTES AND QUERIES.

Paying the National Debt.—A man in Cincinnati has forwarded to Sec'y BRISTOW at Washington, a letter in which he carefully incloses a dollar bill. He is not a whisky distiller nor a thief of any kind. The dollar is not "conscience money," sometimes returned by penitent defrauders. On the contrary, this man solemnly avers that he does not owe Uncle SAM a cent, but sends this dollar as a nucleus to a fund which will, in time, pay the National debt. We hate awfully to discourage such patriotic enterprise; but it is a solemn fact that money "given" for any purpose is quite as apt to do more hurt than good. Paying the National debt by private subscription is no exception. If half a dozen men or women should forward their dollars to Washington, we should straightway be told that it was absolutely necessary to put this patriotic fund under a new Department, with a Secretary or Commissioner to take charge of it and a Chief Clerk to give orders to a dozen assistant clerks, who would, in time, make the payment of five or six dollars on the National debt at a cost to the Treasury of eight or ten to twenty thousand dollars. The mania for making useless offices will far outrun the zeal of any private enterprise in sending money to Washington. In fact, we apprehend that the best way to pay the National debt is to send less money rather than more, to Washington. Less money will compel greater economy, and in these hard times it is a great deal easier as well as better every way, to save money than to make it. This rule is just as good for governments as for private individuals.

The Centennial Corn Premiums.—The circular giving details of the premiums offered by Mr. WILSON and others for corn is now ready and will be sent to all applicants. It is unavoidably crowded out of the RURAL NEW-YORKER this week, but will be published by us on April 15. It includes 130 premiums, ranging from $10 to $100, included in which are 10 premiums of $100 each for the ten best experiments in growing corn with commercial fertilizers, which is included for Granges and clubs. There is a great deal of interest among farmers in these corn premiums, and we look, not only for lively competition, but the discovery of many important and practical facts in corn culture. Without doubt, private enterprise can manage this business better than the State; but the public benefits to all parts of our country from this competitive study of the best methods of growing and feeding corn will be worth many times the two thousand dollars in premiums by which it is secured.

Vermont Merino Sheep Breeders' Association—is the title of an organization formed at a recent adjourned meeting of Vermont wool growers held at Middlebury, following the one noticed in the RURAL of the 25th ult. The object of the Association, as stated in the report of a committee previously appointed to prepare a Constitution, is, "In its own sphere, and in co-operation with other similar associations in other States, to preserve the purity of the Spanish Merino race of sheep, encourage their further improvement, and, as a means to these ends, to provide for the registration of the histories and pedigrees of the flocks of Spanish Merino sheep in Vermont and elsewhere." The constitution of the Association is similar to that of the Ohio one organized for like purposes. The following board of officers was elected for 1876: President—N. T. SPRAGUE, Jr., Brandon. Vice-Pres't's.—S. S. Rockwell, Cornwall; George Campbell, Westminster. Secretary—Albert Chapman, Middlebury. Treas.—Charles D. Lane, Cornwall. Directors—E. N. Bissell, Shoreham; L. P. Clark, Addison; J. H. Mead, West Rutland; A. E. Perkins, Pomfret. Committee on Pedigrees—W. R. Remele, Middlebury; J. T. Stickney, Shoreham; J. J. Crane, Bridport.

A New Cotton Planter.—There have been many attempts to adapt machinery to cotton planting and nearly as many failures. A decade ago a clergyman-farmer of Western New York invented a cotton planter which seemed to do the work well but for some reason—perhaps the lack of means or enterprise, or both, to introduce it—it did not prove a success. Recently some one has been more fortunate, for we read that the ordinary horse grain-drill has been modified so that it may be used in planting cotton seed precisely as it now plants corn and other grains. The modification consists of an apparatus in the box carrying the seed, whereby the cotton seed is continually shaken or agitated, and the sticking together of the seeds, caused by their fibrous covering, prevented, so that they find their way singly into the planting-drills. This planter has all the advantages of the best grain-drills, and may be used with or without the mixture of fertilizing materials with the seeds. If we mistake not this is also the invention of a Western New-Yorker.

Death of Rysdyk's Hambletonian.—The world-renowned stallion known as Rysdyk's Hambletonian—the sire of Dexter and other famous trotters—died at Chester, Orange Co., N. Y., on the 26th ultimo. The income from Hambletonian was over $10,000 a year, and it is said that at one time $100,000 was offered for him. He was nearly 30 years old. About 27 years ago he was bought for $150 from the SEELEY family, at Sugar Loaf, Orange County. Before Mr. RYSDYK's death, he selected a place where the old horse was to be buried in a fenced-in lot, with appropriate headstone. He left a clause in his will, that under no circumstances should the horse's remains be mutilated after death. Two offers were made after his death, one of $500 and one of $1,000, for Hambletonian's hide, for the purpose of preserving the horse in his natural shape; but the offers were refused by the RYSDYK family. The famous horse was buried with honors, and his remains will be undisturbed.

The Pennsylvania Dairymens' Association will hold a meeting at Union City, Pa., on Wednesday, April 12, 1876. Among the papers to be read at this meeting we notice the following: Testing milk at cheese factories, by S. SORRENSEN of Meadville; What are the characteristics of the best cheese and how is such cheese made, by J. M. BIGGER, Cambridge; Influence of a Board of Trade, by M. H. TERRY, Waterford; Cheese exhibit at the Centennial, by D. W. TITUS, Phillipsville; Local influences as affecting quality of dairy products, H. C. GREENE, Meadville; Butter making, by S. E. KINCAID of Wayne. A discussion will be had on the subject, "Are manufacturing rates too high." Affirmative—Dr. GRAY of Cambridge; Negative—S. A. FARRINGTON, Cambridge. The Pennsylvania Association is a live society, and the meeting will, without doubt, be one of interest.

"The James Islander."—This is the name of a new paper, soon to be issued by Bro. O. H. KELLEY, Secretary of the National Grange. The first number will be ready on the 15th of April, and it will be largely devoted to the interests of Florida, from one locality of which it takes its name. For the present it will be issued monthly, in editions of 10,000 and 20,000 each, for distribution in the North. The people of the Southern States, and especially of Florida, may be sure that their interests and advantages will receive more effective care than ever before, as Secretary KELLEY is bound to make a success of everything which he undertakes.

New York State and the Centennial Dairy Display.—A bill has been introduced in the Assembly by Hon. M. A. MCKEE of Herkimer, appropriating from the State the sum of $8,000 to pay necessary expenses incident to a complete representation of the dairy system and dairy products of the State of New York at the Centennial Exhibition at Philadelphia. M. FOLSOM of New York City, JOHN SHATTUCK of Norwich and JOSIAH SHULL of Ilion, are named as a special Centennial Board for the State of New York to co-operate with the Centennial Commission.

On the Wrong Track.—The American Agriculturist years ago earned the name, "The Ishmael of the Agricultural Press." This position seems to have been not altogether comfortable. Judging from its mean attack on the late Buffalo Live Stock Journal, consolidated last month with its namesake of Chicago, our neighbor seems to have adopted the profession of a ghoul. In this safe field we wish it all the enjoyment it craves. It had better take care however not to run foul of the National Live Stock Journal of Chicago, which is not its kind of game.

Centennial Poet.—Mr. BAYARD TAYLOR, journalist and traveler, has been selected as Poet of the Centennial Exhibition in place of Mr. LONGFELLOW, who declined. The selection is a good one. Mr. TAYLOR is a many-sided man, and writing a poem is one of the many things he can do well. The thousands who will hear the poem read, and the many millions more who will only read it, have a rich treat in prospect in the ode for our country's Centennial anniversary.

Mushrooms.—The Florida Agriculturist says: There are acres of natural mushroom beds on the Caloosahatchee River, in this State, and of the finest quality. At certain seasons of the year, when the water is low, they spring up in sufficient quantities to serve all the sauce-makers in the world. Why should it not pay some one to set up a factory to manufacture it? There is money in this for some one.

RURAL BREVITIES.

UTAH lost 4,000 cattle by the recent snow.

THE hog cholera continues to prevail in Central Illinois.

MRS. GEORGE DOOLITTLE of Oriskany Falls, N. Y., has ripe strawberries grown in the house.

A CREAM cheese factory at Vernon, N. Y., has started with quite a large number of patrons.

A FARMER in Canaan, Vt., never heard until a few weeks ago that wood-ashes were valuable as a fertilizer.

THE German Government intends appointing as members of its jury at the Philadelphia Exhibition leading industrialists like KRUPP and BORSIG.

JONES of Binghamton dodged into our office just as we were going to press. Of course we are obliged to suspend all journalistic operations and devote our whole time and energies to protecting ourselves. JONES, stay away and stick to selling skates!

B. M. HAINES of the Hudson River Nurseries, at Malden-on-the-Hudson, sends us his catalogue of trees and plants for the Spring of 1876. Mr. H.'s specialty is small fruits, strawberries, raspberries, etc., of which he has the newest and most approved varieties.

THE letter of Rev. Dr. ALEX. CLARK from and about Southern Mississippi, in this paper, will interest many of our readers who are looking South for homes. Dr. CLARK is editor of the Methodist Recorder, Pittsburgh, Pa., and a gentleman of veracity and intelligence.

THE Nebraska Agricultural Society offered premiums for essays on sheep breeding and sugar-beet culture. Students of the Agricultural College won two of the three premiums offered. These were for $100 and $60, and were taken by Harvey Culbertson and G. H. Simmons.

THE one answer which it will entirely become the Rural Home to make to the RURAL NEW-YORKER's proofs of its misstatements is a confession by its Editor of willful falsification. Until he does this all he can say will go for naught, and the public will have reason to discredit his statements on other questions where his supposed interests or prejudices are involved.

ONE of the editors of the Rural Home makes some pretensions as a poet. It seems from his misstatements about the Dairy Editor of the RURAL NEW-YORKER, as exposed in this No., that poet HOPKINS relies mainly on fancy and imagination for his statement of fact. With a willful and convicted falsifier it is not worth while to have any further controversy, and we herewith drop him.

MORE than forty of the leading dairymen and dealers in dairy produce of Illinois have sent a protest to the Centennial Dairy Committee against the appointment of Mr. ARNOLD as Juror. They say it is vitally important to the success of the test that jurors should be competent men, and have practical experience in dairy products and say very plainly that Mr. ARNOLD lacks this qualification.

AFTER writing an article recommending the purchase of trees from nurserymen as being cheaper and better than for farmers to grow young trees themselves, we took up the RURAL NEW-YORKER and saw an advertisement of Messrs. RICHARDSON & KELSEY of Geneva, N. Y., offering peach trees, budded, all the best sorts and 4 to 6 ft. high, for only six dollars per hundred. If any farmer thinks he can raise peach trees and bud them cheaper than that, we are quite sure he is mistaken.

IT is no disparagement of Mr. ARNOLD to say that he is not qualified to act as an expert in judging dairy products. He has not had the practical experience in the dairy needed to give such qualification. DOGBERRY said that reading and writing came by nature; but we never before heard of any one who thought that knowledge of butter and cheese could come otherwise than by practically dealing with them. Considering his lack of experience, Mr. A. is very interesting as a theorizer on dairy matters, and suggests the idea that he might be really instructive if he had sufficient information on which to base his speculations.

BUSINESS NOTICES.

A Cough, Cold or Sore Throat requires immediate attention, as neglect oftentimes results in some incurable Lung Disease. "*Brown's Bronchial Troches*" will almost invariably give relief.

THE best house painters prefer Eckstein, Hills & Co.'s **"Phœnix" brand Pure White Lead** to any other in the market, because it is whiter, finer, and will cover more surface.

WINTER AND SPRING.

BY RUNE BLUFF.

"I AM old: it is time for me to go,"
Sighed Winter, lad his steps were slow,
And he stopped to rest near a bank of snow.

Along the sunny hills was seen
Bright Spring, in robe of fairy green,
With its shifting lights and satin sheen.

She hastened forward to the place,
A golden halo of tender grace
Shining about her lovely face.

Over him bending gently there,
With her hands so full of snow-drops fair,
She scattered them in his hoary hair.

She beckoned a robin with ruddy breast,
And whispered, "O birdie, sing your best,
And lull the tired old man to rest."

The Story-Teller.

JESSIE'S TEST.

MISS JERUSHA JENKINSON folded her napkin with slow, precise carefulness, and then followed her pretty little hostess from the dining-room back to the parlor, where the soft astral lamp glowed like a silver moon, and the illuminated stove made red shadows on the brown-red easy chair in which Miss Jenkinson ensconced herself.

"I really don't know what to do about it, Miss Jerusha. If I once thought Rich was guilty of such indiscretions as you declare he is, I do believe I should—die!"

Jessie Wintrinham winked away a suspicious brightness from her pretty curling brown lashes, and looked eagerly at her guest's sarcastic countenance.

"I dare say there are a great many people who would say I was very officious, my dear, because I tell you what I think of that good-looking husband of yours. But I feel I have your interest at heart, and if no one else has the courage and charity to point out to a wife of half a year the goings on of her husband—why, my dear Mrs. Wintrinham, I'll stand by you and take your part."

Her solemn words made little shivers of vague terror thrill all over Jessie.

"I dare say you are kind indeed, Miss Jerusha, only I can't believe that Rich is such a flirt as you say—always paying such exclusive attention to ladies when he is away from home."

"You must think just what you please, my dear. Only I suppose if you were to see for yourself, you would believe the evidence of your own eyes?"

Jessie's slightly flushed cheeks betrayed the painful interest she felt.

"Of course, if I were to see——"

Miss Jerusha arose triumphantly.

"Then all you have to do is to take my advice, and the next time Mr. Wintrinham has such very important business in New York, do you go by the same train, with your waterproof and a thick veil to disguise you. I must go now, I think, my dear. I'll have to stop at poor Mrs. Delacon's and hear if she has heard from that runaway daughter of hers. Thanks for the early cup of tea you made so nicely—and don't forget what I told you, Miss Wintrinham."

And the abominable old gossip went her way, leaving the arrows of the distrust she had thrown rankling painfully in poor, loving, jealous Jessie's heart.

She perfectly adored her handsome young husband; and as always such passionate affection is accompanied by jealousy, this otherwise sensible little woman found it no difficult matter to entertain the doubt her guest expressed.

Rich was so handsome, so stylish, so gallant—why should not ladies enjoy his attentions? And, sitting by the cosy fire, waiting until her husband should come in for his dinner, Jessie almost decided to play the spy upon him at the earliest moment.

Then, when she heard his latch-key in the door and his quick, firm tread in the hall, and saw his handsome, cheerful face as he took her cheeks in his hands to kiss her, she felt ashamed and confused.

"I am afraid I shall have to hurry you, dear," he said, linking her arm through his and leading the way to the dining-room where the bright light made a genial glow on silver, crystal, and snow-white china."

"Hurry me Rich—how?"

"I have to take the 7.30 train very unexpectedly for the city on important business that cannot be delayed. I shall be at home to-morrow night, I expect. Jessie, will you have another piece of the black meat?"

Mrs. Wintrinham toyed with her chicken, her appetite entirely destroyed by the news Rich announced.

"On important business." Yes, that was what Miss Jenkinson had said. And the night train, too! It flashed hotly across Jessie's mind that her husband was going down to the theater and, if what Miss Jerusha had said was true, not alone.

That second decided her; and, as Mr. Wintrinham arose from the dinner table, he little knew the thoughts that were thronging in his pretty little wife's head.

"Don't be lonesome, darling, will you? Or shall I stop and tell Florrie to come up to-night?"

Jessie laughed a little forcedly.

"You over-anxious fellow! What do I want of sister Florrie? I shall not be lonely at all."

"Brave little woman! kiss me good-night then, dear."

He was so kind and thoughtful; and Jessie's fond, foolish heart almost misgave her as she watched him off.

"It is downright wicked to distrust him; but then, it is just these elegant, fascinating men who are so agreeable to other women beside their wives—at least Miss Jerusha says so, and she's old enough to know."

She watched the ivory hands of the cuckoo clock hastening toward 7.30.

"Well, I shall do it—this once anyhow."

And she went to her room with sparkling eyes and glowing cheeks.

"Is this seat engaged, sir?"

It was a low, sweet voice that addressed Mr. Richmond Wintrinham, as the 7.30 train steamed on, after calling at the last station before reaching the Jersey City terminus.

Mr. Wintrinham arose courteously, glanced at the small, graceful figure in navy-blue waterproof and double veil.

"Take the seat by the window, madam."

She glided in, and Mr. Wintrinham sat down beside her, all unconscious of the sidelong glance from a pair of eager eyes under the veil.

"How handsome he is! and he hasn't the least idea who I am."

For of course it was Jessie who had taken the train at the same station with Rich, but had waited until the last station had been reached before she changed her seat in the car for the one now occupied.

"I wonder if he does know me? Of course he doesn't, only he don't seem very eager to say anything to me." Then a little fragrantly perfumed handkerchief fluttered accidentally (?) to the floor.

Jessie made a deceitful little dive after it, displaying her daintily-kidded hand and round, neatly-cuffed wrist.

Rich quickly anticipated her and handed the handkerchief quietly to her.

"Allow me, madam."

"O, thank you! I am sorry to trouble you so much. I was very awkward."

Jessie's cheeks were blushing furiously under her double dark-brown veil.

"I will give him a chance anyhow," she thought.

But Mr. Wintrinham only bowed gravely and maintained a courteous silence.

The train slowed up and Jessie, with persistent determination to draw him into conversation, made a faint alarm that amused herself as she peered out of the window, then at her seat-mate.

"What are we stopping for? This isn't a station—oh! is anything the matter?"

Rich smiled—this little woman was such an odd one.

"There is no need of apprehension, madam. We are entering the tunnel."

"The tunnel! O, dear, *the tunnel!*"

But Rich didn't "take" at all. He only settled cosily back and slouched his seal-skin hat on his forehead, leaving his companion to fight the imaginary terrors of the tunnel as best she might.

The train had come to its final stand-still at the depot, and just as Wintrinham arose to leave the car, he felt a timid touch of fingers on his coat sleeve.

"Please pardon me—but—but there is a ferry-boat to cross in—isn't there? and if you would be so kind as to tell which way it is to the St. Julian Hotel?"

Rich buttoned up his overcoat deliberately while she spoke.

"The St. Julian? I am going there myself, madam. If you are unaccompanied, I will see you there. This way please."

At last! Jessie's cheeks were as hot as fire now, and her eyes bright as stars, as she walked through the long depot and ferry-house beside her husband. In the ladies' cabin Rich gave her a seat, then left her to join a group of gentlemen who were conversing near the door, and at the New York dock he escorted her to a St. Julian transfer coach, much as if she had been a child in his charge, whom he was bound to do his duty by, and yet considered somewhat of a nuisance. As it happened, the coach had other passengers, so that the hot color had time to die from out Jessie's face, although she mentally regarded him "a darling, provoking fellow."

"If you please, sir, an answer is wanted."

One of the waiters at the St. Julian handed a tiny note-let to Mr. Wintrinham just after that gentleman had inspected the arrangements of his room and was settled down for a half hour's examination of sundry papers in his memorandum book.

"An answer—a letter for?—O, yes, from Ned Hathaway, about the shares——"

His eyes opened widely as he carelessly tore it open to find, not a business communication from Ned Hathaway, but a dainty little note, in a graceful flowing back hand:

"To the gentleman in the Seal-skin Cap:—You made me desire to see you again. Is there not time to attend the theater?

"YOUR LADY ADMIRER."

Rich drew a long breath of surprise.

"So that's the little game, is it?"

Then he rapidly wrote an answer and dispatched it by the man, who grinned knowingly as he received a twenty-five cent stamp from Jessie's trembling fingers.

"Now, then, I've caught him this time. Suppose he consents——"

The ebbing color on her cheeks, the quivering of her pretty mouth, was ample evidence of the state of her feelings; and she opened the sealed envelope as one does a telegram—trying to assure one's self nothing is amiss, and yet, feeling it necessary to be prepared for the worst:

"Permit the 'Gentleman in the Seal-skin Cap' to offer a word of counsel to the 'Lady Admirer'—that, in future, when she learns to distinguish between a gentleman and a scamp, and when she returns home—which had better be at once—she confesses her imprudence to her mother."

Jessie gave a little cry of delight.

"Rich, my own true Rich."

The dinner-table was in readiness. Deliciously-suggestive odors of turtle-soup and egg-plant came from the regions where Jessie Wintrinham's incomparable cook reigned supreme; and in the lace and damask-draped bay window Mrs. Wintrinham waited for her husband's coming home, with her sweet face all sunny welcome, that made him feel what a bonny darling she was as he kissed her before even he removed his seal-skin cap.

"And how have you got along, Jessie? Were you lonely last night?"

She blushed a little as she helped him off with his overcoat.

"No, not at all. Indeed, I've had an unusual time."

"That's good. Had any company?"

"Yes; Flo and her lover were here to lunch this noon. Rich, I think Mr. Addison is just perfectly splendid."

He frowned in pretended horror.

"You think Flo's beau perfectly splendid! Very well, Mrs. Wintrinham, if you wish me to be jealous."

"If that makes you jealous, what will you say when I tell you I have had a letter from a gentleman since you've been gone—a handsomer man than even Mr. Addison."

Jessie watched him closely, her eyes beginning to dim of not far-distant tears.

"You did! I dare say I can see it?"

He was smiling very little, as a distrustful husband would do.

Jessie slipped a half-sheet of paper from her pocket and gave it to him, her lip half trembling, yet half smiling. He opened it carelessly, then looked at her in amazement.

"Why, what on earth, Jessie? Why, I wrote this letter."

"Yes, I know you did—O, Rich!"

She was almost crying now, and her husband was looking so gravely at her. She pointed to a navy-blue waterproof and brown veil lying across a chair.

"It was I, Rich. I knew it was awfully wicked, but—but I wanted to know if it was true, you know, and——"

Mr. Wintrinham knit his browns, frowningly. "I am not sure I understand yet. Jessie did you send me that letter last night? Were *you* my 'Lady Admirer' on the train and at the St. Julian?"

She laid her hands on his shoulder and looked in his eyes penitently.

"Don't scold, Rich. It was I, and my little escapade has made me very happy, for all I knew I was very cruel to do such a thing. You may punish me in any way you please, Rich."

She said it meekly, but with such love and pride in her eyes that he would have been less than Rich Wintrinham to have censured her. So he drew her head down to his breast and kissed her while she promised never to be so foolish again.

A MERRY RIDE.—(See Page 239.)

DEB.

THE solemn Androscoggin bell was ringing the mill girls in by broad sunlight one noon, when there came a knock at the door, and behind it the young lady of whom I board. Deb was startled by the knock and frightened by the young lady. It was not often that visitors came to Brick Alley, and it was still less often that Brick Alley had a visitor who knocked.

This was a young lady for whom Deb's mother did the washing. Deb's mother wiped her hands and placed a chair and the young lady sat down. She was a straight lady, with strong feet, and long, brown feathers in her hat and soft, brown gloves upon her hand. She had come, she said, with that Cluny set, which she found she should need for a party this very night; indeed, she was in so much haste for it that she had hunted Deb's mother up—which was a matter of some difficulty—as she never had the least idea where she lived before and how crooked the stairs were! But the lace was very yellow, as she saw, and would she be sure to have it done by nine o'clock to-night? and——

And then, turning her head suddenly, the straight young lady saw poor, crooked Deb in her high chair, with wonder in her eyes.

"I wonder if I frightened her?" thought Deb. But she only wondered and did not speak.

"Is this your——"

"Yes," said Deb's mother, "the eldest. Fifteen. I'll try my best, ma'am; but I don't know as I ought to promise."

She spoke in a business-like tone, and turned the Cluny lace—a dainty collar and a pair of soft cuffs—about in her hands in a business-like way. A breath of some kind of scented wood struck in a little gust against Deb's face. She wondered how people could

weave sweet smells into a piece of lace and if the young lady knew; or if she knew how much pleasanter it was than the onions that Mrs. McMahoney cooked for dinner every day in the week but Sunday, upon the first floor. But it gave her quite enough to do to wonder without speaking.

"Fifteen!" repeated the young lady, standing up very straight and looking very sorry. "How long has she been—like—that?"

"Born so," said Deb's mother. "She's jest set in that chair ever since she's been big enough to set at all. Would you try gum on these, miss?"

"But you never told me you had a crippled child!" The young lady said this quickly. "You have washed for me three years, and you never told me you had a crippled child!"

"You never asked me, miss," said Deb's mother.

The young lady made no reply. She came and sat down on the edge of Deb's bed, close beside Deb's chair. She seemed to have forgotten all about her Cluny lace. She took Deb's hand up between her two soft, brown gloves, and her long brown feathers dropped and touched Deb's cheek. Deb hardly breathed, the feathers and the gloves, and the sweet smells of scented wood, and the young lady's sorry eyes—such very sorry eyes—were so close to the high chair.

"Fifteen years!" repeated the young lady, very low, "in that chair—that nobody ever—poor little girl! But you could ride," she said suddenly.

"I don't know ma'am," said Deb. "I never saw anybody ride but the grocer and the baker. I ain't like the grocer and the baker."

"You could be lifted, I mean," said the young lady, eagerly. "There is somebody who lifts you?"

"Mother sets me generally," said Deb. "Once, when she was very bad with a lame ankle, Jim McMahoney set me. He's first floor—Jim McMahoney."

"I shall be back here," said the young lady, still speaking very quickly, but speaking to Deb's mother now, "in just an hour. I shall come in an easy sleigh, with warm robes. If you will have your daughter ready to take a ride with me I shall be very much obliged to you."

The young lady finished her sentence as if she didn't know what to say, and so said the truest thing she could think of, which is what we are all in danger of doing at times.

"Well, I'm sure!" said Deb's mother, "Dabitra, tell the lady——"

But Dabitra could not tell the lady, for she was already out of the door, and down stairs and away into the street. And, indeed, Deb would not have told the lady—has never told the lady—can never tell the lady.

If all the blue summer skies, and the gold of summer sunlight, and the shine of summer stars fell down into your hands at once for you to paint the scrap-book with, should you know what to say? Into the poor little scrap-book of Deb's life the colors of heaven dropped and blinded her on that bewildering, beautiful, blessed ride.

In just an hour the sleigh was there, with the easiest cushions and warmest robes, and bells—the merriest bells!—and the straight young lady. And Jim McMahoney was there, and he carried her down stairs to "set" her. And her mother was there, and wrapped her all about in an old red shawl, for Deb had no "things" like other little girls. The young lady remembered that, and she brought the prettiest little white hood Deb had ever seen, and Deb's face looked like a day-lily bud in the shining wool, but Deb could not be that. And Mrs. McMahoney was there, paring onions at the door, to wish her good luck; and all the little McMahoneys were there, and all the children who did not wonder, and the grocer turned in at the alley corner, and the baker stopped as he turned out, and everybody stood and smiled to see her start. The white horse pawed the snow, and held up his head—Deb had never seen such a horse—and the young lady had gathered the reins into her brown gloves, and the sleigh-bells cried for joy—how they cried!—and away they went, and Deb was out of the alley in a minute, and the people in the alley hurrahed, and hurrahed, and hurrahed, to see her go.

That bewildering, beautiful, blessed ride! How warm the little white hood was! How the cushions sank beneath her, and the fur robes opened like feathers to the touch of her poor, thin hands; How the bells sang to her, and the snowdrifts blinked at her, and the icicles, and the slated roofs, and sky, and the people's faces smiled at her.

"What's the matter?" asked the young lady; for Deb drew the great wolf's robe over her face and head, and sat so for a minute still and hidden. The young lady thought she was frightened.

"But I only want to cry a little," said Deb's little, smothered voice. "I must cry a little first!"

When she had cried a little she held up her head, and the shine of her pretty white hood grew faint beside the shine of her eyes and her cheeks. That bewildering, beautiful, blessed ride!

Streets and a crowd and church spires were in it—yes, and a wedding and a funeral, too—all things that Deb had seen in her high chair in the day-time with her eyes shut she saw in the sleigh on that ride with her eyes opened wide.

She was very still. The young lady did not talk to her, and she did not talk to the young lady. The horse held up his head. He seemed to Deb to be flying. She thought that he must be like the awful beautiful white horse in Revelation. She felt as if he could take her to Heaven just as well as not, if the young lady's brown gloves should only pull the rein that way.

They rode and rode—in and out of the merry streets, through and through the singing bells, about and about the great church spires—all over, and over, and over the laughing town. They rode to the river and the young lady stopped the white horse, so that Deb could look across and up and down the shining stream and the shining banks.

"There is so much of it," said Deb, very softly, thinking of the crack of it that she had seen between two houses for fifteen years. For the crack seemed to be very much like fifteen years in a high-chair, and the long, broad-shouldered, silver river seemed to her very much like this world about which she had wondered.

They rode to the mills, and Deb trembled to look up at their frowning walls and to meet their hundred eyes; but some of the girls who wore the little pink bows, and who knew her, came nodding to look down out of them, and she left off trembling to laugh; then, in a minute, she trembled again, for, all at once, without any warning, the great Androscoggin bell pealed the time just over her head and swallowed her up in sound. She turned pale with delighted terror, and then she flushed with terrified delight.

Did it pray, or cry, or laugh? Deb did not know. It seemed to her that if the white horse would carry her into the great heart of that bell she need never sit in a high-chair at a window again, but ride and ride with the young lady. It seemed to her like forever and forever.

They turned away from Androscoggin without speaking, and rode and rode. Daylight dimmed and dusk dropped, and see! all the town is ablaze with lights. Deb could not speak—there were so many lights.

And still she could not speak when they rode into Brick Alley, and Jim McMahoney and her mother, and the children who did not wonder, came out to meet her and take her back to her chair.

She was too happy to speak. She need never wonder any more. She could remember.

But the young lady did not want her to speak. She touched her white horse and was gone in a minute; and when Androscoggin bell rung them both to sleep that night—for the young lady forgot to ask for her Cluny, and she was too tired to go to the party—I am sure I cannot tell which was the happier, she or Deb.—*Elizabeth Stuart Phelps.*

FLOWERS IN LIBERIA.

Most of the African flowers differ from those of temperate climates in three striking characteristics, viz., brilliancy of color, luxuriancy of growth, and in emitting their odor after sunset.

The last peculiarity has been admirably described by Moore, in speaking of that lovely native of India—the fragrant jasmine:

"The flowers that wake while others sleep,
The timid jasmine buds, that keep
Their fragrance to themselves all day,
But when the sunlight drives away
Let their delicious secret out."

A rare and very beautiful species of the jasmine grows in our African forests. The bushes sometimes rise to the hight of ten feet, and are densely covered with large pinnate, oval leaves. The starry white flowers, with bright pink stems, (clustered on what botanists term a cyme,) raise their delicate heads in striking contrast with the heavy masses of glossy, dark green leaves. Their fragrance is delightful. If we happen to awaken at night in a room where a sprig of this odorous flower has dropped, we are almost inclined to imagine that, instead of the dreadful malaria we strive so much to keep out,

"The sweet south wind
That breathes upon a bank of violets,
Stealing and giving odor,"

has, by some miraculous means, penetrated our closely-shut African chambers. Most aptly did the ancients call this sweet flower the "odorous Violet."

So much has been written about the majestic lilies of the tropics that it is only necessary to say that many finer varieties flourish on our coast. Perhaps the most remarkable of these is the white chandelier lily, so called from having six narrow petals, four inches long, pendent from beneath, and six stamens, an inch shorter, growing out of the margin of a delicate, funnel-shaped corolla.

The Acacia Mimosa, said to be a native of the Nile, is a beautiful but fragile looking tree, from fifteen to twenty feet high, with small yellow flowers peeping out from among its branches of fine, sensitive leaves, and giving forth a most delicious fragrance.

In passing through the forests we are continually struck by the number and variety of luxuriant vines, so closely interwoven with the branches of tall trees as to form a complete canopy. Most of them are covered with small white flowers, apparently almost too delicate to touch.

Many of the flower-bearing shrubs of temperate climes when transplanted here attain to the hight of trees. Some years since a member of our mission brought across the Atlantic a small cutting of the Oleander, from which has sprung a number of stately trees. Some in the garden at Cavalla have already grown full twenty feet high, and are almost constantly covered with double pink flowers, which, for richness and beauty, surpass anything we have ever seen. A lovely sight it is to see these magnificent trees circled by birds of brilliant plumage.

Enough has been said to convince our readers that flowers, so appropriately styled "the smiles of God," have not been withheld from this land of moral darkness. We earnestly pray that the day may come when these beautiful gifts of our Heavenly Father may be appreciated by a redeemed and enlightened people, and that Africa, *spiritually*, as well as naturally, may "rejoice and blossom as the rose."—*West African Record.*

BARNUM AS A YOUNG LOVER.

That was a big book P. T. Barnum wrote about himself. It is very complete, too, but there is one little incident which he either forgot to mention, or which got pied when the forms went to press. It occurred when the great showman was a young man and a resident of this section. He was paying impetuous attention to a lady living in Newton. Being a son of poor but honest parents, he was obliged to walk over to the village which contained his adored, on the Sunday nights he visited her. When there he labored under another and more awkward disadvantage. The young lady's father conceived a singular and most violent dislike of the amiable embryotic showman. This necessitated extreme caution on the part of the lover, and he was equal to the emergency, as a matter of course. His ingress to the house was by a window on the second floor, which he reached by springing from the cover of a cistern curb, and catching hold of the window ledge. His egress was effected by hanging full length from the ledge and then dropping to the cistern cover, a fall of about six inches.

On Sunday he took with him on the visit a young man who now carries his silver hairs behind a Danbury grocery counter. They reached the place, the young lady saw the signal, opened the window and the famous Barnum sprung up into bliss. The young man was to amuse himself about the village until the time of departure. He amused himself. It don't seem possible that any one could be so brutal, but that young man actually removed the cover of the cistern. Then he sat down by the fence and ate currants, and calmly waited for the result. P. T. finished his sparking, and backed out of the window the full length his hands would permit.

"Good-by," he gasped in a whisper, as he prepared to drop.

"Good-by, Phinny," she whispered back. Then he let go, and instantly shot from sight into the yawning abyss of darkness and rain water, and if he had been of solid iron, heated to a white glow, he could not have created more of a commotion in striking the water. It is not necessary to repeat what Mr. Barnum said, both when crawling out of the cistern and during the eight miles' walk home, but shortly after he became a Universalist. —*Danbury News.*

HOW MERIT WAS REWARDED.

Kassim Pasha, when Minister of War for Egypt, was very particular as to the personal appearance of his officers, and issued stringent orders that they should never appear unshaved in public. One day he met in the street a lieutenant who had "bearded" the Pasha and disregarded his order.

"To what regiment do you belong?" demanded the indignant minister.

"To the —— Regiment at Abasseuh," replied the frightened lieutenant.

"Get into my carriage at once, so that I may carry you to the encampment and have you publicly punished," was the stern command which followed.

The young man obeyed, and the twain rode along gloomily enough for some time, when the Pasha stopped his carriage and entered a shop for a few moments to make some trifling purchase. Seizing the opportunity, the culprit sprang from the vehicle, darted into a barber's stall, and, minus his beard, regained his post before the return of his jailer. For the remainder of the route the officer buried his face in his hands and seemed the picture of apprehension. Abassueh was at length reached, and all the officers were assembled to witness the degradation of their comrade, who all the while kept well in the rear of the minister.

"Come forward, you son of a dog!" cried the irate Pasha, when there stepped before him an officer with a face as devoid of hair as a baby's and a look of supreme innocence.

His excellency gave a long look of blank astonishment, and then, with an appreciative smile breaking over his war-worn features, turned to the assembled officers and said:

"Here, gentlemen, your old minister is a fool, and your young lieutenant is a captain!"

A SINGULAR SERMON.

Four gentlemen and an old minister were assailed on the highway by three robbers who demanded and took possession of their funds. The old minister pleaded very hard to be allowed a little money as he was on his way to pay a bill in London. The highwaymen being generous fellows gave him all his money back again on condition of his preaching them a sermon. Accordingly they retired a little distance from the highway, and the minister addressed them as follows:

Gentlemen, you are the most like the old apostles of any men in the world, for they were wanderers upon the earth, and so are you; they had neither lands nor tenements that they could call their own, neither, I presume, have you; they were despised of all but those of their own profession, and so, I believe, are you; they were unalterably fixed in the principles they professed, and I dare swear so are you; they were often hurried into jails and prisons, all of which suffering, I presume have been undergone by you; their profession brought them all to untimely deaths, and if you continue in your course, such will be your end. But in this point you differ mightily; for the apostles ascended from a tree into heaven, where, I am afraid, you will never come; but as their deaths were compensated with eternal glory; yours will be rewarded with eternal shame and misery unless you mend your manners.

Sabbath Reading.

THE WAY WE GROW OLD.

A broken toy: a task that held away
A yearning child-heart from an hour of play;
A Christmas that no Christmas idols brought;
A tangled lesson, full of tangled thought;
A homesick boy; a senior gowned and wise;
A glimpse of life, when lo! the curtains rise
Fold over fold,
And hangs the picture, like a boundless sea—
The world, all action and reality—
So we grow old.

A wedding, and a tender wife's caress;
A prattling babe the parents' life to bless;
A home of joys and cares in equal part;
A dreary watching with a heavy heart;
And Death's dread angel knocking at the gate,
And Hope and Courage bidding Sorrow wait
Or lose her hold;
A new-made grave, and then a brave return
To where the fires of life triumphant burn—
So we grow old.

A fortune and a gen'rous need of fame,
Or direful ruin and a tarnished name,
A slipping off of week and month and year,
Faster and faster as the close draws near;
A grief to-day, and with to-morrow's light,
A pleasure that transforms the sullen night
From lead to gold;
A chilling winter of unchanging storm;
A spring replete with dawns and sunsets warm—
So we grow old.

Old to ourselves, but children yet to be
In the strange cities of eternity.

[*N. Y. Evening Post.*

NR. MOODY ON LOVE.

From a sermon on "Love," recently delivered by Mr. Moody at the Hippodrome in this city, we take the following:

I have often thought I wouldn't have but one text; if I thought I could make the world only believe that God is love, I would only take that text and go up and down the earth trying to counteract what Satan has been telling them—that God is not love. He has made the world believe it effectually. It would not take twenty-four hours to make the world come to God if you could only make them believe God is love. If you can really make a man believe you love him, you have won him; and if I could only make people really believe that God loves them, what a rush we would see for the Kingdom of God! Oh, how they would rush in! But man has got a false idea about God, and he will not believe that He is a God of love. It is because he don't know Him.

Now, in Paul's farewell letter to the Corinthians in the 13 chapter, 2d Corinthians, he says, "Finally, brethren, farewell. Be perfect. Be of good comfort. Be of one mind. Live in peace, and the God of love"—he calls Him the God of love—"and peace shall be with you." Then John, who was better acquainted with Christ, telling us about the love God has for this perishing world, writes in this epistle in the evening of his life these words: "Beloved, let us love one another, for love is of God, and every one that loveth is born of God and knoweth God, and he that loveth not knoweth not God, for God is love." We built a church in Chicago a few years ago, and we were so anxious to make people believe God is love that we thought if we could not preach it into their hearts we would burn it in, and so right over the pulpit we had the words put in gas jets, "God is love," and every night we had it there. A man going along there one night glanced in through the door and saw the text. He was a poor prodigal, and he passed on, and as he walked away he said to himself, "God is love? No. God is not love. God does not love me. He does not love me, for I am a poor, miserable sinner. If God was love, He would love me. God is not love." Yet there the text was, burning down into his soul. And he went on a little ways further, and turned around and came back and went into the meeting. He didn't hear what the sermon was, but the text got into his heart, and that is what we want. It is of very little account what men say, if God's word only gets into the heart. And he stayed after the meeting, and I found him there weeping like a child; but as I unfolded the Scripture and told him how God had loved him from his earliest childhood all along, the light of the Gospel broke into his mind, and he went away rejoicing. This would be the best meeting to-day we have had yet, if we could only make this audience believe that God is love.

PHYSICAL BENEFIT OF SUNDAY.

Sunday is God's special present to the working man, and one of his chief objects is to prolong his life, and preserve efficient his working tone. In the vital system it works like a compensation pend; it replenishes the spirit, the elasticity and vigor, which the last six days have drained away, and supplies the force which is to fill the six days succeeding; and in the economy of existence it answers the same purpose as in the economy of income is answered by a savings bank. The frugal man who puts away a pound to-day, and another pound next month, and who in a quiet way is putting by his stated pound from time to time, when he grows old and frail gets not only the same pounds back again, but a good many pounds besides. And the conscientious man, who husbands one day of his existence every week—who, instead of allowing Sunday to be trampled and torn in the hurry and scramble of life, treasures it up—the Lord of Sunday keeps it for him, and in length of days the halo of age gives it back with usury. The savings bank of human exisence is the weekly Sunday.

Ladies' Portfolio.

THE OLD LOG HOUSE.

BY WILL M'K.

THERE'S an old log house on my father's farm,
All silent, and lonely, and still.
Not a sound of mirth is ever heard, now,
In the old log house on the hill.

But fondly I think of the bygone days,
Where, with brothers and sisters dear,
Not a happier home, in the country 'round,
Could be found, either far or near.

But my father builded another house,
And my brothers are gone afar;
And the old log house is deserted now,
And defaced with many a scar.

The rabbit and squirrel play hide-and-seek
With the mice o'er the oaken floor;
But they quickly beat a hasty retreat,
When the owl flies in at the door.

The "twittering swallow" now builds its nest
On the rafters, going to decay;
And the robin and sparrow have made their house
On the logs for many a day.

The little room, where my brothers and I
Oft listened to the weird whip-poor-will,
Is open, now, to the birds and the bats,
And they come there without fear of ill.

But poor-will is miss'd from his nightly seat
On the apple tree near the door—
For there's no one there to answer him back,
As we've done a thousand times o'er.

The primroses bloom uncared for now,
And the "blue-eyed-violets" blow;
And the cottage rose, that my sisters lov'd,
Climbs in at the casement low,

As if it would ask, "Where are they all gone,
That used once to caress and to love
Us poor flowers, neglected now
In the rank weeds that o'er us rove?"

But the friendly vine, on the old black logs,
Still clings there, loving and true,
As if it would hide the marks of decay
From the passing traveler's view.

O, my heart still clings to the dear old home,
And the times of my childhood there!
And, I'd rather live o'er those blessed days,
Than to dwell in a palace fair.

Pittsburgh, Pa., March, 1876.

WHIFFS FROM CANADA.

No. II.—The Herb Garden and Its Labors.

EARLY in the season, after the vegetable seeds are sown, we prepare a seed bed where we sow the herbs used for culinary purposes, and a few simples as medicine. The seed is sown rather thick, lightly covered, and rolled. After the early peas are staked and earthed up for the last time we take advantage of a shower to transplant our herbs between the rows, and when the ground is cleared of the first crop and the debris carried away, a one-horse plow stirs up the soil where peas have been and leaves us a fresh-growing crop for the autumn. The work of hoeing round the plants, cutting and drying is easily performed by one of the children, who purchases the seed in spring and takes charge of the plants, reaping the reward in pocket money, which is valued more for being so pleasantly earned.

The best-paying herb crop is Sage: used for its aromatic, carminative and astringent properties medicinally, and as a favorite gargle and embrocation—the first for sore throat and the latter for chronic rheumatism of the joints. It is in good demand by cooks, especially in holiday times, and finds ready sale. Thyme, an herb of milder type, is used very much in dressing fowls. It is of slower growth than Sage, but if not to its full size will stand the winter and be a crop in the spring, growing luxuriantly the second season. Medicinally it is used in cases of obstinate sprains. A small corner is reserved for Saffron, whose golden, thread-like flowers when dried are used as a dye, and often called for by our neighbors as a safe and old-fashioned medicine for babies. But my favorite herb is the Lavender, aromatic and beautiful either in its pale-green leaf or its spikes of delicate flowers that produce a very refreshing perfume. When well grown the flower spikes sell readily to the chemist, and it is always valued as a choice, fragrant and acceptable offering to a friend—not fading like the flowers you may give, but retaining a memory of the giver for many years. How often has the faintest perfume of that flower brought back to me a closed drawer, where are put away the last worn garments, and a fair bright curl, all that remains of one whose unspoken name is enshrined in the deepest recess of a mother's heart! For did I not with fearless grief gather the September flowers of purple lavender to lend its delicate perfume to that drawer, so full of painful memories?

"It whispers of the long ago,
Its love, its loss, its aching woe,
And buried sorrows stir;
And tears like those we shed of old
Roll down our cheeks, as we behold
Our faded lavender."

And so sentiment and sorrow can grow, and flourish even in an herb garden. Nor can one describe, in this short article, the thoughts and feelings, the weavings of fancy and hours of sweetness that are merged in that aromatic spot. The sunshine tans our cheek, the labors of hoe and scissors are enough for the little shoulders that undertake the culture of their choice; but some of the pleasures of independent labor add zest to the work, and let us hope that the old-fashioned virtues associated with the old-fashioned herbs may become the possession of our little herb gatherers. ANNIE L. JACK.

IN ANCIENT TIMES.

IN the wardrobe of a Hebrew lady the most splendid article of clothing was the turban, for those who could afford it. The poor people had to be satisfied with winding a piece of cloth round their head and fixing it as well as they could. The turbans were of various colors, and wound in different ways; some of them were like a high tower. Shoes and stockings were unknown, but soles of leather were fastened with two lachets. The ladies, who carried luxury into every department, and who are supposed, even in the present day, to be far from indifferent to a nice, neat boot, or to elegant slippers, had their shoes, or rather sandals, and their lachets, made of colored leather; dark blue, violet and purple were favorite colors. The ankles were decorated with bracelets of gold or dainty silver chains and rings, with tiny silver bells. Hair nets and head-bands were in great request. The latter were made of gold or silver and worn under the net, extending from one ear to the other. Ear-rings were much thought of; we are told of some that weighed a thousand and seven hundred shekels of gold, and were so large that a man could easily put his hand through them. Some of the women wore several rings with little bells attached to them. They were generally made of horn or silver. But the most popular ring was the nose ring. The left nostril was pierced for the purpose and a ring made of ivory or metal was put through it. Bracelets were favorite ornaments, and were generally worn on the right arm. Some of them were exceedingly large, so that they reached up to the elbow. Rings on the fingers were worn; chains of fine gold, or strings of pearls with little silver balls or small tinkling bells, worn round the neck.

LOVE.

TRUE love is grounded on esteem.—*Buckingham.*

If fun is good, truth is better, and love best of all.—*Thackeray.*

Love me little, love me long.—*Marlow.*

Love seldom haunts the breast where learning lies.—*Pope.*

Hate makes us vehement partisans, but love still more so.—*Goethe.*

In love we are all fools alike.—*Gay.*

Love is the virtue of woman.—*Duderant.*

In love the deceit generally outstrips the distrust.—*Rochefoucauld.*

Where love dwells is paradise.—*Richter.*

Love is precisely to the moral nature what the sun is to the earth.—*Balzac.*

Words of love are works of love.—*Balzac.*

Love as if you should hereafter hate, and hate as if you should hereafter love.—*Chilo.*

When we love we live.—*Congreve.*

Gold does not satisfy love; it must be paid in its own coin.—*Madame Delazy.*

She that is loved is safe.—*Jeremy Taylor.*

How shall I do to love? Believe. How shall I do to believe? Love.—*Leighton.*

Love is an egotism of two.—*A. de la Salle.*

I could not love thee, dear, so much, loved I not honor more.—*Lovelace.*

A BEAUTIFUL PARLOR ORNAMENT.

A BEAUTIFUL ornament for the sitting-room can be made by covering a common glass tumbler with moss, the latter fastened in place by sewing-cotton wound around. Then glue dried moss upon a saucer, into which set the tumbler, filling it and the remaining space in the saucer with loose earth from the woods. Plant the former with a variety of ferns, and the latter with wood violets. On the edge of the grass also plant some of the nameless little evergreen vine, which bears red (scarlet) berries, and whose dark, glossy, ivy-like foliage will trail over the fresh blue and white of the violets with beautiful effect.

Another good plan is to fill a rather deep plate with some of the nameless but beautiful silvery and light green and delicate pink mosses, which are met with in profusion in all swamps and marshes. This can be kept fresh and beautiful as long as it is not neglected to water it profusely once a day. It must, of course, be placed in the shade, or the moss will blanch and die. In the center of this a clump of large azure violets should be placed, adding some curious lichens and pretty fungus growth from the barks of forest trees, and a few cones, shells and pebbles.

TEACH CHILDREN TO SPEAK THE TRUTH.—Children should be taught to speak the truth, to hate a lie, and to be honest. It is unsafe to leave any class of children untaught. It is not for the interest and welfare of the community to do so. It is from the ignorant and the vicious that the pauper and criminal element chiefly comes. That is the burden which others are chiefly taxed to support. It is chiefly from those who have no healthful home training, no church, no family altar, no Sabbath school. There are many who get no correct notions of right and wrong save what they get in school. At home and in the street they learn to lie, to steal, to fight, to get drunk, to use vile language. There, by precept and example they get a knowledge of evil. It is more the duty of society to provide for the right education and proper training of all the children than it is to support the paupers and take care of the criminals. Prevention is better than cure.

Reading for the Young.

SCHOOL-DAYS.

SIXTY little urchins
Coming through the door,
Pushing, crowding, making
A tremendous roar.
Why don't you keep quiet?
Can't you mind the rule?
Bless me, this is pleasant,
Teaching public school.

Sixty little pilgrims
On the road to fame,
If they fail to reach it
Who will be to blame?
High and lowly stations
Birds of every feather—
On a common level
Here are brought together.

Dirty little faces,
Loving little hearts,
Eyes brim full of mischief,
Skilled in all its arts.
That's a precious darling!
What are you about?
"May I pass the water?"
"Please, may I go out?"

Boots and shoes are shuffling,
Slates and books are rattling—
And in the corner yonder
Two pugilists are battling.
Others cutting didoes,
What a botheration!
No wonder we grow crusty
From such association!

A MERRY RIDE.

[SEE ILLUSTRATION ON PAGE 237.]

TOM, ANNIE, and JANE often say in the morning, when their father is going to the city, "Please, father, come home early." Mr. JONES is a very kind father, and loves his little ones very much. He often gives his children a treat; but nothing gives them greater pleasure than having a ride on his back. TOM gets a piece of cord, which he makes into a bridle, and then Mr. JONES trots away round the room, just as you see in the picture. Mrs. JONES sometimes wonders what all the merry noise is about, and when she opens the door the children cry out, "Oh, mother, we are having such a *nice* ride on dear papa's back!"

We reckon many of the young folks of the RURAL circle have kind fathers, who like to play with their children, but don't suppose they all do it in the same way. Some of them, who live in the country, take CHARLIE, MARY, and perhaps FANNY too, along when they go to the village, and all then have a merry ride in a carriage drawn by nice horses. At any rate we hope our young readers, in country, village and city, have many nice rides with their parents and mates, for innocent play gives zest to work and study.

A POTATO STORY WITH A LESSON.

MR. ROCKAWAY, being asked to tell one of his "ten-minute" stories, said:—"If it will content you, I will tell you a story which begins with a bean pole:"

Once there was a bean pole which was stuck into the ground by the side of a potato hill.

"Dear me!" cried a young cabbage growing near, "what a stiff, poky thing that is! And of no earthly use, standing there doing nothing!"

But very soon a scarlet bean, running about in search of something to climb upon, found this same bean pole.

"All right!" cried the happy little bean. "You are the very thing I want. Now I'll begin my summer's work."

"Well, to be sure!" cried the young cabbage. "Everything comes to some use at last; but who would have thought it?"

The scarlet bean was a spry little thing. She ran up that pole just as easy! Being of a lively turn, she began, at last, to make fun of the potato plant.

"How sober you are!" said she. "Why don't you try to brighten up and look more blooming?"

The poor potato plant, though doing her best, could only show a few pale blossoms.

"You don't mean to call those things flowers?" cried the frisky bean. "Just look at my beautiful blossoms!" and she held up a spray of bright scarlet.

The potato kept quiet.

"What stupid, useless things," said young cabbage, "those potato plants are! and how much room they take up!"

Summer passed. The bean began to fill her pods, and proud enough she was of them.

"Why don't you do something?" she cried to the potato plant, down below. "Only see what I've done! There's a summer's work for you!"

And sure enough she had hung her full pods all up and down the pole.

"Yes, why don't you do something?" cried cabbage. "Your summer is gone, and nothing done! Can't you come to a head? Anything but idleness!"

The potato plant still kept quiet. But when digging time came and the hill was opened and the pile of "Long Reds" appeared, her neighbors could hardly believe their senses.

"Dear me, what a surprise!" cried the bean. "So we can't always tell by appearances!"

"I declare!" cried the cabbage, "then you were doing something all that time! But how could I know? There's that bean—she hung her pods up high so everybody could see. Well, well, well! After this, I'll always say of a plant which makes but little show, 'Wait—potatoes inside there, maybe.'"

"There are a great many scarlet beans among the people I know," said Mr. Rockaway, "and some potato plants, too."

"And perhaps a few young cabbage heads," said Uncle Peter, looking slyly around at the children.—*Mrs. Diaz, in St. Nicholas.*

HENRY'S REASON.

"My son, why don't you like to visit Horace Mills? I think he is a very nice boy. His father is one of my best friends, and I would like for you to be sociable with Horace," said Mr. Marrs to his son Henry, a lad of some sixteen summers.

"I do try to treat him well," said Henry.

"Try to treat him well? That sounds as if it was an effort. Come now, my son, is there not a reason for your want of interest in Horace?" said Mr. Marrs.

"To tell the truth, father, I have a reason for not associating more with him; but if you do not mind, I would rather not tell," said Henry.

"I would feel better satisfied if you told me," said his father.

"Well, it is just this—he is not what he seems to you to be. He behaves very well in the company of grown people, but when he is with boys he uses bad language and is selfish. I do not want to be in company with a boy that talks as he does. I have nothing against him, but I can't bear to be in his company because I know so much about him," said Henry.

"That is perfectly satisfactory, my son. I commend you for shunning the society of such a boy. He is the son of good parents, but I am not willing you should be associated with him. I hope, my dear son, that you will always feel as you do now about associating with boys of his class."

Let those who read contrast Henry and Horace; admire the one and shun the habits and example of the latter. Let the boys and girls learn to read character and fall in love with noble traits.

HOW TO BREAK OFF BAD HABITS.

UNDERSTAND the reason, and all the reasons, why the habit is injurious. Study the subject until there is no lingering doubt in your mind. Avoid the places, the persons, and the thoughts that lead to the temptation. Frequent the places, associate with the persons, indulge in the thoughts that lead away from temptation. Keep busy; idleness is the strength of bad habits. Do not give up the struggle when you have broken your resolution once, twice—a thousand times. That only shows how much need there is for you to strive. When you have broken your resolutions just think the matter over and endeavor to understand why it is you failed, so that you may be on your guard against a recurrence of the same circumstances. Do not think it is an easy thing that you have undertaken. It is a folly to expect to break off a bad habit in a day which may have been gathering long years.

The Puzzler.

DECAPITATION.—No. 3.

1. BEHEAD a European city, and leave above.
2. An Asiatic city, and leave a home of wild beasts.
3. An animal, and leave a part of the body.

PUBLISHER'S SPECIAL NOTICES.

The Rural is a very good present to send to a friend, and it pleasantly reminds the recipient of the donor fifty-two times a year—this year fifty-three times. Any *subscriber* can send it to a relative or friend, as a present, at our lowest club rate—only $2.15, including postage.

Holiday Presents will be plenty this year among our Agent-Friends and others who form clubs for RURAL. Our list comprises many articles appropriate for presents. Induce a few of your friends to take the RURAL, and thus secure a Premium.

Officers of Agricultural Societies and Clubs, Granges, &c., can, if they will, materially aid in augmenting the circulation of the RURAL. Scores of such are already forming clubs; how many others will kindly do likewise?

Renew early if you would secure the uninterrupted continuance of the RURAL to your address; and pray don't forget to ask friends to join you in sending for the Fifty-three Numbers which we shall publish during 1876.

Back Numbers of this Year (from Jan. 1) can be furnished to all new subscribers, but we shall not send them hereafter unless specially requested. Those who desire can begin with any number, however.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper*, and in Premiums to Agents.

Select Your Premiums.—All persons entitled to Premiums will please designate what they prefer and notify us how and where to forward—whether by Freight or Express—if articles are not mailable.

Act as Agent!—Reader, if there is no agent for the RURAL in your locality please become one by forming a club. *It will pay.*

At Our Risk.—You can remit by Draft, P. O. Money Order or Registered Letter *at our risk.*

News of the Week.

DEVASTATING FLOOD NEAR WORCESTER.

THE reservoir supplied by Lyne brook, which overlooks the city of Worcester, Mass., gave way on Thursday of last week, destroying a great amount of property and narrowly escaping being much more destructive than it proved. The reservoir is capable of holding 700,000,000 gallons of water, and was nearly full when first discovered to be in danger. The recent heavy rains had apparently undermined the earthwork foundations, but it is since reported that leaks have been noticed occasionally for some time past. Only a few days before the break, the water in the reservoirs had been raised by flush boards, despite the protests of some mill-owners in the valley below, who apprehended danger. On Wednesday it was discovered that water was trickling through the embankment; but this, at first, was thought to be from rains and not from the reservoir itself. From this time, however, every effort was made to prevent a break. The water was drawn off as rapidly as possible, and when it was only too evident that the dam was slowly undermined, trunks of trees, bales of hay and wagon-loads of earth were thrown in to hold the breach from growing wider. As a last resort, an attempt was made to draw off the water on the opposite side, but this was only partially successful. The great break occurred about 3 o'clock Thursday afternoon, March 30, and immediately the thousands of spectators who had gathered to watch the reservoir, scattered and took refuge on the hill sides. A gap thirty feet wide was made in the wall of the reservoir.

Property holders had warning and much movable property was taken out of harm's way, but mills, dams, and houses on the line of the torrent were indiscriminately swept away. Several small houses were crushed by timbers and debris brought down by the flood. The water at first rushed down a ravine which it gullied on either side, washing out a great deal of soil and leaving the banks deeper and with almost perpendicular sides. Besides destroying numerous mills and other buildings in the line of its track, the flood tore up several hundred feet of the Boston & Albany Railroad, causing a detention of travel several days. The damage done by the flood is estimated at five hundred thousand to a million dollars, and for this it is supposed that the city of Worcester is responsible. Had the reservoir broken away suddenly and before much of the water had been drawn off the city of Worcester would have suffered very severely as the larger flood could not have been kept in channels so much as it was. There seems to have been culpable carelessness on the part of Worcester City authorities in leaving the reservoir in an unsafe condition.

HOME NEWS PARAGRAPHS.

ONE of the workmen in a paper mill at Shawangunk, Ulster county, N. Y., recently attempted to make up the time of his father, who was ill and worked for fifty-six consecutive hours without sleep, only resting while he ate. At his last supper, he fell asleep while eating, but was aroused, got up and finished his last six hours' work.

The new City Directory of St. Louis fixes the population of that city at 498,182.

The women are now holding the office of County Superintendent of Public Schools in Iowa, under the act passed by the Legislature of the State. A majority of the Justices on the Supreme bench of the State are reported to favor the law as it stands.

The last rail of the Lake Ontario Shore Railroad has been laid at Lewiston, and connection thereby established with the New York Central and Hudson River road. The last fifty-five miles of the track has all been laid during the past winter. The road will be open for through business by the first of June. It establishes a route to New York via the Delaware and Lackawanna road from Oswego.

The free common schools in the States of California, Connecticut, Florida, Indiana, Iowa, Kansas, Maryland, Michigan, Mississippi, Missouri, Nevada, New Jersey, Oregon, Rhode Island, Tennessee, Texas, Wisconsin and West Virginia, are maintained through constitutional provisions, under which have been raised abundant public funds, said funds being permanent and inviolable. The Legislatures are particularly directed as to the application of these funds. The universal rule is, that the school funds may be increased but never diminished. In eleven States, the range of school ages and the period of the school year, are fixed in the constitution.

Buffalo, N. Y., is very proud of her new city and county hall, which has just been completed. It is in the form of a double Roman cross, with bases extending longitudinally north and south. The body of the cross covers a space one hundred and fourteen by two hundred and twenty-five feet, and the arms and heads have each twenty feet projection and fifty-two feet front, allowing to the building a total length of two hundred and ninety-five feet and a total width of one hundred and fifty-eight feet. The style of architecture is the Lombardic. The main walls, which are eighty feet high, are built of Maine granite. It is surmounted with a tower two hundred and seventy feet high.

The Massachusetts Senate a few days ago suspended its rules as a mark of respect to Mr. William Cullen Bryant, and passed through its various stages a bill to incorporate the "Bryant Free Library" in Cummington.

Bishops Janes and Harris, of the Methodist Episcopal Church, have issued a letter to all ministers and members of that church throughout the United States, inviting them to set apart Friday, the 28th of April, as a day of fasting and special prayer for the divine blessing on the coming General Conference.

A party of Denver men with more time than money are going to walk to the Centennial Exhibition. They expect to do the distance within 90 days.

The members of the Golden Gate Encampment, I. O. O. F., of San Francisco, recently visited in a body Mrs. Parlington and her boy Ike at the Palace Hotel.

Up to noon on the 14th of March, New Orleans had received 1,204,542 bales of cotton of the present crop, an increase of 320,310 bales over the receipts for the same time last year.

Twenty-six persons in Santa Clara county, Cal., own together over 1,000,000 acres of the best farming land, and 122 persons throughout the State control 6,500,000 acres.

Col. Furlong, a member of the Mississippi Senate, has introduced a bill to prevent the introduction of adulterated candy into the State, and to prohibit the manufacture of such.

The colored people of Newark, N. J., celebrated the adoption of the Fifteenth Amendment March 30th by a salute of 100 guns and a procession through the streets.

The Government printing office has been doing work for private firms and the evidence appears to show that the Superintendent has pocketed the money.

An aged couple at Fairfield, Me., lately celebrated their golden wedding by separating. It took them fifty years to find out that they were only wedded, not mated.

In Spencer, Wis., there is a secret society in operation, of which the public will probably learn much soon, as the members are being tried for the murder of a candidate while undergoing initation.

A Chicago apothecary put up two prescriptions correctly, but misplaced the labels. The purchaser, a women, consequently swallowed a mixture intended for outward application, taking dose after dose until she died in great agony.

Chicago is very much embarrassed pecuniarily. The amount of unpaid taxes on January 1st were over $8,250,000, of which over $3,000,000 was for taxes due previous to 1875. The obligations maturing by the 1st of July foot up nearly $5,400,000, and to meet these it has now but $500,000 in the treasury, and the general fund is indebted to special funds for money borrowed about a million and three-quarters more.

John E. Shawhan, a San Francisco stock speculator, has built a stable at a cost of about $100,000 chiefly to gratify his wife, who is fond of horses. It contains a parlor handsomely furnished for her use; and the carriage and harness rooms, stalls, and other apartments are finished in fine woods.

A scientific man who takes great interest in the subject of drainage, says:—"Two-thirds of the miasmatic troubles in New York proceed from the kitchen sinks of the city houses. The sink drain gets clogged with grease, and foul odors arise to the upper stories of the houses, and little pale children inhale them all night, until they have scarcely strength enough in the morning to put on their shoes and stockings." For want of a better remedy, a common brick placed over the aperture will nearly obviate the trouble, and it should be the duty of every sensible head of a family to see that it is reguarly placed there.

The Louisiana State Funding Board March 29 and 30 funded nearly $1,500,000 of State debt, including a number of the one million issue of Levee bonds of 1865, recently declared valid by the Supreme Court. Nearly all the valid and unquestioned State debt has now been converted into the new consols.

The Rev. A. B. Earle the revivalist, is conducting a revival in Clinton, N. Y. He insists upon his congregation all kneeling and praying audibly a brief prayer which he gives out. Then he makes them arise and stand and answer questions, sometimes all in a body, sometimds singly. This he calls "a fool and ankle-bone meeting."

In order to check Indian and Mexican depredations in Texas, Gen. Ord has decided to establish a military camp near the head waters of Devil's river under the command of Col. Buell, at Fort Griffin.

A plan of Yorktown (Va.) and adjacent country, showing the operations of the American, English and French armies during the siege, drawn with a crow pen and presented to Lafayette, has just been deposited in the Virginia State Library.

Under its new laws Texas now exempts from taxation tools and instruments used in any trade or profession to the value of $50; all safes and furniture to a like amount; one year's supplies from the soil; all institutions of learning, with their property, and all hospitals and churches.

T. L. Coleman, Mrs. John Seal, Mrs. Frank Arnold, and others have discovered a land grant to Benjamin Waller, a relative, for 72,000 acres of land in Charleston, Abbeville and Greenville counties, S. C., dated in 1754, and renewed in Charleston in 1851. As lawyers are at work upon the claim, there is already much consternation among the property holders in that region.

A novel industry has sprung up in Iowa. Henry Buskirk, finding a number of ox carcases in his neighborhood, bought fifty cents' worth of strychnine and dosed them thoroughly. In the next three days he picked up thirty-eight dead coyotes, and taking them to the County Clerk received $1.50—the legal bounty—for each scalp, thus clearing $56.30 by his shrewdness.

Grayson is exceedingly jubilant, and will not be disheartened. Since gaining the advantage of railroad facilities her breed of hogs has improved a thousand fold. The pointer breed of several years ago that could run their snouts down a half-gallon jug of buttermilk and lick the bottom clean, and through whose emaciated sides a person could read the Declaration of Independence without spectacles, have altogether disappeared, and the great, fat, lazy Poland Chinas, the overgrown Berkshires and Chester Whites have taken their places in the estimation of the farmers.

Some English sparrows at Richmond, Va., have built their nests in the nostrils of the horse on which is placed Crawford's statue of Washington.

A revival of more than usual interest is in progress in Williams College. The students hold noonday prayer meetings, and the conversions are numerous.

In the six principal markets of this country the number of hogs packed this season amounts to 3,200,000, a decrease of nearly 300,000 as compared with last year.

The glass dome of the Centennial art gallery will be lighted by 2,000 gas jets. The dome is 266 feet above the level of the Schuylkill, and will be visible at night all over Philadelphia.

One of the first fugitive slaves that came to Oberlin, Ohio, a woman, said to be the veritable Eliza of Uncle Tom's Cabin," who crossed the Ohio on floating ice, died in Oberlin a short time ago.

The pupils of the Providence public schools are drawing maps, which will be sent to the Centennial Exposition. One of them, the son of an oysterman, has drawn the map of Rhode Island inside the two halves of a clam shell. But then Rhode Island is not a large State.

FOREIGN NOTES.

AT the Chester Assizes in England, Justice Lush has sentenced one Lewis to ten years' penal servitude and five years' police surveillance for passing a bad florin.

Excursionists to Europe are warned that the former railway robberies on "through" luggage have been resumed in Belgium and France.

In the House of Lords March 30, there was a long debate on the Royal Titles bill. The Duke of Richmond and Marquis of Salisbury defended the title of Empress as accurately expressing the Queen's relation to India. Lords Somerset, Grey, Laurence, Waveney, Granville and Kimberly opposed it. The latter congratulated the Ministers that they had not repealed Mr. Disraeli's mischievous argument concerning Russia. The bill was read a second time without a division, the opposition announcing their intention of supporting Lord Shaftesbury's motion praying the Queen not to assume the title of Empress.

Nearly every country in Europe has suffered more or less damage by floods during the past winter and present spring. In England there were inundations on the east coast, which laid the country under water for miles, and made communication in some towns only possible by boats; the south of France was visited with more severity, and immense damage done; then the Danube overflowed its banks and swept away hundreds of houses and devastated an immense area of agricultural land. Lastly, we have the intelligence that the town of Bois-le-Duc, or in the Dutch, Herzogenbosch, situated at the confluence of two small rivers which flow into the Meuse, has been partially laid under water and completely isolated by the bursting of the surrounding dikes. The railways have been destroyed, a large number of houses swept away, and over six thousand persons rendered homeless.

The French elections have all been held and the result is a decided triumph for the Republicans. Of the 536 Deputies, 354 are Republicans, 105 Bonapartists, 46 Conservatives and only 8 Orleans. The Republicans also have a decided majority of the Senate, Gambetta, leader of the Republicans, has shown many of the qualities of true statesmanship.

The Levant Herald, published in Constantinople, announces that the plague has reached Bagdad, where there are ten cases daily. The Egyptian sanitary authorities quarantine arrivals from the Persian Gulf for fifteen days.

The Pall Mall Gazette's Berlin special says that the proposed retirement of the Czar appears partly confirmed. It is said that the Czarewitch will be intrusted with the Regency during the summer, being temporarily invested with the full sovereign power.

The Church of St. Nicholas, just completed at Hamburg, is the highest in Europe. It is 472 feet high, eleven feet higher than the Strasbourg Cathedral.

The Chinese have built a man-of-war, and named her "The Terror to Western Nations." But she has not proved much of a terror yet, for the Government allowance of grease for the ways was so small that she was launched with great difficulty, and when launched the engines refused to work the screw, and the Chinese are wondering how they are to start her on the mission of terror.

A lively scene occurred in St. Paul's Church in Lisbon the other day. Father Hughes, an English Jesuit, has for some time past been attracting attention there by the vehemence of his language and his attacks on the vices of the times. But the other day he went a little too far, and spoke in unseemly language of the family of the women. Angry remonstrances were made by some of the congregation, and another Jesuit, to quiet the tumult, drew out a cudgel and struck one of the remonstrants. Upon this the whole congregation rose and drove Father Hughes and all the other Jesuits out of the church. The prior of the church now refuses to allow the Jesuits to preach there, and in this refusal he is sustained by the Portuguese Government.

Capt. Patton, the English pigeon shooter, won the grand prize at Monaco, worth $30,000, and then lost it all at roulette.

Brussels has the largest ice-house in the world. The roof covers an area of 18,000 square feet; the walls are double, and filled with moss and sawdust. There are nine separate ice chambers, each of 30,000 cubic feet capacity. There are galleries for storing meat in hot weather, capable of holding 2,000 quarters. A million tons of ice have been stored in the building at one time.

THE SEASON, CROPS, PRICES, ETC.

Lawrence, Ark., March 23.—Until within the past week we have had no winter comparatively; a little frost now and then; weather more spring than winter. Peaches have been blooming since Christmas. Plums were in full bloom, and the beautiful red bud was out two weeks ago, but the 19th we caught six inches of snow with a cold "Norther;" ice an inch thick the next night, and our peaches (the which we raise such fine ones) are gone where the woodbine, etc. Apples are injured some, but as they never fail here, we hope to get a full crop. I have been trying to raise fruit against North Iowa winters some eighteen years; have been here two years and am thinking I will have an easier thing of it here, for this is the best apple, pear and grape country I was ever in. No insects, no blight; the sweetest and most productive grapes; the largest, handsomest and finest-flavored apples and pears I ever saw. I will not now tell you any big stories about fruits here, but will send you some samples next fall, which I presume will please better.—J. F. M.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, April 1, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	59,666	Rice, bbls	824
Whisky	522	Cut meats, pkgs	9,375
Corn meal, bbls	220	Lard, pkgs	6,035
Corn meal, bags	3,216	Tobacco, hhds	1,559
Wheat, bush	287,300	do. cases	4,290
*Corn, bush	94,325	Butter, pkgs	15,069
Oats, bush	157,205	Cheese, bxs	—
Rye, bush	193	Cotton, bales	14,181
Malt, bush	24,535	Rosin	2,511
Barley, bush	45,532	Sols. turp., bbls	959
Beans, bbls	9,921	Dried Fruits, pkgs	288
Grass seed, bags	4,232	Eggs, bbls	13,718
Beef, pkgs	1,206	Peanuts, bags	2,239
Wool, bales	1,583	Dressed Hogs	1442
Hops, bales	1,102	Leather, sides	112,270
Pork, bbls	5,279	Sugar, hhds	209
Tallow	1,340	Oil cake	6,948
Molasses	709		

*Receipts of corn for week ending March 25 should have been 265,850 bush., instead of 43,000 bush., as we incorrectly printed.

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise, many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done: but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible: mixing always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else.

BEANS AND PEAS.—Exports of beans past week, 823 bbls.; since Jan. 1st, 17,150 do.; same time last year, 6,506 do. Exports of peas past week, 10,440 bush.; since Jan. 1st, 225,760 do.; same time last year, 133,825. The market is generally quiet and prices for every grade are weak. Distributors for consumption seem well supplied with mediums, and there are few new sales or marrows for export. The above totals in-

clude some parcels bought ahead. Nothing doing in kidneys. Peas are not moving to any extent. We quote:

Beans—Prime pea, $1.20@1.25; fair to good, 90c.@$1; prime mediums, $1.10@1.15; fair to good, 85c.@$1; poor, 75@80c.; prime marrows, $1.20; fair to good, $1.25@1.15; prime white kidney, $1.60@1.70; other, $1.30@1.50; prime red kidney, $1.30@1.35; other, $1@1.20; Lima (Cal.), $2.50@2.75. Peas—Canadian, bbls., free, $1.10@1.12; do., in bulk and bond, 98@99c., green, $1.50@1.55; Southern B. E., 2-bush. bag, $2.75; split, ₱ bbl., $6.

BEESWAX.—Choice lots are scarce and wanted. Medium stock dull. Sales at 33@33½c. for Western and 31@31½c. for Southern. Exports past week, none; since Jan. 1st, 31,080 lbs.; same time last year, 38,050.

BROOM CORN is hard to sell. The stock is composed of medium and common grades.

We quote Brush, short green, 8½@10c.; hurl, green, 8½@10c.; green, medium, 6@6½c.; red and red-tipped, 3@4c.

BUTTER.—New York has seldom turned into the second month of spring with such a scanty supply of butter as we now have. Were the times at all of a character that would be trifled with, we would be apt to hear of pretty warm prices under the light receipts and stock. Some of our largest houses are quite cleaned out of old, and they have to pay rather long figures to fill up special wants of fine or good old. Others who hold stock are husbanding it with great care since the storms of late threaten impediment to transportation. Quotations for old are marked up as high as they should be in the order of things. New is running white in color but it has to sell, and fortunately with the wants of market. We urge dairymen to give attention to our suggestions in recent reports. Western butter is selling well at our rates, there is no abundance. The Producers' Price Current gives the following:

Comparative receipts and exports June 1st.

	Receipts, pkgs.	Exports, lb.
June 1, '75, to April 1, '76	388,919	322,470
June 1, '74, to April 1, '75	887,150	448,500
June 1, '73, to April 1, '74	852,497	298,375
June 1, '72, to April 1, '73	617,223	445,113
June 1, '71, to April 1, '72	808,037	637,770

In speaking of Pail Butter Willard's Practical Butter Book has the following:—To neutralize the odor and sap of the wood, and to drive from the cells of the wood the air which bands the butter, the pails ought to be thoroughly soaked with hot brine made from the same kind of salt with which the butter is cared, and not used over and over again, until the bitter taste of the wood has destroyed the use of the brine, but thrown away after each pail is scalded. After the pail is thus prepared, pack the butter solidly, putting on the top of it a clean, white cloth, and cover the cloth with a layer of the same kind of salt, half an inch in thickness. Each time your pails are returned from the city, scald and cleanse them thoroughly.

New butter, prime, 38@40c.; fair to good, 35@38c.; half firkin tubs, prime, 41@42c.; fair to good, 33@36c.; Welsh tubs, prime, 37@39c.; fair to good, 33@35c.; Pails, Western creamery, prime, 40@—c.; fair to good, 35@37c.

Old State dairies, extra, 38@39c.; entire, good to prime, 36@37c.; fair to good, 32@34c.; firkins, selected fresh, 38@39c.; good to prime, 34@36c.; fair to good, 30@31c.; half-firkin tubs, selected, 40@42c.; good to prime, 37@38c.; fair to good, 34@37c.; poor to fair, 25@34c.; State, Welsh, tubs, fall made, 30@32c.; dairies, 32@35c.; good to prime, 31@36c.; fair to good, 29@33c.; poor to fair, 21@28c.; Pennsylvania, store packed, 20@23c.; Western, dairy tubs, selected, 33@35c.; good to prime, 31@33c.; tubs selected fresh, 30@31c.; good to prime, fresh, 31@33c.; fair to good, fresh, 27@30c.; poor to fair, fresh, 20@24c.; Western, early packed, selected, 27@29c.; good in lines, 25@26c.; fair in lines, 23@25c.; poor, 20@22c. Roll butter, Mich. & N. Hlls., fancy, 32@34c.; good to prime, 29@31c.; fair to good, 27@29c.; poor to fair, 22@25c.

CHEESE.—Export trade has been moderate of late but the aggregate for the week shows well. Do best grades unchanged prices were paid. The arrivals have been larger than expected, chiefly of common and medium stock, which are more urgently offered.

New State factory, fancy, 13¾@14c.; fine, 13½c.; do. good to prime, 12@13c.; fair to good, 10@12c.; poor to fair, 7@10c. State Farm Dairy fancy, 12½@13c.; good to prime, 11@12c.; fair to good, 10@11c. Western factory, cheddar, fine, 12½@13½c.; good to prime, 11@12c.; flat fair, 8@11½c.; poor to fair, 7@8c.

There has been little Southern trade during the past season. Exports to Europe past week, 38,939 pckgs.

The Producers' Price Current gives the following comparative receipts and exports from June 1st:

	Receipts, pkgs.	Exports, lbs.
June 1, '75, to April 1, '76	2,390 887	90,640,518
June 1, '74, to April 1, '75	1,881,070	88,515,132
June 1, '73, to April 1, '74	1,908,503	85,901,103
June 1, '72 to April 1, '73	1,658,938	81,014,108
June 1, '71, to April 1, '72	1,397,871	62,161,661
June 1, '70, to April 1, '71	1,140,946	59,148,007

COTTON.—The market advanced sharply immediately subsequent to our last, but closed with a decided reaction through the changes in the Liverpool market and their influences upon export trade. Closing prices are for April, 13 15-32@13 11-16c.; May, 13 21-32@13 11-16c.; June, 13 29-32@13 15-16c.; July, 14 5-32@14 7-32c.; August, 14 9-32c.; September, 14@14¼c.; October, 13¾@13 15-16c.; November, 13 25-32@13¾c.; December, 13 23-32c.

Quotations for spot cotton, based on American standard of classification:

	Uplands.		*Ala.*		*Orleans.*		*Texas*	
Ordinary	9	13-16	9	13-16	9	13-16	9	13-16
Strict ordinary	10	11-16	10	11-16	10	11-16	10	11-16
Good ordinary	11	5-16	11	5-16	11	7-16	11	7-16
Strict good do	12	1-16	12	1-16	12	3-16	11	3-16
Low middling	12	9-16	12	11-16	12	13-16	12	13-16
Strict low middling	13	2-16	13	3-16	13	5-16	13	5-16

Stained.

Good ordinary	9 15-16	Low middling	11 9-16
Strict ordinary	11 1-16	Middling	12 7-16

DOMESTIC DRIED FRUITS.—Apples are taken in small lots at about steady figures. Peaches are held more firmly, through reports of damage to the trees South. Blackberries are weak and dull.

Apples—State, sliced, 9¾@10c.; do., quarters, 8c.; Western quarters at 8¾@8½c.; Southern sliced, 1875, prime, 10c.; fair lots, 8@9c.; Tennessee qrs., 8¼@8½c. Blackberries, 10@10½c. Peeled peaches, good and prime Georgia, 14@15c.; do. fancy, 16@17c. Unpeeled peaches, new, 12@12½c. for halves, and 10@11c. for quarters. Plums, 20c. Raspberries, 25@26c. Cherries, 18@20c.

EGGS.—Receipts continue to arrive in quantities that give buyers considerable dictation on the price question. At one period since our last they worked up to 17½c. for prime fresh Western, but the market is very tame at present. For old stored stock the outlet is very dubious, and it may be that the fate of the remnant of limed awaits them. Other spring produce will soon divide up trade so far as eggs are concerned, and though the opening at the North may be backward, the facilities these days for sending Southern truck and fish, give us virtually an early spring. Dealers have this fact in mind, and shade quotations just as soon as a lull is imminent. Duck and goose eggs do not sell well until further on—say after Easter. We quote:

Near points, ₱ bbl., 17@17½c.; State and Penn., 16@16½c.; Western, prime, 15½@16c.; do. fair marks, 15@15½c.; Southern and Southwestern, 15@15½c.; duck, 25@27c.; goose, 50@55c.

ESSENTIAL OILS.—We quote:

"H. C." oil peppermint, $1, in glass; Hale & Parshall do., $1@1.20 in tin, $3.50; sassafras, 55c.; wintergreen, $3.12; spearmint, $3.50; pennyroyal, $4.

FEATHERS.—Supply light. Live Western geese, 52@57c.; mixed, 35@45c. Hen and turkey feathers not wanted.

FLOUR.—There has been a good, steady export demand, which has been met freely at unchanged prices, closing with less doing and winter wheat extras rather weak.

Superfine State, $4.50@4.75; extra do., $5.10@5.65; superfine Western, $4.50@4.75; extra do., $5.10@5.75 No. 2, $3.30@4.10; extra round-hoop Ohio, $5.10@5.40; trade brands do., $5.45@7.25; white wheat extras, $5.90@7.75; St. Louis, $5.35@9.00; City Mills extra, $5.20@6.75; Southern at $4.35@5.00 for superfine; $5.25@6.45 for poor to choice shipping extras; $6.50@8.75 for trade and family brands. Rye at $4.25@4.65. Buckwheat flour at $1.60@1.80. Corn meal quoted at $2.65@3.25 for yellow Western; $3@3.35 for yellow Jersey; $2.90@3.20 for Pennsylvania.

FOREIGN DRIED FRUITS.—Layer raisins, $2.37½@2.40; Valencia do., 10½@10¾c.; loose Muscatel, $2.60@2.90. Currants, 6@6¼c. Tarragona almonds, 17½c.; Ivica do., 15½@15¾c.; Languedoc do., 17½c.

FRESH FRUITS.—Exports of apples past week, —— bbls. Since Jan. 1st, 4,151 do.; same time last year, 11,311, do. For wholesale use in apples we are now down to Russets. A few parcels of red fruit are bringing high prices, and, for that matter, the same may be said of choice, large Russets. Grapes are still quotable. Florida oranges are evidently down to last pickings. Few look well. Strawberries do not open with their usual spring vim. Charleston ranges at 25@40c. for poor and 60@70 for prime. Cranberries are plenty enough at the price.

Apples, winter varieties, ₱ bbl., $3.75@4.25; mixed lots, good, $3.50@3.70; mixed lots, fair, $2.50@3.25. Oranges—Florida, ₱ crate, $5@6. Cranberries—Jersey, choice, standard sorts, $1.25@1.50; good to pr., $1@1.25; "pony" crates, $3.50@4; good to choice, per bbl., $13@11. Peanuts are pretty and quiet; prices ruling weak. Virginia, per bush., $1.55@1.65; Wilmington, $1.80@2.00; do. Tennessee, 1½c.@$1.15.

FURS AND SKINS.—Further advices from the London spring sales show a decline of 10 per cent. on raccoon, skunked opossum and muskrat. Future city quotations will be apt to favor buyers.

GRAIN.—For wheat, with the foreign advices, unfavorable, there is more of an urgency to sell, and prices lower. Latest sales at $1.08@1.18 for inferior and ungraded spring; $1.20 for No. 2 Milwaukee spring, full inspection, in store; $1.48@1.50 for white Michigan; $1.15@1.30 for inferior to prime red Western; $1.23@1.30 for No. 2 spring; $1.15@1.17 for winter red and amber; $1.36@1.50 for white; $1.34@1.38 for No. 1 spring. Rye at 90c. for Pennsylvania. Corn is pressed for sale, lower and dull. Latest sales at 65¾@67c. for mixed Western; 66@66½c. for yellow Western. Oats have been in active speculative demand, but closed weak. Latest sales at 49@50 for white State; 45@48 for mixed Western.

HAY AND STRAW.—Exports past week, 3,082 bales; since Jan. 1st, 9,840; same time last year, 8,925. Arrivals are liberal, but there is a good demand and prices are well sustained.

Baled hay is quoted:—Shipping, 75@80c.; retail qualities, 93c.@1.05; clover, 60@70c.; salt, 60@70c. Straw is quoted at $1.05@1.15 for long rye; 75@80c. for short rye; 60@65c. for oat.

HIGHWINES.—Selling at $1.12½.

HOPS.—There has been a very quiet market and prices reduced 1@2c. The advanced figures almost checked export demand, and the receipts have been larger than expected. The market closed with more of an urgency to sell. The receipts for the week have been 1,200 bales; exports 950 bales, but the latter taking in some parcels purchased previously.

N. Y. State, 12@17c.; Eastern, 10@15c.; Wisconsins, 14@16c.; Yearlings, 8@10c.; Olds, all growths, 4@6c.; California, 15@20c.

HONEY.—Merely nominal. We do not remember another season so discouraging to both apiarist and seller. We quote white comb at 18@25c.; buckwheat and dark do., 13@15c.

LEATHER.—Hemlock sole at 21@22c. for light, 23@24½c. for middle, 23@25c. for heavy, and 21@22c. for good damaged, showing a decided decline.

MAPLE SUGAR.—Choice Delaware is expected next week. The market is quiet for all grades. Supply mostly Western, much of which is of good quality. We quote:

New prime sugar ranges at 14@15c.; fair to good, 12@13c.; old, run over, 10@12c.; old, ordinary, 8@9c. Syrup, ₱ gal. of 11 lbs., 1@1.10.

Syrup is slow of sale; it seldom works off with much activity. Unfortunately, this valuable table delicacy arrives a little too late to be serviceable for the products of the griddle, which is an old bewilderment on the part of receivers.

OIL CAKE.—Western in large receipt and quoted at $40.50.

POULTRY AND GAME.—The working supply is mainly frozen. It brings pretty full prices when in good order. Some of it is turning out very poor. At this part of the season it is difficult to move any stock that is off in quality. We quote Philadelphia dry picked chickens at 21@22c.; capons at 25@30c. for large; 20@22c. for small capons and slips, with a supply fully equal to the demand.

Chickens, Bucks Co., good to prime, 20@22c.; Jersey, good to prime, 19@21c.; State, good to prime, 18@20c.; Western, good to prime, 17@19c.; fair to good, 14@16c.; poor, 8@11c. Turkeys, Jersey, good to prime, 20@22c.; State, good to prime, 20@22c.; Western, good to prime, 15@21c.; Inferior, 10@15c. Ducks, Jersey, good to prime, 22@24c.; State, good to prime, 21@23c.; Western, good to prime, 20@22c.; fair to good, 18@20c.; poor, 14@16c. Geese, Jersey, prime, 15@16c.; State, good to prime, 14@15c.; Western, good to prime, 13@15c.; do., poor to fair, 10@12c.

Pigeons have been scarce and high. They have declined with moderately increased receipts. Snipe scarce. Wild ducks dull and low.

Wild ducks at $1 for Canvasback; 70@80c. for redhead, and 50@65c. for Mallard. Wild pigeons, unpicked, ₱ doz., $2; English snipe, $1.50@5; plover, $3.50@4.

Live poultry is high in the scarcity of the dressed. Our quotations on geese are for prime only:

Turkeys, Jersey, ₱ lb., 19@20c.; do. Western, 17@18c.; Geese, Jersey, ₱ pair, $2.50@3; do. Western, $1@1.50; ducks, Western, ₱ pair, 80c.@$1; ducks, Jersey, ₱ pair, $1.25@1.50; roosters, 8@10c.

A few spring chickens from Del. have sold at $1.25 per pair.

PROVISIONS.—There has been a very quiet market as regards export trade, with prices lower. Mess pork quoted at $23.30 for spot and April, $23.30 for May delivery, and $23.50 for June. Boxed dry-salted shoulders, 9¾c.; tierced pickled hams, 12½@13½c. Bacon at 12¾c. for long clear, and 14½c. for short do. Western steam lard at $14.30 for spot, $14.30 for April, $14.12½ for May, and $14.32½@14.55 for June delivery. Stearine at 15½c. for choice Western. Beef hams at $24@26. Tallow at 8¾c. for prime. Beef—New extra mess at $12.50@13.50; do. plain, $12.50@13; new tierced at $12 for prime mess, and $25 for India mess. City extra India mess, $31.25@31.50.

SEED.—For clover there is at present only a light jobbing demand, with 17c. paid for choice State. Timothy selling in small lots at $2.45@2.75.

SUGAR (Refined).—Soft yellow, 8½@9½c.; soft white, 9¾@9¾c.; crushed, 10¾c.; powdered, 10¼c.; granulated, 10¾c.; cutloaf, 10¾@11c.

TOBACCO.—The assortments are better and an advanced range of prices prevail, with also a more active export trade.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., April 1, 1876.

TRANSACTIONS this week have been light, and there has been no improvement in prices. Factory dairies may be quoted at 12@13c., and factories at 12@13c. The Fairfield Association is still holding its goods at 14c., which is above the views of buyers.

The most important feature in the market this week is the sudden jump in the price of butter. New milk butter ran up to 38@40c. for extra grades, but the price for fair ranged at 33@36c. The high figures reached this week will stimulate the practice of skimming, and if it continues, we shall be likely to have a large proportion of skim cheese on the market at the early sales.

We have advices from Europe to the second week of March. Our London correspondent says:

There is a steady consumptive demand for all sorts of cheese—more especially American, the stocks of which are reducing fast.

The prices are for extra American, 65@66s.; fine, 63@64s.; good, 60@62s.; secondary and common, 30@45s.

English cheddar brings 82@93s.; Wiltshire double, 68@80s.; Cheshire medium, 56@68s.; fine, 71@86s.; Scotch, 70@88s.

There is no fine or good intermediate butter remaining unsold. All the oleomargarine to hand is sold, as also the best of the Canadian. The prices are as follows:

Jersey sells for 100@148s.; Dorsets, 176s.; Danish and Swedish, 120@176s.; Friesland, 160s.; Normandy extra, 168s.; American and Canadian, 90@130s. ₱ cwt.

Oleomargarine or artificial butter, 60@130s.

LIVE STOCK MARKETS.

NEW YORK, April 1, 1876.

RECEIPTS OF LIVE STOCK.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Sixtieth St.	3,539	40	497	6,403	000
Forty-Eighth St.	000	17	200	3,130	000

Totals this week	8,197	57	697	17,853	20,309
" last week	7,189	89	647	14,852	17,370

BEEVES.—Trade on last Monday forenoon opened slow on an increased number of horned cattle, the quality of which was generally coarse. Prices were 9@13c. ₱ lb.; weights, 5¾@9¾ cwt. The markets closed weak, with several carloads unsold. Wednesday, trade fair at 9½@10c.; weights, 6¾@11¾ cwt. Thursday, sales small at 9@10¾c.; weights, 6@11¾ cwt. Friday, the markets closed slow, with sales at 9@12c.; weights, 5½@12 cwt. From 55@58 lbs., net, fats have been allowed to the cwt. Spanish herds, mixed oxen and steers, sold at 8¾@9¾c., being partly corn-fed in Missouri. Native steers sold at 8@12¾c.; grade, 12¾@13c.; Western oxen, 8¾@10¾c.; State, 10@11½c.; Western bulls on live weight, 4¾@4½c.; mixed herds, quality poor, 8@9¾c.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	12 @13	12 @13
Fair	11 @11¾	11 @11¾
Poor	10 @10¾	10 @10¾
Poorest	8 @ 9¾	8 @ 9¾
Gen. selling rates	9¾@11	9¾@11

MILCH COWS.—Trade very small and very slow: cows 5 ld at $30@45.50 ₱ head; 9 at $45@55; 5 at $50; 5 at $63@81—calves always included.

VEALS AND CALVES.—The supply of smooth quality veals has been light and the demand moderate at 9@10½c. ₱ lb.; sales slow to coarse quality meal-fed calves at 7@8¾c.; grass calves not quoted. State calves from Western New York sold at 9@10¾c.; Pennsylvania, 9@10¾c.; Jersey, 9@10c.; Western, meal-fed, 8@8¾c.; State, 7@8c.

SHEEP AND LAMBS.—The quality of the flocks as quoted below has been from fair to choice, generally good. Trade opened slow on Monday last, when sheep sold at 6¾@8¾c.; yearling lambs, 9¼c.; spring lambs, 11c.; the markets closed weak, with several flocks unsold. Wednesday, trade small; sheep, 5¾@8c. Thursday, trade small in sheep at 6¾@8¼c. Friday, the markets closed weak; sheep, 6¾@7¾c.; lambs, 8¾c. Michigan sheep sold at 6¾@8c.; Ohio, 6¾@8¼c.; State, 6¾@8¼c.; Pennsylvania, 7¾@8c.; Indiana, 7@7¾c. The lambs to hand have been received exclusively from New York State.

HOGS.—During the latter days of this past week and up to Tuesday afternoon, there were no sales of live hogs. On Wednesday, 114 Ohio hogs, live weight, 190 lbs. ₱ head, sold at 8¾c. ₱ lb. City dressed weak at 11¾@10¾c.; light pigs, 10¾@11c.; trade small.

HORSE MARKET.—City trade still hampered by bad weather, yet dealers report a slight improvement in the sales of high-priced animals. Three pair stylish carriage horses, $1,000@1,900 ₱ pair; 11 pairs family do., $325@450; 7 pairs course quality heavy draft horses sold at $320@425; 3 head of do. at $225; 18 roadsters with fair trotting action, $275@425; 5 trotters of moderate speed but stylish, $500@700; 43 head poor quality light harness horses, $40@92; 22 head ordinary do., $117@211. Thirty-one horses arrived per Erie Railroad via Oak Cliff Station.

CHOICE VEGETABLES

Most of the following I originally introduced to the public, some of them for the first time this season.

Quaker Sweet Corn (the sweetest of all the white varieties). *Marblehead Dutch Cabbage* (head rounder, harder and handsomer than common kind). *Mexican Sweet Corn* (the sweetest and tenderest of all.) *Marblehead Mammoth Sweet Corn* (the largest variety in the United States). *Russian Netted Cucumber* (differs in hardiness and color from the others). *Telfair's Hybrid* (a magnificent cross between English Frame and White Spine). *Bonnet Gourd* (vine and fruit are very striking). *Silk's Melon* (sweet, spicy, delicious). *Queen Onion* (earliest of all varieties). *Mammoth Petpell* (a mammoth variety). *Emerald Gem Pea* (the best dwarf for family use). **Butquac Squash** (new; the only squash of American origin; first-class every way). **Paragon Tomato** (the best of the thick varieties). **Canada Victor** (decidedly the best early tomato grown). *White Pea Bean* (as round as a shot, differs from all other pea beans). **Each of the above at 15 cts. a package.** *Green's New Wyman Cabbage* (the most solid variety of the Early Wyman). *Marblehead Mammoth Cabbage* (the largest variety in the world, sometimes weighs 60 pounds). *Norbiton Giant Cucumber* (grows as long as a barrel is high). *Hardy Ridge Melon* (the flesh is as thick again as any other melon, very large, very hardy, delicious). **Each of the preceding 25 cts. a package.** *Snake Cucumber* (grows six feet, often curled, and strikingly resembles a snake). 20 cts. a package.—**THE THREE BEST NEW SEEDLING POTATOES**, for yield, handsome form, quality and general traits that the market wants. In my experience, tested side by side with all the new varieties, are **Early Ohio** for early, and **Burbank** and **Dunmore** for late. Sent to any address at $1 each per pound; for larger quantities, see my Catalogue, which contains quotations of an immense variety of vegetable seed, and will be sent Free to any address. **JAMES J. H. GREGORY,** Marblehead, Mass.

The Celebrated Eclipse Wind Mills

PERSONAL ITEMS.

EDWIN BOOTH cleared $52,000 by his Southern starring tour.

FOSTER DEWEY, Tweed's old private Secretary, is at Jacksonville, Fla.

ALFRED R. PRITCHARD, a prominent citizen of Rochester, died March 26, aged 53.

LIEUTENANT CAMERON, the English African explorer, is headed for Liverpool and home.

AT the revivals in Troy, conducted by Mrs. Van Cott, 300 converts were made in one week.

A NATIVE Greek declined the post of Minister to England because the salary, $10,000 was too small.

A PARIS dispatch says:—"J. Thirion Montanhan, Minister of San Domingo to France, is dead."

LOUIS XAVIER EYMA, the French author, is dead. He was born in St. Pierre, Martinique, in 1816.

RISTORI and Rossi will play together in London in the fall, and possibly will visit this country together.

GEN. GARIBALDI has accepted the Presidency of an International Arbitration Congress to be held at Rome.

THE Shah of Persia has decided to send the Crown Prince Muzesser Eddin to Europe to be educated.

A MONUMENT to the German artist Reitschl, by Prof. Jean Schilling, was dedicated at Dresden, recently.

THE Emperor of Brazil, now coming to visit the United States, has been a great traveler for many years.

SENATOR JONES of Nevada, has prepared a speech on finance, which he will deliver at the first opportunity.

THACKERAY was the only man upon the Punch staff with whom Mark Lemon was not upon thoroughly easy terms.

PROF. J. F. WEIR of the Yale Art School, has selected five of his paintings to be placed on exhibition at the Centennial.

MR. COLLIN J. MCRAE of Mississippi, the financial agent of the Confederacy in Liverpool during the war, died in Spanish Honduras a few weeks ago.

MLLE. ANNA DE BOLOCA, the artist, accompanied by Maurice Strakosch, sailed from Liverpool on the steamship Germanic, on March 24th, for New York.

MR. DISRAELI is sitting for a bust to Mr. J. D. Crittenden, which is to be planted in the Royal Academy. The same artist has executed busts of Mr. Gladstone and Mr. Carlyle.

MR. WILBUR FLAG of the class of 1873 of Yale College, has presented a practice barge to the eight-oared crew of that institution, which is to row with Harvard at Springfield, Mass.

LORD LYTTON has taken so seriously to politics since his appointment to the Indian Viceroyalty that he has withdrawn his new poem, "King Poppy," which was about to be published.

MR. ANTHONY TROLLOPE will commence a serial story in the May number of The Temple Bar Magazine, to be entitled "The American Senator." The scene of the story is laid in England.

PRESIDENT CLARK of the Massachusetts Agricultural College has selected Mr. D. P. Penhallow of Portsmouth, N. H., for Professor of Botany and Chemistry and Mr. William Wheeler for Professor of Mathematics in the Japan Agricultural College.

Traveler's Guide.

CALIFORNIA.

Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?

The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTHWESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oskosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.

This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.

This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.

For rates or information not attainable from your home ticket agents, apply to

MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

THE PALACE HOTEL TRAIN

BETWEEN

NEW YORK AND CHICAGO,

via Cleveland.

Leaves Erie Railway Depot, foot of Chambers St. New York.

9:00 A. M., Daily except Sunday. Drawing-Room Sleeping Coaches through to Chicago; but one change of day cars.

7:00 P. M., Daily The Palace Hotel Train to Chicago. Drawing-Room Sleeping Coaches and Pullman's Hotel Dining Car, through without change; but one change of day cars

The only line running Hotel Dining Cars out of New York. A ride of nearly a thousand miles without leaving the car to eat, drink or sleep!

Sewing Machines.

"GENERAL FAVORITE"

No. 2,

Recently perfected and offered to the trade by the

WEED SEWING MACHINE COMPANY,

Possess many advantages, both in construction and capacity, over machines now in use by

MANUFACTURERS.

The Machines made by this Company have always been noted for simplicity, a merit which has been preserved in this new style and combined with great strength, especial care having been taken to provide against the wear and tear of use in Factories running by

STEAM POWER.

Actual WORK is the only test of a sewing machine. The Weed Co., desirous of thorough investigation, are prepared to place these machines on trial, feeling confident that practical work will convince intending purchasers of their merit. Manufacturers will please examine if our claims are not correctly made on the following points:

CONVENIENCE.

The large space under the arm. From needle to foot of arm, 9 inches; from needle to bend of arm, 11 inches; from bed to bottom of arm, 5 inches. Easily oiled, threaded and cleaned.

SIMPLICITY.

No cams or cogs are used, a continuous circular motion, preventing vibration, and rendering a high rate of speed possible, while noise is reduced to the minimum, and for foot power the ease of working is increased to a wonderful degree.

DURABILITY.

The wearing parts are forged and hardened. Lost motion can be taken up with a screw-driver, thus saving cost of new parts, and time consumed in fitting them. The shuttle being carried, instead of driven, wears much longer, and skipping of stitches is avoided. The needle socket is hardened and so constructed that a needle, when broken in the bar, can be readily removed. Address

ESTEY'S COTTAGE ORGANS are the best.

NEWS CONDENSER.

— Chattanooga is to have a United States Court.

— Forty-two theaters are in full blast in London this season.

— Fifteen thousand bunches of violets are sold daily in Paris.

— The Vienna Exposition buildings are rapidly falling to decay.

— Liverpool is the most densely populated town in Great Britain.

— A mountain of superior white chalk has been discovered in Idaho.

— Wide-awake farmers planted potatoes in Nantucket, two weeks ago.

— Vermont has a State Association of Breeders of Spanish Merino Sheep.

— The new catalogue shows that Michigan University has 1,127 pupils.

— England has spent $1,000,000,000 on her navy within the last eighteen years.

— The annual income of Oxford and Cambridge Universities is nearly $4,000,000.

— Hereafter wife-beaters in California will be punished by a public whipping.

— Eight per cent. has just been fixed as the legal rate of interest in Kentucky.

— A Polish translation of Shakspeare's works is in course of publication at Warsaw.

— The Bureau Veritas reports 96 sailing vessels and 9 steamers lost during January.

— It is said that the French Government has decided to annex the New Hebrides.

— Thirty-seven companies on the Kennebec river, Me., have housed 690,500 tons of ice.

— A library association has been formed by the negroes of Richmond, and they ask for books.

— The Grangers of the United States have over $18,000,000 invested in their various enterprises.

— Sixteen centenarians died in Massachusetts last year, eleven of whom were born in Ireland.

— At a sale in England the other day, Earl Dudley gave 7,500 guineas for a pair of Sevres vases.

— A Mormon tabernacle has been erected near Albany, Oregon, and many conversions are reported.

— At York, Pa., March 19, an explosion entirely destroyed the powder mill of Thomas C. Brainard. No loss of life.

— A man at Goshen, Ind., has made a chair on which he claims that he has used 103 different kinds of wood.

— The anti-gas fever has extended to Selma, Ala., where the city has discontinued the use of its street lamps.

— An excellent quality and almost unlimited quantity of mica (isinglass) has been discovered at Silver City, Idaho.

— Seven hundred men are employed on the Truckee division of the Central Pacific to keep the track clear of snow.

— The entire country for four or five miles west of Steamboat Springs, Nevada, has been located by cinnabar prospectors.

— There are a couple of women revivalists traveling in Texas. One preaches and the other exhibits a magic lantern.

— A Boston journal says that New York spends $2,000,000 a year for flowers alone, and for plants and fruits $3,000,000 more.

— By the arrival of the City of Peking at San Francisco the Chinese population of that city was increased by 1,017 persons.

— According to the new law of Alabama, every commercial traveler doing business in the State must take out a $50 license.

— A new line of steamers will soon commence running between San Francisco and Panama, touching at the Mexican ports.

— It is expected that the Watchung branch of the Montclair and Greenwood Lake Railroad will be in operation in about a month.

— Proclamations prohibiting all kinds of gambling have been posted outside the city of Canton, China, by the Viceroy and Lieutenant-Governor.

— A French legal adviser of the Japanese Government has presented a petition to the Ministers to abolish torture in the procedure of the courts.

— The Pennsylvania Legislature are considering a bill which makes it a penal offence to point a gun or pistol at a person, whether in jest or earnest.

— Packages of beet sugar seed are being distributed among the farmers of Oregon, and a factory will be located in the section showing the largest returns.

— France makes 640,000 dolls every year, many of them wonderful pieces of mechanism. England furnishes the rag dolls, and Germany the wax and china heads.

— The Sisters of Charity at Carson, Nevada, have purchased the race track near that place, and will erect a nunnery and orphan asylum upon the site.

— Several years ago the Berlin Museum paid $24,000 for what were supposed to be Moabite antiquities. It has just been discovered that they are not genuine.

— Petrarch, the favorite for the Two Thousand Guineas and the Derby, has been purchased from Mr. Spencer, his breeder and owner, for $52,000, by Lord Dupplin.

— A "ranchero" near Santa Fe owns 80,000 head of cattle, which he pastures on 16,000 adjoining sections of land. One hundred "vaqueros" and one hundred boys take care of them.

AN INDUCEMENT!

A Good Way to Secure a Practical and Scientific Library.

WE have made a selection from our Publications of the following Standard Works, which we offer to subscribers in conjunction with the RURAL NEW-YORKER, at the extremely low rates below. These works are by men who have a national reputation in their various specialties, and we feel sure that we are conferring a double service when we offer the best Agricultural and Family Journal, *and* a Valuable Book, at little more than the cost of either alone.

We will send one year (postage prepaid on both) the

Rural N.-Y. and Willard's Dairy Husbandry, for		$5 00
"	Randall's Practical Shepherd...	4 00
"	Allen's American Cattle.....	4 00
"	People's Practical Poultry Book	3 50
"	Quinn's Money in the Garden...	3 50
"	Willard's Practical Butter Book	3 00

MOORE'S RURAL NEW-YORKER is an excellent Agricultural paper, and very popular. As a family visitant it is hard to beat in the attractions it holds forth for young and old. We are pleased to see that Mr. MOORE is full of his old enterprise and bent on making the paper better and better from year to year.—*Yates Co. Chronicle.*

Wit and Humor.

SPARKS AND SPLINTERS.

Young girls like to read the marrytime news.

Why is the peacock like the figure 9?—It is nothing without its tail.

Somebody says that Tyndall calls his wife Molliecule. We suppose she calls him a-Tom.

The question is asked why newspapers will persist in abbreviating a son of temperance and make a S. O. T. of him.

Why is the present Polar Expedition likely to come to grief?—Because the men and officers of the Discovery are not on the Alert.

"Well, sir what does h-a-i-r spell?" Boy—"I don't know." "What have you got on your head?" Boy (scratching)—"I guess it's a mus-keeter bite."

The largest feet known to history must be those of the Maryland editor who writes: "We black our boots with 15,000,000 boxes of domestic blacking a year."

An original neighbor of Rip Van Winkle was said to be so lazy that when he went to hoe corn he worked so slowly that the shade of his broad-brimmed hat killed the plants.

Her smile is sunlight and her laugh
That same smile set to tune;
Her lips the honey bee might quaff
And dream of buds in June.

Two Irishmen, traveling, were robbed and tied in a wood. One in despair, cried:—"Och, I'm undone!" Said the other:—"Faix, then I wish you would come and undo me."

Gushing idiot—How sublime this rinking is! By Jove I could rink with you as partner through life—could you? Young lady—Well, I don't know; you see it all depends on your rinkome!

They have a disagreeable way in Canon City, Col., when a man takes a broken chair to the cabinet shop, of saying, "Hit you with a chair, did she?" This is very trying to the average citizen.

They are going to explode 50,000 lbs. of nitro-glycerine at Hell Gate next year, say the New York papers. It is not wide enough at present to accommodate the travel from New York and Brooklyn.

Butcher:—"Come John, be lively now; break the bones in Mr. Williams' chops, and put Mr. Smith's ribs in the basket for him." John briskly:—"All right sir, just as soon as I've sawed off Mrs. Murphy's leg."

"No, Mrs. Henry; no!" said John, in tones of solemn warning. "Look at Mrs. Belknap. She wanted a new dress, too; and see where she is now! Stick to your calico, Mrs. Henry, and avoid the insidious voice of the tempter."

Epitaph for a liar:

In life he lied while he had breath;
And strange to say lies still in death.

For a musical director:

In beating Time his life was passed,
But Time has beaten him at last.

For a brewer:

A well-known brewer lieth here;
His ails are o'er—he's on "his bier."

For a potter:

On earth he oft turned clay to delf,
But now he's turned to clay himself.

For a scalemaker:

His weighs were the ways of pleasantness
In all life's fill'nl dream.
He struck a balance with the world,
And then—he kicked the beam.

On arriving at Calais on her way to make the grand tour, an English lady was surprised and somewhat indignant at being termed, for the first time in her life, "a foreigner." "You mistake, madam," said she to the libeler, with some pique; "it is you who are the foreigners. We are English."

He was taken sick in the night, and in her youthful ignorance she made two mustard plasters, and put one in front and one behind, and then with horrid sarcasm she asked him how he felt. But he was a well-bred man, and merely said that he realized with a tenderness he had never known before the true position of a sandwich in the community.

The committee appointed to investigate the subject of ladies' luncheons when traveling report that they invariably consist of a very small sandwich, large quantities of white and yellow cake, and an immense pickle; if the latter is absent the affair is considered a failure. These data are trustworthy, and shed light upon a subject to which little attention has been paid hitherto.

A man out West, about thirty years old, having a shot-gun on his shoulder and two pigeons in his hand, was a short time back standing at a street corner, telling a crowd that he had been out, and killed five hundred pigeons since sunrise. "You're a liar!" shouted a man on the edge of the crowd. The stranger looked at him, long and earnestly, and then inquired, "Where did you get acquainted with me?"

A SEASONABLE DEVICE.

"The Paterfamilias"—A Patented Hat and Umbrella Combination.

ARE YOU GOING TO PAINT?
USE NONE BUT THE
AVERILL CHEMICAL PAINT!
MIXED READY FOR USE.
PRICE REDUCED.
OVER 300,000 HOUSES HAVE BEEN PAINTED WITH IT.
ONE HUNDRED BEAUTIFUL TINTS AND COLORS.
IT IS THE MOST DURABLE PAINT MADE.
IT IS THE HANDSOMEST PAINT MADE.
IT IS THE MOST ECONOMICAL PAINT IN THE MARKET.
IT IS THE STANDARD, AND ONLY RELIABLE MIXED PAINT.
IT IS GUARANTEED TO BE SUPERIOR TO ALL OTHER PAINTS.

It has received the highest endorsements from thousands of persons who have used it in various sections of the Country.

Sample Cards, together with testimonials from owners of the finest residences in the Country furnished free by the

AVERILL CHEMICAL PAINT CO.,
32 Burling Slip, New York City.

THE BEST PAINT IN THE WORLD.
RUBBER PAINT,
MANUFACTURED BY THE RUBBER PAINT CO. OF CLEVELAND, O.
DURABLE. WATERPROOF. ECONOMICAL.
ANY SHADE FROM PURE WHITE TO JET BLACK, AND, AS IT IS MIXED READY FOR USE,
EVERY MAN CAN BE HIS OWN PAINTER.
The incorporation of RUBBER in our paint makes it *unequaled* by any other. It is unaffected by change of temperature, and is perfectly waterproof. It presents the finest possible finish, will not crack or peel off, and is in every way the "*Best Paint*" for either inside or outside painting, is from one-fourth to one-third cheaper, and lasts three times as long as the best lead and oil paints. The almost *unanimous verdict* of the many thousands who have used our paint is that it is *far superior* to any other paint in use.
Be sure that our TRADE MARK (a fac-simile of which is given above), is on every package.
The great popularity of and demand for our paint has necessitated the establishing of "*Branch Factories*," as follows:
No. 506 West St., New York City; No. 83 West Van Buren St., Chicago, Ill.; No. 210 South Third St., St. Louis, Mo.; and a Wholesale Depot at Wm. King & Bro., No. 2 North Liberty St., Baltimore, Md.

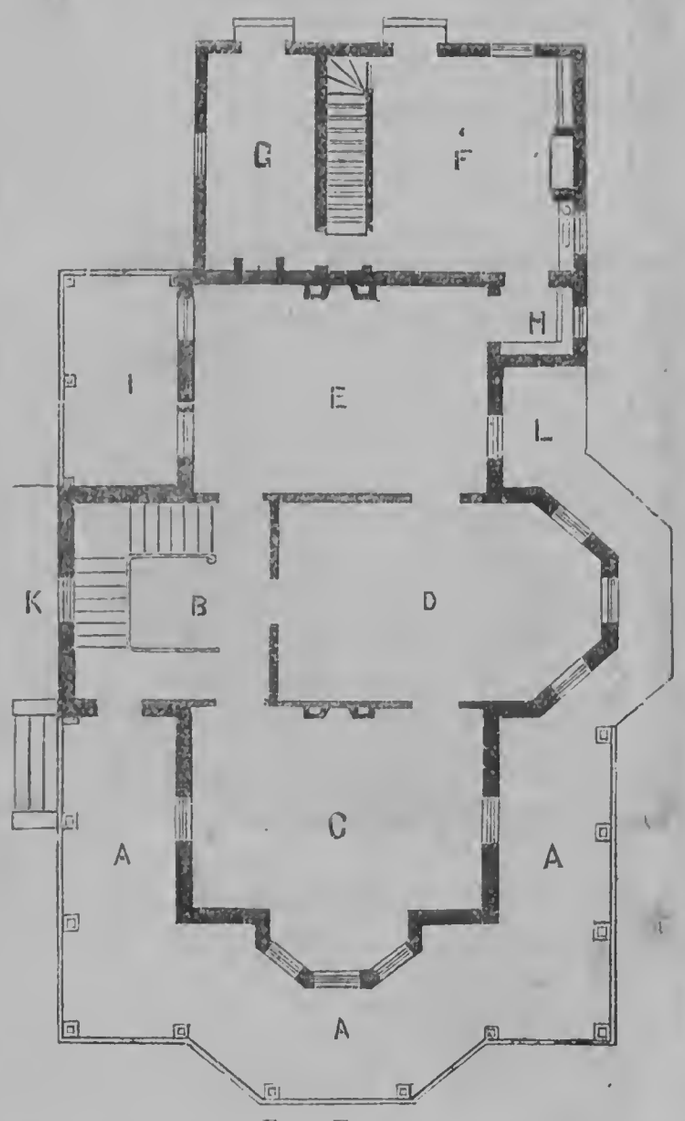
Rural Architecture.

A GOTHIC VILLA.

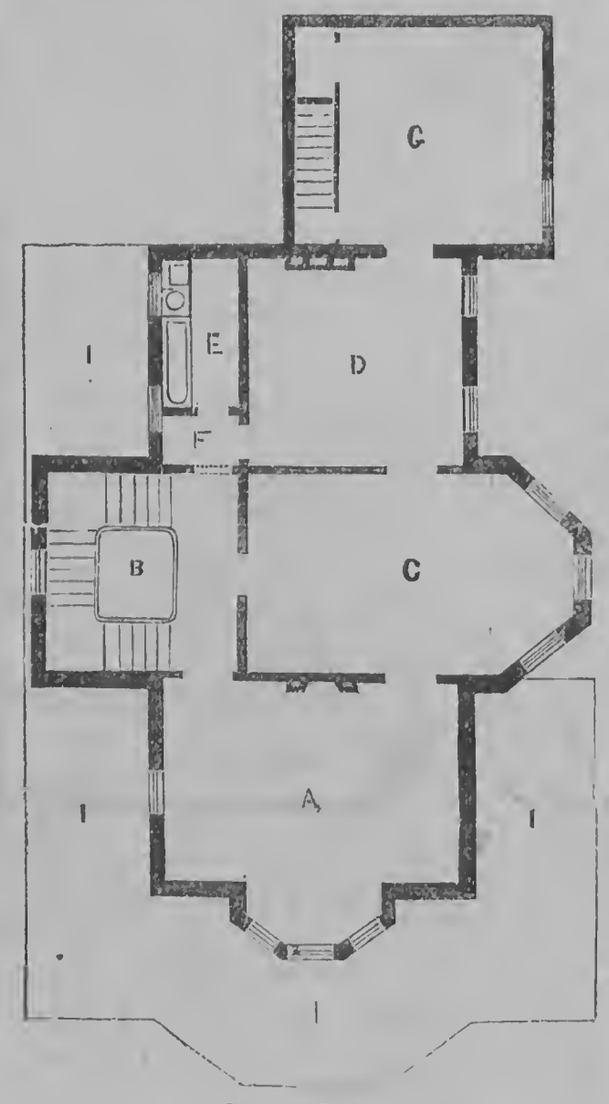
ONE of the best plans for a Gothic Villa which we have seen for many a year was contributed by Mr. SAMUEL SLOAN, an architect of Phila., to the American Land and Law Advisor. We append the illustrations and letter-press description, as follows:

There are few styles, if any, that can give a more perfect home retreat than the Domestic Gothic. Its irregularity of plan presents features of artistic value, and every gable and gablet helps to make up a picture possessed of all the charms which boldly contrasted light and shade so acceptably present to the mind.

The perspective which herewith illustrates our remarks clearly indicates comfort, ease and elegance. The ample verandas, which insure such an extent of shade, so desirable in overcoming seasons of heat, and the projecting gable, which gives such decided character to the whole composition, with the rural ornamentation which accompany them, tend to make it impressively a home. The material of which this residence might best be constructed, for permanency and appearance, should be stone of a selected tint. Coursed rubble, with cut quoins, hoods and sills, as well as plinths and chimney caps, would produce a most pleasing effect. It also would look extremely well if open-coursed mortar joints were sprinkled with small cobble stones and coarse, sharp gravel. But if the proper stone material cannot be had, brick is the next best thing in order, with cut stone trimmings, quoins, etc.



FIRST FLOOR.



SECOND FLOOR.

For covering the roof we would prefer slate of an ornamental cut, stained some tint appropriate to an attractive design. And here we may observe that the roof, being the finishing or crowning feature of a building, should not be slighted, but rather be made a prominent feature of the composition.

The covering may also be tin, well painted and finely sanded, taking care to obliterate all signs of joints. We would also suggest the screwing down on it of beveled or molded slips, in vertical rows, sixteen inches apart from center to center. But the tint chosen for painting the tin must be some one agreeable to the general tone of finish to the house, as any discordancy would be so remarkable in a Mansard roof that it would be fatal to the expression of the design. The vertical slips should be painted some color in strong contrast with the roof-covering, so as to give sufficient relief to these lines of demarcation.

Good, sound, split-shingles make an excellent roof, but if left unpainted, they present a raw appearance, until time has mellowed them with a somber tint assimilating better with the rest of the construction.

The following is a description of the plan of the principal story of this Gothic

DESIGN FOR A GOTHIC VILLA.—PERSPECTIVE VIEW.

Villa:—A, A, A, the porch, 8 feet wide; B, the hall, 14x13½ feet, with principal staircase; C, parlor, 14x20 feet; D, sitting-room, 14x22 feet; E, dining-room, 14x20 feet; F, kitchen, with stairs leading to the servants' room; G, wash-house; H, butler's pantry, connecting dining-room with kitchen; I, side porch to the dining-room; K, side porch to the hall; L, balcony, front of dining-room window, and extends around the octagon end of sitting-room, connecting with front porch. All the windows opening on to the porches and balconies extend to the floor.

The second story is divided as follows: A, front chamber, 14x20 feet, with bay window; B, the hall, 13½x14 feet, with stairs continued to the rooms above; C, chamber over sitting-room, 14x19 feet, with wardrobe closets, H, H, each of which is three feet deep; D, chamber above dining-room, 14x14 feet; E, bath-room, 5½x10 feet, with bath-tub, water-closet and water-basin, entered from the lobby at F. This lobby communicates with the main stair hall by an archway. In this arrangement the bath-room is accessible from all parts of the house. G is the servant's room over the kitchen, approached by a private staircase, as indicated; and a door communicates with the main house, by descending three steps.

The accommodations are ample for a family of ten persons, servants included, and if constructed with brick, with painted walls, and furnished with all the modern conveniences, the cost would not exceed $12,000.

Such a residence, with accommodations as the plans display, cannot fail to be satisfactory alike to those who occupy it and to the passing observer, to whom the evident completeness of the whole composition must give pleasure.

Field Crops.

CENTENNIAL CORN PREMIUMS.

THE following statement presents further information, as promised by Mr. WILSON, in regard to the offers made to farmers by himself and others for the best results in growing corn:

TWO THOUSAND DOLLARS FOR BEST RESULTS IN CORN CULTURE.

The corn crop of the United States may be estimated in a favorable season at a thousand million bushels for the grain, and sixty million tons for the stover. The total cash value of this result is not less than a thousand million dollars a year. In addition to this stands out the great fact that each bushel of corn is capable of producing a definite amount of other products of higher value. This not only increases the profit of the crop to the farmer, but tends to reduce the cost of other food staples in the markets of the world.

The quantity of these staples annually produced by American farmers is far greater in amount than is commonly supposed. The single article of butter reaches a yearly aggregate of ten or twelve hundred million pounds. When to these are added the corresponding amounts for beef, pork and mutton, for milk, cheese and wool, for poultry and eggs, and when it is considered, that for every pound of these staples, the profit to the farmer, and the market price to the consumer are largely determined by the yield and cost of Indian corn, it is easy to see that the actual value of this cereal is not to be measured by ordinary standards.

An average gain of even 5 cts. a bushel in the cost of corn would amount to fifty million dollars a year for the entire crop of the country, and would reduce the cost in a like ratio for each of the above staples. Hence it is not surprising that the attention of the foremost minds in the country has been lately and earnestly drawn to this subject. To stimulate farmers to aim at better modes of culture and a lower rate of cost in producing this grain is an object worthy of the best efforts of thoughtful men.

No apology is therefore needed in submitting to the farmers, Granges and Clubs of the United States the following series of offers which, from a much smaller beginning, have grown up to their present extent, as already explained, by the aid and co-operation of other parties.

The following well-known business firms have, by their liberal proposals, contributed to promote this movement:—New York.—R. H. Allen & Co., The Rural Publishing Co., Mr. Frank Leslie, B. K. Bliss & Sons, Sheldon & Co., Jas. Miller, W. L. Allison, Peter Henderson & Co., H. J. Baker & Bros., A. S. Barnes & Co., Clark & Maynard, Dick & Fitzgerald, The New York Plow Co., C. T. Dillingham, The Lucius Hart Manuf. Co. Philadelphia.—Henry A. Dreer, Harrison Bros. & Co. Boston.—The Ames Plow Co., W. H. Bowker & Co. Rochester.—James Vick, The Pennock Manuf. Co. of Penn., and others in various localities.

Though the premiums are not in the form of money, they are believed and intended to be even better adapted to the end in view. They comprise books, farm implements fertilizers, plated silver, oil paintings, vegetable and flower seeds, art-subjects, tools, etc.

In order to give successful competitors some opportunity of choice, the premiums are made to consist of a series of orders on the various firms above named, by which means a better assortment is secured. This arrangement simplifies the plan so that it is only necessary to state here the money value of each offer, leaving the selection as far as possible to the winning parties, though necessarily under some restriction.

LIST OF OFFERS.

	Money values.
For the best yield of shelled corn by weight from a single grain, an order amounting to..	$50
For the second best yield of the same, an order amounting to.....	25
For the third best yield, an order amounting to.....	15
For the fourth best yield, an order amounting to.....	10
For the next twenty products of the same, twenty orders of $5 each.....	100
For the best yield of shelled corn by weight from 20 rods, an order amounting to.....	50
For the second best yield of the same, an order amounting to.....	25
For the third best yield, an order amounting to.....	15
For the fourth best yield, an order amounting to.....	10
For the next twenty products from 20 rods, twenty orders of $5 each.....	100
For the lowest cost per bushel for shelled corn on one or more acres, an order of.....	50
For the second lowest cost of the same, an order of.....	25
For the third lowest cost, an order of.....	15
For the fourth lowest cost, an order of.....	10
For the next 20 rates of lowest cost per bushel, twenty orders of $5 each.....	100
For the largest product of pork from 1 bushel of corn, an order amounting to	50
For the second largest product of the same, an order amounting to.....	25
For the third product, an order amounting to	15
For the fourth product, an order amounting to	10
For the next 20 products of pork from 1 bushel of corn, twenty orders $5 each.....	100
For the best results in butter from 1 bushel of corn, the same series of offers as above, amounting to.....	200
For the ten best experiments in growing corn with commercial manures, to test the theory of a specific formula for any desired yield, ten orders amounting to.....	1,000

This offer is intended for Granges and Clubs. An accurate outline for the experiment and a formula for fertilizing will be sent, on application, to every Grange or Club intending to compete.

CONDITIONS OF COMPETITION.

The mode of culture in every case to be accurately described in writing, and the result to be duly verified. All products intended for competition will receive due attention by notifying me as soon as they are ready to harvest. Full particulars in regard to the awards, and the exhibition at the Centennial, etc., will be furnished in a supplementary statement in ample season.

As most of the offers here made do not require the products to be exhibited, provided the statement of facts is duly verified, it will be left to the option of competitors to exhibit or not. But, in any case, the facts must be clearly stated and properly verified.

All farmers, Granges and Clubs intending to compete, are requested to send me their address; not for publication, but as a matter of convenience to me, and of advantage to themselves.

CONRAD WILSON.

New York City, P. O. Box 4242.

POTATOES.

WHO can tell what comments we shall have to make on the potato crop of 1876? Those on last year's crop were generally dismal enough. One correspondent of the RURAL NEW-YORKER succeeded in growing potatoes, (Brownell's Beauty) for 12½c. per bushel, and he made some profit even out of last season's low prices. Generally, however, potatoes were grown at a loss last year, and the caution is almost universal against planting too largely this spring. This will be especially true where enormous quantities were grown last year, and also where men unused to the business went to planting potatoes largely for the first time. The losses of these classes have been heavy; but farmers who have learned the knack of growing potatoes cheaply, and mainly by horse hoeing have not suffered so severely. Their crops have been grown at moderate cost and low prices only means the loss of their customary profits. Those who understand potato growing were cheated out of fair pay rather by partial failure of the crop, owing to dry weather in a few localities just as the tubers were setting, than to the lowness of price. A crop of 250 to 300 bushels per acre may be made to pay expenses at 25 to 30 cents a bushel, and when near a good market at even a less rate.

It is scarcely possible that the present low prices of potatoes shall prevail another season. We advise no one to discard other crops, and depend altogether or mainly on potatoes. Nor would we have any farmer plow up unsuitable ground or a larger area than he can easily and thoroughly care for, with the help and manure at his disposal. We had rather see him planting less than more than usual. If he has been accustomed to cultivating five to twenty acres let him reduce this one-third or one-half. In the meantime he can be quite well assured, that thousands who last year grew potatoes largely will henceforth discard them entirely, and enough will surely do so to ensure a paying price for all which even in a good season can be grown next year.

The potato beetle is not so generally feared as it was a year or two years ago, but the warning from the over-production of last season is far more likely to be effectual than any fear of the beetle. Still we do not doubt that this enemy may prove destructive in many localities, which last year almost entirely escaped. The great reduction in area planted this season, will concentrate the enemy on a smaller space; but this will also make it easier for farmers to fight him. With a hot, dry season, as we may probably have next summer, keeping the vines clear of potato beetles either by hand picking or poison, is likely to be no small part of the farmer's work. Still this should not deter any one from planting potatoes; but rather encourage them. If the beetle is active he will still further thin off the growing crop, and may even insure high prices for farmers, energetic and enterprising enough to save their crops.

BROWNELL'S BEAUTY.

AT the Jackson meeting of the Michigan State Pomological Society the Brownell's Beauty potato received strong indorsment as being the coming late potato and suitable to take the place of the favorite Peachblow, which is reported to be on the decline. A writer in the Lansing (Mich.) Republican confirms this commendation in the following terms:

"The Brownell's Beauty first made its appearance in the spring of 1873. Its beauty, superior keeping qualities, great productiveness, and delicate quality, as a table potato, at once placed it in the front rank of those recommended for general cultivation. It is stated on good authority that samples grown in 1873 were exhibited with those grown in 1874, and but few could detect sufficient difference to call them the growth of two years. It is decidely a late potato; and my experience has been that it is at least eight days longer in coming up, after being planted, than the Early Rose. The size is medium to large, growing very fair and smooth; eyes small and nearly even with the surface; shape oval, somewhat flattened; skin a deep flesh color; flesh white, fine grained and very delicate. For the table, they cook by either baking or boiling, equal to the best, and are never hollow, watery, or discolored at the center. The tubers grow compactly in the hill, and are easily dug,—fully equal to the Early Rose in this respect; and I confess this is saying much, as the Early Rose has always been the *queen*, in the item of digging. It ripens in 12 to 14 weeks from time of planting, and is a good, healthy grower.

"And now I must say that, while I have no mind to underrate the Peachblow as a late potato,—for no potato has filled our market so long and so well,—the Brownell's Beauty beats it, because it ripens early, it grows compactly in the hill, is dug with one-half the labor, the eyes are not one-quarter as deep, it is a better keeper, and the quality just as good. It has been tried for three years, and there is no humbug about it. I have no doubt it will be the principal late potato in our market next fall, provided there is enough in the county to furnish the farmers with seed."

CORN AND WIRE WORMS.

A CORRESPONDENT of the Prairie Farmer communicates the following:—Last spring I planted a field of corn which was the second crop after breaking an old meadow. The wire worms attacked the corn before it came up and made clean work of it, in places, all over the field; in some places for nearly an acre the corn was entirely destroyed by them, while in others in the same field the corn came up and looked well. We went to work with our hoes and replanted the vacant places. The ground being warm and in fine condition I supposed the corn would be up in a very few days, but to my sad disappointment there was not one hill in fifty that came at all. When I examined for the cause, I found from four to six wire worms in each hill, which had entirely destroyed the germ and heart of the grain before the plant got through the ground. I thought I would not give it up yet, though it was getting late in the season, so I procured some early corn called the "Kankakee yellow," and put it to soak in copperas water in the evening, and let it soak till morning. I then poured the water off and went to replanting the same ground again. Nearly every hill came up in a few days, grew finely, and made good, sound corn. I am fully convinced that seed corn soaked as above directed, will prevent wire worms and many other insects troubling it. The only difficulty is it may be some trouble to plant with a corn planter while damp.

ABOUT OATS.

I HAVE seen advertised a few new varieties of oats. One is called "Andre's King," the other "Excelsior." Will you give your ideas about them in the columns of the RURAL?—YOUNG FARMER.

ANDRE'S KING, is a new variety with which we have had no personal experience. Will readers who have please write us its merits and demerits. The Excelsior is a white oat weighing 36 to 38 lbs. per bushel, and yielding as largely as any other good variety. We have known 86 bushels per acre to be grown of this variety. The white Probesteier oat is very similar to the Excelsior.

Sheep Husbandry.

MANAGEMENT OF YOUNG LAMBS.

THE following interesting and timely article on the management of lambs is from the N. Y. Herald of a recent date:

In the Northern and Eastern States a great many lambs are lost every season during the cold storms of rain and snow which prevail during vernal seed time. Many times lambs become so chilled in a short time after they are dropped that to save their lives the tender animals must be carried to the kitchen, where they can be warmed, invigorated and fed if necessary. The National Live Stock Journal states that this spring will be an exceptional one if there are not some days and nights when the lamb that is dropped with no shelter but the corner of a rail fence and no other bed than the ground will have a pretty hard struggle for life the first few hours of its existence. To those farmers who have not provided against such contingencies, as well as those who, having the necessary shelter, are crowded out, or accidentally separated from them, we offer a few suggestions as to the means most easily employed to resuscitate chilled lambs: Wrap the little sufferer in something soon as possible, to break the chilling effect of the atmosphere, and allow what animal heat there may be left to do its part in sustaining life. If within reach of the house, take the lamb to the fire (first observing closely the mother, so that you will recognize her when returning to the flock). If warm water can be had, immerse the lamb, keeping only the nose out, and hold it there until it is pretty thoroughly warm (no fear that the water is too hot if the hands can be held in it). Now, wipe the lamb as dry as can be done, and wrap in an old cloth or sheep skin, and place near the stove. If the mother cannot be caught readily so as to allow the lamb to suck, it should be fed a few spoonfuls of warm milk from a sucking bottle, if one is handy, otherwise from a spoon, using great care not to feed faster than the milk is swallowed. By this treatment we have known many a lamb resuscitated, that, when found, showed scarcely any signs of life. When the warm water cannot be had for immediate use, the same end can be secured, though not so readily or surely, by wrapping it in warm cloths and laying close to the fire, or, as the writer has often done, placing in the stove oven, left partly open for the admission of air. The advantage in hot water is that it will entirely exclude all chilling air, and will act equally on all parts of the body. When possible, the milk of the mother should be used in feeding young lambs, as it contains certain properties adapted to setting in proper order the digestive functions. Unless far gone, lambs will help themselves when held up to the mother, if a little patience is used by the shepherd. Cows' milk, warmed to the proper degree, with a few drops of molasses, will be found a pretty good substitute, if too much is not fed at a time.

TICKS ON SHEEP.

I should like to hear, through the columns of your paper, the best way to kill the sheep ticks. —H. E. R., *Glensdale, N. Y.*

Sheep well kept in winter rarely suffer much from ticks. At shearing time the ticks gather on the lambs, whose growing wool affords better protection than that of the newly clipped older sheep. Dipping the lambs in a solution of tobacco water will kill the ticks. Take the coarse stems of the tobacco plant for cheapness, steep in water, and immerse the lambs, excepting their heads, wetting the wool to the skin. This will speedily kill the ticks. By having the lamb stand on an inclined platform connecting with the tub, the tobacco juice can be squeezed from the wool and used for a large flock. While cold weather lasts, feed the sheep liberally and the ticks will do little injury.

SHEEP RAISING in California began in 1852 with importations across the plains from Missouri.

Dairy Husbandry.

EXPERIMENT IN SETTING MILK ON THE SWEDISH SYSTEM.

Mr. H. O. Freeman of Chenango, writes us as follows:—"Your invaluable work, Willard's 'Practical Butter Book,' that should be in the hands of all dairymen, has opened my eyes to the full extent of their orbits in the result of some late experiments made as suggested in the work. In order to be as practical as the Book, if that were possible, I go right at the results; yet I must diverge a little, for when I read your report of the Swedish system of setting milk, I made up my mind that the man who wrote that book had better have left out the plan followed in that far-off, isolated region. But I had the misfortune or good fortune to have under my charge one creamery in which the spring of water was unusually cold, standing at 42 to 44 degs., Fahr. Upon close of the season's business of 1875, I found this creamery had given more butter from a given quantity of milk than others where the water was not so cold. I at once conceived the idea that perhaps those Swedes did know some things which we Yankees had not yet practiced, and that Willard's 'Practical Butter Book' was written by a man who desired to place before the American dairyman such facts as had come to his knowledge, relying upon the intelligence of last-mentioned peoples to use them or ignore them. I tried the plan with the following result:

"I used the milk from one cow, stirred it well before dividing equally into the glass milk-testers, holding one pint each. Placed one tester, after filling, in a room the temperature of which was 62 degs. Fahr.; the other tester, filled with the same quality of milk, was placed in an ice bath and reduced to a temperature of 33 degs. Fahr. and within two feet of first tester. In three hours after setting, the open air tester showed just 5 degs. of cream—the ice bath tester 25 degs. of cream. After setting 20 hours the open air tester increased its percentage of cream up to 12 degs. and the ice bath tester decreased to 18 degs. The decrease of the latter from 25 to 18 degs. may be explained by you more to one's satisfaction than I am able to give. I assume the sudden rising of cream carried with it from the milk *something* the cream found out it did not want long in its company, and therefore rejected it. Some may argue that the slow rising of cream in the open air tester was a guarantee of its superior richness to that in the ice bath, Be this as it may, after 30 hours' standing the open air tester contracted its cream to 10 degs. and the ice bath tester to 17 degs. By placing the former between myself and a bright light, the milk was so opaque that no light could be seen through it, while the latter looked more like whey from the hands of a first-class cheese maker, and it was, as compared with its mate, quite transparent."

It is evident, from the above description, that the separation of the cream from the milk in the ice bath tester was much more perfect than that in the open air tester. We are glad attention is being called to the Swedish system of setting milk, and that our butter dairymen are finding the practice worthy of study and adoption.

BUTTER MAKING IN FRANKLIN CO., N. Y.

Mr. L. D. Paddock of Malone, Franklin Co., N. Y., in his paper before the American Convention at Rome, refers to some of the advantages of butter making at factories above those at farm dairies. The factory system removes much drudgery from farmers' homes, and better prices are also gained for the butter. In 1870 the first factory was established in Franklin County. It was a small factory, and the first season a pound of butter was made from 23¾ pounds of milk. The prices obtained for the butter were about 3c. higher than those obtained by the private dairies. There are now 28 butter factories in Franklin County, using the milk of about 7,000 cows. The plan of setting the milk usually adopted is in large pans, or what is known as "shallow setting." In establishing a factory he advises that the location should be near a cold spring of pure water, and it should also be near the greatest number of cows attainable. It costs but little more to manufacture butter from a large number of cows than from a small number. The most convenient size for a 300 cow factory is 30x50 feet. The pans are set with their ends to the wall, with an alley-way between each row. The water for cooling is brought in by means of pipes and the milk is brought from the delivery window to the pans on a truck and weighed. The milk is cooled down to 60 or 62 degs. as soon as possible. The temperature of the milk room is about 70 degs. The milk is skimmed as soon as it becomes sour, and the sour milk is emptied into a large vat outside the factory, where it is taken away by patrons.

It usually takes an hour to do the churning, and the butter, after being washed, is then taken to the cellar, spread out thinly and salted at the rate of an ounce of salt to the pound of butter. It is now set away until next morning, when it is worked and packed in 60-pound packages and covered with a cloth, and over this is placed the lid of the package. He expresses the opinion that cows fed on dry land pastures will give more milk than those on wet land pastures. Such is the general method of conducting butter factories on the "shallow setting plan" in Franklin County which has, of late, obtained much celebrity on account of the excellent quality of its butter.

CONCERNING THE QUALITY AND SALE OF BUTTER.

Hon. John Shattuck of Chenango County, well known as a leading dairyman of that County, and who has been distinguished throughout the State for the manufacture of fancy butter, read a paper recently before the Farmers' Club of Chenango County on the "Manufacture and Handling of Butter." He pointed out the losses to the dairymen from a failure or neglect of producing a first-class article. A cow that yields 200 pounds of butter that is sold at 5c. per pound off from the price of a first-class article, will make a difference in the receipts of the former of $10. Now, on 20 cows the loss of $10 per cow is $200, and on 50 cows the loss is $500. This tells the story very plainly, and points to the reason why dairying is often of little or no profit to the farmer.

Mr. Shattuck touches another point which it seems to us is a correct view in regard to purchasing. He urges a more careful discrimination on the part of buyers, and thinks they are to blame for not buying butter strictly on its merits in the country, the same as in the city. If one man's butter is worth 40c. and another but 35c. per pound, let the proper difference be made, and thus dairymen will be made to feel the importance of improving their product. He urges also, the plan of letting butter go upon the market when it is fresh and in its best condition, putting it into consumption as it is wanted and where it is wanted. And he says truly, that medium grades are worth more while fresh than they will be after standing through the season, while the practice of sending butter to market while fresh, or as soon as made, thereby letting it go into consumption, has a tendency to create a better margin for the fall make.

We commend these views of an old and experienced butter maker as worthy the attention of butter dairymen.

ABOUT THE BUTTER PRODUCT OF 1875.

Mr. J. M. Peters, in his address at the American Dairymen's Association, in referring to the butter product, said:—"The butter surplus—butter being a perishable article—suffers by the delay of storage. Very little of the stock received at New York is fine enough for the top price in the home market. The Western butter business has never been so well conducted as during the season of 1875. The Western dairymen have learned that prices depend upon the quality of the stock. It comes to market to be sold at any price. Goods should be put upon the market to be sold when at the time. The Western butter makers are crowding the State makers in quality. To brand a tub "Western," no longer condemns it, and to brand it "State," no longer insures good quality. No special effort has been made to extend exports. No progress has been made during the year. The season has been unprofitable both to the trade and the producer. The quality of the product has not proportionately been improved. Mr. Peters thought the buying system in the interior is defective, because the value of the product has been made to depend too much upon the quotations of a few buyers."

Mr. Peters would seem to argue, from the last statement, that better results would be obtained by returning to the commission trade. We can hardly agree with him in this regard. The best plan for dairymen it seems to us, is to have regular market days in the interior, where both butter and cheese are sold and paid for on delivery.

A CENTENNIAL CHEESE.

We see it stated that an Ohio Dairyman proposes making a mammoth cheese for the Centennial Exhibition, which will require one day's milk from 20,000 cows The proposed weight of this cheese is 25,000 pounds, and a car will be made for it and upon which it will be put to press. This will much surpass the great Canada cheese which was made at the Ingersoll factory. This cheese was six feet ten inches in diameter, three feet high and twenty-one feet in circumference, and weighed 7,000 pounds. It required thirty-five tons of milk to make it, or one milking from 7,000 cows. It was exhibited at the New York State Fair at Saratoga, and was afterwards exported to England, and caused a sensation when it passed through the streets of London and other cities on its way to the place of exhibition.

In making large cheeses, unless due caution is taken, there is difficulty in expressing the whey, and if the whey is not properly expelled the cheese will be sure to turn of bad flavor. Several large cheeses have been injured in this way, and we suggest to our Ohio friends to have special care in this regard. The Ingersoll cheese was pressed first in small hoops, the batches of curd being no more than from 50 to 70 pounds; then, after the whey was fully expelled, the small cheeses were broken up, passed through a curd mill and finally incorporated in one mass, where the curds assumed a proper shape under powerful pressure.

The Herdsman.

THE HOLSTEIN CATTLE.

Are Holsteins the "coming" breed of cattle? A writer in the Ithacan evidently believes so, and as there is much interest among farmers in this breed of cattle, we copy what he says of their character:

In history we find evidence to show that the Short-Horns owe much of their present superiority to Holstein blood, and the Ayrshires also, there is reason for believing, were, in a similar manner, improved from being a poor race until they have become a good one. They are large and well built, coming fully up to the Short-Horn in size, Many of the cows weigh 1,500 lbs. and upward, and the bull Von Tromp, imported in 1861, weighed when six years old 2,720 lbs. Their color is black and white, the spots being large and very distinct. The Holsteins are now found throughout Germany and Holland, but in the greatest perfection in Holstein, North Holland and the intermediate territory. As the name implies, they are found in Holstein. This is a province of Germany situated in the northern part and forming the isthmus between Denmark and the mainland. It lies between the North Sea and the Baltic, and, like Holland, the country is low and marshy, and the cattle are exceedingly hardy and vigorous. Their hardiness makes them very valuable to us, and more adapted to the climate of the Northern States than cattle from warmer climates. The Dutch are notably thrifty, and produce grain, butter and cheese in great abundance. Holland has been famous for its butter and cheese for a thousand years, and consequently they have taken greater care of their cows, for no doubt much of their success has been due to their superior race of cattle.

In the year 1864 there was estimated to have been exported from Holland 32,000,000 lbs. of butter and 61,000,000 lbs. of cheese, and that there were 913,216 cows in the country.

In 1820 it was estimated that the number of cows in the United States was 11,200,000, of which 900,000 were in the State of New York; yet there was exported from this country only 2,000,000 lbs. of butter and 47,000,000 lbs. of cheese. Of course the amount consumed is immensely greater in this country than in Holland, yet it is of interest to us to see the immense difference between the amount consumed and the total number of cows in the two countries.

The Holsteins were first introduced into this country in 1625 by the West India Company. The Dutch, of course, brought some of their cattle with them in their early settlements in New York. Then we know of no other importations until nearly two centuries later.

In 1810 William Jarvis imported two cows and a bull and placed them on his farm in Vermont. In 1825 Herman de Roy imported some and kept them on a farm near New York City, and also introduced them into the Western part of the State, in the Genesee Valley. There is no doubt that both of these importations improved the cattle in the localities where they were introduced very much, but not being kept pure they were soon mingled with the native cattle.

The present Holstein cattle in the United States, or at least those called thoroughbred, have mostly descended from importations by W. W. Chenery, Belmont, Mass. He first imported a fine cow in 1852, which pleased him so much that in 1857 he imported a bull and two more cows. Two years later he imported four more. These, with their progeny, he kept until 1860, when, in consequence of too close confinement in warm stables, a disease broke out among them. The people being in mortal fear of the rinderpest, they were all destroyed, except one bull calf, by a law of the State Legislature. But Mr. Chenery was not discouraged, and the next year he imported a bull and four cows. They arrived in good condition, and were the first successful introduction of Holsteins in this country. The animals imported were the finest that could be found in North Holland, and they have given evidence of being good beef animals, growing rapidly and maturing early. Although as a breed they are very old, yet, not having been bred in-and-in, like most of our pure breeds, they are inclined to be rather coarse. No doubt this can be remedied by proper breeding, and the animals made more compact and smooth.

Milk from these animals has in some instances produced 22 per cent. of cream, which can be excelled for richness by no breed except the Jersey. The milk seems especially adapted for cheese-making, as it is exceedingly rich in caseine, the basis of cheese. In 1822 Mr. Chenery, who was the largest importer of Holsteins, by authority of the American Association of Breen in thoroughbred Holstein cattle, published the first volume of a herd book.

The cattle of North Holland and Holstein are considered thoroughbred and can be recorded in the herd book, and also those that can trace purely to those that have been so imported. These cattle have been called by various names, one of the principal of which has been Dutch cattle. In order to establish some name that might be universally recognized and to avoid much confusion, the Association decided to call them Holstein cattle. This seems quite appropriate, because it is pretty conclusively proven that the race originally came from the Province of Holstein. Time will tell what rank they are to take among the herds of this country, but that they are to be the breed for general dairy purposes I feel well assured.

EXPERIMENTS IN FEEDING STOCK.

A writer in the Kansas Farmer, in considering the question of how to make money farming, mentions several experiments in feeding stock by men who could not command money to purchase stock. One feeder took 40 head of three-year-old steers, the 20th day of October, to feed, for 8c. per lb. for all the gross weight he could put on till the 20th of February. He had a great deal of soft corn that was not merchantable, and he gave the cattle all they could eat. He fed them four months, consuming about 50 bushels of corn to the steer, and putting 270 lbs. weight upon each animal. This made his corn bring him 42c. per bushel, and he had hogs following his cattle, which will still increase his profits.

Another feeder took some steers of the same man to feed at 7c. per lb. for what he could put on them. Of course his profits were an eighth less than the other feeder, and his corn netted him about 36c., while he still had the profits on the hogs.

These experiments are of considerable value, and they answer the objection so many farmers have at hand when the profit of feeding stock is mentioned, that it takes money to handle stock. Of course the open winter favored the feeders, but, if stock is sheltered, the same results can be attained any winter.

In this connection it may be said that a farmer, when he decides to put in a crop, should consider the probabilities as to a profitable disposal of it, or, in other words, make up his mind as to what he will do with the crop when he gets it. A little calculation and planning before making a venture is always in order.

FEEDING MILCH COWS.

J. H. R. of Northfield, Vt., writes as follows in the Vermont Farmer:

For two months past I have practiced feeding at 5 o'clock in the morning. Hay first, and roots and bran after the hay is eaten. Turn out and water about 8 o'clock, and return to the stable after a short time out for drink and exercise, but not long, unless the weather is fine. I feed all the roots and bran for the day at one feed.

The second feed of the day is at 2 P. M., hay only and all they will eat until 4 P. M., at which time I water and return to a warm stable for the night. I think my fifteen cows do better by this method than to feed three or four times, as I have done heretofore. I sell milk, and am thus able to know when the cows are doing their best. I consider one peck of roots, one quart of corn meal and three quarts of bran, together with all the June or autumn cut (rowen) hay they will eat, as good, liberal winter feed for an average-sized milch cow. My mowings are all cut twice in the season. Would be glad to cut it before it is fairly headed out. Grass is never cut too early, but mostly too late. Cut it early, and cut the second time. The cheapest feed that I can raise is dried grass and fodder corn. Roots cost me most, but they are very valuable. I shall raise more instead of less. Bran is worth all it costs for feed, and also all it costs as a fertilizer afterward.

At Point Reyes, Cal., there is a dairy farm of 45,000 acres, on which there are 3,000 cows. The farm, together with the cows, is rented, in part to several tenants. They make from $1,000 to $2,000 per annum clear of all expenses. The yield from the cows is reported to be excellent; some of the butter ranches show an average of $80 per cow through the whole herd of 200.

Industrial Topics.

OUR PUBLIC ROADS.

DANSVILLE, March 16, 1876.

MR. D. D. T. MOORE.—*Dear Sir:* Some weeks ago you had a couple of articles on the subject of "Highways," and I have looked through all the numbers of the RURAL NEW-YORKER since in the hope that I should see a continuation of the subject until something was brought about that would give us better roads. My neighbors and myself are about shut up at home in consequence of the poor condition of the roads. Sometimes they are too muddy, and at others frozen and rough. Many of us have become satisfied that that the common soil scraped from the sides and put in the middle of the road is not sufficient—that stone or gravel, or both, are necessary to be added in order to make a road-bed that will answer through the fall, winter and spring. We also believe that if you and other influential men would give the subject more attention, in a very short time a system of improvement would be planned which would in a few years give us good roads without burdening us to any great extent. "In the midst of counselors there is safety."

This question may look different from other standpoints, but from mine it seems as though each land owner should be required to build the road across his premises. I believe that this will be found, after full consideration of the subject, to present the fewest objections. I am aware that to properly grade and turnpike the road-bed and then cover the center with broken stone and gravel will take some labor; but the result would justify the expense. Business cannot be carried on with profit to men or with anything approaching humanity to animals over such roads as we have six months in the year. I respectfully submit for your consideration a plan that a number of us believe better suited to the purpose than any other we have seen suggested, and it has this great *desideratum* in its favor—it requires no money tax:

1. Have a law passed requiring every land owner to build the road across his premises.

2. Do away with pathmasters and the present assessments according to valuation, or what is known as statute labor.

3. Let this law minutely state how the roads shall be graded—how wide the dirt road shall be built—how wide the stone shall be spread on top of the dirt turnpike—how fine these stones shall be broken—how thick the stonework must be in the center and how thick at the outer edges—how thick a coat of gravel must be spread on top of these stones.

4. Let this law state the highest grade allowable in hilly parts of the country.

5. Make land owners responsible for accidents caused by neglect to keep the road in repair. All dangerous places at the side of the road must be fixed so that no accident can happen.

In short, give us a road law that when fully carried out will give us for all time to come first-rate highways, thus furnishing at all times of the year a pleasant means of communication between business places, villages, churches, schools, and inhabitants. The advantages to the people would be a hundred times the cost of construction. Other countries whose citizens were not as well prepared to bear the expense as we are have built stone roads. These roads could be built at times when other work was not pressing. Let there be a specified time within which these roads shall be completed—say five, eight or ten years—requiring every owner to build one-fifth or one-tenth, as thought proper, each year, until the completion of the road, or roads.

A READER OF THE RURAL.

NOTES FROM KANSAS.

WE thought we would write a few lines to let Eastern people know how this dronthy, chintz-bug-eaten, grasshopper-eaten and weather-beaten Kansas (so called) is getting along. We had grasshoppers in '74, we don't deny. They came on the 9th of August, about noon, falling as thick and fast as a moderate snow-storm. By evening they had stripped every blade from the corn-stalks, as when they have been pastured over winter. With the drouth they ruined our corn, it being just in roasting ears, but small grain was harvested earlier and was very good. After they had stripped everything, they left, but they did not carry their eggs with them, which hatched out the next spring, '75, destroying small grain and corn in some localities. Despite all, we obtained an immense corn crop, after planting two or three times. Oats, one-third crop; rye, one-third; potatoes good; sorghum good; buckwheat good; wheat not worth mentioning; corn was never better, ranging from 40 to 100 bushels per acre. Grasshoppers do not come every year, however. We have been here sixteen years, and this is the first time they have done us any damage. In '60 we had a drouth, and also in '74, but would have had enough grain to have wintered our stock were it not for the grasshoppers.

One of our most important crops is the prairie grass which our broad, rolling prairies are supplied with, for it and cattle constitute the wealth of the people. Stock run at large from April till October without costing the owner a cent, and come in in the fall fat and sleek; then they shut their steers up, feed corn, and thereby get about 50 cents for it; otherwise they would not

DEERE GANG AND SULKY PLOW.

have received more than 25 cents. There is nothing made here raising grain alone for market, for it costs too much to get it there, but it pays when fed to cattle and hogs. Any kind of farming, raising cattle and hogs, butter and cheese making, wool growing, and the like, are very profitable when properly managed, for not only can animals live and get fat in summer, but they can be carried through the winter in pretty good flesh when they are fed all the prairie hay they can eat, with plenty of salt and water. So you see our prairie grass is very valuable.

The northeastern part of this State is very healthy; sometimes a little ague, but seldom. The wind, at times, blows here almost strong enough to take the hair off a man's head; but we are used to it, and so don't mind it. The weather has been very pleasant this winter. Farmers have been plowing and grubbing almost every week. But this is an exception. We generally have from one to three weeks' sleigh-riding during the winter. For our soil you can judge from the amount of corn it produces, and that without manure. It is a sandy loam, however, three to five feet deep in the bottoms, and one to three on the uplands. E. J. B.

LARGE FARMS IN ENGLAND.

REFERENCE to the big farms in Illinois—40,000 acres, 18 in corn, 5 in oats and flax, and the rest in grass—has recalled a notice of the London Spectator, from the Domesday Book of Scotland, which has a list of these landlords who each own more than 20,000 acres of land in that country. The result is that one man alone, in his own and wife's right holds more than a fifteenth of the entire area of the Kingdom, and twelve men own nearly a third; a proportion probably exceeding anything in Western Europe. No less than 106 hold more than 50,000 each. The 11 who own the largest amounts of land are:—The Duke of Sutherland, 1,176,341 acres; Dutchess of Sutherland, 140,879 acres; Sir. J. Matheson, 406,070 acres; Mr. A. Matheson, 220,632 acres; Duke of Buccleugh, 432,183 acres; Earl of Seafield, 306,000 acres; Mr. Evan Baillie, 306,000 acres; Earl of Stair, 270,000 acres; Duke of Athole, 134,000 acres; Sir K. MacKenzie of Gairlock, 164,680 acres; Macleod of Macleod, 141,700 acres. The old idea that the Duke of Sutherland owns an entire county is not true, but the Duke, with his wife, the Countess of Cromartie, owns more than the entire surface of any county in England, except Yorkshire and Lincolnshire.

LAST YEAR the United Kingdom had 2,874,290 acres of root crops (not including potatoes), and this year, it is believed, 83 per cent. more, and worth, according to estimate, fully $153,000,000 in gold. A good deal of money, surely, and that too for a product the value of which American farmers, as a class, have not yet learned to appreciate.—*Tribune.*

The Garden.

HYBRIDIZING AND CROSSING PLANTS.

ALMOST every day in the week we have some new fruit, flower or plant brought to our notice, which is claimed to be the result of artificial hybridization or crossing. Now, while we do not desire to throw "cold water" on such production, or allay the "fever" of certain enthusiastic manipulators who lay claims to being the originators of any particular hybrid or cross between different species or varieties, still we often feel inclined to ask, "how do you know that certain operations produced certain results?"

For instance, we have frequently heard strawberry growers tell how they produce new sorts, supposed to be crosses between two distinct varieties, by operating somewhat as follows: A plant, perhaps of the *Hovey*, is selected for the female plant, as this is a pistillated variety, which will not bear berries or seed unless the flowers are fertilized by pollen from some perfect flowering or hermaphrodite sort, consequently, if seed is obtained from it, it is pretty good proof that cross fertilization has taken place. Well, a plant of this variety is set out in some secluded spot in the garden, remote from any other strawberries, and alongside of it another is planted, but of a different sort, for instance, *Wilson's Albany*, which has perfect flowers, containing both stamens and pistils.

Of course, when both come into bloom at the same time, the pollen from the *Wilson* would be more likely to reach the pistils in the flowers of the *Hovey* than any from plants growing at a distance of a half a dozen rods, or a mile, still, if left to itself, there is no certainty that such cross fertilization will take place. But a majority of those who have raised new varieties of the strawberry would jump at the conclusion that it meant no better proof of the fact that the pollen from the flowers of the *Wilson* had fructified those of the *Hovey* than the presence of berries on the latter. They would overlook the fact, that a big bug, beetle, or other insect may have draggled itself in the pollen of some strawberry flower in a neighbor's garden and then flown directly to this isolated plant of the *Hovey*, scattering pollen grains over its pistils, fertilizing each thoroughly and effectually.

The seed from the *Hovey* being saved and sown in the ordinary manner, each would produce a different sort, no matter whether one of its parents was the *Wilson* or something else. If any should prove to be valuable the raisers would be very likely to claim that it was a cross between the *Wilson's Albany* and *Hovey's Seedling*. But, under the loose system of manipulation that we have described, (which is a fair sample of how such things are frequently done) how can the raiser know that it is a cross between the two sorts named.

Now to be certain in regard to results in crossing or hybridizing plants, the flowers to be fecundated must be fully protected from the visits of insects, which is a somewhat difficult matter in the open air and in the presence of minute species, which readily pass through the meshes of even common mosquito netting. We have experienced more or less difficulty upon this score, for when we placed very close-woven nets over the flowers the shade destroyed the functions of the pistils, and coarse nets admitted intruders that sadly interferred with our operations. It is very easy to flatter ourselves that results accord with our aims and desires, but it is quite a different thing to be certain of it, therefore it is usually safe to prefix our assertions, in regard to crosses and hybrids, with a "supposed to be," unless precautionary measures were adopted that did effectually prevent any mistake or outside interference with our operations.

COWPER AS A GARDENER.

THE London Garden finds in the "Life of COWPER" the following:—"Gardening was, of all employments, that in which I succeeded best, though even in this I did not suddenly attain perfection. I began with Lettuces and Cauliflowers; from thence I proceeded to Cucumbers, next to Melons. I then purchased an Orange tree to which, in due time, I added three Myrtles. These served me day and night for employment for a whole winter. To defend them from the frost in a situation that exposed them to its severity, cost me much ingenuity and much attendance. I continued to give them fire-heat, and have waded night after night, through the snow, (with the bellows under my arm,) just before going to bed, to give the latest possible puff to the embers, lest the frost should seize upon them before morning. Very moderate beginnings have sometimes important consequences. From nursing two or three evergreens I became ambitious enough to want a greenhouse and accordingly built one which, verse excepted, afforded me amusement for a longer time than any expedient of all the many to which I have fled for refuge from the misery of having nothing to do."

Industrial Implements.

IMPROVED MACHINERY FOR PLOWING.

THE DEERE GANG AND SULKY PLOWS.

UNDOUBTEDLY one reason why active, enterprising men have been averse to farming, has been the impossibility of conducting it on the large and magnificent scale on which other avocations are managed. No matter how large a farm a man might own, he was obliged to plow, cultivate and harvest by the slow processes which smaller farmers adopt, and could only get a large amount of work done by a proportionately large and expensive amount of hired labor. Mowing and reaping machines and other farm implements have long since overcome this difficulty for most farm operations; but until recently plowing has been an exception, and the slow work of following the weary round of the furrow at the rate of one to two acres per day, has been the lot of small farmers and large alike.

We are glad to note the reverse of this, giving capital and enterprise the same advantages in plowing that are enjoyed in other farm operations. The Deere Gang Plow, manufactured by DEERE & Co. at Moline, Ill., introduces an improvement which, at moderate cost, doubles the capacity of the plowman and enables him, with three to four horses, to turn in good order five to six acres of soil per day. We give on this page an illustration of this plow, by which its method of operation will be readily seen. The plows are firmly fixed in an iron framework, and work with the least possible draft. The driver sits in front and regulates the depth of the plow, or can lift it out altogether at the end of a land by means of a lever. The tongue is fastened in the beam by a swivel bolt, giving it free motion and relieving the horses' necks from all pressure except the weight of the tongue itself, which is of wood. The frame, beams and wheels are all iron, insuring the greatest possible durability and exemption from breakage. These plows are already extensively used in the West, and in some tests have shown lighter draft and a better scale of points than any of their competitors. Among their certificates is one from LANDRETH & SON, who use it on their seed farms in Pennsylvania, plowing nearly five acres ten inches deep in ten hours with three mules, and on another occasion plowing an acre and a fraction in two hours.

Messrs. DEERE & Co. also manufacture the "Gilpin," a sulky plow cutting only one furrow and easily worked with three horses. This, like the Deere Gang, is of recent introduction, but is already finding favor with farmers who do not find a virtue in doing work the hardest way when it may just as well be done more pleasantly.

These plows, together with numerous others, by the same makers, are sold by R. H. ALLEN & Co., Nos. 189 and 191 Water street, New York city, who will send descriptive circulars and price lists on application. The importance of the Gang Plow in doubling the working force of the farm during the busy season of plowing and preparing the land for crops, ought to, and probably will, induce a large sale the coming season. Those wishing plows of this kind, or further information on the subject, should order soon, that they may have time to think the matter over before the busy season commences.

Floricultural.

FLORICULTURAL NOTES.

Lilies.—For the past three years we have been unsuccessful with many Lilies, such as Excelsum, Chalcedonicum and Humboldti—and previously as well, with Browni, one of the most beautiful of Lilies, which, though we tried it repeatedly with every care, never once bloomed, and after a more or less feeble summer-existence, was heard of no more forever. Sometimes—as with Excelsum more strikingly—a good stem would shoot up a foot or more with every appearance of perfect health. Here it would remain for weeks without further growth and then dwindle away. We have found, upon removing the earth, that these stems had drawn their substance from the bulb itself, no roots being found upon the disk, and that the stem must have died when the bulb had yielded all its store of nutriment. Extensive growers, we have found upon inquiry, are troubled in the same way. In some instances wire-worms are said to do the mischief—destroying the first fibers of the bulbs when, the stem having commenced growth, the bulbs become exhausted in its support. We were told by one gentleman of experience that in planting, the scales should be held closely together, so as to prevent the earth from falling between them—or, planting in tissue-paper was recommended. Another had met with good success by surrounding the bulbs with pure sand. Another planted potatoes between the rows with good results, the wire-worms, to which he attributed all the trouble, preferring the potatoes and leaving the bulbs unmolested. We have, however, tried all but the potatoes—a remedy worse than the disease for garden-plots—with only failure for the result; so that for the present we shall try to content ourselves with the Auratums, Lancifoliums (Speciosums), Umbellatums, Longiflorums, Candidums, double Tigers, and others that always do well without extra care.

Pachyphytum Bracteosum.—This is one of the very best of succulent plants. We saw this plant for the first about four years ago—it was rare then, though propagated now in almost every hot-house. The leaves are two or three inches long, spatulate-oblanceolate, and as smooth and plump as if molded of wax. The edges are rounded and thick, without a wrinkle or unevenness. The color of the leaves is glaucous, suffused in some parts with a most delicate lilac bloom, in others with a shade of pink.

Like *Echeveria* and Klenia, it is prettiest when young, so that instead of retaining old plants season after season, it is better to raise them from seeds or leaves. From seeds, hundreds may be raised from a single spike and, sown in pans of light soil in the fall, they germinate freely and will be large enough to bed out by late spring. Propagated by the leaves, the sand should be kept rather dry, as they are prone to damp off. Indeed, dryness suits this plant in every stage of its life, and we have found that it thrives just as well in a hot, dry, dusty sitting-room as in any other place. As a bedding-plant it has no superior among succulents.

Xanthoceras sorbifolia.—Our readers will not have forgotten and must not forget this beautiful shrub, of which a life-sized engraving of the inflorescence was given in a late RURAL. We see that a specimen was exhibited in fine condition at a meeting of the Royal Hort. Society about the 15th ult. We shall be glad to make it known to our readers as soon as it is offered by our nurserymen.

Rhododendrons do well in shade—that is, the foliage thrives, though the bloom is not so good. A very pretty arrangement for a sunny situation is a mixed bed of Rhododendrons, Roses, Gladioli and the Japan Lilies. All will do well in the same soil—one composed of peat and loam, if destitute of lime and manure, either of which is injurious to the Rhododendron. Peat until lately has been used in England almost exclusively for Rhododendrons, and the belief was general that no other soil would answer. Now, however, ordinary garden soil is used. In this country there is no doubt but that it is just as good as peat.

Eucalyptus globulus. We have sketched a leaf of the famed prophylactic of those two pests—not to say scourges—of mankind, viz., the *mosquito* and the *fever and ague*, from a seedling four months old. The seed was planted in a pot of sandy soil Dec. 3d, and placed in a conservatory in which during the winter, the thermometer has several times fallen as low as 35 to 38 degs. during the night. In two weeks the cotyledons appeared, one of which is shown in the cut. Jan. 10 the plant was 1½ inches high, and it is now 7 inches in hight. The leaves are opposite, sub-sessile, of a light-green color—the midvein tinged with red. The stem is round at the base but quite square above, and bears 14 leaves besides the cotyledons which still persist.

A note in the RURAL has brought us a number inquiries as to its cultivation and where the seeds could be obtained. Its cultivation, as may be judged from the above, is as easy as possible, and the seeds can be procured of leading seedsmen. Not one of these inquiries, strange to say,

has come from our own (adopted) State. But New Jersey is proud and self-reliant though disowned, and she will stand faithful, through thick and through thin, to her allopathic quinine and her homœopathic mosquito (!) E. S. CARMAN.

Rhododendrons.—Speaking of the injury done to these by deep planting, the Gardener's Monthly says:—"The balls of roots of Rhododendrons should be set, as a general rule, *on* the ground, and the earth drawn up about the roots and pressed very firm." Anything from the leaf of experience respecting these noble shrubs which the veteran Mr. R. B. PARSONS deems the "finest hardy plant in cultivation," is worth noting.

Flowers and Patience.—Mr. VICK says in the March "Floral Guide:"—"Garden work needs a large stock of patience, and we are pleased that it is so; it is an excellent discipline for an irritable temper. Things will not all prove satisfactory the first season; but we see reason to hope for better things next year, and we have enough success to give us faith in the future. What a grand school for the culture of patience, faith and hope! Then, some of our work proves to be in excellent taste, while a portion we dislike, and resolve to change and improve another year. Thus, while we improve our gardens we improve ourselves, and while they get handsomer we get, at least, better. We propose no model, therefore, for any garden, and only give a few suggestions to set people thinking and working—just the keynote to get the tune properly started."

Burns says, appealing to his master, the Duke of Athol:

> Would then my noble master please
> To grant my highest wishes,
> He'll shade my banks wi' towering trees
> And bonnie spreading bushes.

Nature gives us volumes of fruits which she always prefaces with flowers.

Arboricultural.

GROWING QUINCE CUTTINGS.

THE different varieties of the common apple and pear quince are usually propagated by cuttings. They are not difficult to make grow, still it is not every person who tries that will succeed, for there are many unforeseen circumstances which frequently interfere with the success of such operations. We have, in years past, grown many a thousand quince bushes from cuttings, and, although always endeavoring to give the best of care and close attention to the preservation and planting, the results were not always uniform. Sometimes ninety-nine cuttings out of every hundred would grow, then again, with the same care, and with no apparent reason for it, the losses far outnumbered the successes. Our usual mode of proceedure is to make up the cuttings during the fall and winter, using one, two or three year old wood for this purpose, always giving preference to the former if of large size and vigorous.

The branches selected for this purpose are cut up into lengths of six to eight inches and tied up into convenient-sized bundles, say from fifty to two hundred cuttings in each, according to their size, and then set upright and partly buried in moist soil or sand, either in a coal cellar or the open ground, and thus protected from frosts. The object in placing in such a position is to hasten the development of a callus at the base from whence the roots are most likely to issue at the proper season. The strings used in tying the bundles should be of a kind that will not rot away before the bundles are taken out for planting. Tarred twine or osier will answer well for this purpose.

If the cuttings are kept in a cellar, care is required in preventing them from becoming too dry as well as too warm, for if the latter occurs growth follows, which cannot be checked without destroying the life of the cutting. Upon the whole, we have found that bedding the bundles in the open ground, then covering with hay or straw, just sufficient to prevent freezing, and keep out a surplus of moisture the safest place to keep quince and other cuttings of woody plants. If such a bed is made on the south side of some outbuilding the production or process which precedes roots called callus, can be hastened a little by proper care. The cuttings should be uncovered as soon as freezing weather is past, and if the bundles are set close together only the upper ends will be exposed to the cool air at night, this will keep the buds in check while the base of the cuttings being warmer the root-forming process continues. If the cuttings are dry give water from time to time, for moisture is quite important in softening the bark and hastening the formation of roots.

As soon as the ground where the cuttings are to be planted has become warmed by the sun, and in a fit condition for working easily, the planting out may commence. But it is not best to be in too great haste, so long as the cuttings do not show signs of growth in the bundles, because to take out of a warm situation and put into cold, wet ground, is pretty certain to check the formation of roots. We generally delay the planting until the weather is warm enough to stimulate a rapid production of roots and leaves, if the condition of the cuttings will admit of it.

In planting set the cuttings upright in shallow trenches, leaving about one inch of the top uncovered, and pack the soil very firmly about the lower end. Of course, a rich soil is required to insure a rapid, vigorous growth, and rank, fresh barnyard manure should not be placed in immediate contact with the cutting. In some soils mulching will be beneficial, in others it may do more harm than good, but of this every cultivator should be the best judge. We have grown quince plants by the hundreds and thousands from cuttings, managed as described, that would average four feet high at the end of the first season. Then again, a long, cold, drizzling rain, of a week or more has followed the planting out of cuttings, rotting the leaves as fast as they appeared, and almost a total failure ensued.

SEEDLING TREE CULTURE.

WE find the following timely and practical remarks respecting seeds of hardy trees in a circular received from Mr. THOMAS MEEHAN of the Germantown Nurseries, Philadelphia.

"The soundness of any seeds may be ascertained by cutting them open. Most failures arise from not sowing *in partial shade.* If hot bursts of sun come on the seed-beds while the seeds are swelling, and cold follows, many are liable to rot. For raising seeds on an extensive scale, many now use artificial arbors, tall enough to work under. For smaller lots, brushwood, or a thin shade of corn-stalks on a skeleton frame, is an excellent plan. Seeds take some time to swell their seed coats after going in the ground, hence all should be put in as early as possible—even though the frost be not out of the ground; if any dry soil can be had to cover, many find advantage in sowing even on frozen soil.

For evergreens of easy growth from seed, and which will grow rapidly, making beautiful ornaments, capital wind-breaks, and at length valuable timber, the Norway Spruce, Austrian, Scotch, White, Corsican and Pitch Pines stand preeminent. The Hemlock, White and Black Spruce, are on a par with the others, except that the seeds *must* have shade to germinate well.

Of the deciduous trees which grow very easily from seed and make a very rapid growth at once, the following stand foremost: Ailanthus, Catalpa, Persimmon, Honey Locust, Yellow Locust, Paulownia, Taxodium distichum, and the English and Chestnut Oaks. In Kansas and Nebraska, the two former have grown two feet the first year from seed. The Oaks make usually but about two inches the first year; but an average of two feet every year."

We have noticed of late several inquiries as to where seeds of the Honey Locust could be procured. This circular offers *fresh* Honey Locust seeds for 75c. per lb.—$16 per bushel.

PROFITABLE TREE PLANTING.

MR. HENRY IVES, Batavia, N. Y., sent a paper to the N. Y. Farmers' Club on Forest Tree Culture, which we find in the N. Y. Times. Mr. IVES belives that tree planting pays, but adds that in Western New York, and through many of most fertile parts of other States, it will not pay to try to keep a portion of the original forest for a wood-lot as it is found on most farms, for they were left without any reference to their ever acting as a windbreak or an ornament to the farms, and are generally deteriorating; besides which, they occupy the best virgin soil. I tried twenty-five years ago to keep the original wood-lot on my farm renewed, and a good stand of timber, by dressing up and planting in, but it proved a failure. But I am now growing all the timber I want on the farm by planting seedlings, which I have propagated of such thrifty kinds as I chose and in such rows and belts for windbreaks and protection as my orchard and fields require.

These trees are making a very satisfactory growth, and it is all done very cheaply, so that I would recommend all farmers to plant out such groves and belts of timber as his farm and location would require, and that he would find that after a few years he might clear off his old wood-lot and have acres of new land in place of the old land he planted his trees on, and he would have a very thrifty growth of timber instead of his decaying forest timber; he would have it where it would be useful and ornamental to his premises, and, besides, the crop of old timber would probably much more than pay the cost of starting his new timber growth.

Five or six years ago I planted two acres with four-year old seedlings of white elm and soft maple into forest rows, sixteen feet apart and three feet apart in the row. Now the best of them are twenty feet high and twelve inches in circumference, and for thinning out the rows I sell trees for more money than wheat would have brought grown for these years, and I can continue to sell so until they are so large I will take them for firewood, and I am growing a good crop of orchard grass between the rows. So that these acres in forest timber are paying as well, and are likely to pay for years to come, as any other acres on the farm. I am cutting now the second crop of wood where the first or original timber was taken off about twenty-five years ago, and last Winter a thousand rails were taken by a neighbor from one-third of an acre of growth, besides a quantity of wood from the top and timber not making rails. Another neighbor used nice black walnut lumber in building a fine farm-house, sawed from trees that he had helped to plant when a boy.

Our village of Batavia is admired for its fine rows of thrifty growing forest trees along its streets. One soft maple on Main street was broken down by the wind, and, when cut up, made two and one-quarter cords of 18-inch wood, and the owner of it said he planted it there twenty-one years before. The stump measured 19½ inches across inside the bark, and I could count about twenty annual circles outside its red heart. Of other trees on the same street that were planted seventeen years ago last spring, the largest elm masures 4 feet round two feet above the ground. I could give many more facts and figures to show that it does pay for Americans to plant forest trees, both for fuel and timber, and that very few enterprises they can take hold of will pay better.

The Poultry Yard.

TOULOUSE GEESE.

THIS variety is doubtless the largest known. Men in general have an aversion to geese, and we don't blame them either, for what could the little, noisy, voracious, unruly common geese be considered on a farm but a nuisance, unless securely penned in some swampy field? This natural aversion we were not exempt from till we tried the magnificent Toulouse, and then it was changed to a liking for these geese. In appearance, they are noble and dignified, and will thrive without water to swim in, if plenty be provided for drink. They are never unruly, and can be fenced as easily as sheep. are very quiet, not noisy, and extremely hardy. They are good layers, averaging about forty eggs each, in a season, and are seldom broody. If the old stock is not kept fat, and after spring opens only on pasture and vegetables, without grain, nearly every egg will hatch.

The goslings are much stronger when young than the common, and are more easily raised than a pig. We use hens for hatching, and in summer have placed them on a fresh grass-plat, and reared them without any mother. Their growth is so rapid that at four weeks old they will weigh from six to eight pounds each, and at three months, from fifteen to eighteen pounds. At four weeks old, they need no further housing, and can be taken from the nursery and placed in the open pasture to graze and shift for themselves, provided they have their regular meals of soft feed, which should be continued till they are three or four months old. In France and England, Toulouse geese are prized for their great size, excellent flesh, and abundant yield of soft, fine feathers, of which they will average about half a pound to the "picking," and would be profitable for this purpose. In the severest weather they require no shelter, and we never feed mature birds any grain when the ground is bare, where they have access to pasture fields.

In color, geese and ganders are exactly alike, viz: a uniform, handsome grey, with breast and under parts of body a shade lighter. They are so mild and tractable in disposition, and possess so many good traits, that they are profitable where they can be kept, and especially where grain and grass are cheap. There are hundreds of waste places upon which, with a trifling expense, large numbers of these geese could be raised. To show how prolific they are, we have known, for two seasons past, one hundred goslings to be raised each year from the eggs of eight females, besides a large number being sold for hatching purposes. For all purposes, the Toulouse should be voted the "goose of the period."—*The Poultry Nation.*

Diary of a Ruralist.

DAILY RURAL LIFE.

From the Diary of a Gentleman near New York City.

RAPID GROWING CLIMBERS WANTED.

Ed. Rural: I am about constructing a latticed arch over an armlet of a pond, which is of parabolic shape. The highest point of arch will be twenty-five feet above the water. The arch will be fifty feet long. I have graded a walk around this parabolic at the water's edge and eighteen above the water. This walk is to be inclosed by the latticed arch. Outside the arch-line I have planted choice varieties of the fox grape, in order to cover the arch with their foliage. I am anxious to cover it with something this coming summer, but, of course, it will take two or three years to train the grape vines all over it. What can I use temporarily? Will hops answer? Will "Daily Rural," or some other Ruralist, tell me? Also tell me how to cultivate whatsoever is recommended.—Aguadale.

April 3.—There are so many tender rapid-growing climbing plants in cultivation that it is somewhat difficult to determine which would be best for the purpose named. If you can procure good, thrifty clumps of hop vine roots, and remove without disturbing the ball of earth about them, they would no doubt throw up shoots strong enough to cover the arbor the first season. Another advantage of employing some such hardy perennial plant for the purpose named, would be the saving of expense and trouble of replanting next year in case the grape vines did not reach the desired size for two or three seasons to come. The common Japan honeysuckle, or the variegated leaved, are both excellent plants for this purpose, although not quite as rapid growers as the hop vine. All the culture required is to plant them in deep, rich soil.

The American Ivy (*Ampelopsis quinquefolio*) is a superb climber, and its brilliant autumn tints are unsurpassed in the way of high-coloring. For a plant with large leaves, giving a dense shade, the Dutchman's Pipe (*Aristolochia Sipho*) has no equal among hardy climbing plants which will thrive in our Northern States. But transplanted vines grow slowly at first, and we fear they would give little shade the first season.

TENDER ANNUALS AND PERENNIALS.

Perhaps you might find some vine among the tender annuals and perennials which would answer better for that purpose than any of those named. The ornamental gourds grow very rapidly, and, for a novelty, your arbor might be covered with these one season, if no longer. By selecting a variety, or purchasing a paper of mixed seed, you could easily cover the arbor with vines which, towards fall, would give a grand display of ornamental fruit.

The Madeira, or, as sometimes called, Migonette vine, (*Boussingaultia Gaselloides*) is a very rapid-growing, tender plant, bearing small but very fragrant flowers. The tubers may be found at almost any florist, and, if planted in rich, light soil, will throw up stems ten to twenty feet long the first season. Then we have the common Morning Glory in its innumerable varieties, and the closely allied genera, *Ipomeas*, as well as *Tropæolums*, *Thunbergias* and *Cobæa scandens*, any or all of which will answer the purpose of covering an arbor or trellis.

SHEARING EVERGREEN HEDGES.

April 4.—Evergreen hedges are certainly very ornamental, and perhaps beneficial in protecting gardens from cold winds. But the cost of the plants and setting them out is only a starting point in the way of expense, for if a hedge is to be kept in order, cultivation and annual prunings are necessary. I am reminded of the cost of pruning by a pain in my right arm, caused by a few hours' use of a big pair of shears upon a hemlock hedge in my garden. I feel proud of this hedge, for it was planted ten years ago, and has been pruned annually by myself. Of course I do not swing the hedge-shears from morning till night when doing the pruning, still an hour or two at a time affords me an abundant opportunity for learning, in a practical way, just what it costs in labor to keep an evergreen hedge in order. The Hemlock is really the best of all our hardy native evergreen for this purpose, at least it makes the handsomest hedge, on account of its deep green color, both summer and winter, besides submitting with such good grace to the close shearing process, necessary for a neat, compact hedge. The American Arbor-Vitæ also makes a handsome hedge, the plants cost less than the hemlock and are less liable to die when transplanted, but the foliage changes to a dirty yellow in winter instead of remaining green.

But the point I wish to make is this, don't set out evergreens for ornamental hedges unless you intend to give them proper care afterwards, for one allowed to take care of itself, will prove to be anything but an ornament, after a few years. It is far better to put such plants in groups, or set out singly, to grow up naturally, than to crowd into long rows, where the struggle for existence ends in the "survival of the fittest," and these are scarcely worth preserving.

DISAPPEARANCE OF THE WHITE PINE SCALE.

For the past two or three years all white pine trees in my grounds have been infested with a kind of bark louse which seemed to check their growth, and I began to fear would eventually destroy them. These lice were abundant on the young, smooth branches, and was covered with a white, flacculent down-like matter, somewhat resembling (although much smaller in size) the maple tree bark-louse (*Lecanium acericolu*. Without close examination I considered it the same species as described by Dr. Asa Fitch in the Transactions of the N. Y. State Ag. Society, 1854, under the name of Pine-Blight (*Coccus Pinicorticis*). But whatever its true name or cause of appearance, the facts of its abundance and apparent injury to the trees were unmistakable; but, in some unaccountable manner, they have all disappeared as before a magician's wand. I have examined several hundred which were badly infested without finding a single specimen of the pest. The cause of this sudden disappearance is, of course, unknown to me, but I presume some minute parasitic enemy has done it.

I mention the above facts as an encouragement to others who may have become discouraged in planting the white pine on account of the "pine blight," for it shows that such pests frequently have natural enemies, which do more in keeping them in check than any artificial remedies, however skillfully and thoroughly applied.

TRADE IN AQUATIC PLANTS.

I am pleased to see that some of our florists and seedmen are turning their attention to the culture of our native aquatic plants, such, for instance, as the water lilies. It is something out of the usual line of trade for our seedsmen to offer seeds of *Nelumbium luteum*, but I notice that Peter Henderson is doing it this season, and I hope he will be encouraged to continue in the same direction until all of our most desirable water and bog plants become generally known and appreciated. Another dealer in plants offers the common white water lily (*Nymphæa odorata*) at the low price of 25c. each, sent by mail, which is cheap enough, for one could scarcely afford to go very far for them while they can be purchased at this rate.

There are hundreds of ponds which now yield nothing but frogs, sedges and homely weeds, which might be transformed into beautiful flower gardens by employing the more showy aquatic plants like the two named above. When once stocked with a few roots, or seed thrown in, no further trouble or expense need be incurred, and I will venture to say that the "water garden" will be one of the most attractive spots on the farm.

Pomological.

BERRIES.

It is generally known by fruit growers that our large cities are overstocked with berries, and for years past the prices returned for them have not been considered remunerative by the growers, yet but few take the time to investigate the cause of it, and being somewhat familiar with the subject, I take the liberty of presenting a few thoughts in regard to it.

A few years ago many of our agricultural journals were teeming with the wonderful success that a few persons met with in growing berries for market. This fired the ambition of others and they began to grow them very much like they would put out a fire—they did not take the time or pains necessary to learn about the soil, the expense or peculiarities connected with these successes, but planted acres of such land as they had, supposing that they would grow with as little care as potatoes or grass, consequently large quantities of berries have been thrown on the market totally unfit for the table, and they had to be sold for a mere trifle. Then these men exclaimed, "Oh, this business won't pay!" and I, for one, am glad that it did not, for then they would have been satisfied with producing this inferior article.

Growers are apt to lose sight of the true quality of their fruit; they handle their own, and occasionally their neighbors, and as it is the best they have they think it must sell, and even if an imperfection is discovered in it they excuse it and hope the buyers may overlook it. But that is a delusion, for on its arrival in market it is brought in direct contact with a large number of crops, and the defect is even more glaring than at home, besides these dealers are suspicious of the packers, so they examine critically and thoroughly, in order not to be deceived; then they buy to suit their fancy, taste or purse. There is always a demand for really fine fruit, although the large quantities of poor fruit often depreciates its value and in too many instances prevents the good fruit from being examined and appreciated, and too often it happens that the good is sold with the poor to induce the buyers to take a large lot, but the good is what is really sought for. When I speak of good fruit, I mean berries above the medium size, and hard enough to bear a second transportation.

It is safe to say that not one-fourth of the good berries that come to our market are consumed here, for such is the demand from other cities that it is often the case that this demand cannot be supplied; but all the small, soft, dirty fruit remains here, and to whom are we to sell it? That's the question. Who wants to eat this quality of fruit? I do not. Neither do you. But it must be sold, and to those only who know nothing about good fruit, and who look more at the price they pay for it than they do at its quality. Here is one point that I desire our fruit growers to remember—that consumers are becoming more cultivated in their tastes and demands every year; occasionally they get a glimpse of some fancy fruit, or perchance a taste of it, but that taste teaches them that there is a finer and better article than they have been accustomed to purchase, and they want it, and if the price be not unreasonable they will buy it.

Thus you can readily see that as the taste of consumers improves the demand for poor fruit decreases in proportion, and this state of affairs has led to another worth noting by fruit growers. In the early years of fruit growing our local dealers received all the orders for the outside demand, consequently they too often sent inferior fruit, because they had plenty of it, and consequently much of this fruit perished on the route, and the receivers were unable to sell it, save at a loss. These receivers then adopted the plan of uniting and sending a person to our city to buy fruit. These men are very careful and particular in buying, taking only such as they know will carry safely and prove profitable. This plan operated against poor fruit, but the dealers were well pleased with it, for they were relieved from all risk of loss from transportation, which in some instances proved to be very heavy.

Now, if growers will only realize this state of affairs and hasten to improve the quality of their fruit, even if the quantity is increased, they will find fruitgrowing profitable, for the demand for fruit increases every year, and growers have but to produce the article demanded to get a good price for it. Permit me to call their attention to another point worth considering, and that is, the depreciation of small fruit from the time it leaves their possession until it reaches the consumer, which depreciation I consider reaches from 15 to 25 per cent. on berries that have traveled all night in a hot car; and in view of this fact I would respectfully suggest that as this improvement progresses, the care and management of it by those companies who transport it should also be improved. They should be compelled to keep up with the spirit of improvement and made responsible for all the damage it receives while in their possession by bad handling. I am aware that these companies have always practiced a species of terrorism over their patrons, but it is time that these men were taught that the people know their rights and dare maintain them, and no more worthy subject can be brought before every Grange in the country than this one. The Granges can, if they will, control this point, and should do so before another crop of fruit is intrusted to their care.

New York, February, 1876. C. W. I.

IN FAVOR OF BLACK CURRANTS.

A correspondent of the Germantown Telegraph writes in favor of this excellent but much-neglected fruit, doubtless the most valuable in every way of all the currants. He says:—"My opinion is that the Black English or Black Naples, all things considered, is the most profitable. Black currants have with me proved to be entirely free from disease or vermin. No hellebore to be used here. The black currant bears better than the red or white varieties.

"In 1874 I grew from six square rods ten bushels of black currants. In 1875 the same bushes bore only three bushels. The crop of 1874 was so very large as to greatly exhaust the bushes, which accounts for the light crop in 1875. Probably the two years will present a fair average. If so, we shall find that at eight cents per quart (the price at which they were sold) they paid at the rate of $443.73 per acre yearly. A good profit surely.

"Few people fancy the black currant at first; but, like the tomato, a taste for them is to be acquired, and when once acquired it is never relinquished. We all know that an acquired taste is much more lasting than a natural one. Black currants, unlike most other kinds of fruit, can be indulged in even by sick persons. They make the very best of jelly, and for preserves cannot be excelled (if, indeed, equaled,) by any other fruit.

The Madison (Ind.) Courier says that the farmers of that section differ widely as to the condition of the fruit crop. The majority, however, contend that it is not materially injured by the late cold snap.

Insurance Department.

FIRE INSURANCE FOR FARMERS.

Like every other kind of insurance, that against loss by fire is founded on the law of average. For, though it is in the nature of things in the highest degree uncertain what house will burn, the proportion of losses out of a considerable number may be predicted with tolerable accuracy—that is, if the risks are carefully selected, if they are so far apart that a fire occurring in one of them will not involve the destruction of all. For many years this average was pretty well preserved, but of late it has not been as constant. Great conflagrations have occurred, from time to time, sweeping whole cities out of existence in a few hours. The effect of these great fires is to utterly destroy and bankrupt the insurance companies, especially those that habitually insure large amounts upon closely contiguous property. Such companies rarely do an exclusively city business. They are always glad to insure dwelling-houses and farm property, if such business can be obtained; but this kind of business is necessarily scattered, and to get enough of it requires time, patience, and a deal of arduous labor. They desire dwelling and farm risks because they are profitable. They are far apart; one does not set fire to another. Farmers are too honest to set fire to their property for the sake of the insurance, besides their property does not change its value rapidly, so as to offer inducements to incendiarism. Consequently nearly every company has a share of this kind of business, and would like to have more of it. When a great fire bankrupts a score or so of the companies, the owners of dwelling and detached property are the principal sufferers. They necessarily lose their money and insurance, and must pay premiums again for the protection they have lost. And this hardship is not less severe because it has no compensation whatever. The company had put them and the crowded city risks into partnership as mutual insurance. The partnership has turned out badly. Both parties have lost money. The city party whose property is burned and paid for, if the company can pay, loses something, but the countryman loses all his share in this mutual business. In fact, it was a bad bargain from the beginning for the owners of detached and farm property. They run the greater risk of loss, not of burning, but of spending their money for nothing. No amount of burnings among their property could bankrupt the company, but they stand in continued and unavoidable danger of losing their premiums and insurance by a conflagration among the city risks.

Country and village people were very slow to learn that this kind of entanglement was worth avoiding, if possible. But it was not at one time possible. No one could tell what sort of business a company did in the great cities, whether it had crowded a great deal of business into one city block or had distributed as much to a dozen cities. There was really no means of knowing which of these things a company had done, though one of them involved ruin in case of a great fire. There was, however, a means of avoiding danger by insuring with companies that did no city business, but confined their insurance to farm or detached dwelling property. The companies specializing this class of business and that were managed prudently and skillfully met with an assured success from the outset. Prominent among these companies is the *Agricultural Insurance Company of Watertown, N. Y.*, one of the pioneers of that kind of business, and entirely one of the worthiest, best and most reliable. It has accumulated assets to the amount of more than a million of money ($1,058,040), has an income of more than half a million ($541,570) a year, and has a clear surplus, over all liabilities, of $337,237. These figures indicate a very high degree of prosperity. They were not suddenly achieved by insuring a few dangerous risks for a high premium, but by the patient, painstaking and skillful labor of years. Its risks are not only scattered over a vast extent of country, but are all comparatively small, the largest not much exceeding five thousand dollars. This disposition of its risks makes the "Agricultural of Watertown" safer than any company, whatever its capital, that does a mixed business. Infinitely safer for the farmer, and as such we heartily commend it.

Patrons of Husbandry.

THE SORROWS OF A MIDDLEMAN.

"A RETAILER" writes anonymously to the N. Y. Grocer that the Grangers are not all dead yet, and are making himself and other retailers a vast deal of trouble. He says:

"The Grange has made its influence felt in a keener and closer competition amongst dealers, and a nearer approach to a cash basis of business. In driving us to sell closer for cash, it still leaves us with a mixed class of customers who want credit and who are not always the most desirable customers to have. But the worst feature of the business is that the farmers are getting in the habit of clubbing together and getting somebody to fill their orders in New York. If such a policy is kept up, it must have a bad effect on the general retail trade of the country. What can be done to counteract this tendency?"

On this the Grocer comments as follows:

"We know of no better way of stopping the clubbing business than that of showing to the farmers the inevitable result of such a course. Whether that is practicable is the question. The agricultural papers might do it, but they are afraid to touch the matter except to support it. The trade papers go only to merchants. The religious papers could reach them and should show them that the relations of retailers and farmers are so interwoven that upon the prosperity of the one class depends that of the other; that if the storekeepers are ruined the towns and villages must be ruined also, and all the present advantages of schools, churches, places of meeting and exchange of products, in a word, all the best fruits of our modern civilization must be given up."

"The agricultural papers might do it, but are afraid." Are they, indeed? When we see the Grocer ostentatiously balancing this chip on its shoulder, we are irresistibly tempted to knock it off, if only to see what will happen.

"Retailer" is evidently a person who knows nothing of the principles of trade, cares for nothing but his own personal interests, and, being unable to see further than his nose, does not know how best to promote even them. The Grocer, whose plain duty it is to enlighten "retailer," being dependent on his and like support, fails to do so, because it prefers to pander to the prejudices of its patrons. They all feel aggrieved at the Grangers, and the Grocer sneezes as the retail dealers take snuff.

The Grocer's correspondent charges that the Grange has made its influence felt in a keener and closer competition and a nearer approach to the cash basis. Patrons plead guilty and ask if this is a public injury. Would not an entirely cash business be safer and better every way? If not, who shall decide *how much* credit and how much cash would be best for all? If retailers have many "undesirable customers" and lose many bills, the fault is their own. They ought to know whom to trust and who cannot pay their accounts. The complaint is a vindication of the Grange principle, which discourages all credits, and aims at strictly cash payments.

But "the worst of it is" that farmers are in the habit of clubbing together and getting somebody to fill their orders in New York. "Retailer" thinks that this "must have a bad effect" on the retail trade. The only reason for farmers clubbing together and ordering their goods in New York is that they can thereby get them cheaper. This they ought to do. It is not only everybody's right, but duty, to buy where he can buy cheapest. If the middleman is capable and enterprising, people can buy of him cheaper than anywhere else. In that case he is a necessary part of the body politic, and is doing as much for the community in which he lives as if he were an active producer. He facilitates the exchange of products, and thus enables others to produce more cheaply and extensively. When a retailer cannot do this, the fact simply shows that he is not needed—that he is not doing a necessary or useful work in the community. That so rude and imperfect an organization as that of "the clubbing together of farmers" to buy in New York, can undersell the local retail dealer shows, that from some cause, possibly lack of capital, of enterprise, or both, he is not fit for his place, or that there is no place for him. To argue differently would imply that monopoly and extortionate prices were, in some way, public benefits. According to this theory, every village should be disposed of like a post-tradership and no outsider allowed to interfere.

The Grocer partially states an important truth, when it says that "the relations of retailers and farmers are so interwoven that upon the prosperity of one class depends that of the other." So far this is exactly true; but whose prosperity is paramount—that of the producer or that of him who exchanges products? Why not say that "upon the prosperity of the producers depends the prosperity of the retailers." We are against no retailer or middleman as such. When he can sell goods cheaper than any other agency he becomes not only important but even necessary to a community. But this class make no complaint of the Patrons of Husbandry. The Grange agents cannot possibly interfere with them. It is the retailers who cannot sell cheaply, and who thereby prove that they are not necessary parts of the community, to whom all buyers are obliged to pay an extortionate price lest the "advantages of schools, churches, and the best fruits of our modern civilization" should have to be given up.

Seventy or eighty years ago, men with these narrow notions thought the steam engine would make horses valueless, and that improved machinery would destroy the wages of labor. The wealth which the steam engine and labor-saving machinery have created has doubled the numbers of horses, more than doubled their value and has increased the demand and wages of labor. But for the steam engine, there would not be a quarter of the wealth in the world that now exists, and articles now regarded as household necessities would be impossible luxuries.

The Order of Patrons of Husbandry has saved millions of dollars to the farmers of this country, by devising cheaper methods of exchange between producer and consumer. This vast amount is so much clear addition to our national wealth. It is a great absurdity to suppose that money saved to farmers remains in farmers' pockets. It is seen in a greater abundance of the comforts and luxuries of life in the farmer's home—in better facilities for doing the work on his farm, in better schooling for his children and better support for churches and "all the best fruits of modern civilization." Individuals may hoard money but communities never do or can. Anything which increases the wealth of the agricultural class, is necessarily felt in greater prosperity of the merchant, the manufacturer and even of the retail dealer. Of course there are occasional instances of hardship as in all general rules; but these are clearly exceptional. The "hard times" are in no way chargeable to the Patrons of Husbandry. They would have been much worse if it had not existed. It is the saving on purchases effected by Grange agents, which has so largely brought trade to the safe.cash system which the Grocer pretends to deplore. Ultimately this saving must be felt in the increased prosperity not only of farmers but of all classes in the community.

NEW GRANGES.—Deputy L. A. Palmer has recently organized three Granges, as follows:—In Monroe County, March 22d, Chili Grange. Geo. L. Root was elected Master and P. G. Stryker Secretary. In Genesee County, March 23d, Byron Grange, with Geo. W. Prentice Master and Francis T. Miller Secretary. On March 24, Oatka Grange, in Genesee County, with D. H. Pierson Master and Wm. Duncan Secretary.

Domestic Economy.

GINGER SNAPS, CREAM PUFFS, &c.

IT seems to me that that young woman ought, with a fair amount of gumption, to manufacture ginger snaps without a recipe. I never yet tried one that was good, so I invented the following: 1 cup sugar, 1 of molasses, 1 of shortening, a little salt (if lard is used), ½ cup hot water, in which dissolve a teaspoon even full of soda, 2 teaspoons ginger, 1 of cinnamon. Pitch them all in together and stir in flour till it is so you can handle it; dust on white sugar and bake in a a reasonable oven (I object to raving hot ovens for cake), and see whose mouth will water.

Now, about these Potato Puffs, in this week's issue. I don't care anything about the six potatoes—they are only 15 cts. a bushel, but I hate to spend so much time on chicken feed. One thing is, the chickens don't expect it, and besides I'm rather particular about their diet. Did you ever eat these Cream Puffs in a confectioner's. Gushing things they are, but a nice change from ginger snaps after a hard winter. Here's the way to make them: ½ pint water, 4 ounces butter, 6 ounces flour. Put into a spider, stir smoothly and all the time till you have a lump that cleaves from the spider, and looks like putty, or a *heavy pot-pie* (one of your contributors knows *them* well, so she says); but don't be at all discouraged, cool your lump, and add four beaten eggs, and beat lump and eggs well together, drop in spoonsful on greased tins and bake in rather quick oven. Don't shove them on the oven bottom when you turn them round or they'll be heavy. Do as you're told and every puff will be hollow. When cold open with a sharp knife on side and fill with custard made thus:—2 eggs, pint milk, ¼ cup corn starch wet with a little milk; flavor to taste. Have the custard cold also. After you've eaten 6 or 8, you'll let your wife put 25 yards of calico in her dress if she wants to, but don't forget to be thankful that you don't have to iron it. If I dared, I'd iron my clothes as the Chinese do, by sitting on them; but I've established a reputation for housewifery that I'm not willing to give up, so I dress with Quaker plainness, and let it pass for the "eccentricity of genius." If I can get through the world without being called anything worse than *queer* I shall have high hopes for the future. I feel compelled to allude to Potato Puffs again. If persisted in they'll bring down, anybody's gray hairs with Dyspepsia to the grave, or "there abouts."

"The Suet Pudding," two weeks ago, was very nice, and as the RURAL is an old friend and has been a sure one heretofore, it was with the utmost confidence that I launched into Potato Puffs, I will forward any number of whetstones desired, C. O. D.

Will you give me a recipe for getting rid of red spiders, that you can't see, on plants. My "Maple" was enveloped in webs and for fear of my glorious geraniums and begonias becoming infested, I cut it down to the ground and burnt it. Its a sure thing on spiders, but calculated to spoil the looks of a green house if persisted in.

All mistakes in this letter must be set down as the fault of two children wrestling with the multiplication table. With Respect Yours,

MRS. L. E. N., of the Big Village

Kalamazoo, Mich., March 31.

THE ART OF MAKING COFFEE.

"AUNT PRUDENCE" writes in the American Grocer:—"If we browned our coffee, which we confess we do not, we should certainly adopt a plan which we see spoken of in Hall's Journal, and which carries conviction of its excellence to the mind of an old housekeeper. It is this: When the coffee is roasted, and before it is quite cold, while you can hold the berries comfortably in your hand, add to every pound of coffee the white of an egg, and stir the mass thoroughly, so that every berry will be wet with it. It has two advantages:—the first is one spoken of by the writer of the article, of settling the coffee without the addition of anything but boiling water, and the second would be to coat the berry with the egg so as to preserve the aroma, which will pass away in a measure from the roasted berry. We feel morally certain that coffee prepared in this way, with the addition of cream, would be a beverage fit for the gods.

SELECTED RECIPES.

Infants' Food.—Mix the rice flour with cold milk, and stir it into boiling milk until of the proper thickness; sweeten with loaf sugar.

Cream Pie.—One cup cream (sweet, and as thick as you can get it), two tablespoonfuls sugar and one egg. Use one crust, making it the usual way.

Delicate Sponge Cake.—Use the whites of ten eggs, one and one-half tumblers of flour, teaspoonful of salt; lemon to suit the taste. Bake about 35 minutes or more.

Rice Muffins.—To one quart of sour milk, three well beaten eggs, a little salt, teaspoonful of soda and enough of rice flour to thicken to a stiff batter. Bake in rings.

Corn Cake.—One quart of sour milk, three eggs, one teacupful of flour, yellow corn meal enough to make a batter as thick as for pancakes. Bake quickly in pans well buttered.

Rice Custard.—Into a quart of boiling water stir in two tablespoonfuls of rice flour, dissolved in a little cold milk; add two well beaten eggs to boiling mixture; sweeten and flavor to taste.

Rolled Jelly Cake.—One cup sugar, one cup flour, three eggs, one tablespoonful sweet milk, half teaspoonful soda, essence, etc. Beat sugar and eggs slightly, then put all together and beat thoroughly.

Wild Fowl Pie.—The fowl should be trussed like a duck for a pie, larded with anchovies and seasoned with pepper, salt and sweet herbs; put a good quantity of butter into the pie, and flush like all others.

Cocoanut Pudding.—To the grated meat of a cocoanut take six eggs, six large spoonfuls of sugar, half a teacup of butter and a little soda. Line a dish with puff paste and fill with the mixture. Bake in a quick oven.

Washington Pie.—One cup of sugar, one tablespoonful of butter, four tablespoonfuls sweet milk, one-half teaspoonful of soda, one teaspoonful cream of tartar, one cup flour. Bake in two layers, with jelly fruit or cream between.

Lemon Pie.—The juice and rind of one lemon grated into one cup of water, one cupful of loaf sugar, the yelks of two eggs, three tablespoonfuls flour. Frosting—beat the whites of two eggs, add four tablespoonfuls white sugar, spread on the pie, and bake lightly in the oven.

Honey Recipe.—White or brown sugar 20 lbs., soft water 5 lbs., pure bee's honey 3 lbs., cream of tartar 80 grains, essence of roses 2½ drops. Mix the above in a brass kettle, boil over a charcoal fire five minutes, take it off; add the whites of two eggs well beaten; when almost cold add two pounds more bee's honey. A pint of the decoction of slippery elm, of the consistency of cream, will improve the honey, if it be added while cooling.

Hygienic Information.

MEMBRANOUS CROUP CURED.

THAT terror of parents, the much-dreaded membranous croup, has been met and conquered. A mother thus tells the story of how it was done in the Western Farm Journal of Chicago:

I began with the intent to add a story of a sore struggle with croup, that resulted in a cure almost miraculous in its character, hoping that, from the reading of it, somebody may get hope and help in a similar case. In the month of November, 1872, my little boy, Archie, then about three years old, was taken suddenly with croup, not of the worst type at first, but accompanied by the hoarse cough and other symptoms of the milder form of the disease.

Our well tried, and always before this, successful remedy, was applied at once, that is, the cold bandage on the chest and throat, but to our dismay, without any alleviation. The little fellow had considerable fever, and there was a steadily increasing closing up of the air passages all that night and the next day. A physician was called, who ordered emetics, etc., all of which had no effect. We flew from cold water to hot, used lard internally and externally, and even tried a patent nostrum, to our shame be it spoken. On the third day we gave him up, or rather could think of nothing else to do. The poor little fellow had lost almost all consciousness, and his breathing was that dry whistle, that showed the terrible work of suffocation that was killing our boy.

An older and wiser doctor had been summoned, but as he looked at the little sufferer he shook his head and said, "membranous croup of the worst kind; he can't live an hour." As we stood about the bed, an inspiration seemed to seize this physician. Said he, "Steam has been applied, I have heard, with good results;" and in an instant all were alert to find some means to apply this new remedy. The foot of an old-fashioned, high post bedstead was made one side of a room, perhaps six feet square. Quilts were rapidly collected and string around the sides and over the top; a large store box, the first thing at hand, was moved into this room of quilts; the wash-boiler was put upon the stove some six feet from this impromptu steam bath, its lid pierced and fitted with a copper pipe, which conveyed the steam where it was needed. All this came about like magic, though it is hard to tell exactly how; but in less than thirty minutes I was sitting on the box, with Archie's head on my shoulder, the air of our little den thick with steam, and our anxious friends waiting outside for the signal that the little one was saved.

The first breath of the moist, hot atmosphere changed the sound of his breathing, but for four hours the relief was uncertain. At the end of that time the whistle had become a rattle, and the little fellow finally fell into a sound sleep. For seven days and nights Archie and I inhabited that steam den. The progress of his recovery was marked by fearful struggles with his enemy. At times he would sit up, talking and laughing about the clouds that hung about his head, and then again he would wake from sleep half strangled, and for some seconds it seemed as if he must suffocate or burst a blood vessel. But during the last few days of our imprisonment, hard, scaly matter came up by coughing, until the little fellow was safe, and the eighth day we ventured out.

Some more of the facts connected with this strange experiment may be interesting. For twelve hours after we entered the bath it seemed impossible to keep up the needed amount of steam; our cotton walls drank it up until they were saturated. We were obliged to keep kettles of water inside the bath, into which hot stones were now and then plunged; but this made us trouble, as the steam was so loaded with sulphurous fumes as to be stifling; but other than this, my own sensations were not unpleasant, breathing was easy, and I came out from the ordeal, to my utter astonishment, with scarcely any ill effects, not even excessive fatigue, and Archie did not lose flesh or spirits, though for months there was a hoarseness in his voice, as if it had been weakened by the extraordinary efforts to throw off the disease. We were long apprehensive of a return of the attack, but it never came, and he finally was himself again.

The records of croup cases will show that remedies which succeed in one case fail in all others, and I am slow to encourage the belief that our experience would be that of all who try our method, but there is something in this direct application of hot moisture to softening of the membrane in this generally fatal type of croup, that makes me confident of its power to ameliorate, at least, if not to cure the worst forms of this terrible malady: and we shall never cease to thank the good angel who prompted the doctor to tell us of it, although the good doctor, himself, had little faith in its success in our case.

"PROGRESS AND IMPROVEMENT."

THURLOW WEED, THE JOURNALIST.

THE portrait in this week's RURAL NEW-YORKER is that of the veteran journalist, Hon. THURLOW WEED, long a political editor in Rochester and Albany, and now living in New York City in a retiracy earned by a long and busy life. The portrait is engraved from a photograph recently taken, and is acknowledged by all to be an excellent likeness. Though at a very advanced age—now in his 79th year—Mr. WEED retains his old interest in public affairs, and his advice and counsel are held in high regard by the shrewdest politicians of the State and Country.

THURLOW WEED was born in Catskill, on the Hudson, in NOV., 1797. At the early age of ten years he got a place as a cabin boy on a Hudson river sloop, and in 1807 he witnessed the first trial trip of ROBERT FULTON'S new steamship. Shortly afterwards, Mr. WEED's father moved West with his family and young THURLOW went to Syracuse to learn the trade of a printer, then removed to Chenango Co. and commenced the publication of a weekly paper. Going to Rochester about 1824, he published and edited the Anti-Masonic Inquirer, and was elected one term to the State Legislature.

In the sharp discussions which prevailed in those times Mr. WEED took a prominent part, chiefly through his paper. Seldom penning long articles, he had a faculty of writing short, trenchant sentences, which were sure to reach the popular thought and to be remembered. In 1830, Mr. WEED left Rochester and found his appropriate field in Albany as Editor and one of the Publishers of the Albany Evening Journal. During the thirty-two years that he remained there, Mr. WEED'S influence on politics and on public sentiment through the State was greater than that of any other person. He brought out the young HORACE GREELEY—who was fourteen years his junior, and was the fast friend of WILLIAM H. SEWARD as State Senator, Governor, U. S. Senator and Cabinet Minister. Both Mr. SEWARD and Mr. GREELEY have passed away, but Mr. WEED still lives in full possession of his mental faculties, and in better physical health than most men of his advanced age.

The influence of Mr. WEED on the political events of his time is undisputed. That influence he owed to no unworthy acts, but to the singular clearness and sagacity of his opinions. His views and plans were not only generally the wisest, but he had the rare faculty of convincing his associates of the fact. Only when they disregarded his advice did they have cause to regret it. He was a strong partisan, and yet strongly independent in his political course, choosing to work inside rather than outside of party organizations. No other public man of equal independence of character has understood so clearly the power of partisan organizations. Hence he saved for practical use the power which so many political reformers waste in efforts which have no result.

Mr. WEED, with the assistance of his daughter, has of late years been preparing an autobiography to be published after his death. Few careers have been more interesting than his, and no man of the last fifty years is able to give more of the history of our country and its politics than he. Aside from these labors, Mr. WEED writes occasionally on public events of the time, and his letters are always read with interest and extensively copied.

BUSINESS RESULTS OF THE CENTENNIAL.

IN the early history of Western New York the proprietors of large tracts of land, anxious to get the Genesee Valley settled, had a magnificent horse race, which was advertised in all the older parts of the country. The result was that some of the most enterprising and wealthy settlers of the new country—including, we believe, the FITZHUGHS and the ROCHESTERS—were attracted to Western New York and made it their home, to the advantage of all parties.

It seems to us that the Centennial Exhibition in Philadelphia may and should be utilized in a similar manner. This will be not alone in bringing people from all parts of the United States to Philadelphia, though that will be one important result; but we shall have during the coming eight months, thousands of the most intelligent and enterprising people from all parts of Europe. These should be encouraged in every way to extend their visit to various parts of our broad land. The great West and South have attractions quite as wonderful as anything which can be shown in the Centennial City itself. There has been some regret expressed because none of the European crowned heads would be present, and only one sprig of royalty—the Emperor of Brazil—would grace our Centennial; but such regrets are needless. Crowned heads would not be apt to remain here and continue their business, and we do not want them if they would; but the people of foreign countries are doubly welcome here—either as visitors or to remain.

It is probable that few of our foreign visitors will cross the ocean without going much farther than New York or Philadelphia. The reduction in rates made on the railroads will be equally operative for those going West as to those coming East, and the travel will not be so one-sided as is generally supposed. Our Centennial year is likely to be the occasion of a more intimate intercourse and interchange of thought between people in all sections of the country.

IMPROVING COUNTRY ROADS.

IN another part of this paper a correspondent presents his views on the improvement of country roads. His plan of making the owners of farms keep their own roads in good condition would exempt from road tax large numbers of property holders in villages who have only a trifling amount of roadway. The roads are for the benefit of all, and we do not see why all property holders should not help keep them in repair. It undoubtedly needs a great deal more intelligence on the part of path masters to make our present system effective. In fact, lack of intelligence is the grand cause of poor roads everywhere; but remitting the care of roads to owners of property adjoining would not make them any more intelligent in doing the work.

A great deal of labor on roads is misdirected. It is this fact which makes men try to "shirk" work as they do when filling out their road tax. Where roads are improved by the judicious use of stone and gravel, there is little disposition to shirk duty. In many cases an underdrain by the side of the road, and on the upper side, if on a side hill, will make the road bed dry, when otherwise it would have been almost fathomless. It is better to have the drain by the side of rather than directly under the road bed, so that tramping and cutting of the soil by heavy loads shall not disturb it. A little study of the effects of underdraining on wet or springy spots will enable pathmasters to wonderfully improve most country roads at comparatively small expense.

JURORS IN DAIRY PRODUCTS.

THE following paragraph, from the Little Falls Journal and Courier of April 4th, represents the views of most dairymen in Herkimer County, where Mr. ARNOLD formerly resided, and where his disqualification for the position for which he has been named are well known. The view of Mr. ARNOLD is evidently a friendly one; but his incapacity as an expert in dairy products is asserted in the strongest terms. This incapacity is undoubtedly much better known to those who have had a life-long acquaintance with Mr. A. than to those who only know him as a writer on dairy subjects in the public journals:

"Quite a discussion is going on in some of the agricultural journals as to the appointment of jurors to decide upon dairy products at the Centennial Exposition. Inasmuch as this discussion has been largely as to the propriety of the selection of Mr. L. B. ARNOLD as such a juror, it seems proper, in justice to him, to state that his old friends in this county, greatly pleased as they are to learn always of his preferment and personal success, still fear that his experience as a writer has not been just the experience to fit him as a juror and nice discriminator of qualities of cheese and butter. Indeed there are very few men in the country who *are* fully competent for this position—and it is no discredit to Mr. ARNOLD that he is believed not to be one of this few; as, really, we can think of but two or three men in Herkimer County who would just fill the bill, and these do not include the names of any of the most prominent essayists on dairy subjects. The display of these products promises to be a very large and creditable one, and the competition will be sharp and close. It is not strange, therefore, that factorymen are taking considerable interest in the proper selection of those whose duties will be most delicate, trying and responsible.

REMONSTRANCE OF NORTHWESTERN DAIRYMEN.

THE following remonstrance of leading dairymen and dealers in dairy products against the appointment of L. B. ARNOLD as a Juror has been sent to the Chairman of the Centennial Dairy Committee. It contains some very influential names, and without doubt represents the feelings of most Western dairymen on this subject:

ELGIN, Ill., March 11, 1876.

To J. V. H. Scoville, Esq., Chairman Centennial Dairy Committee.

DEAR SIR: We, the undersigned, dairy factorymen and dealers of the State of Illinois, feeling a deep interest in the successful exposition of the dairy products of our country at the Centennial in Philadelphia, and deeming it a matter of vital importance that we have *competent* men as Jurors, rendered such by *practical experience*, do hereby most earnestly protest against the appointment of Prof. L. B. ARNOLD of Rochester, N. Y., as essentially wanting in this qualification:

G. P. Lord, Thos. Bishop, A. D. Gifford, A. B. Church, O. F. Lawrence, E. L. Bishop, P. C. Gilbert, J. W. Sayer, M. W. Frazer, T. J. Shepherd, Wm. Dalton, D. E. Wood, A. Sherwin (dealer), H. A. Bogardus (dealer), G. W. Waterman, S. W. Kingsley, R. P. McGlincy (Dairy Editor Elgin Advocate), Dr. R. R. Stone (Sec'y N. W. Dairy Association), M. H. Thompson (Sec'y Ill. State D. Association), John Keating, S. S. Mann (dealer), Silvanus Wilcox (ex-Pres. Mo. D. Association), J. C. Bosworth, I. H. Wanzer (dealer), T. R. McLean (ex-Pres. Ill. State D. Association), Henry Sherman, C. B. Hawly, R. P. Brown, G. H. Britton, P. Moran (dealer), Jno. Anderson, M. N. Newton, F. W. Wright, E. G. Hammond, Z. W. Browning, J. W. Brown, C. H. Larkin, Ira Russell, J. H. Browning, M. Switzer, Wm. F. Osgood.

We understand that Mr. SCOVILLE has not forwarded the above remonstrance to the Centennial Commissioners at Philadelphia, who have power of appointment of a Juror, unless he has done so very recently. What is the reason for this delay?

RURAL NOTES AND QUERIES.

A Question of Ability.—Senator WINDOM of Minn. having said in the Senate that the Indians were "the greatest liars and vagabonds on the face of the earth," Prof. THOMANS in Popular Science Monthly doubts this, and adds:—"Grant the ability, they lack the resources and capacity. Mentally, they are children, with but little knowledge, scanty ideas upon a few subjects, and limited intellectual operations. They lack the scope, the cultivation, the facilities for exercise in deceit which is possessed by the civilized race. . . . The civilized man multiplies his capacity of falsehood through division of labor. He not only lies with his tongue, but with his hands, manipulating falsehood into his manufactures. He lies by machinery, and swindles by steam. By the printing press he scatters deceptions like snow-flakes over the continent. Your civilizer lies with enterprise, through an army of agents, by post and by telegraph. What can the 'poor Indian,' with his 'untutored mind,' do in comparison with this? There was more lying in the management of the Northern Pacific Railroad than ten tribes of Indians could perpetrate in a generation. There is more lying in one presidential campaign than all the North American tribes could perpetrate in a century. The Indians are no more 'the greatest liars on the face of the earth' than they are the greatest lawyers, politicians, editors, merchants and manufacturers, on the face of the earth. Fraud, falsification, dissimulation, insincerity, trickery, overreaching, and the innumerable grades and shades of humbug, are vices of the civilized man, and he must accept this with all his other forms of greatness." There is a great deal of truth in this. We have yet to learn the best fruits of civilization by combining modern intelligence and enterprise with the homely virtues which distinguished the people of earlier and simpler ages.

The "Modest" Five of the Dairy Ring.—When five men meet in a private caucus, and each one comes out with an office and a claim for exceeding "modesty," it becomes an interesting question how the thing was done. Did each of the five vote for himself, or were only four votes cast for each office? The member of the Ring whose "modesty" is most vaunted, voted afterwards, in open meeting at Philadelphia, against associating other jurors on terms of equality with himself. It is fair to presume that the others voted for themselves throughout. Did three of the five name themselves as the Auditing Committee, and did the others name themselves candidates for the position of Jurors, or was this done for each by the others?

Election of Postmasters.—A Tennessee member of Congress has introduced a bill to make postmasters elective by the people in their jurisdiction. It is not probable that such a bill can become a law just yet; but it is a move in the right direction. Postmasters ought to be the servants of the people. Under our present system they are mostly appointed by some M. C. or Senator,, and are chiefly interested in serving personal and partisan interests. If we are ever to have uniformly competent and obliging post-office officials, we must make their selection depend upon popular favor. This also would do away with a large part of the official patronage, which has become one of the chief evils of our politics and a danger to true representative government.

Corn for the South.—The Rural Carolinian, Edited by D. WYATT AIKEN of the National Grange, quotes the RURAL NEW-YORKER on the importance of diversity of crops, and says that Carolina farmers need fear no glut of corn—would rather welcome it as a variation from recent experience. This is undoubtedly true, and Carolina farmers, and others in the older Southern States, need not fear any glut of corn. The difficulty will be found, rather, in getting enough of it. In the states bordering the Mississippi river it may still be found better to use cheap Western corn than to grow all wanted at home.

Petty Pilfering.—The Mississippi Legislature has passed a law, making the stealing of hogs, chickens or any farm stock, grand larceny. It is hoped that this will put a stop to a system of petty thieving with prevails in most of the southern states. The trouble, however, is in getting evidence of the crime, and increasing the penalty will not be apt to lessen the difficulty. Increasing educational advantages for all, with due regard to moral and religious instruction, would seem to be the more natural remedy for the evils now complained of. That takes time, as any reform must do to be effectual.

Fish in Canandaigua Lake.—Four years ago 20,000 salmon trout fry were placed in Canandaigua Lake, in Western New York. Since then more trout and whitefish have been added, and the fishing in these waters is now better than it has been for many years. This lake is a pleasant summer resort, and its banks are lined with some of the finest vineyards in the country, particularly at Vine Valley on the eastern shore, and Naples at the head of the lake. The people also of these localities are a hospitable folk, which vastly increases the advantages of their surroundings.

An English Grazier says he has not applied barnyard manure to pasture or meadow—using it only on tilled crops; but, instead of manure, has top-dressed his grazing and mowing lands with 5 cwt. of bone meal. The result is he keeps fifty per cent. more stock than before, and the stock is fifty per cent. better. There is no doubt that unmanured pastures are deficient in richness, and often the deficiency is from lack of phosphates, causing cows to yield poor milk, and being probably one cause of abortion.

RURAL BREVITIES.

PEACH buds are nearly all killed in Ohio.

SHEEP were introduced into Massachusetts before 1633.

THE hogs killed in Chicago last year, if placed in line, would have reached to Boston.

A HORSE FAIR will be held on the Fair Grounds at Belleville, Ill., on the 11th and 12th of May.

MICHIGAN last year yielded 1,026,975 barrels of salt, being 200,000 more than any previous year.

THE total cut of saw logs in Ottawa, Canada, for 1875, is estimated at 200,000,000 feet, and the cost of production $2,003,700.

A PUBLIC-SPIRITED citizen of Auburn, N. Y., has added $30,000 to the bequest of the late JAMES SEYMOUR of that city, for a public library.

AN English stock company is buying up all the wild pine lands in Georgia. They will send over immigrants, get out the turpentine, and then sell the land.

CATTLE disease is spreading over the entire south of Japan. The Government has ordered that none be killed for market till after official inspection.

THE Legislature of New Brunswick have passed a very stringent game law, prohibiting the killing of moose, deer and caribou in that province for three years.

ARBOR DAY (or Tree-Planting Day, April 15) has become a permanent institution in Minnesota. The Legislature has appropriated $2,500 for cash premiums to tree planters.

GROUND squirrels are a great trouble to California farmers. This nimble animal never sleeps. He lives in villages under ground and plunders the farmers worse than gophers. Every two months the ground squirrel breeds, and neither State premiums nor strychnine diminishes its numbers. He levies an assessment of 50 per cent. on the profits of a wheat crop in many sections.

MR. J. V. H. SCOVILLE, Chairman of the Centennial Dairy Committee, writes in the Utica Herald attempting to defend Mr. ARNOLD, but admitting that A. voted against recommending others as jurors on an equality with himself. This is an admission by one of Mr. ARNOLD'S friends of what we stated and what ARNOLD'S organ denied. It seems to us that the less said about Mr. ARNOLD'S "modesty" the better.

BUSINESS NOTICES.

THIRTY-NINE years' experience in the manufacture of White Lead, warrants us in stating that our **"Phœnix" brand Pure White Lead** cannot fail to give entire satisfaction. Eckstein, Hills & Co., Cincinnati, O.

Coughs and Colds.—Those who are suffering from Coughs, Colds, Hoarseness, Sore Throat, &c., should try *"Brown's Bronchial Troches."*

WAITING FOR SPRING.

THOU of the sunny head,
With lilies garlanded,
And bosom fairer than the blown sea-foam:
O Spring, in what waste desart dost thou stay,
Whilst leaves await thy presence to unfold?
The branches of the lime with frost are gray,
And all imprisoned is the crocus' gold.
Come, sweet enchantress, come!

Arise, and bring with thee
The rathe bud for the tree,
The healing sunshine for the trampled grass:
Loose tendrils for the boughs which bless the eaves,
And shield the swallows in the rainy hours,
The pendant flames which the laburnum heaves,
And faint scents for the wind-stirred lilac flowers.
Enchantress, breathe and pass!

The larks shall sing again,
Between the sun and rain,
The brown bee through the flowered pastures roams,
There shall be music in the frozen woods,
A gurgling carol in the rushing brook,
An odor in the half unbosomed buds,
And dancing foxgloves in each forest nook.
Then come, enchantress, come!

[Chambers's Journal.

The Story-Teller.

AUTUMN BLOSSOMS.

How was it that I came to be an old bachelor? Not because of hating women, I am sure, for I liked them very much, and never could have spoken to one rudely or discourteously for my life. As nearly as I know, it was in this wise:—

My father died, leaving a family of children, a wife, and an old father and mother, not one of whom, only myself, was able to earn a shilling. He had never saved anything.

So, after the first great grief, when we had calmed down and were able to look matters quietly in the face, there was a wretched sort of prospect for us. I was only an accountant, and had a young fellow's habit of wasting my small salary in a thousand different ways. I had been "paying attention" too, to Elsie Hall who, young and childish as she was, had a way that some girls do have of leading their admirers into extravagance. Of all the trials of that never-to-be-forgotten time, I think the greatest was appearing niggardly in those baby blue eyes. I did not mind wearing plain suits, discarding kid gloves and renouncing the opera; but not to lay those bouquets, and books, and music, and dainty bits of jewelry, and multitudinous trifles at Elsie's feet, was a very terrible ordeal. I passed it, though; and if ever man had reason to be thankful I had, for the acquisitive little beauty jilted me in a month for Tom Tantem, who was rich and lavish of gifts, and who ran away from her after a marriage of ten months.

I worked day and night, and managed to keep the wolf from the door.

Sometimes I used to think how well it was for Elsie that she had not really loved me, for she could have had nothing but a dismal prospect of wearing out her youth in a dreary, hopeless engagement to one too poor to marry. That was until Tom ran off. Then I thought it would have been better for her to have shared our humble home and poor fare, and the love I could have given her, than to be deserted so. And I pitied her, as if she had not proved herself heartless. But I never went near her, of course; and I never even spoke of her to my mother.

I grew no younger all this while, and every year seemed to add five to my looks. I had never been very handsome or very merry, and soon I became conscious of a peculiar middle-aged look, which settles down upon some people very early.

Strangers, too, began to take me for the head of the family; and once, in a new neighborhood, the butcher alluded to "my wife." I found out that he meant my mother, and only wondered that it was not dear old grannie.

She was eighty, grandfather ninety, and they died one bright autumn day, before prosperity came to us—died within an hour of each other; for grannie just said, "I think I'll lie down a bit, now Lemuel don't need me. I'm very tired."

Then she kissed me and said:—"You've been a good boy to your grandpa, Edward. You'll have that to think of."

And when next we looked at her she was dead, with her cheek upon her hand, like a sleeping child.

So two were gone, and we were sadder than before. And then Jean, my eldest sister, married at sixteen a physician, who carried her off to Hindostan in her honeymoon.

And we could none of us feel the wedding a happy thing.

But prosperity did come at last. I had worked hard for it, and anything a man makes his sole object in this life he is very sure to attain.

We were comfortable—easy. Ah, what a word that is, after years of struggle! At last we were rich. But by that time I was five-and-forty—a large, dark, middle-aged man, with a face that looked to myself, in the glass, as though it were perpetually intent on figures. The girls were married. Dick had taken to the sea, and we saw him once a year or so, and Ashton was at home with mother and myself—the only really handsome member of our family, and just two-and-twenty. And it was on his birthday, I remember, that that letter came to me from poor Hunter—the letter which began:—"When these lines reach you, Ned Sanford, I shall have my six feet of earth—all I ever owned, or would, if I had lived to be a hundred."

We had been young together, though he was really older than I; and we had been close friends once, but a roving fit seized him, and we had not met for years. I knew he had married a young Kentish girl, and knew no more; but now he told me that she was dead, and that his death would leave a daughter an orphan.

"She is not quite penniless," he wrote, "for her mother had a little income which, poor as I was, I was never brute enough to meddle with, and it has descended to her. But I have been a rolling stone, gathering no moss, all my life, and we never staid long enough in one place to make friends. Will you be her guardian? It is a dying man's last request"——

And then he wrote some words, coming from his heart I knew, which, being of myself, I cannot quote even here—I could not think that I deserved them.

And the result of that letter and of another from the lawyer who had Annie Hunter's little fortune in charge, was that one soft spring day found me on board of a steamer which lay at rest after her voyage, in the protecting arms of Liverpool, with two little hands in mine, and a pair of great brown eyes lifted to my face and a sweet voice choked with sobs saying something of "poor papa," and how much he had spoken of me, and of the lovely voyage, and the green graves left behind; and I, who had gone to meet a child and found a woman, looking at her and feeling toward her as I had never looked upon nor felt to any other—not to Elsie Hall. It was not the boyish love-dream come again.

Analyzing the emotion, I found only a great longing to protect and comfort her—to guard her from every pain and ill; and I said to myself: "This is as a father must feel to a daughter. I can be a parent to George Hunter's child in very truth." And I took her home to the old house and to my old mother. I thought only of those; somehow, I never thought of Ashton.

Shall I ever forget how she brightened the somber rooms! How, as her sadness wore away, she sang to us in the twilight! How strangely a something which made the return home and the long hours of the evening seem so much brighter than they had ever been before, stole into my life! I never went to sleep in church now. I kept awake to look at Olive Hunter—to listen to her pure contralto as she joined in the singing. Sometimes I caught her eye—her great, unfathomable brown eye—for she had a habit of looking at me. "Was she wondering how a face could be so stern and grim?" I used to ask myself.

Ashton used to look at her also. He had been away when she first came to us, and when he returned she was a grand surprise to him.

"Oh, how lovely she is!" he had said to me.

"She is very pretty," I replied.

Ashton laughed.

"May I never be an old bachelor if it brings me to calling such a girl 'very pretty,'" he said; and I felt conscious that my cheek flushed, and felt angry that he should have spoken of me thus, though I never cared before.

They liked each other very much—those two young things. They were together a great deal. A pretty picture they made in the Venetian window in the sunset. He a fair-headed, blue-eyed, Saxon-looking youth; she so exquisitely dark and glowing.

Every one liked her. Even my old clerk, Stephen Hadley, used to say her presence lit the office more than a dozen lamps—the nearest approach to a poetical speech of which old Stephen was ever known to be guilty; and I never knew how much she was to me until one evening when, coming home earlier than usual, I saw in that Venetian window where Ashton and Olive had made so many pleasant pictures for me, one that I never shall forget as long as I live.

She stood with her back to me. Ashton was kneeling at her feet. The sound of the opening door dissolved the picture; but I had seen it, and I stole away to hide the stab that it had given me.

I sat down in my own room and hid my face in my hands, and would have been glad to hide it beneath my coffin-lid. I knew now that I loved Olive Hunter; that I loved her not as an old man might love a child, but as a young man might love the woman who ought to be his wife—better than I had loved Elsie Hall, for it was not a boyish passion, but earnest, heartfelt love.

I in love! I arose and looked in the mirror, and my broad-shouldered reflection blushed before my gaze. The springtime of my life had flown and my summer had come and gone, and in the autumn I had dreamt of love's bud and blossom.

I knelt beside my bed and prayed that I might not hate my brother—that I might not even envy him. His touch upon my door startled me. He came in with something in his manner not usual with him, and sat down opposite me. For a few moments we were both silent. Then he said, speaking rapidly and blushing like a girl:—"Ned, old fellow, you—you saw me making a fool of myself just now, I suppose?"

"I saw you on your knees," I said.

"And thought me a silly fellow, eh? But you don't know, Ned. You can't understand—you've been so calm and cool all your life through, you know. She's driving me mad. Ned, I do believe she likes me, but she won't say yes. I'd give my right hand for her love. I must have it, and I think you can help me, Ned. From something she said, I believe she thinks you would disapprove; perhaps you are one of those old fellows who want every one to marry for money. Tell her you are not. Ned—dear old fellow—tell her you have no objection, and I'll never forget it—indeed I won't."

"Tell her I have no objection," I repeated, mechanically.

"You know you are master here, and as much my father as if you really were one instead of a brother," said Ashton. "If I did not know how kindly you had always felt to us both, I should not confide in you, for it's a serious thing to be in love, Ned, and you may thank heaven you know nothing about it."

"Know nothing about it?" Ah, if he could have read my heart just then!

"I'll do what I can, Ashton," I said at last. "I'll try my best."

And he flung his arm about me in his own boyish fashion and left me alone—alone with my own thoughts.

He had said, truly, I "had been like a father" to him. I was old enough to be hers, and no one should know my silly dream. I would hide it while I lived. As I had said once:—"I've only the old folks and the children now," I said then. "I will only think of mother and of Ashton. Let my own life be as nothing; I have lived for them—if needs be, I will die for them."

But I would not see or speak to Olive that night nor until the next day was quite done. Then, in the twilight, I sat beside her and took her hand.

"Olive," I said, "I think you know that Ashton loves you. I am sure he has told you so. And you—can you not love him?"

She drew her hand from mine, and said not one word.

"I should rejoice in my brother's happiness. I should think him happier in having your love than anything else could make him. I told him I would tell you so."

And then she spoke.

"You wish me to marry Ashton?"

Reproach was in the tone—reproach and sorrow.

"If you can love him, Olive," I said

She arose. She seemed to shrink from me, though in the dark I could not see her face.

"I do not love him," she said.

And we were still as death. Then suddenly Olive Hunter began to sob.

"You have been very kind to me. I love you all," she said; "but I cannot stay here now. Please to let me go somewhere else. I must—I cannot live here."

"Go from us, Olive?" I said. "Nay, we are not tyrants; and once assured you do not love him, Ashton will——"

"Hush!" she pleaded; "hush! Please let me go away! Please let me go away!"

The moon was rising. Her new-born light fell upon Olive's face. Perhaps its whiteness made her look pale.

She leaned against the wall, with her little hand upon her heart, her unfathomable eyes full of pain. How had I hurt so? A new thought struck me.

"Perhaps you love some one else, Olive."

And at that she turned her face from me, and hid it in her hands.

"Too much—too much. You might have saved me that," she said. "Let me go away. I wish you had never brought me here."

And I arose and went to her. I bent over the woman I loved. I touched her with my hand; her soft hair brushed my cheek.

"Olive," I said, "if coming here has brought pain upon you, I wish I had not. I would rather have died to make you happy."

And my voice trembled and my hand shook, and she turned her face towards me again and looked into my eyes. What she saw in mine I do not know—the truth, I think. In hers I read this—I was not too old to her; too old to be loved.

I stole my arm about her; she did not untwine it. I uttered her name, "Olive," huskily.

Afterwards I told her of my struggle with myself—not then. I said: "Olive, I love you; but it cannot be that you care for me. I am old enough to be your father."

And again I saw in her eyes the happy truth and took her to my heart.

But we kept our secret for a while, for we both loved Ashton, and both knew that this wound was not too deep to find a balm; and within a year, when the boy brought home a bride—a pretty creature whom he loved, and who loved him—I claimed Olive.

And she is mine now; and the autumn blossoms of my heart will only fade on earth to bloom again through all eternity in paradise.

THURLOW WEED.

A THERMOMETER MAN IN DETROIT.

HE was a way-worn man from the East, and he had thirty-seven thermometers in a basket on his arm. After standing on the street corners for two or three hours without making a sale, he started for the eastern part of the city, hoping to do better among the private houses. He seemed to gain confidence from the cheerful look of the dwellings, and he bore himself like a banker as he ascended the steps and pulled a door-bell.

"Nothing for the poor," said the lady, as she opened the door.

"I am not soliciting for the poor—I am selling thermometers," he said, in a balmy voice.

"Don't want any—bought our stock in the fall," she said, drawing in her head.

"I said thermometers, madam," he called, in a despairing voice.

"I know it; but we've got all the vegetables we can use," she called back, and the door struck his toes.

Going in the saloon on the corner the man addressed the proprietor with a sweet smile, asking:

"Would you like a thermometer to-day?"

"Py der pushel?" inquired the saloonist.

"No—a thermometer—a little instrument for telling you when it is cold or warm."

"Any music-box in it?" inquired the saloonist.

"No; it records the weather."

"What wedder?"

"Why, the weather we have every day in the year. When it is warm this little tube runs up; when it is cold it sinks down."

"Umph! Ven it ish wurm I dukes my coat off; ven it is gold I put more goal in the stoat. Go sell dat to some schmall poy as knows noddings!"

The thermometer man entered a carpet-weaver's, and a bow-backed man nodded kindly and cordially welcomed him.

"Accurate thermometers for only twenty-five cents," said the peddler, as he held one up.

"New thing?" said the weaver, as he took one in his hand.

"We have had thermometers for many years. People have come to consider them a household necessity."

"Zero—Zero? Who was Zero?" asked the weaver, reading the word behind the glass.

The thermometer man explained, and the weaver, after trying to get his thumb-nail under the glass, asked:

"Where does the blamed thing open?"

"Thermometers are not made to open, my friend," was the reply.

"Well, I don't want no thermometer around me that won't open!" growled the man. "I thought it was a new kind of stove-handle when you came in, or I shouldn't have looked at it."

The thermometer man next tried a dwelling-house. In answer to his ring, the door was instantly and swiftly opened by a red-faced woman, who hit him with a club and cried out:

"I'll learn you, you young villain!"

She apologized and explained that several bad boys had been ringing the door-bell, and he forgave her and said:

"I have some accurate and handsome thermometers here. Would you——"

"We never have hash for breakfast," she interrupted. "My husband detests hash, so I don't want to buy."

"Hush! A thermometer has nothing to do with hash!" he exclaimed.

"Well, I can't help that," she replied, slowly closing the door. "We haven't any lamps to mend, and you shouldn't track mud on the steps that way."

There was a portly man crossing the street, and the thermometer man beckoned to him, halted him, and when he got near enough, asked:

"Can I sell you an accurate thermometer, to-day?"

"A what?"

"A thermometer?"

"What do I want with a thermometer?" exclaimed the portly man, raising his voice a peg.

"Why, to note the weather."

"You blamed idiot! Do you suppose I run the weather?" roared the fat man, growing purple in the face.

"But you want to know when it is hot or cold, don't you?"

"Am I such an old fool that I don't know when it's summer and when it's winter?" shrieked the fat man.

"We all know, of course," replied the stranger, "but every respectable family has a thermometer nowadays."

"They have, eh? I never had one, nor I wouldn't have one, and do you dare to tell me that I ain't respectable?" screamed old portly.

"I didn't mean——"

"Yes, you did, and you have made me miss the car, and I'll cane you!"

The thermometer man waded across the muddy street and made his escape, and at dusk last night was backed up against the Soldier's Monument, his basket between his feet, and was squinting sadly at the clock on the City Hall tower.—*Detroit Free Press.*

USE GOOD ENGLISH.

A GREAT deal depends on early habit; and correct language learned in early life is easily continued ever afterward. Whenever young persons use a wrong word, let them immediately select the right expression and repeat it to themselves a number of times, and in this way it will soon become easy and natural. Without such repetition in use they will certainly fail. Every thing in life depends on a good use of English; and on the other hand, nothing will retard successful progress in life sooner than bad English, bad pronunciation, and slang words. Edward Everett said, that "to read the English language well, to write a neat, legible hand, and to be master of the first four rules of arithmetic—I call this a good education. And if you add the ability to write pure grammatical English, I regard it as an excellent education."

Now, to correct errors and establish a good practice, the work must be taken in detail. One thing must be done at a time. One of the first steps then, is to use simple language to express just what we want to say. There are several words often improperly used for many different meanings, and in this way they lose their force. Take, for example, the word *fix*—the strict meaning of which is to *make fast*, to *settle*. But it is improperly used in many other ways, as "I fixed my hair, I fixed the wagon, I fixed my gloves, I fixed the room," &c.; instead of "I brushed my hair, I repaired the wagon, I sewed my gloves, I put my room in order," &c.

Another word used still more loosely and widely, is, "*nice*." This properly means *over exact; punctilious; delicate; subtle*. But it is often employed to denote all commendable qualities. We often hear careless speakers say, "this apple is *nice*," instead of *delicious*; "she is a *nice* girl," instead of *good* or *agreeable*; a *nice* landscape," for a *lovely* landscape; a *nice* cottage," instead of a *snug* one; a *nice* man," instead of a *genial* man; a *nice* mountain," instead of a *grand* or *lofty* one; "a *nice* drink of water," for a *refreshing* one; "a *nice* story," instead of an *interesting* one; "a *nice* smell," to a flower, for a *pleasant odor;* and so on without limit. Some persons look nice, walk nice, talk nice, make a nice visit, write a nice letter, live in a nice house, wear nice clothes, make a nice present, &c.

Again, the word "*awful*," which means *dreadful, fearful, sublime*, is used as a general adjective for nearly all purposes, both good and bad, by those who cannot select a separate and appropriate adjective for each separate purpose; and we accordingly hear of an awful nice day, an awful dull knife, an awful good pear, an awful old hat, etc., etc.

Another word, "*got*," is used profusely by some speakers. Some of our readers have perhaps heard the man's narration:—"After I got your letter I got on horseback, and when I got to Boston I got a carriage, but I got wet before I got to the office, and I got such a cold as I can't get rid of. I got to the hotel and got my supper, and then I got to bed, but it was long before I got to sleep. When I got up in the morning and got my breakfast, I got to the cars. I got home before night."

To avoid all such inelegancies, or to correct them when they have become a habit, repeat to yourself the correction, and continue to repeat it till it becomes ready and familiar in use. In this way young persons may acquire the habit of using the best language, and the longer it is continued the more easy and natural it will become. Always select the shortest and simplest words, and those which convey distinctly the intended meaning. All this will require attention and pains, without which nothing is ever accomplished.

WASHINGTON'S ANCESTRY.

GARSDON, a small town or parish in Wilts Co., Eng., has the honor of containing in its venerable church a monument to the memory of General George Washington's ancestors—a memorial which, in the heart of every patriotic American, is replete with associations the most tender and sacred. The village of Garsdon is about two miles from Malmesbury, and the church is a quaint Gothic edifice, situated in the bosom of a rich country and surrounded with ancient trees. For generations past the country people of this charming spot have been in the habit of conducting strangers to the church for the purpose of pointing out this venerable memorial of the architect of the American Republic, the Father of his Country. The monument was once a superb specimen of the mural style, and even now presents evidences of rich and curious workmanship. It is to be seen in the chancel on the left side of the altar, and is finely carved out of the stone of that part of the country. It is surmounted with the family coat-of-arms, which form a handsome emblazonment of heraldry, and, although erected more than two hundred years ago, they are still burnished with gilding, and the following interesting inscription appears:

To ye
Memory of
SIR LAWRENCE WASHINGTON, NITE,
Lately Chief Register
of ye
Chauncerye,
Of Renown, Piety, and Charitye,
An exemplyarye and Loving Husband, a Tender Father, a Bountefolle Master, a Constante Refiever of ye Poore; and to Thoas of His Parish, a Perpetual Benefactor
Whom It Pleased
God to Take Into Is Peace.
From ye Fury e of ye Inzuing Warrs
Born May XIV.
He was Heare Interred
May XXIV., An. Dni. 1643,
Ætat. Sue. 64.
Heare Also Lycte
Dame Anne,
Is Wife, who Deceased
January XIIIth; and Who
Was Beryed XVth,
Anno Dni. 1645.

The ancient English homestead of the Washington family is handsome, very old-fashioned, and built of stone, with immense solidity and strength. The timber about it is chiefly oak, and in several of the rooms, particularly the old hall or banqueting room, there are rich remains of gilding, carved work in cornices, ceilings and panels, polished floors and wainscoting, also shields containing the same coat-of-arms as on the mural monument in the church, carved over the lofty and antique mantelpieces. Beneath the house are extensive cellars, which, with the banqueting-room, seem to indicate the genuine hospitality and princely style of living peculiar to a "fine old English gentleman, all of the olden time." And indeed, according to the traditions and chronicles of that region of country, such was the general character of the heads of the Washington family. The walls of the houses are five feet thick, and the entire residence is surrounded by beautiful gardens and orchards. In the old parish archives the Washington family are in frequent instances most warmly referred to as among the benefactors of the parish; and from the earliest recorded time they seem to have been the lords of the soil at Garsdon down to the period of their leaving.—*Cor. St. Louis Republican.*

A HOTEL WITH A LIBRARY.

How will the morning stars sing together on that millenial day when the landlords of the earth shall pull down their curtains, if need be, seeing they are usually gray as to the lace and dingy as to the damask, and sure to gather dust and defilement, be they never so royal at the outset; shall pull up their carpets if purses be shallow, seeing the carpets are trodden by such ungenial feet as fate may send, and that the deeper the pile the more surely it hoards the uncanny deposits for sensitive lungs, and delicate nerves, and vivid imaginations; shall give up even its frescoed finery, its breadth of gilded frame and plate glass, if danger of bankruptcy require it, but shall hold the one indispensable luxury of a hotel to be a library! With lavish generosity, from apparently boundless resources, the proprietors of hotels have furnished their guests with numberless comforts and conveniences. They have made a marvelous outlay to fascinate the eye and to gratify the palate; but it seems never to have entered into the heart of man that this American people knows how to read. An occasional Bible in a bedroom, a gorgeously gilded book of advertisements on the center-table of the gilded and gorgeous drawing-room, a faint, vague rumor of newspapers in the outer darkness where female foot never penetrates—this is all that indicates any consciousness in the hotel proprietor that the travelers of the world ever care to while away a waiting hour by the innocent diversion of reading. What doth hinder the devotion of a few hundred dollars to works of popular science, popular theology, art and literature, and history? In what quarter of the heavens shall rise that landlord of the future—is he even now disporting with his innocent infantine locs in the sunshine?—who shall send one looking-glass, one hot, heavy, horrid armchair, one dusty, tasseled curtain, to the auction room, and bear into his inn from the proceeds a set of Dickens, and of Thackeray, and Scott and Cooper, and George Elliot, and John Halifax, Gentleman, and an occasional volume of Tyndall, and Huxley, and Agassiz, and Browning, and Tennyson, and Matthew Arnold, and Macauley? The chair and the curtain and the looking-glass would do it. I can but think that the room from which it was known that a chair, a table, and a looking-glass had been removed to make room for a choice and sensible little library, would be the most popular hotel in the city.—*Gail Hamilton, in Scribner.*

A PLUCKY MAN.

YEARS ago, Chauncey Filley, formerly of this city, took up his residence in St. Louis and engaged in the manufacture of stoves. Honest, industrious and enterprising, he rapidly made his way in the world and became possessed of an ample fortune. He was an excellent citizen, established a reputation among his fellows, and eventually became postmaster of this great city of the West, a position he still retains. At the time of the President's visit to St. Louis, Mr. Filley entertained him sumptuously and with splendid hospitality. Engaged in the mining business was a friend who had plenty of enterprise and but little money. Filley had unbounded confidence in him, and when the friend wanted an indorser for his notes Mr. Filley became his surety, whenever requested, without keeping any record as to the amount of money he was bolden for. Eventually his mining friend failed, and these notes were presented to Mr. Filley for payment.

Of course his surprise was great, but the fact gave him no anxiety, for he did not think the indorsements would exceed $100,000, and he could easily pay that from his ample fortune. One hundred thousand dollars were soon presented and promptly paid, but they did not stop coming until they amounted to $990,000. To pay this would make Mr. Filley a bankrupt. In fact he had not the means to pay the entire claim, and he saw no way out of his dilemma but to go into bankruptcy. This he at first decided to do, but his pride restrained him. He had a business reputation which was second to no one in St. Louis, and, after mature deliberation, decided to ask for a chance to pay his full indebtedness.

He told his creditors that he could make more money out of his property than if it were disposed of at auction, and he was given an opportunity to prove his assertion. He paid $500,000 down, and resumed business with renewed vigor and energy, and to-day the full amount, nearly $1,000,000, lost by over-confidence in a friend, has been paid, with the exception of about $50,000, and that also Mr. Filley is now abundantly able to pay. The result shows what indomitable energy, pluck and perseverance can do when employed in the right direction.—*Troy Times.*

WHY SHE PLANTED ROSES.

A BLACKSMITH had in possession, but under mortgage, a house and piece of land. Like many others, he was at one time fond of the social glass, but was happily induced by a friend to join the temperance society. About three months after he observed his wife one morning busily engaged in planting rose bushes and fruit trees. "Mary," said he, "I have owned this lot for five years, and yet I have never known you to care to improve it in this manner." "Indeed," replied the smiling wife, "I had no heart to do it until you gave up the drink. I had often thought of it before, but I was persuaded that should I do it, some strangers would pluck the roses and eat the fruit. Now, with God's blessing, this cot will be ours and we and our children may expect to enjoy the produce. We shall pluck the roses and eat the fruit." And they did. Their cottage was known as the prettiest in the neighborhood.

KNOWLEDGE LIMITED.

THINK for a moment of the narrow limits of our knowledge! Eight hundred millions of featherless bipeds, more or less, are picking up a living, eating and drinking, marrying and giving in marriage, on this pretty planet of ours; of what infinitessimal proportion can you really unveil the secrets and guage the virtues and the happiness? How many people do you know intimately enough to say whether their lot is, on the whole, enviable or the reverse? Every human being is a foreign kingdom to every other. We make a short excursion into their minds; we touch at a port here and there; and we say glibly that we know them intimately. We know not how many dark corners are carefully hidden away from all strangers, and what vast provinces have never been reached in our most daring travels.

Sabbath Reading.

"THE NIGHT COMETH."

BY ELEANOR BURR.

WHAT thou doest, do quickly, child!
Thou hast not very long to stay:
Make haste to gird thy loins about;
My "Rod and Staff" shall wait thy way.

Stand with lights all trimmed and burning:
Sandals bound on pilgrim feet,
Stand with face to Eastward turning,
Thou may'st then His coming greet.

Let not Pleasure lure nor bind thee
With "green withes" or flaxen strands;
Yield thou not to guilty slumber;
Place not thy strength in human hands,

Lest a loud alarm be given,
And into her fair, mocking face,
Bewildered eyes uplifting,
Thou meet Philistine passion base;

Lest shorn and crippled thou bring'st shame
Upon thy Israelitish house;
Upon JEHOVAH'S honored name,
Upon the symbols of thy troth.

O Soul! O covenanted one!
Be thou faithful to thy vow!
Look up! look on! search thy own depths!
GOD'S own image stamps thy brow.

What thou doest, do quickly, child!
Thou hast not very long to stay;
Eager souls await thy coming;
My "Rod and Staff" await thy way.

THE REALITY OF CHRIST'S LIFE.

WHEN we look at the picture of Christ in the New Testament and see him moving through the "forty days" and the "forty hours" of sorrow, we are wont to lose the significance of this great struggle by so exalting the divine as to make it sweep away the human and to make Christ only an actor upon a stage. His temptation seems slight, his suffering slight, his tears only illustrative of what men ought to shed. There is such a feeling that there must have been in Christ such a sense of unused power, such a knowledge of what he could do if only it were best for the scheme of salvation, that before this feeling the thrilling scenes in his life become only the successive acts in a well-performed drama. But we must never exalt the divine at the expense of the sincere. Far better place Christ down among dependent, helpless beings, than suffer any of the scenes of the New Testament to lie in our minds as pieces of a drama or a pantomime. Apparent temptation, apparent grief, apparent agony in the garden, apparent struggling for character, are not what the world needs to see. It has enough of the hypothetical without finding any in the temptation or olive garden. To solve the enigma of the sufferings of a God, some of the early theologians held to the idea of two souls as existing in Jesus. But how they solved their two-souled enigma I know not. We must all escape the influence of those old theories. Christ passed along, not in a representative art like that of the drama, or of the painter, or sculptor, but he moved along in the same paths of trial, and courage, and effort, and sublime heroism as those along which human hearts in our day must move. The life was real, the triumph was real. Otherwise divinity is made the ally of pretense and deception. Christ is a real chapter from the book of life.—*David Swing.*

THOUGHTS FOR THINKERS.

GOD will not refuse the poor offerings of poor people; but He will not accept the poor offerings of the rich.—*Bishop Medley.*

MISTRUST the man who finds everything good, the man who finds everything evil, and still more, the man who is indifferent to everything.—*Lavater.*

THE years go on; we with their tide
Are to the Future drifting;
And patiently we must abide
The curtain's lifting.

ONE hour with Christ is worth an eternity of all earth's joys, and communion with him is the best, the surest and the most ecstatic foretaste of the bliss of heaven.

MANY do with opportunities as children do at the sea shore—fill their little hands with sand, and then let the grains fall through their fingers till they are gone.

A GOOD conscience is better than two witnesses—it will consume your grief as the sun dissolves the ice. It is a spring when you are thirsty, a staff when you are weary, a screen when the sun burns.

EVERY kindly word and feeling, every good deed and thought, every noble action and impulse, is like the ark-sent dove, and returns from the troubled waters of life bearing a green olive branch to the soul.

WHY should the gloom deepen as we near the sun? And why should the unthinking speak of the downward slope of life? Why walk backward all our days, with our faces down hill, and gloomily speak of downward slope to the grave? But yet how true it is that most of us do so.

A SPOTLESS life may go far to incapacitate a man for saving souls. The common expression, "He is too good for us," contains, like many another vulgarism, pure gold. We are not Christs. We do not understand the evil that we have never committed. We are not the world's saviours, only its helpers; and we have all the helper's dullness, none of the Saviour's insight.—*Elizabeth Stuart Phelps.*

Ladies' Portfolio.

MOTHERS, DON'T SCOLD.

BY FORT U. LACCA.

It is true, I may have been naughty,
For I was to the stranger bold,
When he asked me who my "dad" was,—
But, mother, please do not scold.

I went to the brook there a fishing,
You see I am wet, and so cold!
I know I did wrong not to ask you,—
But, mother, please do not scold.

I fell from the ladder and hurt me,
It slipped and I loosened my hold;
By the fall I did tear my pant-leg,—
But, mother, please do not scold.

I'll try to be good in the future,
And to do just the best I am told;
But should I chance to do wrongly,
Please, mother, *then* do not scold.

Mothers, our boy is right in his pleadings,
And he stands where many a boy's stood:
I never yet knew the occasion
Where *scolding* e'er did a boy good.

"SUPERFLUOUS WOMEN."

In a recent lecture Mrs. Livermore made the following pointed and sensible remarks:

All through the land, in homes and outside of them, I find these women, unwedded, in the vulgar parlance of every-day speech called "old maids," with a shrug of the shoulder, and a slight dash of scorn, in the finer language of sociologists and essayists denominated "superfluous women." They have been brave enough to elect to walk through life alone, when some man has asked them in marriage whom they could not love; with white lips they have said "no," while their hearts have said "yes," because duty demanded of them the sacrifice of their own happiness. Their lives have been stepping stones for the advancement of younger sisters; they have earned the money to carry brothers through college into professions; like the Caryatides of architecture, they stand in their places and uphold the roof over a dependent household; they invert the order of nature and become mothers to the aged, childish parents, fathers and mothers, whose failing feet they guide gently down the hill of life, and whose withered hands they by and by fold beneath the daisies; they carry words of cheer and a world of comfort to households invaded by trouble, sickness or death. The dusty years stretch far behind them; beauty and comeliness drop away from them, and they grow faded and careworn; they become nobodies to the hurrying, rushing, bustling world, and by-and-by they will slip out into the gloom—the shadows will veil them forever from earthly sight—the great surprise of joyful greeting will welcome them, and they will thrill to the embrace of the heavenly Bridegroom.

Ah, Stewart, who from your $100,000,000 of earthly treasures have given $1,000,000 to the working women in a beautiful home! Ah, Peabody, whose gifts of libraries and institutes and educational funds were princely! Ah, Vanderbilt and Drew, who have put millions into the endowment of schools and colleges—these poor women have given and are giving more than ye all. For out of your abundance ye have given but little, and these superfluous women have given their all—themselves, with their loving hearts, with their possibilities of happiness, with their dreams of the future! Ah, four-starred Grant and Sherman, not so heroic was your march through the fearful, bristling wilderness, and from Atlanta to the sea, as is the lonely passage of life made by many an unmated woman, except as her celibate life serves to point a jest, or add cynical pleasantry to a story. Ye were stimulated by the cheers and prayers of a nation, while the gaze of the world followed you. But the path of these women was through the hot shot of ridicule and satire.

Let us give to women such training, physically, industrially, intellectually and spiritually, that we shame the word "superfluous" out of the vocabulary, as descriptive of women. And this will help men, and elevate them, quite as much as any special work which might be done for them, and thus collective humanity will be benefited, and a higher civilization be promoted, for

> The woman's cause is man's; they rise or sink
> Together, dwarfed or god-like, bond or free.

A STORY FOR THE GIRLS.

Sit down on the porch, children, and let me tell you about Aunt Rachel, and the story she once told me. One day, when I was about twelve years old, I had planned to go after strawberries, but Aunt Rachel said to me: "A girl of your age should begin to learn how to do housework. Take off your hat, roll up your sleeves, and help me do the baking."

I pouted and sighed and shed tears, but was encouraged by the promise that I might go after the baking. Under good Aunt Rachel's direction I mixed a big loaf of bread, placed it on a tin as bright as a new dollar, and was rubbing the flour off my hands, when she called out: "This will never, never do, child—you haven't scraped your bread bowl clean."

I shall never forget the picture she made standing there, her eyes regarding me sternly, one hand resting on her hip, while in the other she held the muddy bowl.

"It will never do, child," she went on; "it is not only untidy, but it makes too much waste; to be a good housekeeper you must learn to be economical. You have heard the story of the young man who wanted an economical wife?"

"No," I answered, and I might have added that I didn't wish to hear it, either.

"Well," she continued, "he was a very likely young man and he wanted a careful wife, so he thought of a way he could find out. One morning he went to call upon the different girls of his acquaintance and asked them each for the scrapings of their bread bowls to feed his horses. You see they all wanted him, so they got all they could for him. Finally he found a girl who hadn't any, so he asked her to be his wife, because he thought she must be economical. "Now," said Aunt Rachel, triumphantly, "suppose a young man should ask you for the scrapings of your bread-bowl, what could you say?"

"What could I say?" I repeated scornfully, "why, I'd tell him if he couldn't afford to buy oats for his horses they might starve. I wouldn't rob the pigs to feed them."

I suppose Aunt Rachel thought that lesson was all lost on me; but as true as you live I never knead the bread to this day without thinking of her lesson in economy.

THE EMPRESS JOSEPHINE.

Josephine, before marrying General Bonaparte, consulted her lawyer, Monsieur Raquideau, as to her union with the young victor of St. Roch.

"It is folly," answered the sage man of law, "perfect folly, to marry a young officer without fortune and without future."

But Josephine had more confidence still in the oracles of Mlle. Lenormand, the celebrated fortune-teller; or, rather, she did as people often do after asking advice—she followed her own mind, and did well.

Bonaparte heard of the opinion passed upon him, but made his way in spite of M. Raquideau's doubts, and the young officer became emperor.

But, although he had advanced much, he had forgotten nothing. When he was attired in his coronation robes, and a few minutes before proceeding to Notre Dame, he called out in a voice of thunder:

"Let Raquideau be brought."

The poor notary thought that he had signed his last contract.

"Well," said the emperor, as soon as he perceived him, "here is the man without fortune and without future;" and then, after a mischievous pause of a few moments, he added, "I name you lawyer to the family."

Josephine did well, they say. Can we think so, if we remember her after-suffering, and the agony of that night when, knowing her fate, she drew Bonaparte to the window, and, pointing to the sky, said prophetically:

"Like those two stars we have risen together, and separated we shall fall."

SATURDAY NIGHT.

How many a kiss has been given, how many a curse, how many a caress, how many a kind word, —how many a promise has been broken, how many a heart has been wrecked,—how many a loved one has been lowered into the narrow chamber, how many a babe has gone from earth to heaven,—how many a crib or cradle stands silent now, which last Saturday night held the rarest of all treasures of the heart? A week is a life. A week is a history. A week marks events of sorrow or gladness of which people never heard. Go home to the family, man of business! Go home, you heart-erring wanderer! Go home to cheer that awaits you, wronged waif of life's breakers! Go home to those you love, man of toil! and give one night to the joys and comforts fast flying by. Leave your book with complex figures, your dirty workshop, your busy store. Rest with those you love; for God only knows what the next Saturday night will bring you. Forget the world of care and the battle of life which have furrowed the week. Draw close around the family hearth. Go home to those you love, and as you bask in the loved presence and meet to return the loved embrace of your heart's pets, strive to be a better man and to bless God for giving his weary children so dear a stepping-stone in the river to the Eternal as Saturday night.

ADAM'S FIRST WIFE'S REVENGE.

The old Hebrew cabalistic legend of Lilith, the first wife of Adam, is told by M. D. Conway, in his lecture on the Devil, in language which is as beautiful as a finished poem. She was a cold, passionless, splendid beauty, with wondrous golden hair. She was created Adam's equal in every respect, and therefore properly enough refused to obey him. For this she was driven from the garden of Eden, and Eve was created, made to order, so to speak, of one of Adam's ribs. Then the golden-haired Lilith, jealous, enraged, pining for her first home in Paradise, entered in the form of a serpent, crept into the garden of Eden and tempted Adam and Eve to their destruction. And from that day to this Lilith, a cold, passionless beauty, with golden hair, has roamed up and down the earth, snaring the sons of Adam and destroying them. You may always know her dead victims, for whenever a man has been destroyed by the hands of Lilith you will always find a single golden hair wrapped tight around his lifeless heart. To this day, many and many a son of Adam is still lured to death and ruin from having the golden hair of a woman wrapped too tight around his heart. This is the moral. Has not Lilith been revenged?

Either trouble or happiness borrowed from the future is apt to prove fallacious.

Reading for the Young.

AT QUEEN MAUDE'S BANQUET.

She wears no crown
Save her own flossy curls,
Rosiest, plumpest
Of pet baby girls;
Blue-eyed and dimpled
And dignified she,
Pouring out for us
Invisible tea.
Little Queen Maude.

Tiniest teacups
And saucer and spoon:
Baby, your banquet
Has ended too soon,
Fancy's full cupboard
Unlocks to your hand;
We your poor subjects
Await your command,
Little Queen Maude.

Throned on the floor,
We must stoop to your state;
If a queen's little,
Can courtiers be great?
Now kiss us, dismiss us,
Red lips rosy sweet,
For yonder's a post
Chained fast to your feet,
Little Queen Maude.

LETTERS FROM BOYS AND GIRLS.

From a Southern New York Girl.

Dear Rural Cousins:—If by that name you will allow me to call you—I have been wishing for a long time to write you and ask if I might be numbered with the Cousins, but could never summon courage enough until now. I am just sixteen (am I too old), and as this is Leap Year and the Centennial Year, I thought I would celebrate by writing to the Rural. Do any of the Cousins intend to go to the Centennial? I should dearly like to go, but it is too far away and too expensive for me to do anything more than dream about. If any of the Rural friends do go, I hope they will write and tell us of some of the wonderful and beautiful things that they have seen. We live a mile from the village of ——, and it is very pleasant and thriving little village it is, with high hills on all sides. My brothers and I have attended school all winter. We have a graded school here. My studies are Arithmetic, Algebra, Grammar, Philosophy, Geography and U. S. History as a reader. A few weeks before our winter term closed the advanced scholars visited a school about twenty-five miles from here. We went one day and returned the next. We visited the school in the afternoon and attended a party in the evening. They entertained us nicely, and we had a pleasant time generally. The return train stopped an hour in the village of Owego, and we, not wishing to wait in the depot, improved our time by marching down to the river (the Susquehanna) and looking at the new steamboat they are building; it is very nice, and I should not mind taking a ride on it when it is completed. I can imagine just how Uncle Moore looks, as he reads this, my first attempt. I see him sitting in a large arm chair by a table covered with letters. He takes up my unfortunate letter, glances through it, and with a "Not quite up to the mark," tosses it over his shoulder, and it lands—where? On the grave of many other letters; but I wonder if at the same time he says "Try again." I hope so, for I certainly shall.—M. A. B., *Tioga Co., N. Y.*

From an Illinois Boy.

Dear Cousins:—As this is my first attempt to enter the "Rural Circle," and I perceive that the girls are ahead as to numbers, I will throw in my mite to make up the deficiency. I notice that there are very few who boast of their attainments in the farming line, as the agricultural profession seems to be at a discount with them, as well as the boys. I am not sure that it is best to follow McOmber's suggestion to "keep on the right side of the girls." For my part I prefer a little difference of opinion, especially in conversation, for when a person agrees with every idea you advance, and the only reply you can get is yes or no, this is agreeing too well. And now I have a query to propose. Why is it that they bestow their smiles and favors on so many that claim to be young men, but who are little better than tobacco distillers, if we consider the quantity of tobacco juice that they manufacture every day? Is this one of the accomplishments that a young man must acquire before he can expect to win the favor of the fair sex? If their tongues are, as one of the Cousins suggests, loose at both ends, then let them wag at something that will do some good. I would make it one of the conditions essential to keeping my company, that he should abstain from the disgusting habit. If there was some of the energy that is displayed in following the fashions, I do not think that we should be any the worse, and it is a subject that will bear a great deal of tongue, both hot and cold.—Critic, *Melvin, Ill.*

From a Western New York Girl.

Ed. Rural:—Your valuable paper has just come to us with the back numbers from Jan. 1. We have decided that we cannot do without the Rural as long as the several departments are so well and ably conducted as now. In looking over the "Letters from Boys and Girls," I notice the several sarcastic remarks directed to Young Tom. As we did not take the Rural last year I have not seen *his* letter. Will the kind Editor send me the paper containing it? Both boys and girls denounce it so strongly my curiosity is excited, and I am anxious to know what the young gentleman said to arouse the indignation of *all*. I wonder he has not been tempted to write another letter. If he does not try to vindicate himself soon some of the girls ought to write *for* him. I hope Fairy Belle will write again, naming some of her favorite music. I am much interested in music, and practice several hours a day. I fear the Editor will think this too long, even if otherwise meriting publication.—Witch Hazel, *Groton, Tompkins Co., N. Y.*

From a Virginia Girl.

Dear Editor:—This is the first time I have written for the Rural, and I don't know as it will be printed, but I will try and see what I can do. As most of the girls tell about their pets, I will tell about mine. I have a dog I call "Skip," and a tortoise-shell cat named "Lillie." I live on a farm three miles from Norfolk City, on a branch of the Elizabeth River. I think it a very pretty place. I hope I may be admitted into the list of Rural Cousins, may I not? I think the picture in the Rural of Aug. 8th, 1874,—"O dear, No, I'm not Conceited," is a pretty fair specimen of Young Tom. I don't know as I shall pitch into Y. Bach just yet. Girls, you have administered a quietus that has cured him of his long tongue, I guess; he is fairly scared away—afraid to show his head again, poor boy. I should like to climb some of those mountains out where you live, Young Tom, but if I caught sight of you I should fly on the wings of the wind. And now, my dear Rural Cousins, if I may call you so, adieu.—Snow Drop, *Norfolk Co., Va.*

From an Oregon Girl.

Dear Editor:—I have long thought I would write and tell you how we like the Rural. We like it very well; we have taken it three years and commenced on the fourth year. We live in the country, and I think we have a nice place to live. I have no pets, but I have a little baby sister. I am twelve years old. This is my first attempt at writing for a paper, and if this does not go into the waste basket I will try again.—Bertha Parvin, *Dexter, Lane Co., Oregon.*

From a Central New York Girl.

Dear Girls:—As all the girls and boys are writing, I thought I would too. I went to school during the winter. I am a farmer's daughter, and nothing could hire me to live in the city. I agree with Dell B. W. of Rochester, and if she will give me her P. O. address I would like to correspond with her. I think Young Tom had better not say anything in regard to the fair sex. I close, hoping this (my first letter) will find a place in the Rural.—Ada O. H., *Hill's Branch, Cayuga Co., N. Y.*

The Puzzler.

LITERARY PUZZLE.—No. 1.

(A) Novel by Bulwer.

(1) Novel by Charles Kingsley, wearying of (2) Novel by Edw. Garrett, and possessing an income of (3) Novel by Warren, I sought the (4) Novel by Miss Warner in quest of adventure. 'Twas (5) Novel by Lever from (6) Novel by D. G. Mitchell to the Metropolis. But the tedium of the journey was relieved by the perusal of (7) Novel by Bulwer and conversing with (8) Novel by Howell, the possessor of (9) Novel by Hardy, who completely fascinated me. Arriving at (10) Story by Dickens, I left the carriage to procure some (11) Novel by D. Jerrold for my fair friend, leaving her (12) Novel by G. A. Sala. Picture my mortification at finding her on my return gaily chatting with (13) Novel by Dumas. But by means of a (14) Novel by Miss Carlen I succeeded in regaining my place beside her, and as (15) Novel by Werner would have it they soon left the carriage. 'Twas (16) Novel by W. Collins when we parted at the London terminus. I had gone but a short distance when cries of distress reached my ear. Suspecting (17) Novel by Chas. Reade, I hastened in the direction from whence they came, and soon discovered three (18) Novel by Miss Braddon attacking a cab, the inmates of which proved to be my traveling companion and her (19) Novel by Le Fanee. My arrival gave the ruffians (20) Novel by Wills, but not before I had recognized (21) Novel by Lever as one of (22) Novel by Dumas. Of course I felt (23) Novel by Chas. Gibbon to see them safely to their destination. It is needless to say the acquaintance did not stop here. After many (24) Novel by Miss Yonge, I found myself (25) Novel by Mark Lemon. (26) Novel by T. S. Arthur we returned to (27) Novel by Miss Bremer, (28) Novel by Hardy, quite content with the results of (29) Novel by Sterne.

PUBLISHER'S SPECIAL NOTICES.

The Rural is a very good present to send to a friend, and it pleasantly reminds the recipient of the donor fifty-two times a year—this year fifty-three times. Any *subscriber* can send it to a relative or friend, as a present, at our lowest club rate—only $2.15, including postage.

Holiday Presents will be plenty this year among our Agent-Friends and others who form clubs for RURAL. Our list comprises many articles appropriate for presents. Induce a few of your friends to take the RURAL, and thus secure a Premium.

Officers of Agricultural Societies and Clubs, Granges, &c., can, if they will, materially aid in augmenting the circulation of the RURAL. Scores of such are already forming clubs; how many others will kindly do likewise?

Renew early if you would secure the uninterrupted continuance of the RURAL to your address; and pray don't forget to ask friends to join you in sending for the Fifty-three Numbers which we shall publish during 1876.

Back Numbers of this Year (from Jan. 1) can be furnished to all new subscribers, but we shall not send them hereafter unless specially requested. Those who desire can begin with any number, however.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper*, and in Premiums to Agents.

Select Your Premiums.—All persons entitled to Premiums will please designate what they prefer and notify us how and where to forward—whether by Freight or Express—if articles are not mailable.

Act as Agent!—Reader, if there is no agent for the RURAL in your locality please become one by forming a club. *It will pay.*

At Our Risk.—You can remit by Draft, P. O. Money Order or Registered Letter *at our risk.*

News of the Week.

DEATH OF A. T. STEWART.

ALEXANDER T. STEWART, the wealthy merchant of this city, died at his residence on Fifth Avenue on Monday, April 10th. Mr. Stewart has been sick several weeks, and his death was not unexpected. He was one of the three or four enormously wealthy men in the country, his property being variously estimated at forty to eighty millions of dollars.

HOME NEWS PARAGRAPHS.

THE bonded debt of Syracuse, N. Y., is $1,316,000. The principal items are as follows:—Bonds for Chenango Valley railroad, $500,000; for Syracuse Northern railroad, $500,000; for Syracuse university, $100,000. The floating debt of the city is over $150,000.

The following are the directors of the Elmira driving park, chosen at a recent meeting of the association:—F. H. Atkinson, S. T. Reynold, J. C. Langdon, C. W. Skinner, Lorenzo Howes, E. W. Howes, M. H. Howes, M. H. Foster, H. H. Purdy, Url Bartholomew, F. A. Frasier. Very many substantial improvements are being made at the park.

The salaries of the Buffalo employes of the Erie Railway Company aggregate about one hundred thousand dollars a month, or nearly a million and a quarter dollars per year. Nearly one-third of this amount is paid out to the attaches of the work shops, two in number.

The Vue de l'Eau Hotel, at Bewell's Point, Hampton Roads, Va., was burned last week and is a total loss. The fire was the work of an incendiary. The house originally cost $38,000, the furniture $16,000. The insurance is $16,000.

In the New Jersey Legislature an amendment to the tax bill providing that church property shall not be exempt was defeated, April 6th.

Several bids have been made to sweep out the Centennial Fair Buildings for fifty thousand dollars. Sealed proposals for the contract were not even solicted by the managers of the institution.

The Philadelphia Court of Common Pleas rules that the right of telegraph companies to run telegraph lines and use other telegraphic apparatus through the streets of that city, is subject to the consent of the mayor and councils of the city. The court held poles to be nuisances, and say wires should be laid under ground.

An express agent named Dinsmore, at Parsons, Ks., has been arrested for the recent stealing of some forty registered packages from the mail. He confesses and makes some $800 restitution.

Florida has 3,000 white men who have not voted since the downfall of the Confedracy.

Only 40 out of 200 of the Nootka Sound tribe of Indians, British Columbia, have survived the visitation of small pox.

A woman and her daughter, the latter only twelve years old, both reeling with intoxication were seen in the streets of Virginia City a few days ago.

That plow made on the Daniel Webster farm at Franklin, N. H., under Daniel's supervision and partly by Daniel himself, is to be sent to the Centennial.

During the past five years the Bureau of Education of Virginia has received from State taxation $2,163,997.33; from local taxation, $1,982,789.02; and from the Peabody fund and private donations $410,820.37, making a total of four and a half millions.

The Connecticut election resulted in the [illegible] of the Democratic candidates. Gov. Ingersoll is re-elected and Hon. Jas. E. English will probably be returned to the Senate for the term which he is filling by appointment since the death of Senator Ferry. David A. Wells, a well known political economist was defeated for Congress. Hon. John T. Wait being elected in the 3rd Dist. to fill the vacancy caused by the death of Hon. H. H. Starkweather.

The wife of B. F. Butler died April 8th from cancer of the stomach.

Tramps attempted to rob a railway train on the New Jersey Central R. R. between Phillipsburg and Hampton. The engineer thought there was an obstruction and stopped the train, when the tramps tried to board it, assailing the engineer with stones. A melee ensued and the train hands finally drove the tramps away, taking nine of them prisoners.

At a meeting of the Elevated Railroad Co., April 9th, Mr. Johnson reported that he had secured the signatures of men who own more than $7,000,000 worth of property on the line, all opposed to the building of the road.

An amendment to the bill regulating the admission of attorneys to practice, which would have allowed women to become applicants for examination, was voted down in the Maryland House.

A Boston preacher said:—"If any society will take charge of all the cases of poverty brought on by intemperance, this church will take upon itself to relieve all the remaining paupers of Boston."

The Narragansett Indians at Charlestown, R. I., have just elected their council. At an election a line is drawn, and the candidate stands on either side. The one that gets the most Indians to stand on his side is elected.

The working hours at the Erie railway shops at Port Jervis, N. Y., have been increased from 35 to 40 a. week.

The Ex-Officers' Association, which had its origin in Troy four years ago, now numbers nearly 1,000 members.

During the last three months 486 cases were tried in the police court of Buffalo, N. Y. Of these 47 were sent to higher courts.

The Buffalo Bar Association, recently organized, has fifty-five members. James M. Humphrey has been elected president.

Four men gagged and bound the watchman at the Boston & Albany freight office, at East Albany, on the night of April 3rd and made an unsuccessful attempt to blow open the safe. They were frightened off without obtaining any plunder.

There are 62,552 churches in the United States, with sittings for 11,395,542 people, the Methodists being the strongest denomination. The total value of church property is placed at $342,619,780.

A company known as the "Jennings Estate Association" was incorporated by the Virginia Senate on the 25th ult. The object is to secure untold riches left by a Mr. Jennings in England a century ago.

In Philadelphia seven schools have enrolled nearly two thousand boys in societies for the protection of animals. They have badges and banners, are trained to march to the sound of military music, and have annual meetings at the Music Hall.

In compliance with orders from Washington, gas has been cut off from the post-office and custom house in Norfolk. Mails which are usually distributed at about 8 o'clock P. M., are delayed in consequence till next morning.

The United States Senate has refused to confirm the nomination of Richard H. Dana as Minister to England.

It is reported that the political campaign is about opening in Louisiana in the old style. Citizens are dragged away from their homes on Ku-Klux charges, and the writs of the United States courts are employed to produce terror in country parishes.

Carthage, N. Y., has abandoned the idea of celebrating the Centennial Fourth because the village has voted down the proposition to raise $500 by tax for the purpose.

The peculiar appearance of the trees in the line of the Worcester flood, which were struck by the waters but not uprooted, has attracted much attention. The bark of trunks, limbs and twigs has been stripped off cleanly and the wood bears the appearance of having been sand-papered.

The Congregational convention April 6th, refers the question of examining into the guilt or innocence of Beecher to a committee of five, who shall call together all persons who are supposed to have any evidence bearing directly on the subject.

The New York East Conference of the Methodist Church has been session at the Hanson Place Methoddist Church, Brooklyn.

Dolan has addressed a final appeal to Governor Tilden for executive clemency, again protesting his innocence of the crime of which he is convicted.

The American Express Company talks of arming all its employes with pistols, which they will wear in plain sight, because the law forbids the carrying of concealed weapons.

H. C. Kirk of Sacramento, has bottled up in alcohol an infant sea-serpent, which was taken in a net by some fishermen down the coast recently, and forwarded to him. It is about a foot long, but the body at its largest part is not half an inch in diameter. It is of a grayish color; has a dorsal fin; the head is over an inch long, of a bony substance, with a bill something like that of a bill-fish; eyes very large and protruding; body tapering until half an inch from the extremity it is scarcely as big around as a knitting needle; but at that point it suddenly breaks into a queer little tail of the flapjack-turner order.

Mrs. Lydia Graham, of Port Byron, N. Y., celebrated her 100th birthday in that village recently. Members of her family, down to the fourth generation, were present to take part in the festivities. Mrs. Graham, who was born in New Jersey in 1776, came to Cayuga county when thirty-eight years old, where she has resided sixty-two years.

One day recently Sheriff Wiseman of Mitchell county, N. C., attempted to arrest an illict distiller, named Barner, who was with a party of friends. Barner shot Wiseman through the shoulder, and the Sheriff in return shot him dead and wounded five of his companions, and then, his ammunition giving out, retired in good order.

In 1773 a former in Cape Elizabeth, Maine, made a will, sealed it in an envelope, wrote on it the direction that it should not be opened within one hundred years, delivered it to the selectmen for safe keeping, and then died. His heirs-at-law took possesion of his property, nobody objecting, and after many years the town papers were lost. The sealed will recently came to light, and was found to devise the testator's property to the town, to be used as a charitable institution for vagrants; but it has changed hands many times, and to take it now from the present holders would be a great hardship. Probably the town will not press its claim.

The model of the statue of American Girl is now completed, and is pronounced by those who are competent to judge, and who have been permitted to see it, really a very fine work of art. Doty, the driver of the lamented Girl, has carefully criticised it and allows it to be a most faithful likeness, and the model of a horse. The cast itself will probably be completed by the first of May, ready to be set up and unveiled at the Elmira Driving Park at the first meeting of the Association, early in June.

The town poor of Carmel, Putnam County, N. Y., have broken 2,933 bushels of stone at a total cost of $451.65, which has been paid by orders on the overseer of the poor.

In St. Louis, April 5, an injunction, restraining the police from interfering with the Missouri State lottery, was refused.

FOREIGN NOTES.

THE united capital of the companies that supply London with water, amounts to $64,808,870. In December, 1875, they supplied a population of 3,726,893, living in 521,521 homes, with 111,421,397 gallons per day.

It appears that Capt. Webb's swim across the English channel will turn out to be a very profitable job. The testimonial being raised for him has already reached $20,000.

When a French army officer is convicted of a felony his epaulets are torn off, his sword is broken, and a private steps from the ranks and kicks him. After that the civil authorities take care of him.

The Camden Society of London has accepted the offer of Dr. Jessopp to edit "The Economy of the Fleet," from the MS. in possession of the Duke of Westminster. It contains a curious account of the condition of the Fleet Prison in reign of James I.

The Italian *Movimento* announces that the Workingmen's Association of Genoa, who applied to Spain, through the foreign Minister, for permission to remove the remains of Columbus, now interred in Havana, to Italy, have received a favorable reply as far as Spain is concerned, but Havana utterly repudiates the idea.

The Birmingham Post, England, announces that William Dudley, a deceased goldsmith, has left half a million dollars:—1. To assist young tradesmen with good characters; 2. To relieve necessitous aged tradesmen who have never been a burden to the parish; and 3, To extend the usefulness of local medical charities.

At a recent meeting of the London School Board a highly influential deputation of noblemen and merchants presented a memorial urging the advisability of establishing penny savings banks in connection with every public school.

The custom of drinking wine instead of liquor is a great economic benefit to France. The harvest of 1874 produced 1,836,000,000 gallons of wine, of which four-fifths were consumed in the country. This enormous yield was valued at $650,000,000, or more than the united wheat and cotton crops of the United States.

Parisian ladies who do their own needlework have adopted thimbles with a pebble inserted as a top. The agate, cairngorm, onyx, and crystal are the most popular, as they look very pretty in their setting of silver.

The Academy of Medicine and Surgery, St. Petersburg, is attended by 171 women and girls, 102 of whom are of titled birth. They mix harmoniously with the other sex in the dissecting rooms.

Of the 33 generals and 66 lieutenant-generals in the Prussian army, all are of noble birth. There are only 18 plebeians among the 147 major-generals, only 27 among the 146 infantry colonels, and only 6 among the 60 cavalry colonels.

Prof. Dove, the meteorologist of Berlin, Prussia, celebrated the completion of his 50th year as a doctor of philosophy recently. He received the congratulations of the Empress and a visit from the Crown Prince, and the Emperor conferred upon him the star of the Red Eagle Order.

The Wheeler exploring party recently found a ruined town in New Mexico, which the Indians say was built in the reign of Montezuma. A skeleton was found near the walls, and the natives warned the party that violent death or ill-fortune would result from disturbing it. The topographer of the party removed the skeleton, and three days after was shot and died.

A new comer at the city prison in Berne, Switzerland, having told his mates that a prisoner had escaped from the Zurich jail by cutting out wooden keys, a number of them set to work and actually succeeded in getting out in the same way, a few only being recaptured.

Mr. George Carter Sleut, an Englishman living in Shanghai, has just published a collection of Chinese ballads. One of them bears the name of "Chang Liang's Flute," and according to tradition its melancholy tones induced 8,000 soldiers to desert their camp for their homes in a single night.

They have on the Nord Railway in France a new system of danger warning, consisting of sixty signal stations along the line, to indicate danger when there is any, in connection with which thirty-eight locomotives have been supplied with the electric automatic whistle. This is so arranged that when, in day or night, the locomotive reaches a signal which shows "danger," that moment the whistle on the engine sounds.

There is enough lumber lying at the wharves of St. Johns, N. B., to load forty 1,000-ton vessels.

In the Italian army there now are 133 generals, 1,226 staff officers, and 2,927 captains and lieutenants.

The British naval estimates for the ensuing year amount to £11,288,572, a considerable increase over those of last year.

The Archbishop of Paris says that the exclusion of religion from the public schools would be equivalent to the destruction of France.

In Paris in 1875, there were born 29,211 boys and 26,613 girls; 45,980 persons died; surplus of births, 9,874; 19,127 marriages were contracted.

The Cologne Gazette has published a series of articles in favor of introducing the Latin instead of the German characters in the German newspapers.

Dion Boucicault will, in May, lecture in the large cities of Great Britain on "The prejudices existing in England respecting Irishmen." Soon afterward he will return to this country.

Laborers engaged on the new railroad from Alexandria to Aboukir have unearthed some interesting antiques, among them the head of a statue of a late Roman emperor, and large numbers of terra cotta lamps of the Roman and Christian periods.

The Russians have another naval novelty. It is a steamship for coast defence, without guns but covered with very thick iron, and armed with a spar. She has an arrangement for using torpedoes offensively, and can steam fifteen miles an hour.

In Great Britain in 1874-75 the fines for drunkenness imposed upon soldiers amounted to the sum of £17,939 from the army and £696 from the militia.

An illustration of the value of timber on waste lands is afforded by a sale of wood which took place on the estate of the Earl of Caw or in Nairnshire the other day. In 1820, two hills, about 200 acres in extent, were planted with fir and other trees, and after successive thinnings, the sale of which realized large sums, the remainder of the wood has just been sold off for the sum of £16,000. The sums realized for the wood on this waste land during the fifty years is stated to be equal per acre to the return for the best arable land in the country.

An old manuscript has been fished up in the archives of Pisa, giving a precise and detailed description of an immense treasure alleged to be buried near a hospital in the city of Cagliare, Island of Sardinia. The treasure is minutely described as consisting of millions of money and of phenomenally sized diamonds, and is promised to the finder. Amateurs have been zealously digging away for it, but so far in the dark.

The ravages of yellow fever at Rio Janeiro are increasing.

It is reported that Carlist depots of arms still exist in Biscay.

The French Chamber of Deputies has annulled the election of Peyrusse, Bonapartist.

Sir Henry Halford has formally resigned the captaincy of the British national rifle team.

The Spanish commission on the constitution proposes to increase the number of Senators to 300.

The strike of the dock laborers at Liverpool has ended, the men resuming work on the old terms.

Russia intends to re-open negotiations in regard to the codification of international rights in time of war, and hopes England will adhere to the amended proposals of the Brussels conference.

THE SEASON, CROPS, PRICES, ETC.

Lyndonville, Col. Co., Vt., April 3.—A foot of snow, more or less, has fallen during the past two weeks, and the weather continues cold and winter-like. The hoary-headed old gentleman seems fondly to linger in the lap of spring, and the fair maiden coolly smiles and consents. Very little maple sugar has been made in this section yet, although some was made two or three weeks ago. The demand thus far has exceeded the supply. The weather at present is fair and pleasant, and with due moderation it may afford business for sugar makers. The young folks already have their "appointments," and "sugar party" the present month is their special institution.—I. W. S.

Willida, Lyon Co., Iowa, March 29.—We have had a very mild winter. No snow until March 1, and very little since then. March was the coldest month of the four. Robins and other spring birds here since the middle of February. Crops of all kinds good. No grasshoppers to do any damage. Wheat, No. 2, 85c.; oats, 30c.; corn, 25c.; a surfeit of potatoes and all kinds of vegetables; pork, 8@12c.; fat cattle, 3@5c. gross; milch cows, $30@35; work oxen, $100@125 yoke; horses, $100@112 apiece. Wild prairie, $5@7 acre. No homestead land left, but railroad and speculators' land for sale on long time at very low figures. A smooth prairie country of great fertility and room for thousands.—A. K. H.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, April 8, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	69,799	Rice, bbls	773
Whisky	4,635	Cut meats, pkgs	7,685
Corn meal, bbls	593	Lard, pkgs	5,238
Corn meal, bags	3,635	Tobacco, hhds	1,708
Wheat, bush	249,623	do. cases	4,232
Corn, bush	57,813	Butter, lbs	15,100
Oats, bush	200,184	Cheese, lbs	20,261
Rye, bush	5,028	Cotton, bales	13,011
Malt, bush	4,800	Rosin	4,206
Barley, bush	3,120	Spts. turp., bbls	1,271
Beans, bbls	11,275	Dried Fruits, pkgs	311
Grass seed, bags	3,325	Eggs, bbls	17,257
Beef, pkgs	3,075	Peanuts, bags	1,366
Wool, bales	103	Dressed Hogs	40
Hops, bales	600	Leather, sides	146,142
Pork, bbls	2,430	Sugar, hhds	23
Tallow	546	Oil cake	3,402
Molasses	—		

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise, many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible; mixing always injures a sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else.

BEANS AND PEAS.—Exports of beans past week, 527 bbls.; since Jan. 1st, 17,975 do.; same time last year, 6,504 do. Exports of peas past week, 14,211 bush.; since Jan. 1st, 242,971 do.; same time last year, 150,918. Medium beans continue dull at the late low figures. The best marks have been taken very sparingly by the home trade. Some of the under-quality lots have been taken for Great Britain, the exportation being stimulated by low rates. Sellers are glad of any chance that will relieve the market of such grades and do not attempt to lighten prices. For marrows the West Indian demand is limited. Dealers think that prices have struck about their lowest notch for mediums and marrows, and say they will make no further concession in prime marks. Pea, red and white kidneys remain quiet, prices favoring buyers even in small transactions. Green peas are lower, with a rather large stock. Canadian peas show some revival, with a par quantity going out.

Beans—Prime pea, $1.20@1.25; fair to good, 90c.@$1; prime mediums, $1.10@1.15; fair to good, 85c.@$1; poor, 50@60c.; prime marrows, $1.60; fair to good, $1.25@1.45; prime white kidney, $1.55@1.60; other, $1.25@1.40; prime red kidney, $1.25@1.30; other, $1@1.15; Lima (Cal.), $2.50@2.75. Peas—Canadian, bbls., free, $1.20@; do., in bulk and bond, $1.00@; green, $1.40@1.45; Southern S. E., 2-bush. bag, $2.70@2,75; split, ₱ bbl., $6.

BEESWAX.—Extreme prices prevail, with the stock of old nearly exhausted and bleachers still in the market. Sales at 35@37c. for Western and Southern. Exports past week, 2,800 lbs.; since Jan. 1, 33,875 lbs.; same time last year, 96,500.

BROOM CORN.—Choice lots are scarce and wanted. Medium stock plenty and dull.

We quote Brush, short green, 8½@10c.; hurl, green, 8½@10c.; green, medium, 5@6½c.; red and red-tipped, 3@4c.

BUTTER.—Perhaps the shortest way to express the condition of the butter market is to simply say the demand has "balked." The first week or so of new with a diminished stock of fine old permitted the famine tone of sellers to have some weight; but buyers soon become tired of paying high prices for questionable qualities of anything, and the merit of white butter is not of a strong character in the N. Y. market. Consumers use it sparingly and if they have to change from it to accessible old on account of a bad-flavored sample, discontent is sure to arise that makes slow business for hay-stock that will not carry for retailing purposes. Our quotations show a very marked decline for new, and the prospect is for an unsteady feeling until well set grass. Old butter is in few hands and will go out firm, as there will be no surplus after furnishing Southern trade a fortnight or so.

New butter, Falls State, selected, 40@—c.; do., other 34@38c.; half firkin tubs, prime, 36@38c.; fair to good, 33@35c.; Welsh tubs, prime, 36@37c.; fair to good, 33@35c.; Falls, Western creamery, prime, 38@—c.; fair to good, 34@36c.; Western tubs, good to prime, 32@34c.; fair to good, 30@32c.

Old State dairies, extra, 38@40c.; entire, good to prime, 31@37c.; fair to good, 32@34c.; firkins, selected fresh, 38@40c.; good to prime, 34@36c.; fair to good, 28@31c.; State Welsh, tubs, fall made, 30@33c.; dairies 33@36c.; good to prime, 25@27c.; fair to good, 32@34c.; poor to fair, 28@32c.; Pennsylvania, store packed, 20@23c.; Western, dairy tubs, selected, 33@35c.; good to prime, 31@33c.; fair to good, fresh, 28@30c.; Western, early packed, selected, 28@30c.; good in lines, 26@28c.; fair in lines, 23@26c.; poor, 20@22c. Roll butter, good to prime, 32@34c.; fair to good, 28@32c.; poor to fair, 21@28c.

CHEESE.—The exports this week are fair, brought about by a disposition to meet shippers promptly. The common and medium grades have been more generally dealt in, as relatively easier prices have been secured on this class of stock.

New State factory, fancy, 13½@13¾c.; fine, 13½c.; do. good to prime, 12@13c.; fair to good, 10@12c.; poor to fair, 7@10c. State Farm Dairy—fancy, 12½@13c.; good to prime, 11@12c.; fair to good, 10@11c. Western factory, cheddar, fine, 12¾@13c.; good to prime, 11@12c.; flat fair, 5@11½c.; poor to fair, 7@8c.

COTTON—Has been very irregular in price and closed weak. Closing prices are for April, 13 9-32@13 5-16c.; May, 13½@13 17-32c.; June, 13¾@13 25-32c.; July, 13 15-16@13 31-32c.; August, 14 1-16@14 3-32c.; September, 13¾@13 27-32c.; October, 13 21-32@13 11-16c.; November, 13¾@13 17-32c.; December, 13¾@13 9-16c.

Quotations for spot cotton, based on American standard of classification:

	Uplands.	*Ala.*	*Orleans.*	*Texas*
Ordinary	9 13-16	9 13-16	9 13-16	9 13-16

Stained.

Good ordinary	9 15-16	Low middling	11 9-16
Strict ordinary	11 1-16	Middling	12 7-16

DOMESTIC DRIED FRUITS.—Exports past week, 153 bbls. apples. Apples are hard to sell, and the small lots moving at regular prices. Peaches are quiet and nominal. Blackberries are inactive and weak, as also small fruits generally.

Apples—State, sliced, 9¾@10c.; do., quarters, 9c.; Western quarters at 8½@8¾c.; Southern sliced, 1875, prime, 10c.; fair lots, 8@8c.; Tennessee qrs., 8¾@8¾c. Blackberries, 10@10½c. Peeled peaches, good and prime Georgia, 14@15c.; do. fancy, 16@17c. Unpeeled peaches, new, 12@12¾c. for halves, and 10@11c. for quarters. Plums, 20c. Raspberries, 25@26c. Cherries, 18@20c.

EGGS.—The week has been an active one, and a good deal of stock has been worked out that might have crowded some later on. Easter will be celebrated next week and all good marks will be in demand for a few days. The stock is reduced, but not sufficiently so to permit sellers to advance rates rapidly. A good deal of fine stock is now coming from near points. We quote:

Near points, ₱ bbl., 18@—c.; State and Penn., 17½@18c.; Western, prime, 18@—c.; do. fair marks, 16½@17½c.; Southern and Southwestern, 16½@17½c.; duck, 20@23c.; goose, 55@60c.

ESSENTIAL OILS.—We learn of no change.

"H. O." oil peppermint, $4, in glass; Hale & Parshall do., $4@4.20 do.; pure in tin, $3 50; sassafras, 55c.; wintergreen, $3.12; spearmint, $3.50; pennyroyal, $4.

FLOUR.—Advices from abroad are discouraging, and have led to a pressure to sell and easier prices.

Superfine State, $4.20@4.50; extra do., $5.00@5.60; superfine Western, $4.20@4.60; extra do., $5.00@5.70; No. 2, $3.00@3.75; extra round-hoop Ohio, $5.00@5.30; trade brands do., $5.35@7.00; white wheat extras, $5 75@7.00; St. Louis, $5.35@9.00; City Mills extra, $5.20@6.75; Southern at $4.25@4.55 for superfine; $5.10@6.25 for poor to choice shipping extras, $6.35@8.75 for trade and family brands. Rye at $4.15@4.20. Buckwheat flour at $1.60@1.90. Corn meal quoted at $2.65@3.25 for yellow Western; $3@3.15 for yellow Jersey; $2.20@3.20 for Pennsylvania, and $3.30@3.35 for Brandywine.

FEATHERS.—Spring brings new business in feathers and the market is firm. Live Western geese, 55@57c.; mixed, 35@45c.

FRESH FRUITS.—Exports of apples past week, —— bbls. Since Jan. 1st, 4,285 do.; same time last year, 15,867, do. Apples are not so active under high prices, still the stock is down to a point that gives sellers firmness. Supply, mainly Russets. Strawberries have a slow opening this season. Cranberries somewhat weak. Peanuts dull and in buyers' favor.

Apples—winter varieties, ₱ bbl., $3.75@4.25; mixed lots, good, $3.50@3.75; mixed lots, fair, $2.50@3.25. Oranges—Florida, ₱ crate, $5@—. Cal. grapes, ——@——. Strawberries, prime, ₱ quart, 55@65c.; other, 25@40c. Cranberries—Jersey, choice, standard crates, $4.75@5; good to pr., small crates, $3.50@4.75; "pony" crates $1@1.50; good to choice, per bbl., $11@15. Peanuts—Virginia, per bush., $1.45@1.65; Wilmington, $1.80@2.00; do. Tennessee, 95c.@$1.15.

FURS AND SKINS.—The London sales have had the effect of marking down a good many items here. There is some demand, but the season is drawing to a close. We annex the items that are chiefly affected by the cable news:

	North. & Eastern.	Western and N. Y.
Otter, ₱ piece	$6 50@ 8 00	$4 00@ 5 50
Gray Fox	1 75@ 2 00	1 50@ 1 75

Skunk, black		75@ 90
striped		10@ 40
Wolf, mountain		2 00@ 3 00
prairie		75@ 1 00

GRAIN.—For wheat the market is lower and dull, with English advices unfavorable. Latest sales at $1.14 for No. 3 Milwaukee spring, afloat; $1.16 for mixed spring in store, called choice No. 3; $1.35 for good No. 1 Minnesota spring afloat; $1.11 for rejected Chicago spring afloat; $1.65 for white Michigan, crop 1874, in store, and $1.45 for amber Michigan; $1.21@1.28 for No. 2 spring; $1.15@1.16 for winter red and amber; $1.35@1.50 for white; $1.34@1.38 for No. 1 spring. Rye at 80c. for State. Corn is higher and scarce, with an active demand. Sales at 69½@70c. for mixed Western; 70c. for yellow Western; 70c. for yellow Southern and Pennsylvania. Oats have increased demand. Selling at 43c for good mixed Western, afloat; 41½@45c. for fair to prime white Western.

HAY AND STRAW.—There is a liberal business in shipping grades, and more doing in prime stock at strong figures.

Bale hay is quoted:—Shipping, 75@80c.; retail qualities, 95c.@1.10; clover, 60@70c.; salt, 60@70c. Straw is quoted at $1.05@1.15 for long rye; 75@80c. for short rye; 60@65c. for oat. Exports past week, 1,640 bales. Since Jan. 1st, 11,450; same time last year, 9,355.

HIGHWINES.—Selling at $1.12½.

HOPS.—The decline as noted last week brought out export orders more generally, and tended to increased trade from brewers; the market closing firm. The receipts for the week have been 600 bales, and exports 1,117 do. It is thought 12,000 bales will cover the stock of new hops in this city, and, with anything like the export trade which prevailed here only a fortnight back, the market would soon work to a better basis.

N. Y. State, 13@18c.; Eastern, 11@16c.; Wisconsins, 11@16c.; Yearlings, 8@10c.; Olds, all growths, 4@6c.; Californias, 15@20c.

HONEY.—Nominal at former rates.

MAPLE SUGAR.—The supply is light and prime new is in demand.

New prime sugar ranges at 14@15c.; fair to good, 12@13c.; old, run over, 10@12c.; old, ordinary, 8@9c. Syrup, ₱ gal. of 14 lbs., 1@1.25.

MILK.—The farmers price for March was 4@4½c.

OIL CAKE.—Western is selling at $41 ₱ ton.

PROVISIONS.—The general markets have been depressed. Mess pork quoted at $23 for spot lots, $22.90 for April, $24.95 for May, $23.15 for June, $23.30 for July, and $23.50 for August deliveries. Boxed dry-salted shoulders, 9½c.; tierced pickled hams, 12¾@13¾c. Bacon—Western long clear, 12 11-16c.; city do. do., 13c.; short do., 13½c. Lard—Western steamed, $14@14.05 for spot lots. $14@14.02½ for April, $14.07½ for May, $14.20 for June, and $14.35 for July; prime steamed, 13½c. Beef hams at $21@25. Beef—New extra mess at $12.50@13.50; do. plain, $12 50@13; new tierced at $23 for prime mess, and $25 for India mess. City extra India mess, $31.25@31.50.

POULTRY AND GAME.—Fresh dressed is scarce. Frozen is in demand when prime. The winter has been poor for saving in this way. When nice, frozen sells nearly as high as fresh. We quote Philadelphia picked chickens at 21@25c.; capons at 31@33c. for large; 26@28c. for small capons and slips.

Chickens, Bucks Co., good to prime, 21@22c.; Jersey, good to prime, 20@21c.; State, good to prime, 18@21c.; Western, good to prime, 18@20c.; fair to good, 14@17c.; poor, 8@10c. Turkeys, Jersey, good to prime, 20@22c.; State, good to prime, 20@22c.; Western, good to prime, 18@21c.; inferior, 10@15c. Ducks, Jersey, good to prime, 22@24c.; state, good to prime, 21@23c.; Western, good to prime, 20@22c.; fair to good, 18@20c.; poor, 14@16c. Geese, Jersey, prime, 15@17c.; State, good to prime, 14@16c.; Western, good to prime, 13@15c.; do., poor to fair, 10@13c.

Live poultry has been up to high figures, but the market is tamer and is tending lower.

Turkeys, Jersey, ₱ lb., 16@18c.; do. Western, 15@16c.; Geese, Jersey, ₱ pair, $2.50@3; do. Western, $1@1.50; ducks, Western, ₱ pair, 80c.@$1; ducks, Jersey, ₱ pair, $1.25@1.50; roosters, 8@10c.

Wild pigeons are in good supply and selling well. Wild ducks are not steady; quality against them. Wild ducks at 75c.@$1 for Canvasback; 60@75c. for redhead, and 50@60c. for Mallard. Wild pigeons, feathered, ₱ doz., $1.50@1.75; English snipe, ₱ doz., $1.75@1.87 plover, ₱ doz., $1.62@1.75.

SEED.—Clover is scarce and lightly dealt in, but steady in price; sales at 16¾c. for State and 16¾c. for Western. Timothy at $2.65@2.75.

TOBACCO.—Offerings are larger and of more attractive grades, leading to a freer business. Prices generally firm. Quotations for

VEGETABLES.—Exports of potatoes past week, 4,200 bbls.; since Jan. 1st, 54,750 do.; same time last year, 28,775 do. Exports of onions for the week, 125 bbls.; since Jan. 1st, 5,200 bbls.; same time last year, 1,725 do. Old potatoes still show a large stock, but the fine low rates prevent additions, which is fortunate for shippers. We don't want any more. Bermuda potatoes are doing better. Bermuda tomatoes are lower, with large cargoes arriving. Onions have largely advanced with the liberal export trade. Southern green stuff varies considerably as to quality. We quote:

Early Rose, bulk, ₱ bbl., $1@$1.12; Peach Blows, $1.00@1.25; Prince Alberts, 75c.@$1.00; common, 50@75c. Bermuda, $8@9; Florida, $—@—. Cabbages, ₱ 100, $5@8; red, $7@11. Squash, Marrow, bbl., $1.25@1.75; Hubbard, $1.25@1.75. Onions, red, bbl., $2.20@2.75; yellow, $2.50@2.75; white, $4.50@5.50. Russia Turnips, ₱ bbl., 75c.; white, 60c. Carrots, $1.00. Southern spinach, ₱ bbl., $1.50@2.25. Kale, $1@1.25. Florida green peas, ₱ bush., $1.75@3.50. Norfolk cabbage, ₱ bbl., $1.25@1.50. Bermuda tomatoes, 5-quart box, $1@1.25; beets, $1.50 ₱ crate. Mushrooms, ₱ lb., 50@60c. Rhubarb, ₱ doz., $1@1.25. Bermuda onions, ₱ crate, $1.50.

WOOL.—The market has been very quiet. The freshers have checked work at a number of the mills, and with the production of goods restricted, manufacturers have been but little disposed to operate in wools.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., April 8, 1876.

THERE is no material change to note in the price of cheese this week. Farm dairies may be quoted at about 10c. for late ends. A few lots have been sent forward on commission on a guarantee of 9½c. Factories may be quoted at 12@13c. The Fairfield Association are still holding for 14c., which is above the views of buyers.

There has been a large trade in butter this week, but prices are about 2c. lower than last week. The rates paid for butter made from new milk, have been 37@38c.; common and ordinary ranged at 35@36c.

We have advices from Europe to the third week of March. Our London correspondent says:

Fancy English cheese is in small supply. Dutch is firm. American is in good demand for all sorts, especially fine/fine September. Two thousand boxes of one factory—a well known brand—have sold for 68s. Good fine mediums wanted at 56@60s.

The prices are for extra American, 66@68s.; fine, 63@64s.; good, 56@58s.; secondary and common, 30@46s.

English cheddar brings 60@65s.; Wiltshire double, 72@80s.; Cheshire medium, 57@66s.; fine, 70@74s.; Scotch, 68@72s.

There is no good intermediate butter remaining unsold. Continental sells to arrive, for which agents can name their own figures. For the substitutes (oleomargarine) manufacturing districts now compete for them. The prices are as follows:

Jersey sells for 120@150s.; Dorsets, 174s.; Danish and Swedish, 110@174s.; Friesland, 164s.; Normandy extra, 174s.; American and Canadian, 90@130s. ₱ cwt. Oleomargarine or artificial butter, Irish, 50@90s.; Continental, 90@140s.

LIVE STOCK MARKETS.

" last week	8,197	57	667	17,863	20,309

BEEVES.—Trade on last Monday forenoon opened slow at a reduction of ¼c. scarcely ₱ lb. on the closing rates of the previous week. As trade advanced the markets improved in feeling but not in values. The herds to hand were sold off at noon and ranged in quality from common to good. Prices were 8¾@13c. ₱ lb.; weights, 6@12 cwt. Wednesday, trade very dull at 8@12c.; weights, 6@11cwt. Thursday, sales small at 9@12c.; weights, 6¾@9¾ cwt. Friday, the markets closed weak, with sales at 8¾@11½c.; weights, 5½@8¾ cwt. From 55@58 lbs., net, has been allowed to the cwt.; the largest number of cattle were sold at 56 lbs. net. Kansas and Cherokee steers, in mixed herds, quality coarse, sold at 8¾@9¾c.; Texas steers, corn-fed, 9¾@11c.; native steers, 8@12½c.; grade, 12½@13c.; bulls on live weight, 4¾@6c.; mixed herds, 8@10½c.; oxen, 9¾@12c.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	12 @13	12 @13
Fair	11 @11¾	11 @11¾
Poor	10 @10¾	10 @10¾
Poorest	8 @ 9¾	8 @ 9¾
Gen. selling rates	9¾@10¾	9¾@11

MILCH COWS.—The poorness of the quality of the fresh cows offered for sale since our last weekly report, has caused trade to be small and slow; 2 cows sold at $90; 1 at $50; 1 at $75—no calves included; 9 cows sold at $40@60 ₱ head; 11 at $55@62; 3 at $65; 8 at $59.50@72—calves included.

VEALS AND CALVES.—Trade in smooth quality veals small and slow on a light run at 9@10¾c. ₱ lb.; course quality meal-fed calves abundant on the markets and in moderate demand at 6@8¾c.; grass calves not quoted. State veals sold at 9@9¾c.; Pennsylvania, 9@10¾c.; Jersey, 9@10¾c.; Western calves, 6c.; State, 7@8¾c.

SHEEP AND LAMBS.—Trade opened fair on Monday last; sheep sold at 6¾@6¾c.; yearling lambs, 8¾c.; Wednesday, trade small; sheep, 7@8¾c.; lambs, 8¾c. Thursday, trade firm in sheep at 6¾@8¾c.; lambs, 10c. Friday, the markets closed slow; sheep, 6¾@8¾c.; lambs, $10 ₱ head; stall sheep, 6¾@9c. Michigan sheep sold at 7@7¾c.; Pennsylvania, $8.43¾ ₱ cwt.; Illinois, $7.30@8.75; Missouri, 7c. ₱ lb.; Ohio, 6¾@8¾c. The lambs to hand have been received exclusively from New York State.

HOGS.—One car-load of Ohio hogs, live weight, 199 lbs. ₱ head, sold at 8¾c. ₱ lb. City dressed weak on Monday last at 10¾@10¾c.; light pigs, 10¾c. Wednesday, sales at 10¾@10¾c. Thursday and Friday prices were 10¾@10¾c.—light weights included.

HORSE MARKET.—City trade slow and small, owing in a large sure to the wetness of the weather; 19 head quality light harness horses, $50@95; 2? head ordinary do., $100@195; 7 pairs family carriage horses, $300@550 ₱ pair; 7 head course quality heavy draft horses, $125@270; several contracts for railroad horses have been filled at $100@250 ₱ head; no sales of choice quality arrivals reported. Thirty-one horses arrived per Erie Railroad via Oak Cliff Station.

WILLARD'S PRACTICAL Butter Book

ONLY COSTS $1,

And should be in the hands of every Farmer's wife in this country. It is full of practical and scientific information upon every branch of butter making, from the care of cows to butter in the market, and should be kept for constant reference in every house where that article is made.

☞ *This book is fully and handsomely Illustrated.*

Every one can understand it, and improve the quality and quantity of their butter by reference to its pages. Written by one who has not only made a life study of the subject, but who is himself a

Practical Dairyman,

it cannot but be thorough and useful. No book contains more solid information upon the subject in so few words. A complete index enables he reader to refer to any branch of butter making, and take in the whole subject in a very short time.

Lay it beside your churn, and apply its useful lessons each day, and your one dollar book will have yielded you fifty dollars before the end of the year.

Sent, post-paid, upon receipt of $1.

ALLEN'S AMERICAN CATTLE.

THEIR HISTORY, BREEDING AND MANAGEMENT.

EVERY breeder or owner of Cattle should have this work by Hon. LEWIS F. ALLEN, Ex-Pres't. N. Y. State Ag. Society, Editor of "American Short-Horn Herd Book," &c., &c. It is a handsomely illustrated and well printed and bound volume of 523 duodecimo pages. Mailed, post-paid, to any address in United States or Canada on receipt of reduced price, $1.

Address

O. D. T. MOORE,
78 Duane St., N. Y.

MOORE'S RURAL NEW-YORKER became a household word and power in the land long before we quit "going to school," and, perhaps, needs no comment from us; still "its memory is ever fresh and green," and is renewed by its appearance every week, brimful of *good things* as ever. We are glad to announce that our predictions in the January number are being more than fulfilled. We have sent it more than *five hundred* names, and we learn that subscriptions have been pouring in in like proportions from all parts of the country, despite the hard times. Long may it continue to be what it is—a power for good in the land.—*Agent's Friend.*

PERSONAL ITEMS.

WM. H. YOUNG of Troy, has a book published in Venice in 1474.

EX-SECRETARY of the Treasury Richardson has sailed for Europe.

HERSCHEL V. JOHNSON has consented to run for the Governorship of Georgia.

MRS. HENRY WARD BEECHER arrived in Jacksonville, Florida, March 29th.

THE Rev. Henry Ward Beecher will deliver a lecture in Boston on the 20th inst.

THE King of Holland has given $400 toward the erection of a Dutch church in New York City.

PROF. MARSH has procured 2,500 volumes of Japanese literature for the library of Yale College.

MR. M. D. CONWAY has declined the call from the Theodore Parker Fraternity Society of Boston.

GEN. CESNOLA, United States Consul in Cyprus, has been elected a member of the Academy of Sciences of Turin.

THE San Francisco Call says that Mr. Montgomery Blair has bought for $1,000,000 the New Idria quicksilver mine.

SALVA WILLIAMS, a negro, was jokingly voted for as constable in Palmer, Mass., and his election has been declared legal.

EX-GOV. ALLEN of Ohio has given the order for his portrait for the Governor's gallery to Mr. W. C. Matthews of New York.

PROF. JAMES MORGAN HART has been elected Professor of Modern Languages and Literature, in the University of Cincinnati.

THE statue of Lord Rosse, by the late Mr. Foley, has been cast in bronze and placed in Parson's Town, Kings County, Ireland.

THE late Dr. King's collection of curiosities, made during his Arctic expedition and elsewhere, will be sold shortly in London.

DR. DOLLINGER'S 77th birthday occurred on the 28th of February, when he received the congratulations of King Louis of Bavaria.

JAMES D. REID, for many years Superintendent of the Western Union Telegraph Company, is writing a history of the Telegraph.

A Scotch lord, Sir Robert Abercrombie, with a party of friends, has been in Charleston, *en route* to Florida, on a hunting expedition.

MISS HOBART, a Massachusetts girl, has purchased twenty acres of land in Westminster, Cal., and is devoting half of it to—onions.

MR. HOLMAN HUNT'S portrait of himself, which was lately in the Liverpool exhibition, will be sent to the Centennial at Philadelphia.

A LONDON dealer in old china has confessed that he sold to the Baron Rothschild, for £250, a bogus piece which only cost 40 shillings.

THE Registrar-General of England believes that the illness of 140,000 fever patients reported last year cost more than $5,000,000 in money.

THE Rev. Ezra D. Winslow, the Boston forger, has been adjudged a bankrupt, and April 1 was appointed for a meeting of his creditors.

JUDGE J. W. DEADERICK has been made Chief Justice of Tennessee, vice Nicholson, deceased, by unanimous vote of the associate Judges.

GEN. SHERMAN will preside and deliver an address at a reunion of the veterans of the civil war to be held at Springfield, Ill., May 13.

TWO railway carriages have been built in Brussels at a cost of $10,000 for the use of Queen Victoria during her travels on the Continent.

A TABLET in memory of the late Justice Nelson of the United States Supreme Court has been placed in Christ Church, at Cooperstown.

POSTMASTER-GENERAL JEWELL has recovered sufficiently from his late attack of rheumatism to leave Washington for Connecticut.

REPRESENTATIVE WILSON, who is lying ill in Washington, is a little better, and his friends have some hope of his recovery.

A GENTLEMAN of Auburn has added $30,000 to the gift of the late James S. Seymour for the establishment of a public library in that city.

DON CARLOS, it is said, has purchased the place recently occupied by the Duc d'Aumale and known as the Orleans House, a few miles out of London.

MR. JEFFERSON DAVIS will sail for Europe May 1, where he will remain for six or eight months to promote the establishment of a direct trade with the cities of the Mississippi Valley.

THE Hon. John W. Johnson of Madison, Minn., has given $5,000 to the State University, the income of which is to be used in aiding students who speak the Scandinavian languages.

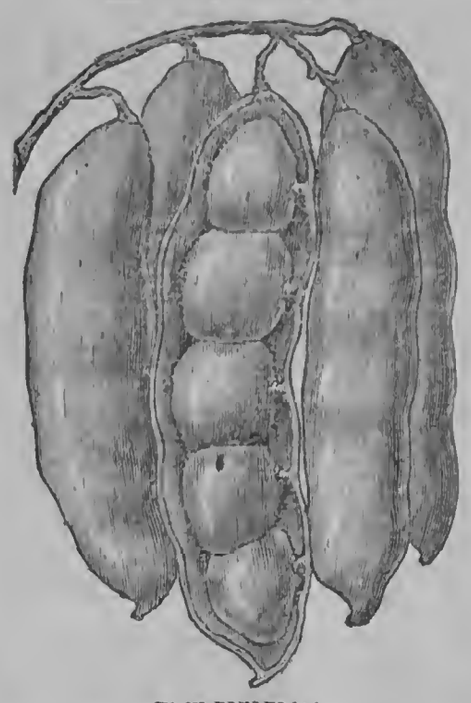
THE Hon. Robert C. Winthrop of Boston has accepted the Presidency of the Washington National Monument Association. He is in favor of finishing the monument as soon as possible.

COL. W. C. P. BRECKINRIDGE, a brother of the late ex-Vice-President Breckinridge, will deliver an address May 2, at the unveiling of a monument to the Confederate dead at Bowling Green, Ky.

JOHN CLARK, until a year ago a reporter employed by the Brooklyn Eagle, and since then a musical student in Milan, has been engaged for seven years by Mapleson, the London opera manager.

THE late Bishop Thirlwall of England is said to have been a perfect prodigy of precocity. At three years of age he read English so well that he was taught Latin, and at four he read Greek with an ease and fluency that astonished all who heard him.

Trees, Seeds, Plants, &c.



DREER'S
IMPROVED LIMA BEAN.

The distinctive features of this sort are early maturity, prolificness, and extra quality of bean, containing more saccharine matter and producing one-third more shelled beans to the pole than the Large Lima, while the shelling becomes an easy matter, from the fact of the pods being entirely full of beans, forming one against the other like peas in a pod.

The *American Agriculturist* of Nov., 1874, says: "We regard the improving of this bean as one of the most important of the recent contributions to horticulture."

Price, $1 per pint.
20 cents per paper, mailed on receipt of price.
HENRY A. DREER,
714 Chestnut St., Philadelphia.

Traveler's Guide.

CALIFORNIA.
Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?

The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTHWESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oshkosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.

This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.

This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.

For rates or information not attainable from your home ticket agents, apply to
MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

Roofing.

IT PAYS

any smart man who wishes to make $2,000 a year on a *small* capital, to commence in our line of business. **Roofing is a Specialty.** There is no one in your county who carries on the business. You can learn it in one week by studying our instructions, which we send to all who ask for them. Any man having $100 capital to start with, can purchase enough material to roof *three* ordinary houses. The sum realized from sale and profit on this supply, added to the regular pay for labor as Roofer, should amount to not less than **$200.** An expert man could *easily* do the work in nine working days. Two persons of small means can join together to advantage: *one* canvassing, while the *other* attends to the work. Send for our Book of Instructions (*free* if you write *at once*), and *study* it. Ask for terms. If you are unable to advance the money, present the matter to the principal storekeeper *in your place*, and talk it over with him. He will be *glad* to furnish the stock and *divide* the profit with you. We will guarantee the territory to the *first* responsible applicant. Address N. Y. SLATE ROOFING CO., LIMITED, 8 Cedar St., N. Y., and mention RURAL NEW-YORKER.

AN INDUCEMENT!

A Good Way to Secure a Practical and Scientific Library.

WE have made a selection from our Publications of the following Standard Works, which we offer to subscribers in conjunction with the RURAL NEW-YORKER, at the extremely low rates below. These works are by men who have a national reputation in their various specialties, and we feel sure that we are conferring a double service when we offer the best Agricultural and Family Journal, *and* a Valuable Book, at little more than the cost of either alone.

We will send one year (postage prepaid on both) the

Rural N.-Y. and Willard's Dairy Husbandry, for		$5 00
"	Randall's Practical Shepherd...	4 00
"	Allen's American Cattle.....	4 00
"	People's Practical Poultry Book	3 50
"	Quinn's Money in the Garden...	3 50
"	Willard's Practical Butter Book	3 00

MOORE'S RURAL NEW-YORKER.—With its full corps of editors, and a new publisher of energy and ability, the management propose to celebrate the quarter-centennial of the pioneer RURAL in such a manner as to augment its popularity and usefulness. For a first-class, lively paper, containing matter of interest for all classes, take the RURAL NEW-YORKER, and do so at once, for the paper never was better, and its prospects never brighter.—*Freeport (Ill.) Journal.*

NEWS CONDENSER.

— Rochester wants a central market.

— Persia is to have a navy on her Gulf.

— The Philadelphia Ledger has enlarged.

— The prospects of the English iron trade are gloomy.

— Thirty-four Governments will be represented at Philadelphia.

— The Erie Railway will not change its time-table until May 1st.

— Lord Dupplin has bought the race-horse Petrarch for $52,500.

— The Universal Exhibition in Paris will be opened on May 1, 1878.

— Nearly all the fruit in East Tennessee has been killed by the frost.

— A postal service organized on the European plan is in operation in Persia.

— The women of Albany have contributed $1,000 toward the State Centennial banner.

— One of the four machines made in Germany for Tomassen has arrived at Baltimore.

— The Consolidated Virginia mine yielded the unprecedented sum of $2,500,000 in February.

— There is at present a large exodus of negroes from Tennessee, Kansas being the happy land.

— Hereafter the police of Paris will not allow any theatrical posters over 18 by 12 inches to be put up.

— Five hundred thousand grape-vines are to be planted in one single county of California this spring.

— Rabbits have so increased in Kentucky that hunting them down has become an absolute necessity.

— The present crop of sugar in Cuba is 1,000,000 boxes, and is worth $30,000,000 less than last year's crop.

— The meeting of the National Sportsmen's Association will be held at Chicago on the 8th of August next.

— It is claimed in New Orleans that fifty cents' worth of coal oil will last as long as nine dollars worth of gas.

— In San Francisco cucumbers are selling for $1 apiece, while peppermint is only twenty-five cents a bottle.

— It is a noteworthy fact that gas stocks are always readily taken as investments, because they pay largely.

— The Scotch herring fisheries earn $7,500,000 yearly, and the English fisheries do not fall much below that figure.

— The English revisers of the Old Testament have reached the forty-fourth chapter of Jeremiah, twenty-first verse.

— Southern Europe has forwarded enough olive oil to Philadelphia to dress the lettuce of that city for a century to come.

— A new museum has been opened in Rome, in which will be exhibited the antiquities discovered there during the last five years.

— The schooner Hart, Captain Newcomb, left Charlotte, N. Y., April 4th for Oswego. The first vessel out of that port this season.

— The name of the Post-Office at Rockaway, N. Y., has been changed to Lawrence Station. There is no change in the Postmaster.

— Thirty-one millions of dollars' worth of dressed hogs were exported from the United States from Nov. 1, 1875, to March 1, 1876.

— Two young men were digging a grave near Chattanooga, Tenn., and while they were at work in the opening a tree blew down and killed them.

— Two Boston women have expended $700 in money, a year of time, and nearly all their eyesight in embroidering a flag for the Centennial show.

— Two hundred and thirty thousand cubic feet of the best pine are used in making the 20,000,000,000 matches which the United States annually produce.

— There are $1,000,000 worth of shoe pegs made yearly in the United States, most of them in Massachusetts, requiring 100,000 cubic feet of white birch.

— It is expected that the new time-table on the Central road will be arranged with a view of affording local travelers more facilities than they enjoy at present.

— The first number of an Arabic newspaper has just been issued in Paris, edited by M. Florian Pharaon. It is intended for the instruction of the Arabs in Algeria.

— The American Express Company talks of arming all its employes with pistols, which they will wear in plain sight, because the law forbids the carrying of concealed weapons.

— Although 210,000 persons have been admitted since last Easter to the London Tower free of charge, not a single article in the great national collection has been lost or damaged.

— Booth, the Chicago oysterman, is planting oysters in San Francisco Bay, and about three car loads of young oysters are daily sent over the Union Pacific Railroad for that purpose.

— An English agent representing a capital of $15,000,000 is in Charlotte, N. C., considering the expediency of establishing a smelting furnace for the treatment of sulphurets and refractory ores.

— A girl employed in a paper mill at Westfield, Mass., suffered a severe attack of lockjaw recently, in which the jaws were set for nearly two hours. The doctor said the trouble was the result of an inveterate habit of chewing gum.

Wit and Humor.

POETICAL SOAP.

Messrs. Water and Oil
One day had a broil,
As down in the glass they were dropping,
And would not unite,
But continued to fight,
Without any prospect of stopping.

Mr. Pearlash o'erheard,
And, quick as a word,
He jumped in the midst of the clashing;
When all three agreed,
And united with speed,
And Soap came out ready for washing.

SPARKS AND SPLINTERS.

Something of a wag—A dog's tail.

Cork is the paradise of bottle-stoppers.

"Cranky" musicians—Organ-grinders.

When is it right to take one in?—When it rains.

Motto for an orphan asylum—Thus far and no father.

Every old maid can boast of two beaux, but they are elbows.

A man can find fault in any direction he is pleased to look for it.

The first man who ever went round the world—The man in the moon.

Why is a man that can't learn by experience like laurel? Because he is an *evergreen*.

Is there a word in the English language which contains all the vowels? Unquestionably.

A worn-out parent in Chicago has named his baby Macbeth, because he murdered sleep.

The author of the saying, "You must always take a man as you find him," was a constable.

Why is a store that don't advertise like Enoch Arden? Because it "sees no sale from day to day."

Said a philospher:—"My friend conducted his wife to the altar—and here his leadership came to an end."

The Evening Post says there is a "Hurricane Baptist Church" in Indiana. We suppose it goes by wind and water.

"Why, Mary Ann, what in the world are you doing with the scissors?" "Shure yez tould me to scallop the oysters."

An exchange speaks of a woman so crosseyed that when she weeps tears from her left eye they drop on her right cheek.

"Big long-legged men don't always sometimes get ahead of little boy," is Chinese for "the race is not always to the swift."

"Why should we celebrate Washington's Birthday more than mine?" asked a teacher in Boston. "Because he never told a lie!" shouted a boy.

A woman in New Jersey is so economical that the other night while her husband was a-bed, she turned and made over his last pair of pantaloons for one of the children.

An Irishman noticing a woman pass along, espied two strips depending from under the lady's cloak. Not knowing that these were styled sashes, and in the right place, he exclaimed: "Faith, ma'am, your galluses are untied."

"Another shipwreck," said Elnathan, as they were walking down the Bowrery. "Dear, dear," said Mrs. Dorkings, sympathetically, "where?" "There," said Elnathan, pointing to a dead dog in the gutter. "There's a bark that's lost forever." "Oh!" said Mrs. Dorkings.

A little girl at school read thus:—The widow lived on a small limbacy left her by a relative."—"What did you call that word?" asked the teacher "the word is legacy, not limbacy." "But," said the little girl, "my sister says I I must always say limb, not leg."

A railway accident lately occurred, caused by the axle of a tender giving way, which detained a train for several hours. A lady inquired of a gentleman passenger, why it was so delayed. He gravely replied, "Madam, it was occasioned by what is always followed by serious consequences—the sudden breaking of a tender attachment."

Beware of Widows.—When a widow presses your hand and tells you how she has made four dozen clothes pegs last her twelve years, and she droops her eyes and says a paper of pins lasts three years, and she looks up and smiles a rosy smile, how on earth is a fellow to break away and leave that house and convince himself that she loves him only for his wealth?

Brown came home late the other night and Mrs. B., reaching out of the bedroom window, said:—"So you've been tipping the glass again, have you?" "Glass," said Brown; "(hic) 'ts a funny word; take off the 'g' and it's you my dear." "Yes," answered the wife, "and then take off the 'l' and it's you you wretch," and she slammed down the window with a bounce.

THE BEST PAINT IN THE WORLD.

ANY SHADE FROM PURE WHITE TO JET BLACK, AND, AS IT IS MIXED READY FOR USE,
EVERY MAN CAN BE HIS OWN PAINTER.
The incorporation of RUBBER in our paint makes it *unequaled* by any other. It is unaffected by change of temperature, and is perfectly waterproof. It presents the finest possible finish, will not crack or peel off, and is in every way the "*Best Paint*" for either inside or outside painting, is from one-fourth to one-third cheaper, and lasts three times as long as the best lead and oil paints. The almost *unanimous verdict* of the many thousands who have used our paint is that it is *far superior* to any other paint in use.
Be sure that our TRADE MARK (a fac-simile of which is given above), **is on every package.**
The great popularity of and demand for our paint has necessitated the establishing of "*Branch Factories*," as follows:

The Centennial.

ART GALLERY AND MEMORIAL HALL.

THE illustration on this page is of the Art Gallery and Memorial Hall, which is now completed and ready for use. The cost of the structure is one and a half millions of dollars. It is one of the affixes to the great exhibition and north of the main building looking southeast over the city, built on a terrace six feet higher than the plateau on which it rests, which is more than 100 feet above the river.

The entire structure is in the modern Renaissance. The materials are granite, glass and iron. No wood is used in the construction, and the building is thoroughly fireproof. The structure is 365 feet in length, 210 feet in width and 90 feet in hight, over a spacious basement 12 feet in hight, and is surmounted by a dome.

The main entrance opens on a hall 82 feet long, 60 feet wide and 53 feet high, decorated in the modern Renaissance style; on the farther side of this hall, three doorways, each 16 feet wide and 25 feet high, open into the center hall; this hall is 83 feet square, the ceiling of the dome rising over it 80 feet in hight.

From its east and west sides extend the galleries, each 98 feet long, 88 feet wide and 35 feet in hight. These galleries admit of temporary divisions for the most advantageous display of paintings. The center hall and galleries form one grand hall 287 feet long and 85 feet wide, capable of holding eight thousand persons, nearly twice the dimensions of the largest hall in the country. From the two galleries doorways open into two smaller galleries, 28 feet wide and 89 feet long. These open north and south into private apartments which connect with the pavilion rooms, forming two side galleries 210 feet long. Along the whole length of the north side of the main galleries and central hall extends a corridor 14 feet wide, which opens on its north line into a series of private rooms, thirteen in number, designed for studios and smaller exhibition rooms.

All the galleries and central hall are lighted from above; the pavilions and studios are lighted from the sides. The pavilions and central hall are designed especially for the exhibition of sculpture.

INDEPENDENCE HALL.

THIS venerable building is to be restored as far as possible and the work is now in progress. A Philadelphia correspondent writes:

Mr. Etting is getting on bravely in his restoration of Independance Hall. The coats of thick paint and other coverings have been taken from the walls and stairways, and all the fine old carving brought to light. The old bell is in the entry, and on the walls are panels giving a clear and concise history of the important deeds done in Philadelphia during the Revoluntary years. Mr. Etting has collected a large number of historical portraits of great interest; the members of the Continental Congress hang on the walls in one room, and below them are the very chairs and the table that they used. A second large room is made a kind of museum. Among its attractions already collected are a grand, stately picture of George III. in his youth; full lengths of William and Mary and Queen Anne; Sir Peter Lely's portrait of Charles II; the Sharpless collection of cabinet pictures, in colored crayons, including all the men and women of any note in this country from 1787 to 1800; some exquisite china and glass, fine old furniture, and everything that had to do with the life of that age. The Hall is already a most interesting place.

CENTENNIAL PREPARATION.

As the time approaches for opening the exhibition everything is hurry and bustle on the grounds, and doors are closed to vistors to allow preparations to be made with less interruption.

The giant engine is in working order, with the boilers, shafting, &c. The entire weight is 1,360,583 pounds. It required sixty freight cars from Providence, R. I., to ship it in sections. The cylinders are 40-inch, and the stroke is ten feet, and it will make thirty-six revolutions per minute. The power may be raised to 2,000 horses. When the giant was first tried the enormous arms ascended and descended so noiselessly that with back turned it was hardly to be told that the engine was in motion.

Nearly all nationalities are represented on the grounds. New buildings are going up every day. Patent rolling carriages are to be provided to allow people to wheel themselves over the ground in double quick time. A mammoth music stand for 200 musicians is to be erected in the middle of a ravine capable of comfortably seating 20,000 people, so that they can hear the music distinctly. The State militia and the Grangers are going to have encampments, and suitable accomodations are provided for companies representing all the States.

There is considerable objection to the price of admission. The poorer classes cannot afford to pay fifty cents for every time they visit the show. It is not as if a person could see all in one day. On the contrary it will require weeks to do so. The visitor cannot sleep on the grounds and every succeeding day he will have to shell out another and another fifty cent note for his admission. If he remains a week he will have to pay exactly $3, and that is what the people are talking about. At Vienna that same thing caused trouble. They finally reduced the admission to about twenty cents, and the receipts trebled in a few days. People who have thought this thing over are of the opinion that fifty cents is too much, and that by charging everybody, high, low, rich and poor, and admitting no one as a deadhead, the Centennial would gain, not only financially, but the solid respect of everybody in the end.

Up to the close of last week the American exhibits alone reached 10,500. Since March 25, 267 car loads of foreign goods have been received from all parts of the world. Large freight cars filled with precious articles are pulled right into and unloaded in the main building and in Machinery Hall. The interiors of these gigantic buildings remind the observer of chaos let loose. There is a mighty chorus of hammers, saws and chisels. About 1,000 Park Guards will do special duty during the show. The great collection of paintings will be at once arranged in the Art Gallery. In the Horticultural Hall will be plants and shrubs and flowers from all over the world. One of the great attractions will be the Turkish house, where full-grown natives will sell coffee and tobacco, pure from over the sea.

ART GALLERY AND MEMORIAL HALL.

Field Crops.

THE NOMENCLATURE OF HYBRIDIZATION.

Though I write in all kindness, my Dear Rural Life, I will not deny a literal reading of the irony you employ respecting yourself, when you write (Rural New-Yorker, March 25th, p. 202,) upon the terminology of Hybridization, and criticise my use of the word "Hybridized" to indicate the origin of a certain lot of potato seed produced by cross-impregnation among some of the varieties of *Solanum tuberosum*. I distinctly remember anticipating, when I made use of the word in this particular instance, just such criticism as you bestow; and I assure you I did not venture upon dangerous ground without the support of authority.

I confess having myself, being strenuous to apply them correctly, puzzled much over the use of the terms "hybrid" and "cross,"—terms by which the earlier hybridists, with the sanction of the botanists of their day, undertook to designate respectively the progeny from a union of two distinct species and those from the union of two varieties of the same species, and to discriminate between such. At the start the distinction between the two classes is easily enough maintained. When, in the beginning of my hybridization of plants, I united separate species, or varieties of one species, I found no difficulty in choosing the right term of these as employed; but, when I came to recross among themselves in various ways, or with their parent forms, the results of these unions, by what name should I call their offspring? Commonly such issues have been styled "mongrels," a vague term, as it has been used, conveying to those previously so precise about such things no exact idea of the origin of the new forms, or of the relations of their parents.

Of these very inadequate terms Prof. Lecoq, in his most excellent work, "De la Fecondation et Hybridation," p. 24, very justly remarks,—"These designations would be useful, if we could always apply them; but in the practice of horticulture it often happens that a hybrid is fertilized in its turn by its own parents, or that a hybrid impregnates a cross; then it becomes utterly impossible to recognize among all these crossings the different degrees of hybridity."

Happily, however, the German botanists come to us in the midst of this perplexity and offer a much more precise and complete nomenclature for Hybridization. Dr. Julius Sachs, professor in the university of Wurzburg, in his "Text-book of Botany," a work just translated into our language in England, and acknowledged by British botanists as a more profound and accurate treatise on vegetable physiology than our English literature has yet produced, thus speaks of hybrids: "According as the union takes place between different varieties of one species, different species of one genus, or between two species belonging to different genera, the resulting hybrid may be termed a variety-hybrid, species-hybrid, or genus-hybrid." "When a hybrid is made to unite with one of its parent-forms, or with another parent-form, or with a hybrid of different origin, the product is termed a derivation-hybrid." "When a hybrid unites with a new parent-form or with a hybrid of another species, a derivation-hybrid results in which three, four, or more species (or varieties) are combined. Hybrids of this kind may be conveniently termed combined-hybrids. Book III., Sec. 32. Here the issue of cross-impregnations of every sort receive the general name of "hybrids;" and we are able to indicate, if necessary, in a very simple manner and with entire precision, the botanical affinities of their parents, and in the case of continual inter-crossing to show approximately the number of species that have entered into the combination.

Now, my Dear Rural Life, desiring to see adopted in America so excellent a system of terminology for my art, an event which seems to me almost inevitable, and willing to draw upon myself the thunder of criticism for attempting an innovation, I advisedly wrote the phrase "Pringle's Hybridized Potato Seed," which, as it appears, has come so near terminating the sanity and usefulness of our most delightful horticultural writer. Should you care to know, further, the precise nature or degree of hybridity of the new potatoes which came of that seed, I should inform you, that they will be both variety-hybrids and derivation-hybrids.

And, now, since you inquire directly and in a manner that implies doubt, I will aver that there *is* a species of potato which I am employing to produce with the common species hybridized seed, that will give me species-hybrids. It is *Solanum Fendleri*, the wild species of New Mexico. A third species, *S. montanum*, a native of Peru, I am so desirous of obtaining for the same purpose, that he who helps me to it, will place me under life-long obligations.

But, before I close, permit me say a few words for your gardener John, which I do with all the less reserve, because I have no pecuniary interest in the seed in question. I am not certain that it is "lucky" for you any more than for John, that he cannot read. You have allowed him to crowd your greenhouse with plants "raised from seed-balls, as gathered in the field without any regard to variety." Evidently you have never told him that in the breeding of plants pedigree and blood are of just as much consequence as in the breeding of animals, and that in practice we should, as much in the one field as in the other, endeavor to combine in the progeny the desirable qualities we find in the potential parents, and to exclude the inferior characters, whether by interfering, as far as we can, with the tendency of direct inheritance (more or less potent as it always is) in the mother, or by anticipating, as we certainly may, unpropitious accidental impregnations.

You failed last summer to send John into the field to make a few judicious crosses; and, therefore, instead of a small and select lot of seedlings, he has a confused host of seedlings of unknown lineage, good, bad and indifferent, overrunning your greenhouse. That he would have had no bad ones, had he hybridized, I will not pretend, for over the tendency to revert to inferior ancestors so potent in inheritance, and over the tendency even more general with insufficiently-bred plants to vary widely in their seedlings, the hybridist has put little, if any, control. Nor would I discourage John in his hope to find among his batch of seedlings the coming potato. He has a chance. But, in his experiment, it is only chance. Hybridization, it cannot be gainsaid, offers us positive advantages; and, with these advantages, we need not invest in so many tickets to secure a prize. The batch of seedlings, among which the Snowflake and Alpha appeared, were less than a hundred in number.

C. G. Pringle.

I was perfectly well aware, when making my remarks on the use of the term "Hybridized Potato Seed," that plenty of authorities for its use could be found in foreign books, periodicals, and especially in seedsmen's and nurserymen's catalogues. The French are especially fond of using the high-sounding and pretentious term "hybride," and it has been gradually creeping into our own horticultural literature, and used without the least regard to its true scientific meaning. All of our best horticultural and botanical writers in this country use the term "hybrid," to indicate the offspring between two species, and with all due deference to Dr. Julius Sachs, or the opinion of our English cousins in regard to his abilities, I think we Americans have no need to travel quite so far to find an authority equally as reliable and capable to decide so simple a question as "what is a hybrid." Dr. Asa Gray defines a hybrid as a "cross-breed between two allied species," and this definition is backed by nine-tenths of all the botanical and horticultural writers of any note in the world.

Of course, no one familiar with horticultural literature of the present day, would be led astray by the use of the term "hybridized potato seed," for I presume when Mr. Pringle, or anybody else, succeeds in obtaining a true hybrid between *Solanum tuberosum* and *S. Fendleri* or any other species, it will be announced in very definite language. But if we are going to use this word "hybrid" indiscriminately for true hybrids as well as distinct species and crosses of varieties, it will at once put an end to lines of demarcation, which should not, for the good of horticultural and agricultural science, be obliterated. Men who, after years of patient labor, succeed in hybridizing grapes should receive the credit of accomplishing something more than raising a seedling from a variety of one species, which by nature is so liable to variation that no man is able to tell whether the oft-repeated claim of artificial crossing has actually been accomplished or not. If we permit the word hybrid to be used without careful discrimination, we shall soon be confronted with all sorts of seedling plants under this name as a prefix.

Now, as true or genuine hybrids are exceedingly rare and difficult to obtain, I will leave it to Mr. Pringle's own good sense to say, if it would not be better to retain this name for such a production than to permit of its being applied to every seedling—good or bad—which some illiterate or dishonest dabbler in horticulture may produce. Messrs. Pringle, Bliss, Campbell, Compton, and other well-known gentlemen, are doing a good work by raising and introducing choice varieties of the potato, and I think they cannot afford to use descriptive terms in presenting their productions to the public, which are not strictly in accord with the definition given in our dictionaries of the English language, as well as those of our best scientific authorities.

BREEDING UP, OR CHANCE SEEDLINGS.

It is true that I have not explained to my colored gardener, John, the importance of pedigree in potatoes, for I have yet failed to learn that any one who has practiced any such system of breeding the potato produced better results than those who trusted to chance. Mr. Goodrich started out with this idea, and, after sixteen years of experiments with sixteen thousand seedlings, he could not show a variety equal to some of the old sorts which were common when he was a boy. Dr. Knight of England pursued the same pedigree system with fruits, more than half a century ago, and left nothing worth perpetuating. Dr. Van Mons, however, of Belgium, started with the wild, poor crab pears, and from these, through a few generations of seedlings, produced hundreds of most excellent sorts, many of which will remain in cultivation for centuries to come. I might, if necessary, cite hundreds of instances where the chance seedlings from inferior parentage excelled the scientifically-produced offspring. Of course in raising a seedling plant of any kind, I would select the parents most likely to produce desired results, but just here there might be a wide difference of opinion in regard to the best method of proceeding to reach this end.

We have had some very fine varieties of potatoes introduced within the past few years, but there are few persons who would not gladly throw them all aside if they could see the old *Neshannock* and *Pinkeye* of forty or more years ago restored in all their pristine glory.

Daily Rural Life.

ORCHARD GRASS—FERTILIZERS.

I wish to ask a few questions, to be answered in your columns if you see fit. Many of my neighbors and myself are thinking of sowing orchard grass seed, the price of clover is so high. Now I would like to have some one that knows tell us if it will do well on land a little inclined to heave, how much it needs to the acre, and is it best to sow it alone or must we mix clover with it? Another thing; as we read your paper, we become interested in the experiments with fertilizers of different kinds. In your issue of March 25 we read of farmers making superphosphates and getting good returns for outlay and labor; now, if it can be made at home, we would like to know what to make it of and how to do it, or find where to get it and what it costs. The time has come that we must do something more than fit the land to get good crops. I will not try your patience longer, but must say that I would not trade the three numbers of the Rural that I have received for twenty of any that can be named. I learn something from every paper that is worth the price of the paper for a year; the one sent me is read by five or six, and all unite in saying it is the best.

Pittsfield, N. Y. A New Subscriber.

"New Subscriber" will not find orchard grass cheaper than clover seed, even at the present high price of the latter. It requires fully a bushel of orchard grass seed per acre, and two, three, or even four bushels would be better. The seed is very light—only 12 to 14 lbs. per bushel. Much of it will probably fail, and leave the grass in "bunches" the first year. Hence it is advisable to sow clover seed with orchard grass. The first year the clover will nearly monopolize the ground; but clover is a biennial, dying out after the second year, and the bunches of orchard grass will spread and occupy the whole surface, and last as many years as it is left unplowed. It is not likely to be injured on land inclined to "heave," as its roots are spreading and do not strike deep into the subsoil, as clover does. For this reason it is not so beneficial to the soil as clover, but preferable to timothy. Orchard grass does better sown in the fall; but if sown in spring, the earlier it is done the better.

We have had some trials in making superphosphate. For this burned bone, or bone-black got from the sugar refineries, is needed. It is almost impossible with the facilities farmers have, to reduce raw bones fine enough to be available. Even ground bone dissolves very slowly, and unless in the form of bone flour, often does not do so much good the first season. We know some farmers who tried making superphosphates out of bone-black, or burned bone. In this way they lost the ammonia which the unburned bone contains; but this un-ammoniated superphosphate produced an excellent effect on wheat. It was, however, found to cost fully as much as the dealers asked for ammoniated superphosphate of good quality. Hence, we have always purchased the superphosphate we have used, paying $40 to $60 per ton for it—the latter an extortionate price.

Our correspondent need not fear of purchasing superphosphate of any dealer that advertises in the Rural New-Yorker. We will not advertise any one who would cheat our customers. Buying will probably be quite as cheap as making, and save a great deal of *very disagreeable* work. Bone-black costs a cent, or more, a pound and sulphuric acid, oil of vitriol, costs 3½ cts. per lb. by the quantity. He had better get ammoniated superphosphate and try a little before buying largely, to see if it is adapted to his soil and crops. As a test whether phosphate is needed, a superphosphate without ammonia is better than the other.

POTATOES—CAUSE OF POOR QUALITY.

Col. D. C. Richmond in the Ohio Farmer, says one cause for the poor quality of potatoes last year was that planters permitted the bugs to prey on the vines to a considerable extent during the latter part of the season, before the tubers were matured, and holds that another reason for the poor quality lies in the new varieties recently introduced which, while they produce well, are not of first-rate quality like the Pink-Eye and Neshannock. He believes that the quality of our potatoes is deteriorating, and that the day may not be far distant when they will cease to be generally used as food. He has this to say of soil and planting:

"Now sandy loam produces the best quality of potatoes. Any sandy loam, not wet, especially in clover, will grow good potatoes. Low, mucky, black soil, which becomes very hot in the middle of the day, and cools rapidly at night, will produce a large crop in a favorable season, but the potatoes are generally too large for the market and not of good quality. A medium-sized tuber suits the market best. Clay land will sometimes grow a good crop, but in a dry season the tubers are small, and in a wet one they are inclined to rot. Gravelly soil, if rich, answers well. Under favorable circumstances they will grow in almost any soil, and they are always a failure where water stands on the land.

"Seed potatoes should be of good size and free from long sprouts. Several days before planting, cut them into medium-sized pieces, each containing two or three eyes. It is well to cut them in a warm room and sprinkle warm water over them, so as just to start the sprouts; they will then come up quickly. Furrow the ground in rows about 3½ feet apart and plant in hills or drills, according to circumstances. New land works best in hills. Put one piece in a hill and cover with the hoe about four inches deep, so that a light harrow can pass over without disturbing them."

DEEP PLOWING FOR CORN.

A correspondent of the Rural World remarks as follows:

It is better to raise one hundred bushels of corn on one acre of ground than fifty bushels an acre on two acres. The yield could be doubled on nearly every acre of ground in cultivation in the West. What is wanted is deeper plowing and better preparation of the soil and more thorough after cultivation. This skimming over the ground is one of the greatest evils in Western farming. Plow deep and then cross-plow deep, and you prepare food and moisture for the plants and enable them to resist the drouths, and make them laugh and thrive and bear abundantly.

The positive iteration of generalities, and especially the emphasis placed on deep plowing for corn, invites the suspicion that the writer was airing some very plausible theories, instead of writing from practical experience. It may be under certain circumstances that corn will do better on deeply-plowed land; but we never saw such a case. As for "cross-plowing" deep for corn, we know that this is only theory; for if corn is planted on a newly-turned sod, as it should be, cross-plowing would only turn the sod uppermost again. Most probably the writer of the paragraph quoted does not know anything of the subject which he was discussing, but has borrowed some plausible ideas from the agricultural wisdom always floating in the newspapers.

PRIZES FOR POTATOES.

Mr. D. A. Compton of Hawley, Penna., is widely known as the originator of Compton's Surprise, and other valuable potatoes. Two of these—the Acme and the Hawley—have never before been offered to the public, but have been fully tested by gentlemen well known, and whose commendation for prolificacy and quality is very high. The originator offers six premiums, amounting to $150, for the largest amount grown from one pound of the Hawley, and two premiums—one of $75 and one of $25—for growers of the Acme. Circulars giving details of these premiums, with description of the new varieties, and much valuable information about growing potatoes, will be sent to any address on application to Mr. Compton.

It is rather discouraging, planting potatoes largely this spring: but there is no question, that whether prices be high or low, varieties which are most easily grown and most prolific, pay best. It will pay farmers who grow potatoes for sale to make a trial of Hawley and Acme, even though they may not contend for the premiums.

Harrowing Wheat.—It is a good plan, both for the wheat and the catch of clover seed, to harrow wheat in the spring. Select some day when the ground is dry enough to pulverize freely, and if possible, just before a rain. Where wheat has been drilled-in a common, heavy drag will only break down the ridges between the rows and cover exposed roots. If sown broadcast, the Thomas Smoothing Harrow should be used, and is preferable under any circumstances.

Dairy Husbandry.

PRESERVING MILK.

THE experiments of Prof. KOLBE of the University of Leipsic in regard to the properties of salicylic acid, and especially his discovery of its action as an anti-ferment and antiseptic, has turned attention to its use, possibly, as a preservative of milk. KOLBE'S discovery was made only about a year ago, and although the fact appears to have been abundantly demonstrated that milk treated with 0.04 per cent. of salicylic acid remained uncoagulated for 36 hours longer than milk not so treated, yet the question will occur, Whether milk so treated is harmless as an article of food? In other words, whether salicylic acid does not contain properties which would render it injurious or unsafe to be used in milk, daily taken as food. From what has been stated in connection with KOLBE'S experiments, we are led to conclude that it is not injurious when so used; still, more extended experiments should be made to test this point, so as to leave no doubt as to its properties in this regard.

For several days KOLBE took daily, in four parts, ½ gramme, (solution in water in the proportion of 1 to 1,000,) without the slightest bad effect. After an interval of eight days he, for five successive days, took double the former dose, and for two successive days he took 1½ grammes. In the meantime his digestion was entirely normal; there was no feeling of oppression in the stomach, nor did he experience any inconvenience whatever. Other physicians who, at his request, made the same experiments, confirm these results. It must not, however, be taken in the form of a powder, for in that shape it attacks the mucous membrane of the mouth and œsophagus; it must be taken in solution.

According to an article in the Popular Science Monthly, from which we gather these facts, it is stated that eggs immersed for an hour in a solution of salicylic acid, were at the end of three months as fresh as at first. Fresh meat dusted over with the acid keeps its freshness for weeks. When about to be used, the meat may be dipped into water to remove the acid. KOLBE has employed it as a wash for the teeth and mouth, and asserts that it is very effectual in purifying the breath. It is stated also to be valuable as a means for keeping water sweet on shipboard.

If all the statements concerning salicylic acid be trustworthy, its use in the dairy in various ways may prove of advantage, and perhaps some of our dairy experimenters will make some tests with this new antiseptic, showing its value in the management of milk.

If any of our readers have any facts that go to show that salicylic acid is not a safe article to use for the preservation of foods, we should be glad to hear from them and print their views on the subject.

RAISING CALVES FOR THE DAIRY.

THERE are various opinions in reference to the best and cheapest manner of raising calves. We believe the best results are obtained by giving the calf generous treatment from first to last. A poor, stunted and half-starved calf will never be able to reach that standard of excellence that it would had a more liberal allowance of food been made during its earliest days. If a calf gets a fair start on milk, its food may be changed to whey by adding a porridge of oatmeal, oilcake, buckwheat flour, or something of this kind to supply the necessary constituents lacking in the whey. We have sometimes seen good calves raised on a small quantity of milk by adding the liquor from steeped hay. Where conveniences are had for steeping hay and only a small quantity of milk can be had, this plan may be resorted to, but if good, sweet whey can be obtained, the porridge or oatmeal, or oilcake will require less labor in its preparation and is easier to be regulated as to the quantity required.

In butter dairies good calves can be raised on the skimmed milk. Almost every farmer has some peculiar notion of his own in regard to the manner of raising calves; but the great and general fault in management is a scanty allowance of nutritious food in the early stages of growth. It is important that the young animal be kept in a growing, vigorous condition, so that when cold weather approaches in the fall and early winter, it will be able to meet the exigencies of change in climate with good feed and care and without special nursing to bring it through the rigors of winter. It pays well to do the work thoroughly and in the best manner at first, since if this is omitted no after-treatment will be able to wholly counteract neglect and starvation in the early stages of growth.

The importance of growing good dairy stock cannot be too strongly urged upon the dairy farmers of the State at this time. The difficulty of getting good stock by selecting from droves brought from a distance, is so great that the raising of stock on the farm where it is to be used is now almost imperative, if a good and profitable herd is desired. Calves should be selected from deep milking animals, and if these have been crossed with thoroughbred bulls of good milking families, the chances are almost certain that the calf will make a good cow.

A BUTTER MAKERS' EXPERIENCE.

A CORRESPONDENT of the New York Tribune gives the following account of his method in butter making:

"I keep sixteen cows; am milking ten this winter—six new milchs. I make 63 pounds of butter a week. The cows are a mixture of native with Jersey; but I should prefer they be half of each, for the reason that the milk is just as good, more in quantity, and the cows more hardy than all Jersey. Of course, the native cows should be the very best. Hay is given three times a day, and one quart each of cob meal and shorts twice a day. I add to this meal two quarts of skim milk. The cows are supplied with all the salt they will eat. Water is given twice a day, immediately after eating hay. Bed the cows twice a day thoroughly with fine shavings and sawdust, to keep them dry and clean. In winter card them regularly once a week.

"I treat my cows with great kindness, being very gentle with them, as such treatment has a great deal to do with a generous flow of milk. During the milking season my son favors them with his best whistling, not because he ever heard that cows are partial to such music, though he thinks 'our cows' relish it much, and expect it morning and night. Doubtless it has a soothing effect upon them. My pastures are newly cleared, hilly, and rocky, with a western slope, and pretty good; the other older and more level, but productive. I have about 20 acres of mowing land, and cut from 20 to 30 tons of nice English hay. My farm is on a hill; soil deep, strong and productive; first crop cut early. I cut several tons second crop of clover in August. We scald our milk or heat it twice a day, from the middle of October to June 1, in a tin pail over a kettle of boiling water. The pail will hold what I put into four pans, about three quarts to a pan. Milk stands 36 hours, then skim. In winter, keep it warm in a room warmed by a soapstone stove, so that the temperature is about the same day and night—from 50 to 65 degs. The milk is set on two racks, made in this way:—An upright square post, eight feet long, six inches square, pivot in each end, slats across seven inches, will set 32 pans on each; skim twice a day, and churn three times a week. Cream is kept in as cool a place as possible without freezing. When ready to churn, it is warmed by pouring sweet skim milk into the mass in the churn to the temperature of 62 degs. The butter is washed in three waters having the chill taken off; then weighed, allowing one-half ounce of salt to the pound. In winter we lump the butter the same day it is churned. We lump it over with a butter worker, weigh it into one pound masses, lump it square with butter spatters, then stamp and send to market. I sell to a firm in Boston; have sold to them for four years, and got 55c. a pound this winter, express paid by the firm."

PROFIT IN COWS.

THE Iowa State Register advocates liberal feeding at all times for cows. We do not believe it would find it a recommendation of any system that it was less expensive to feed cows than any other. We cordially indorse the following remarks on this subject:

"There are but few farmers who fully realize the true value of a good cow well kept. As a general practice, three cows do not produce as much milk, butter or cheese as one would if treated profitably. No account is kept of the amount of milk or butter produced by each cow in the year. The farmer with his cows is in the same situation as he is with the balance of his farm. He keeps no account and knows nothing about his business; 250 pounds of butter per year is not a large yield, yet there are more that do not produce more than half that amount than there are that exceed one-half. There is no poorer policy than starving and freezing a milk cow. There can be no more improvidence in any branch of agriculture than in half starving and exposing to the storms of winter the cow that is expected to furnish the family with milk, butter and groceries. We have seen this spring from three to five cows staggering about straw stacks of farmers which will require nearly all the summer to repair wasted nature, without supplying any of the rich, nutritious milk which only comes from a healthy, well-fed cow. Such a farmer should either keep a less number or provide better shelter and more rich food. One cow well provided for is better than three starved ones. One will furnish more milk.

"Children should never be fed on milk drawn from a poor cow, reduced to the bare possibility of sustaining vitality. It is cruelty to animals thus to treat them, and it is murder to the innocent children to feed them on such food. The profit, the morality and the respectability of it requires that a man who keeps cows should provide better than is done in most cases in cold climates. A man that would cheat his poor old cow, which has thus far raised his children, should be considered respectable in no society. There may be cases where drouth, flood or devouring insects have rendered it impossible to provide bountifully for all the animals on the farm; but in such cases the owner should not be compelled to see the poor old cow shaking her horns at him in his night dreams. We plead for the cow, and if three or five cannot be provided for, sell off, and one well fed will provide more than the three or five."

The Herdsman.

WHEN SHOULD COWS CALVE?

AUNT CHLOE in Uncle Tom's Cabin used to say, "there's reason in all things, and a good deal more in some things than in others." A correspondent of the N. E. Farmer has been giving the "reason" in deciding what is the best time for cows to calve. We quote:

For the man who has a cold, open barn, with nothing but husks, straw, swamp or late-cut hay to feed; who leaves his chores all to the boys, and had rather his cows would go dry four or five months, than to bother with milk in the winter, I would by all means, recommend the first of May; but for the farmer who has a good warm barn, and is willing to take care of his stock; one that would not mind getting up a cold night to look after a young calf; and if he has a plenty of early cut hay to feed, with a little grain, and wants to make the most milk and butter he can, I would consider the first of February as the best time of the whole year for his cows to calve. I find that cows that calve in the winter, if fed with all the early cut hay they will eat night and morning and are fed from two to four quarts of shorts, and half as much meal per day, scalded and given warm in water, will give as much milk in winter as in the summer in good pasture. By having them calve the first of February and feeding as indicated, we can obtain a large flow of milk, which, if properly handled, will make excellent butter, and after three or four months of barn feed, when they begin to shrink a little, we have the flush feed of May and June to turn them into, which will increase their milk again.

Then, in the fall we have our fodder corn, pumpkins, cabbage and root crops to feed, with which to keep up the flow of milk until winter sets in, about the last of November, when it will be time to dry them off, so they may go dry two months, which will bring them around to the first of February again. I find that cows that calve in the winter or spring will invariably shrink when winter sets in, and it is hard to keep up a satisfactory flow of milk in the short, cold days of December, and what milk we do obtain will not make as good butter as milk from new milch cows; the butter globules are small and the butter often will not come until after a tediously long spell at churning.

The cows that calve late in the spring will not give much more in the fall months than those that calved in the winter, and both will dry off nearly together. I am satisfied from my own experience, that by this system, I can obtain one-fifth more milk in the year than by the old system of having the cows calve in April or May. Aside from the increased flow of milk, it is quite an advantage to have the calves come early, whether intended for the butcher, or to raise. If for the butcher, the early calves will bring the most, and if to raise, they have the advantage of a longer time to receive milk before the feed is ready for them in the pastures. The late calves are apt to be neglected, or weaned and turned off too young, and seldom make as good yearlings as early calves.

INTERBREEDING OF SHORT-HORNS.

AT the recent Toronto Short-Horn Convention, Judge Jones, a gentleman of large experience and keen observation, offered a few very suggestive observations on the subject of in-and-in breeding, in the course of which he said:—While it must be admitted that mere speculative scientists had heretofore accomplished very little in aid of cattle breeding, it was nevertheless true that considerable progress had been made in establishing systematic methods founded upon the careful observation of fact and intelligently conducted experiments. All intelligent efforts for the improvement of domestic animals have been founded upon two principles:—(1) The selection of the best animal to breed from; and (2) proper feeding and care for the development of high excellence. Those principles were acted upon in a rude way at the very beginning of the history of races and breeds; and their observance was equally essential in the preservation of the valuable characteristics of the most perfectly developed races of the present day. In the early history of the Short-Horn race there was a good deal of in-and-in breeding; a practice that seemed justifiable because of the limited number of cattle of approved excellence to breed from and because the tendency was, within certain limits, to improve the symmetry, refine the bony and muscular structure, and increase early maturity. The great multitude of the race now disseminated throughout the world were, therefore, all descended from a very few animals.

The fact that close interbreeding tends to refine the extremities, and to impart elegance and style to the general appearance of the animal would explain why men of taste adhere to the practice, while we of a more practical turn of mind would have detected a diminution in useful qualities. In the case of in-bred animals commanding high prices, it could not be expected that the owners would change their style of breeding and involve pecuniary loss, and so long as those line-bred animals were in demand at higher prices than others, so long would they be bred. There was now no necessity for resorting to the refining system to give style and beauty of form, for, as observed by Prof. Low, the external form has already been brought to all the perfection which art seems capable of communicating; and now those other properties remain to be attended to, without which no further refinement in breeding will avail for the purpose of profit to individuals and benefit to the country.

Gentlemen in the in-and-in practice seemed to be aware of its influence in impairing useful qualities, as was shown by the fact that they were constantly seeking bulls as remotely connected as possible with their cows. What was at this day the essential matter to be attended to in their practice? Had they not carried refinement far enough, and had not the external form been brought to all the perfection which art seemed capable of communicating? The form of the model Short-Horn would seem to admit of very little variety in the way of types, unless they attempted something that was not essential to useful and profitable excellence. They should bring up the average to the maximum of excellence and keep it there. He urged that cattle should be judged by a scale of points, which might be subdivided to suit the fancy. He objected to incestuous breeding, especially where it was practiced merely for the purpose of continuing in the line, because it tended to impair constitution, vigor and the growing and feeding properties, although it produced high refinement of form.—*Michigan Farmer.*

PROMISE OF THE CATTLE TRADE.

THE cattle disease is threatening to become chronic. Scarcely a season passes that its presence is not manifested to a greater or less extent in the grazing districts of England and Wales, while France, Germany, and Belgium are also becoming more familiar with it. The endeavor to "stamp it out" by quarantine and red tape has thus far met with but little success, and from present appearances there would seem to be nothing to prevent the complaint, like the potato rot some years ago, running its course.

Meanwhile, stock raisers on this side of the Atlantic have their opportunity. There is no reason why the United States should not find abroad such a profitable outlet for their surplus as would add immensely to the profits of the business. During the few months past there have been a few cargoes sent over as an experiment, and the result, we believe, has been such as to amply compensate the parties who made the venture. The cattle endured the sea voyage with as little discomfort as is ordinarily experienced in crossing the English channel. With vessels having between-decks specially constructed with reference to this kind of freight, we believe it is admitted by those who are familiar with the business, there is no reason why it should not be as safely and as comfortably transported as any other cargo. There are but two or three such vessels afloat as yet, and these are owned at the East. There was some talk a while ago about an English company placing three or four suitable steamers to run between Liverpool and Texas ports, but latterly the undertaking seems to be lost sight of. It will be strange, however, if the continuation of the foot and mouth disease, and the consequent dearness of animal food in the British markets, does not soon force it again into the foreground.

As an illustration of the well-nigh illimitable capacity of the country beyond the Mississippi as a source of supply, we read in an Omaha paper the other day of a cattle range in Nebraska 156 miles in length. One stock-raiser owned 20,000 acres, upon which were some 26,000 head of beeves, and some 4,000 to 5,000 calves. Upon his net sales this year he expects to realize the sum of $33 per head. At this rate 4,500 would bring $148,500.

AYRSHIRE CATTLE FOR ARKANSAS.

GREAT size, early maturity and aptitude to fatten have made our Short-Horns the fashion, and justly so. There has been money in breeding them, and the highest prices ever heard in cattle sales have been paid for certain animals of this breed. Just think of a cow bringing forty thousand dollars! Whether or not paying such a price is a good investment, is not our present purpose to inquire, but it goes to show what can be done by judicious, careful, painstaking breeding. This breed is almost too artificial for our climate. It requires too much nursing. Farm grasses, well-matted sward, rich meadows, and all the appliances of wealth suit them the best, and these are all necessary to bring the Short-Horn to its highest development. The Ayrshire, on the contrary, though not so large, is a much more hardy race. They will thrive wonderfully on our coarse, wild grasses, and being very active and accustomed to a bleak climate and exposure, they can stand heat and the absence of creature comforts without any material detriment, whereas to the pampered Short-Horn such neglect would mean death. The breed has thus far surpassed expectations, and will prove a great benefit to Southern industry.—*Spirit of Arkansas.*

Farm Economy.

HOW SHALL WE INCREASE THE MANURE PILE.

This is a question of vital importance to the farmer and to many others. Last year I had my boys cultivate about an acre of corn, and after feeding all the cow would eat I found the stalks a nuisance, and the question arose how to dispose of them. With cow manure alone it will take a year to rot them so as to be suitable for grass land. Is there a chemical process whereby manure can be quickly and cheaply made from corn stalks, weeds and refuse, hay, etc? Our western country is full of large weeds. I often see hundreds of acres in a day's travel where the weeds stand up four and five feet high. If these were cut before seeding time and piled up, and could be easily made to decay, what a valuable work would be accomplished. Will you, or some of your correspondents, kindly favor the reader of your valuable paper with the desired information.—Calvin, *Webster Groves, Mo.*

It is very difficult handling manure mixed with coarse corn stover. The better plan is to cut the stalks with a horse-power cutting machine, which will cut off several acres of stalks per day at trifling expense. Besides, being better for stock, the advantage in making the uneaten stalks work up well in the manure pile is alone worth the cost of cutting. It is too late, however, for our correspondent to try this plan. His corn fodder is already mixed with manure. If he can get it into heaps, cover with a little earth and keep moist, the heaps will be rotten by fall. A little lime will greatly assist decomposition, and if the heap is covered even slightly with earth, little ammonia will be lost. Unless covered with earth, (thick sods are best) the corn stalks will hold the heap open to the air, and not even lime will cause it to rot. Mixing some manure from horses with the cow manure will cause it to heat more rapidly and be better for both, as horse manure alone is apt to fire-fang.

The weeds in the western country and everywhere else should be cut down and destroyed before seeding. We don't think much of the plan of "piling them up to decay." It won't pay. A large quantity of green succulent weeds, when thoroughly rotted, will only make a small amount of vegetable mold, and that not very rich in fertilizing material. It is far better to leave the weeds where they fall. They are worth more as a mulch for most crops before decaying than as a manure afterward. Besides, green weeds decay readily, and their remains are worth as much where they lie as if rotted somewhere else and then brought back. Of course, if the weeds are full of seeds this plan is impracticable, and in that case they had better be dried and burned than thrown into a heap to decay.

The value of weeds, straw and other like refuse as manure is greatly overrated in the mind of many young farmers. When thoroughly decayed such manures have little except carbonaceous matter, of which most soils, and especially western soils, have no lack. Our correspondent should not regard the size of the manure pile as of the chief importance. It is not likely that his land is deficient in vegetable matter; but its lack of fertility is far more likely to be due to a deficiency in phosphate, potash or ammonia. Let him experiment with fertilizers containing these elements, and when he discovers which does most good at the smallest expense, let him supplement his manure pile with that. If his soil is lacking in vegetable matter, he can most easily recuperate it by growing clover with gypsum and plowing under. Clover, also, is excellent for increasing the supply of available nitrogen, phosphates and potash. Of course it cannot increase the amount of mineral fertilizers in the soil, but its deep-reaching roots will bring fertility from the subsoil and make it available for roots of wheat, corn and other crops.

ECONOMIZING IN UNDERDRAINING.

The most essential point in persuading farmers to make needed improvements is to show how they can be made with less expense than has been supposed to be needed. Want of money stands in the way of manuring, underdraining and other improvements, but most of all of underdraining, the expense of which is often exaggerated and often really made much more than it should be. So far as possible the work of digging should be done with team and plow. This will often save one-half the expense of this heaviest item.

By laying out underdrains to cut off the overflow from high ground, a much smaller number of drains will be needed on low, level land. Very often this low land is flooded by springs which start out of side hills and which are not supposed to need underdraining because they are "high."

Where the spring or surface water from above is cut off, one or two drains properly laid will remove surplus water from a wide piece of level land. Plow in lands *across* the underdrains and leave the dead furrows open to conduct water to them. In this way the efficiency of underdrains is more than doubled. This is not perfect underdraining, but it is possible and will *pay* for thousands of farmers who would not dare think of laying out their farms in twenty or twenty-five feet wide strips with an underdrain between each one. It is better to have some dead furrows even when land is thoroughly underdrained. When the ground is frozen in winter, water will often stand on the surface and settle into hollows, unable to reach the drains, and killing out wheat if it should happen to freeze solid before the ground beneath had opened and let the water out.

Finally, by growing clover, which has a long tap root, forming a natural underdrain, the efficiency of all natural underdrains may be more than doubled. In other words, one-half the underdraining will answer if clover is grown, that would be needed if the soil were not treated to this crop. With the ground full of clover roots, soil that is not tramped and poached by cattle will absorb an immense amount of water with usually little apparent injury.

NEW VARIETIES OF CORN.

Mr. D. A. Compton of Hawley, Pa., writing about the Centennial Corn excitement, says:

I originated last season about 500 varieties of field corn, some of which grew ten feet in hight, and ripened extra large ears in seventy-five days from planting. It does not appear to be generally known that seed from the branched, exposed small ears, growing on the very tops of the corn stalks, will produce new varieties of corn in every way distinct from the old sorts.

I shall send several varieties, stalks and all, to the Centennial Exposition the day they ripen. An extra-sized *early* field corn would be worth millions to the farmers of the North in a few years. Much is now lost by early frosts.

D. A. C.

Pomological.

BLACK KNOTS ON PLUM TREES.

In many soils and localities the plum as well as the Morello cherry trees are subject to a fungoid disease known by the common name of Black Knot. This disease has been known for a long time, but the cause or origin remains as much a mystery as ever, although many theories have been from time to time advanced by our pomologists in regard to the same. It was once claimed to be prevalent only on heavy clay or wet soils, but its appearance and spread upon the sandy soils of New Jersey and Long Island showed that moisture at the roots of the trees was not at the bottom of the disease, although a well-drained soil is probably preferable to one of an opposite character. Anything which tends to weaken the vitality of the tree, such as exhaustion of the soil, too much or too little moisture, overbearing and neglect, generally seems to hasten the appearance and spread of this disease. We have always noticed that Morello cherry trees of the different varieties, when left to themselves, with roots choked with grass and weeds, were far more liable to show black knots than those given good cultivation, and the same is doubtless true with plum trees.

Fruit trees seem to be amenable to the same laws as animals, neglect being generally followed by the attack of parasitic diseases or insects. Sometimes, however, a contrary course produces similar results, as over-feeding and stimulating also causes disease. But as it is now almost universally admitted that the black knots on our plum and cherry trees are the result of a fungoid disease, and that the minute fungus penetrates the soft tissues of the tender branches, interrupting the flow of sap, and probably drawing a portion of its sustenance therefrom, we must look for an antidote in some stimulating fertilizer applied to the roots, or an *anti*-fungoid solution applied to the branches. Common salt, lime, sulphur and sulphuric acid are all of this nature, and when applied to the soil about the trees act as a stimulant, and some of them as a direct manure; hence it would be well to try experiments with the different substances named upon trees affected with this disease. In applying diluted sulphuric acid or common salt to the soil about trees it will be necessary to use some caution, as an over-dose would be dangerous. Of course the pruning-knife should be employed in removing all diseased branches as soon as discovered, for all such fungi spread more or less rapidly when they once become attached to a branch and healthy tissues are soon affected, even if not apparent to the eye.

INSECTS IN BLACK KNOTS.

If the knots on plum and cherry trees are examined during the summer, grubs of considerable size will be found therein. This fact has led many not very scientific persons to suppose that the knots were caused by insects, and we once heard a gentleman who has figured somewhat as an entomologist declare that the presence of grubs in the knots was a direct and incontrovertible proof of this. But it probably never occurred to him or others who have come to the same conclusion that the same train of reasoning would lead us to attribute the origin of every wormy cherry or plum to the same cause.

All the mystery, however, which at one time surrounded these grubs in the black knots has been dispelled, for it is now known that the plum curculio, which is so destructive to the fruit, breeds in these knots on the branches. The female beetle will deposit her eggs in the soft, spongy tissues of a newly-formed knot, and the larvæ seem to thrive there as well as in the fruit, consequently we are not likely to rid ourselves of this pest even should we abandon plum trees altogether, for where there are none of these it will go to the cherry trees, wild or cultivated, and it also breeds in the wild thorn-apples, crab-apples and several other kinds of fruit. But those who would successfully combat the spread of black knots on their plum and cherry trees should look for remedies elsewhere than in fighting insects.

CULTIVATING AND CROPPING ORCHARDS.

The horticultural editor of the Michigan Farmer recently advised the cultivation and cropping of old orchards. This perfectly reasonable advice has occasioned some criticism; but a correspondent, Mr. J. Webaler Childs of Ypsilanti, indorses it and relates his experience in corroboration as follows:

I have an apple orchard of seven and a quarter acres that has been set seventeen years and is most of it in very fine, healthy condition, and I have plowed and cultivated it every year, I think, but two since it was planted; those two it was seeded to clover and timothy, and yielded two good crops of hay each of the two years.

The trees have now become so large that the crops sowed or planted in the orchard do not amount to very much, but, taking the time from the first planting of the trees, I think I have raised as large an amount of crops on the land occupied by the orchard as on any equal number of acres of my farm—due to the fact, no doubt, that I have manured that oftener and cultivated it better. I know much has been said against cropping an orchard, but I think no harm results from so doing if it is kept so thoroughly manured that the trees never lack for food sufficient to make a vigorous growth and mature an abundant crop of fruit.

If I had not the means of sufficiently manuring an orchard, I would still cultivate it, but without putting in any crops. I have used some ashes upon my orchard, and consider them very valuable indeed for that purpose, but my principal fertilizer has been barnyard manure liberally applied about every second year.

From the first I have plowed very shallow near the trees, and since they have become of considerable size we endeavor to have no part of the orchard plowed more than four or five inches deep. I much prefer hoed crops, especially for orchards, and in no case would I sow an orchard to winter grain, for I think it desirable not to stir the soil much, if any, after about the first of August. But the oftener the surface of the ground is stirred from May until August the better in my judgment, especially if it be a dry season: but continued later, as in plowing and cultivating for fall sowing, a growth is stimulated, when the trees need the time to mature the early growth preparatory for winter.

My trees are headed pretty low, though not as low as I would have them if I were to raise another orchard. I think an orchard should be trimmed more or less every year, at least until it is twenty years old, for by so doing, if the grower has from the start an idea of how he desires his orchard to look when grown, he may not only give the trees the general form that he desires, but will avoid the necessity of cutting large limbs, which should never be done unless absolutely necessary.

I do not suppose that there is only one good way to manage an orchard, but I know that there are a great many that are very badly managed, and consequently pay but very small profits, if any at all. Well managed, in a good locality, there is in Michigan no more profitable branch of farming. At any rate, mine has paid me better by far than any other part of my farming. Some of my trees have borne only every other year, but, taking the orchard together, we never have failed to get a fair crop since the trees commenced to bear, several times portions of the orchard yielding as high as one hundred barrels of fine packing fruit to the acre, and last year from the seven and one quarter acres we packed eight hundred barrels, which I sold at $2.25 per barrel for the fruit.

The Wealthy Apple is as hardy as a crab, and increasingly popular in the Northwest.

The Apiarian.

FEEDING BEES IN THE SPRING.

In a communication to the Bee World, for January, D. Staples, of Columbia, Tenn., gives the following instructions upon this point, in connection with stimulating queens to greater activity, and the bees to the building of new combs. He says it is known by all good apiarians that when honey is coming into the hive regularly the queen is stimulated to lay a vast amount more eggs than where there is no honey coming in, although there may be an abundance of sealed honey in the hive. Hence the philosophy of feeding a little honey every day in early spring; also, if your bees are destitute of a sufficiency of bee bread, you can feed a little rye flour or corn meal, put in the sunshine and out of the way of the wind, with a good effect, in order to have a strong stock of workers on hand on the early appearance of the harvest, that they may wade in and take of the first fruits of the land; and should the harvest linger you need not fear the laborers will tire, for when there is work to do the little busy bee is always ready.

If you wish your bees to use your feed for the purpose of raising bees or building of new combs you will need to dilute your honey or syrup with water, but not so much that it will not be sufficiently sweet for the bees to partake of it freely; and in order that they may not store it in the combs it will be necessary to acidify it a little by using acetic acid, cider vinegar, or lemon juice, for the bees very well know that if they store such in their combs it will be an injury, therefore they will not do it; but being avaricious little fellows they will eat of it and feed it to their young until all become fat with a secretion of wax, when if you place an empty frame in the centre of the brood nest, you will be surprised with what rapidty it will be filled with new combs.

HOW TO PLACE HIVES.

Where bees are wintered in the cellar a question arises whether in replacing them on their summer stands it is necessarry to put them in the same locality they occupied last season. On this point the editor of the American Bee Journal says:

In our own practice, we have not generally placed the hives upon the same stands which they occupied the previous season, and think we have met no serious loss in consequence; but are quite sure that in some cases the bees have at least taken a look at the old spot which was home the previous year. But our bees have usually been confined a long time in the cellar—four months or more. If they were carried out for a fly every warm spell, we should expect them to show a better memory of the old spot. Moreover, being confined for so long a period in the same cellar, they seem in some way to lose their distinguishing scent, so that immediately on first being taken out of the cellar two colonies may be united without any preparation whatever, and without any quarreling. So in such case, if a bee should go to the wrong hive, it would be kindly received. Our bees, at some time during the winter, generally undergo a temperature at, or near, the freezing point. May not the degree of cold they have suffered have something to do with the matter under discussion? It is at least, safe to put them on the old stands, if the precaution has been taken to note where the old stands are.

RAPE AS A HONEY PLANT.

K. O. Krusche, Berlin, Wis., writes the American Bee Journal—"As a honey-producing plant the rape is scarcely second to the linden, producing a beautiful golden honey of good flavor, and is in blossom when nearly everything else is out of blossom, commencing about August 15, and continuing a couple of weeks. As a farm crop it is as good if not better than wheat. The time for sowing it is from the middle to the end of June. This gives time to prepare the soil after other crops are in; or if wheat or corn should fail in coming up, rape can be sown in their places. It is harvested from the middle to the last of September, after all other grain is harvested. It does not impoverish the soil, but benefits it. From five to eight bushels more per acre of wheat are raised on ground which had rape the previous year. It lets no weeds grow after it is fairly started, growing very dense, and its leaves completely shade the ground, therefore it does not suffer from drouth like other grains. The seed has a good cash market at Fon du Lac, Wis., where oil is extracted from it, and brings from $1.50 to $2 per bushel. From ten to eighteen bushels are generally produced per acre, but it is oftener over than under this estimate. Two quarts are sufficient to sow an acre. Thousands of bushels are annually raised in Calumet county, and it is just as staple a crop as wheat. Those doubting my statement I refer to report of agriculture for 1870.

Floricultural.

A GARDEN EXTRAORDINARY.

One of our considerable seed firms in arranging their stock for last spring's business, laid aside a large quantity of flower seeds which remained over after the previous years' business. Unwilling to sell seed of doubtful vitality, the following plan was hit upon for a disposal of it which should promise an unusual if not a profitable return. The article is published in the American Garden, and we give as much of it as our space permits: "We plowed a strip about six feet wide all around a five-acre field, close to the fence. On this plowed ground the seed—previously well mixed—was thrown, just as it happened to come. The surface having, afterwards, been smoothed over, we waited the result. This proved more than satisfactory. We had a wild garden indeed! The plants came up as thickly as they could grow, and flourished and blossomed as freely as though they had enjoyed all the care usually given to delicate hot-house exotics. Sweet Alyssum, Mignonette, Phlox Drummondi, seemed to cover the ground. Morning Glories of every shade, and delicate Cypress vines, tried to cover the fences and run up every tree. Quaint little yellow and green Gourds appeared in the most unexpected places, and the whole bed seemed in a blaze with the brilliant Eschscholtzia, Marigolds and Zinnias.

"Every morning would find some new and unexpected flower in bloom. In short, the place was a constant delight all summer to each member of the family, as also to the neighbors. The children, especially, who reveled in a garden where they were allowed to pick whatever they pleased, were never tired of the excitement of hunting for something new.

"A quantity of the same seed was sown in the adjacent woods. Many of these germinated—and the sight of Morning Glories running up the trees in the wildest part of the woods and bunches of Balsam and Zinnias and Asters looking up through the underbrush was, indeed, passing strange and promotive of intense enjoyment."

Those who putter over the planting of such seeds in pans and frames, may learn a lesson from the above rough and ready treatment.

NOTES.

Country Life.—The past fortnight has been a trying time to country folk, particularly to those quondam city people who have lately adopted the country as their home. Rain has poured down upon us as if the clouds would never empty. The ground is choked with water and gushes out underneath the foot like a juicy orange pricked under pressure. The winds have blown from every direction and have driven through crevices never suspected to exist before. Conservatories from this cause have suffered most of all, and seed boxes, as well as the earth of pots and seedlings yet in the first leaves, have received the drip, drip, drip, and in the morning finger-holes are found here and there—the earth spattered over all and the baby seedlings presenting the appearance of having engaged in a relentless war of extermination. Storms are just one ugly phase of country life. We have no high brick or stone walls, to shelter us, as in the city. The winds howl over us as if we had no existence. The house shakes—nay, trembles as a mad gust strikes it—and then another and another, as if by persistent efforts it had settled upon our poor dwelling for demolishment. The roar of the wind as it issues from the woods near us during several recent night-storms, has exceeded all past experiences—and, though one is snugly in bed, has made itself *felt* as lightning is *seen* with the eyes fast shut. One can but wish during such fierce night-storms, that they would "kindly" cease. *Then* we are ready to recall every harsh word we have ever uttered against cities and city life, and to admit that the city is at least sufferable during six months of the year. But these morbid, erroneous fancies pass away with the first ray of sunshine, and we apologize to our country home and to the country generally for our temporary estrangement.

One look over the fields, hills and woods in the early morning of spring, when the angry winds have passed and the sun assumes his genuine vernal manners, makes us forget the worst storms—in fact, *all* storms that ever have occurred or are likely to occur.

But it is the truth, gentle reader, nevertheless, that the storms of the past two weeks (April 7) have tried our soul more than all the others combined of which we have any remembrance, and the fear of devastating floods to which we are greatly subject in our "Happy Valley," has in no small degree added an element somewhat distressing to shaky nerves.

New Epacris.—The London Garden gives an illustration of a new double white Epacris (*onosmæflora*). It is introduced by Mr. W. Bull, who says that his collector wrote him in ecstacies about it, and said he had seen a plant of it only ten inches in hight, of which seven inches were so covered with double blossoms as to hide the stem, reminding him somewhat of a well-grown Balsam. The engraving certainly reminds one of a double Balsam.

The "Double" Poinsettia.—The same number of the Garden gives a fine colored plate of this new plant to which we have several times referred. The head is described as consisting of no fewer than fifty or sixty bracts, varying from six to eight inches long and upward of two in breadth. The bottom ones being the larger, droop gracefully from their weight, and those which fill up the center, being smaller, are less drooping, until in the center of the head they are nearly erect—the whole forming a bouquet of the most brilliant, glossy scarlet, not less than 16 inches across and rounded as much as bouquets generally are. C.

River Edge, Bergen Co., N. J.

The Garden.

FARM GARDENS.

Farmers do not generally realize the advantage, the profit, of a good garden, because they do not sell what is raised in it, nor buy vegetables if they do not raise them, and yet if they do not raise them they have to buy other things to use instead, or use up what they might otherwise sell. There is no better way to estimate the value of garden produce than by its price in the market. Men who raise vegetables to sell get from two to five hundred dollars per acre, at wholesale prices, and the consumer pays much more. Now if the laborer and mechanic in the city (where bread and meat are nearly as cheap as in the country) find it economical to buy vegetables at prices that would pay the gardener from four hundred to one thousand dollars per acre, the garden is surely worth half as much to the farmer. A good garden is worth more money, saves more money, than ten times the amount of land will yield in ordinary field crops, and every man who neglects it loses his best opportunity to make money. But a poor garden is a disgrace to a farm, and time and money thrown away—poor soil, planted too late, and covered with weeds—this is its history, and failure is the result.

But the profit is not the only advantage of a good garden. It is a healthful luxury. If farmers would eat more vegetables and less pig and pastry in summer, they would be healthier and suffer less from heat and thirst, and consequently drink less cold water, which everyone knows is very injurious.

As farm gardens are usually small, it costs but little more to make it a good garden than to make it a failure. The first necessity is to have it thoroughly drained so that it can be worked very early in the spring. Then a good share of the garden work can be done before time to begin the general work. Many persons do not think it worth their while to do anything in the garden until the whole can be planted. The consequence is that some things are planted too late, and some too early, the farm work crowds, the garden is neglected, and a few sickly vegetables and a great many luxuriant weeds is the result.

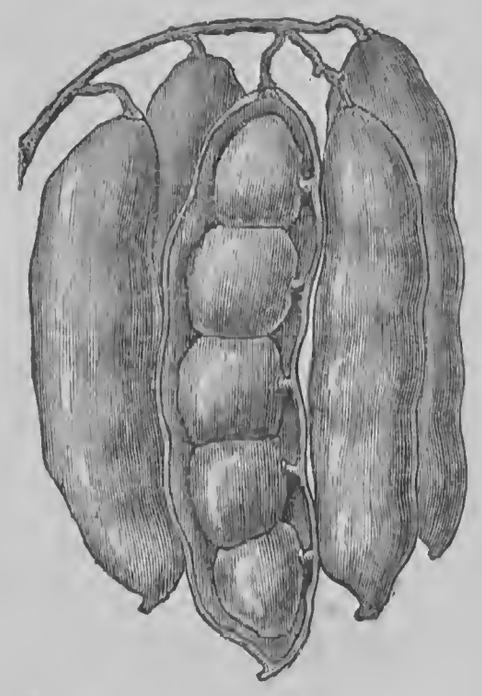
The next thing after draining is thorough manuring, and this should be done at the rate of from twenty-five to forty two horse loads of manure per acre every year. It is better to use different kinds of manure than to use the same kind constantly. It is with this as it is with farm crops—the best results are produced by rotation or variety. No single kind of manure contains all the materials needed to enrich a garden, and when the same kind is used all the time it seems to lose its power to feed the growing crops. Hen manure and ashes, used in connection with stable manure, have a good effect, as does lime or plaster, sown broadcast after the planting is all done. Having put the soil in proper condition by draining, manuring and deep plowing, and thorough harrowing and rolling, the next thing is to plant it. Each kind of seed should be planted as early as there is any prospect that it will grow. As but little of each kind is planted it is better to run the risk of having to plant part of it the second time, than have a late garden.

Early peas may be sown almost as soon as the frost is out of the ground. Cabbage plants, if they have been properly hardened, will stand considerable freezing without injury. Potatoes can be planted as soon as the hard freezes are over. Sweet corn, lettuce, onions, beets, carrots, beans, cucumbers, may be planted much earlier than they usually are, and if they fail to grow the same ground can be planted for a later crop of the same. Do not plant all the corn, peas, beans, radishes, &c., at once, but make successive plantings, and then if the earliest fail the next will come on immediately, and after the earliest are too ripe to use, the later plantings will be ready. Late cabbages and cauliflower can be planted after radishes, lettuce, early beets and early potatoes—celery after early cabbages, and any ground cleared before the fifteenth of August can be sown to turnips.

One of the important aids to a good garden is thorough culture. Don't let the weeds get started. It is easier to keep them down than to pull them after they have got started, and hoeing the crop is a great advantage, even if there are no weeds. A. Y. H.

DREER'S IMPROVED LIMA BEAN.

Farmers and gardeners will understand the importance of improving seed by the yearly



careful selection of the best. Where this process has been carried on a number of years it results in establishing desirable qualities as fixed habits of the plant, sometimes creating entirely distinct varieties. We do not know a better illustration of this fact than in Dreer's Improved Lima Bean, an engraving of which accompanies this article. It was originated by careful selection of the best seeds for planting during the past thirty years by Mr. H. Kimber of Kimberton, Pa., and in its present improvement is earlier, more prolific, and with a greater amount of saccharine matter. The superior quality of this bean is conceded by all who have tried it. The illustration shows the habit and prolificacy of the variety. The beans are more compact in shell, the ends butting against each other instead of being separated by a vacant space. This makes the beans almost square at the ends, and of course the amount of bean in the husk is largely increased. This also makes the beans as easily shelled as so many peas. Among those who highly recommend this variety, from a trial in 1875, are Geo. Paist of Chester Co., Pa., and David F. Grier of Salem Co., N. J. The bean was introduced and is for sale by Henry A. Dreer of Philadelphia, and we feel safe in advising all who grow Lima beans to secure some of this improved variety for trial. It will undoubtedly make Lima beans more popular in farmers' gardens than they have been heretofore.

THE CHO-CHO.

In this early spring time, when vegetation is barely beginning in our Northern climates, we always turn with unusual interest to reports of tropical vegetation. In fall or winter such reports are too discouraging, as it must be months before vegetation will start outside of hot houses. Now, however, we can read and enjoy, as it cannot be long ere winter's gloom and solitude is broken by the singing of merry birds and the breaking forth of luxuriant vegetation. From the last No. of the Florida Agriculturist we copy the following description of the Cho-Cho, a vegetable whose name and character is unknown to most Northern readers. The Agriculturist says:

This is a vegetable commonly cultivated in the Island of Jamaica, under the Spanish name of *Chayote*. There are two varieties—white and green. The latter is the better of the two, being more delicate. They are about the size of a Cluster cucumber—larger at one end, and slightly tapering off. In the West Indies they are sometimes grown on arbors, but more frequently are planted at the root of a tree. They grow very fast (several feet in a night), and will cover the top of the tree with vines, hanging down all around. The vines bear profusely. One will furnish a peck per day. So common are they in Jamaica that they sell in the country at about 10 cents per peck. They will thrive in any part of the Southern States, for when the vines are killed by frost, they only require to be cut off, and the roots covered with straw, and in the spring they will grow again. To cook them, first split in half, lengthwise, and boil until quite tender; butter, and sprinkle with black pepper; or mash up like squash, and treat in the same way. They are more delicate than squash. Apple-sauce can be made from them by the addition of lemon juice and sugar, so that we defy the greatest connoisseur to tell the difference. They should not be planted until they sprout, and then plant with the sprout end slanting downwards, and cover very light; in fact, they hardly require to be covered at all, only placed below the surface, for if covered they rot. The vine will last for years, bearing all the summer. Those who grow them can have apple-pies without apple trees, and no doubt they could be cut up and dried for winter use the same as apples.

The cho-cho should not be too old before used. If the finger nail cannot penetrate they are unfit for food, being too tough.

Ventilated Berry Baskets.—R. H. Haines of Malden, Ulster Co., is an extensive grower of small fruit, plants, &c. In this line of work he has devised some novel improvements in berry baskets of various sizes, and by making them on an extensive scale he can afford to sell lower than most growers can manufacture. His perforated berry baskets give perfect ventilation, and being made from one piece of wood, the flats, already cut, can be sent in quantities at very low rates and made up by the fruit grower at his leisure. This is the only way in which berry growers can profitably make their own baskets, and they should lose no time in addressing Mr. Haines and preparing for the busy summer campaign.

The Horseman.

SIRE AND DAM.

In a recent article which appeared in the Pall Mall (Eng.) Gazette, it is said that it is possible, and indeed obvious, that the character stamped by the sire, though not aided by subsequent association, is incomparably deeper, stronger, and more indelible. Moreover, as there is to all appearance such a thing as an unfortunate union, whereby the qualities of sire and dam conflict and neutralize one another instead of combining together to make something altogether superequine; and such conflict and such naturalization, to judge from many an example like Gladiateur and Fille de l'Air (for the neutralization may assume the shape of deformity as well as any other), are the more probable the greater the prodigy that might otherwise be expected. Another curious thing is that neither sire nor dam may promise anything particular, and that the excellence of the colt or filly they produce will be traceable rather to the general descent than to the immediate parentage; and then, perhaps, a jeremiad will be sung over the shameful manner in which we allow foreigners to buy our best sires, when we had already tried those sires and found them wanting, or had reserved to ourselves others presumably much better. If a Vedetto and a Flying Duchess, both well stricken in years, do, contrary to expectation, produce a winner of the blue ribbon, it will soon appear on reference to their genealogy that there was "the Derby in the family."

THE FEEDING OF HORSES.

The Michigan Farmer says:—Almost of more importance than the form in which food is given, is the frequency and regularity of meals. The horse's digestive organs are not constructed for long fasts. Long intervals without food produce hunger, and hunger begets voracity; food is bolted, and indigestion and colic follow. This is doubly true and dangerous with horses doing hard work. They come to their long-deferred meal not only hungry, but exhausted; not only is the food bolted, but the stomach is in such a state as to be incapable of thoroughly active digestion, and is overpowered by half the amount of food it could otherwise digest. The prevention of waste is almost attained when we give a proper form; but there are two points to which it is right to devote some attention—the form of the mangers, and attention to the wants of the individual animals. The mangers should not be less than three feet long, eighteen inches wide, and twelve inches deep. They should have an upper border of wood projecting inwards for two inches and a traverse bar of half-inch iron across the middle. A piece of two-inch hoop iron, on the top of the manger, protects it from damage by the horse's teeth. This simple arrangement prevents the horse from throwing out his corn, and the provender is not set in so thick a layer as in the ordinary narrow and shallow manger.

LINIMENT FOR HORSES.

R. S. Steele writes to the American Farmers' Club: Some time ago I was a good deal worried with a couple of horses which had sore backs. I tried various remedies without sucess, and was beginning to despair when the following receipt came to my notice: "The inner bark of white oak bark boiled down in an iron kettle (never use a brass one) until it is as black as ink; while boiling drop in a piece of alum, about the size of a hen's egg." This liniment is to be applied with a sponge, and is good for any sore or bruise; in fact it is a safe thing to keep in one's barn ready to use when occasion requires. As I found this so useful, I venture to send it for the benefit of others who may not be in the possession of anything as good. I think it is also an excellent plan in warm weather to clean the collars often with castile soap.

Diary of a Ruralist.

DAILY RURAL LIFE.

From the Diary of a Gentleman near New York City.

ARTISTIC ARRANGEMENT OF AUTUMN LEAVES.

April 10.—The brilliant colors of the autumn leaves of many of our forest trees and shrubs have so often been the subject of dissertations in books and periodicals that it may well be considered almost, if not quite, hackneyed. School girls have exhausted the adjectives of Webster's Unabridged in writing letters to their friends at home and abroad in praise of the autumn tints of our forests, and from these up to the learned essays of an EMERSON innumerable changes have been rung upon the same theme. Still, with all that has been written and said upon this subject, the interest in it does not flag, for, like that of love, it is just as new and delightful to each succeeding generation as to the one preceding it. Love and beauty are two things which never grow old in this world, except to certain prematurely disorganized individuals of the *genus homo*.

But I have frequently had occasion to think that the preservation of autumn leaves by some persons was merely the result of a spasmodic overflow of sentimentalism, ending as abruptly as it began. I am forcibly impressed to take this view of the case soon after the close of every season, for during the autumn MRS. RURALIST has some city friends who seldom fail to spend a few days with us for the purpose of a visit and the gathering of "autumn leaves." During this time exclamations of ecstatic admiration greet my ears at all hours of the day, and such pressing, gluing, dying and varnishing, yes, and I may add scattering, of leaves and twigs about the house and lawn are scenes to be experienced in order to be fully realized.

But after all this is over and quiet again reigns, I am constantly being reminded of the past visits of the leaf-gatherers. If I pick up an atlas to look for the location of some village or town, out drops and are scattered over the carpet a quantity of autumn leaves which had been carefully hidden away and perhaps forgotten in the final disposal of the season's collecting. I open the Dictionary and out drops another lot which were hastily put to press in the most convenient book at hand, regardless of stains and defacement of its pages. Choice quartos and folios have met the same fate, and for a month or more after the departure of our leaf-gathering visitors I feel a little nervous when taking any good-sized volume, lest it should be followed by a shower of dried leaves, entailing upon me a half-hour's labor on hands and knees to gather up.

After a few years' experience of this kind one is likely to lose his interest in albums of autumn leaves, still there is no knowing how soon private opinions, likes and dislikes may be changed by something out of the usual line of preparation and arrangement. I am forcibly reminded of this by the receipt of a handsome album of autumn leaves sent me through the RURAL NEW-YORKER by Mrs. DWIGHT MERRIMAN of Jackson Miss., and I will forgive the young ladies who have used my atlas, dictionary and other volumes for pressing leaves if they will make up anything half as beautiful as these samples sent by Mrs. M. The specimens are arranged in groups, and by an artistic combination of colors each resembles a handsome oil or water-colored painting, more than natural leaves and flowers. The usual brilliant-colored leaves of maple and sumac are tastefully arranged upon some of the cards, but the finest and most beautiful groups are composed of very minute flowers, ferns, grasses and berries, with a little green moss intermingled to complete the picture and make it all the more natural. I can readily see by this specimen of Mrs. MERRIMAN'S handiwork how readily a splendid ornament can be made of natural leaves and plants, provided one is an artist (and possesses the patience to work out the subject in the best manner. Mrs. RURALIST joins me in returning many thanks for this album of autumn leaves, and I shall demand that the "girls," when they come out again to gather specimens, must show something of the sort as the result of all their "mussing about," else be dismissed as impracticable, momentary enthusiasts.

THE OLD SWEET-BRIAR.

April 11.—While our florists are extolling their new Hybrid Tea, China, Bourbon and other choice roses, I want to put in a word for that good old plant the common Sweet-Briar. Of course many of my readers will shrug their shoulders or toss their heads in disdain at the mere mention of so old and well-known a rose, but while I am not inclined to assert that its flowers can compare in brilliancy of color with a Jacqueminot or Giant of Battles, still there is a fragrance in its leaves which we may search for in vain among the more gaudy and newer aspirants for general admiration.

Then again, perhaps, there are thousands of others who, like myself, can remember the time when they plucked sprigs of sweet-briar from the roadside as they went to school along that dusty or muddy country road. No matter who they plucked the buds for or what she said in return for the gift, but the spicy fragrance of those young, crimped leaves still lingers in their memory, and although they may have long since left that pleasant field in which they built many an air castle, it is not well to ignore the pleasures of others of similar tastes who may be following in the same path, although far behind. I own to a sort of reverence for the old Sweet-Briar, perhaps because it was an early acquaintance, and I cannot help thinking that there are many other persons who do not forget the sweet perfume of this old favorite. Although it is a native of England, it was introduced into this country so long ago that it has run wild in many localities throughout the Middle and Eastern States. It is not well to overlook these old plants, which possess merits unknown in many a new and costly variety, for they frequently recall pleasant hours which can be enjoyed over again. "Yes," says one sitting on the opposite side of the table, and to whom I have read the above, "there is not a rose in your collection of superb novelties which surpasses in my eyes the old, rugged Cinnamon rose which bloomed year after year in my grandmother's garden."

But I could never see the beauty of a Cinnamon rose, and, like WARTON, can say:

"By sweet-briar hedges bath'd in dew,
Let me my wholesome path pursue."

Around the Republic.

"DOWN SOUTH."

Diary and Notes of an Ex-Editor Seeking Health.

BY CHARLES D. BRAGDON.

Jacksonville, Fla., March 31.—It is more than a month (I see by the last RURAL NEW-YORKER) since I promised to say something about the Florida State Fair, which I gave notice I intended to visit. The visit was too much for me, hence this delay. So much by way of apology on my part, though doubtless what I shall say of it will be as useful and of as much interest now as then.

The Duval County (that is *this* county) Agricultural Society had purchased a few acres of ground down the river a short distance from the city, accessible both by a good road and by boats, and had erected upon it a very creditable exhibition building, into which all there was of special interest at the State Fair was compressed and exhibited.

There were a few plows, cultivators of various peculiar patterns used here in the South, hoes, carriages, musical instruments, seed from the seed stores, bread from the one bakery in the city, millinery, including the palmetto hats, in every variety of style, which are peculiarly a Southern manufacture developed since (and perhaps during) the war. Large numbers are manufactured in this and other Florida towns, and are to be commended as tasteful ladies' head gear. There were also about the amount of fancy needlework usually displayed in Northern country and town fairs, bouquets of feathers and of the beautiful dried Florida grasses, feathers and shell-work, etc., etc. Of course there were sewing machines and kindred paraphernalia. The shops of Jacksonville displayed, to some extent, samples of their respective lines of goods.

But what did Florida send from its fields! Upland rice, which I was told by the grower could be profitably cultivated, "and," he said, "I have plenty of first-class seed to sell." The cleaned rice—if it *had* been cleaned from the upland growth, which I have no good reason to doubt—did not seem to differ much from that grown in water along the borders of the Savannah River. A few stalks of sugar-cane of the two varieties generally grown here (I was told) were reliable. The show of vegetables was a meager one, but they were generally well grown and of good varieties. The samples were far better than we ordinarily find in this market; but the fact is, only the overflow of the crop of vegetables and fruits finds its way to this market, the bulk being shipped directly to N. Y. City.

The fruit show was the attractive feature of the Exhibition and commanded the almost exclusive attention of Northern visitors. This was natural, because Florida is advertised chiefly as the garden of fruits and "Land of Flowers," in addition to its air of nectar for invalids and its equable climate. The exhibition of fruit was scarcely as large as I had expected, but it was certainly creditable as illustrating what can be exhibited right from the orchards and gardens late in February. There were oranges in variety—I don't know how many varieties; but not until my sojourn here did I realize the difference in quality in the different varieties of this fruit. In the North, as a rule, an orange is simply an orange, as an apple is simply an apple to the great mass of city consumers. I have no doubt I have lost much of my future enjoyment of oranges by this increase of critical knowledge! If you could only have tasted these great golden, pulpy, juicy globes, you would have vowed that EVE was foolish that she did not insist upon an orange instead of an apple! and then you would not have blamed her a bit!

But I had no strength to become enlightened as to the technical nomenclature of the different varieties shown and their respective qualities and merits, albeit the growers were there ready to give information. There were also lemons and limes, figs and pomegranates, pineapples and citrons, in variety, guavas and dates, sappodiloes and bananas—the latter green and of the yellow variety seen in New York markets. I have not fallen in love with Florida yet on account of any of its bananas that I have seen, though I am not sure that I have eaten one that was Florida grown. They cost more here than in Fulton or Washington markets.

A gentleman from Key West exhibited the largest variety of sub-tropical fruits made by one exhibitor, and in addition shells, sponge, etc., and curiosities from that neighborhood. His table attracted, deservedly, much attention.

These different fruits were exhibited in other forms — orange wine, and marmalade, guava jelly, prickly pear jelly, orange paste, etc. Scuppernong grape wine, blackberry and elderberry wines were also shown.

I came near forgetting to say that there was also an exhibition of strawberries—not large, but including well-grown specimens, among which I noticed some fine-looking samples labeled "Seedlings." There can be no doubt that the possibilities of profitable strawberry culture in this State, where the proper localities are selected, are established. I know of more than one plantation, not remote from this city, along the St. Johns River, where plantations are located upon a clay subsoil with humus enough in the sand to sustain growth, and moisture enough to develop the fruit without irrigation. Indeed, surface drainage is resorted to for the purpose of disposing of the superfluous water. There are plenty of such situations, I have no doubt. Florida has no competitor in the Northern markets when her first strawberries ripen.

Of live stock exhibited, there were several coops of creditable fowls; of swine, a few pair of Berkshire and Essex; of goats, a pair of Angoras; of sheep, a few Cotswolds; of cattle, a half-dozen, including an Alderney cow and a Short-Horn bull and cow—none of which, evidently, were bred in the State. But I suppose them to have been acclimated. A day or two before the State Fair opened. I saw an advertisement in a city paper announcing that twelve acclimated Tennessee cows would be offered for sale during the Fair on the Fair grounds. I did not find them the day of my visit, and have been curious ever since to learn the relative value of acclimated and unacclimated cows. What is the per cent. of loss of cows brought from the North during the process of acclimation? and what the expense of quinine and other tonics meantime? These are questions I should gladly have asked the owner of those acclimated Tennessee cows. The stock exhibition at the State Fair was fully as large and quite as excellent as I expected. I did not see the horses reported to have taken premiums, but I have no doubt they were good ones, for Jacksonville is quite a horse market, and much excellent stock can be seen on her streets and in her stables daily.

The attendance at the Fair was, in the aggregate, large, and it may be called a success. As illustrating the agricultural resources of a State which I believe (for I have no census report at hand and may be mistaken) does not yet number 200,000 white inhabitants — and the exhibition was made altogether by the white people, so far as I could learn, few colored people being seen on the grounds, even, the day I was there — I regard Florida's first State Fair (occurring in February, too, it should be borne in mind) as furnishing evidence of great capacity for fruit and vegetable production and promise of remarkable future development of her resources in these respects.

April 1.—I was just about to mail the foregoing when the RURAL of this date came. In it I notice "Archer's" letter from Alachua Co., Fla. Glad to see it. Enjoyed it. Much obliged to "Archer" even for his "pity." But how does "Archer" know that I think Florida all a sand bank? I haven't the papers before me, but I don't think he can find where I have said so. It was "the other feller." But even if Florida is "all a sand bank," "Archer" should not get mad about it. I think it fortunate for its population that as much of it is sand as is. So far as I have observed, it is productive sand. If it were clay, or a stiff, clayey loam, "Archer" would have to lose more than one month in nine by sickness if he were to attempt to stay here. Think of Florida as a clay basin, holding water like a tub, and these frequent pouring rains followed by a hot sun! All that water to be evaporated! Let "Archer" thank the Organizer of things that there is as much sand as there is in Florida. I have found reason to do so, in even the short time I have lived in the State.

When "Archer" next attempts to criticise what I or any one else says or writes, let him, before he begins to do so, settle back in his chair, put both thumbs in the armholes of his vest, compress his lips and audibly and emphatically resolve, "By the Eternal, whatever I do, I will be truthful!" If he had done so when he wrote his delightful letter, he wouldn't have said that "Mr. Ex-Editor thinks guano is worse than nothing to attempt to fertilize with." But some allowance must be made for his enthusiastic state of mind, resulting from his extended experience ("two or three waterings") in the use of this fertilizer. When he looked (the middle of March) upon those tomato and cucumber vines, how could he be expected to stop and be accurate? But "Archer" will grow more careful and truthful as he gets more experience in the "Land of Flowers," I have no doubt. That he will continue to write *facts* and experiences to the RURAL, I most sincerely hope.

Patrons of Husbandry.

CORN CULTURE FOR GRANGES.

THE formulas for the special premiums in corn growing for Granges and Farmer's clubs have been issued. The experiments are designed to test the theory of Prof. STOCKBRIDGE that a given amount of fertilizers may be relied on to produce a corresponding increasing crop. The formula for this experiment is as follows:

Take sulphate of ammonia (18 per cent. nitrogen), 404 lbs.; muriate of potash (55 per cent. potassa), 110 lbs.; sulphate of potash (23 per cent. soluble phosphoric acid), 199 lbs.; These, when combined, will make 864 lbs., which is the quantity employed by Dr. Sturtevant, under the direction of Prof. Stockbridge, who claimed it should add 65 bushels to the yield per acre. Though the proportion of chemicals is the same here as in the experiment of Dr. S. yet the other conditions are all different, which makes this essentially a new test of the theory.

Let this trial be made on four adjoining acres, with soil and other conditions alike, and in which the antecedent conditions have also been alike for one or more years. To the first acre apply the above fertilizer, to the second acre apply 5 1-5 cords of pure, first-class barn yard manure, to the third acre apply nothing, and to the fourth apply one-half manure and one-half the fertilizer above mentioned.

These four acres should, of course, be planted at the same time, and harvested at the same time, and in all other respects, except manuring, should be treated precisely alike. The treatment and results to be accurately stated in writing, and, of course, duly verified.

DELINQUENT MEMBERS.

THE following remarks are taken from the address of J. V. Webster, the newly elected Master of California State Grange:—One of the first duties which we owe to ourselves and the Order is that of pruning the Grange (as unsparingly as we do our orchards) of all decaying branches and superfluous growth—that the fruit may be fair and the harvest abundant. This decaying and superfluous growth in our Order will be found to consist of members who are luke-warm in the support of the principles of the Order, those who are slack and irregular in attendance; and those who are largely delinquent in their dues, I would recommend that the monthly dues of members be reduced to the lowest practical point that will provide for the payment of just obligations, and that the Secretary of each Subordinate Grange should urge prompt payment of dues quarterly. If any then becomes delinquent for six months—after due notice—let such delinquent members be suspended and duly notified of their suspension. If their dues are not then paid within two months they should be expelled. To effect this, I would recommend that the by-laws of each Subordinate Grange make it the duty of the Secretary to prefer charges for non-payment of dues against members who do not respond by the payment of dues after notification of suspension.

BRO. A. P. AXTELL of Perry, Lake County, Ohio, has been elected a member of the Executive Committee of the Ohio State Grange, in place of C. C. JENNINGS, deceased.

Domestic Economy.

FRENCH HOUSEHOLD ECONOMY.

THE French butcher separates the bones from his steaks, and places them where they will do the most good. The housewife orders just enough for each person and no more, even to the coffee. If a chance visitor drops in, somebody quietly retires, and the extra cup is so provided, but nothing extra by carelessness or intention. When the pot has boiled, the handful of charcoal in the little range is extinguished, and waits for another time. No roaring cook stove and red-hot covers all day long for no purpose but waste. The egg laid to-day costs a little more than the one laid last week. Values are nicely estimated, and the smallest surplus is carefully saved. A thousand little economies are practiced, and it is respectable to practice them. Cooking is an economical as well as a sanitary and gustatory science. A French cook will make a franc go as far as an American housewife will make three, and how much further than the American Bridget nobody knows—we should probably be greatly astonished, could the computation be made, how much of the financial, recuperative power of France is owing to her soups and her cheap food; better living, after all, than the heavy bread and greasy failures of our culinary ignorance.

SELECTED RECIPES.

Rice Batter Cakes.—Mix one-fourth wheat flour to three-fourths of rice flour, add a little salt; raise and bake as buckwheat cakes.

Boston Cake.—One cup of sugar; one cup of milk; one tablespoonful of butter; one egg; two and one-half cups of flour; two teaspoonfuls of cream tartar; one teaspoonful soda; flavor with nutmeg or lemon.

Raisin Cake.—One pound of flour; one pound of sugar; one-quarter pound of raisins; three eggs; one-half pint of milk; one teaspoonful of soda. These cakes, when baked in an earthen pot or saucer, are excellent.

Silver Cake.—Two cups of sugar; two and one-half cups of flour; one-half cup of butter; three-quarters of a cupful of sweet milk; one-half teaspoonful of soda; the whites of eight eggs; one teaspoonful of cream of tartar.

Molasses Candy.—One pint white coffee sugar, one pint molasses, one tablespoonful of vinegar, one teaspoonful of butter; cook slowly a long time until it "strings" from the spoon when dipped up; pour upon a greased tin pan; then pull it until it becomes white.

Ham or Tongue Toast.—Cut a slice of bread rather thick, toast it and butter it well on both sides. Take a small quantity of the remains of either ham or tongue and grate it; have ready chopped fine, two hard-boiled eggs, put both meat and eggs into a stew pan with a little butter, salt and cayenne, and make it quite hot, then spread quickly on the toasted bread, and serve immediately.

Molasses Cake.—Three cups molasses, one cup sugar, one and a-half cups milk or milk and water, one cup lard and butter—or corned-beef drippings is better—three eggs, one tablespoonful of soda; spice with ginger and cinnamon to suit the taste; flour to make as thick as pound cakes; fruit improves this very much. This quantity makes three good-sized loaves. Bake in a moderate oven.

To Clean Glass Globes.—If the globes are much stained on the outside by smoke, soak them in tolerably hot water with a little washing soda dissolved in it, then put a teaspoonful of powdered ammonia into a pan of lukewarm water and with a tolerably hard brush wash the globes till the smoke stain disappears; rinse in clean, cold water, and let them drain till dry. They will be quite as white and clear as new globes.

Cracked Wheat Pudding.—Take one quart of unskimmed milk, add to it one gill of cracked wheat, uncooked, and one gill of sugar and a small piece of stick cinnamon. Place in an oven of medium heat. When about half done stir in the crust already formed, and leave it to form another, which will be sufficiently brown. Try when it is done by tasting a grain of wheat, which must be very soft. This, when cold, makes a delicious cream pudding.

French Rolls.—Two quarts of sifted flour, a lump of lard about the size of an egg—one a little larger of butter; stir into the flour, the same as in making pastry. When well stirred, add bloodwarm water, or preferably milk and water, to mix; add a little salt, half teacupful of home-made yeast or three tablespoonfuls of baker's yeast. Mix in the evening as for bread, and let rise; ten or fifteen minutes will suffice if the oven is sufficiently heated. Good bread is made in the same way with a proportionally small quantity of lard and butter.

Plain Steamed Pudding.—One pint of buttermilk or sour milk; one-half pint of sweet milk; one teaspoonful of soda or saleratus. Thicken with flour to a stiff batter: add raisins or fruit; place in a budding dish and steam one hour. Serve with sweet sauce.

INITIAL LETTER.

Gelatine Apples.—Peel and core your apples and cut them in halves; put in a kettle with a pint of water, sugar, sliced lemon, and green ginger, a little whole mace, and six whole cloves; boil until they are tender; then remove the apples, and put into the sirup one tablespoonful of gelatine, and allow it to boil down about three minutes, then pour the sirup over the apples.

Hygienic Information.

FOOD FACTS.

IT has been observed that a small quantity of beef tea, added to other articles of nutrition, augments their power out of all proportion to the additional amount of solid matter.

The saying that "an egg is equivalent to a pound of meat," is a mistaken notion. It is a question whether, weight for weight, eggs are equal to beefsteak. With many persons, particularly of nervous or bilious temperament, eggs disagree. Almost any one can eat an omelet who would find a pound of meat superfluous, and yet the former may contain several eggs.

The nutritive power of milk, and of the preparations from milk, is very much undervalued; since there is nearly as much nourishment in half a pint of milk as there is in a quarter of a pound of meat. Hence, milk might be taken as a sort of representative diet, and as better adapted to sustain the body in health, or to strengthen it in sickness, than any other single article of food.

The almost universal testimony of men and women who have undergone great fatigue, such as riding long journeys without stopping, or sitting up several nights in succession, is that they could do it best upon an occasional cup of tea—and nothing else. But a little tea or coffee restores quite as much as a great deal; and a great deal of tea, and especially of coffee, impairs the power of digestion.

The question is often asked at what time in the day fruit should be eaten? In tropical countries, where fruit is the chief article of food, the rule appears to be that the earlier in the day it is taken the better it is, and the later, the worse. In hot weather, many wise people will eat none after noon, alleging that the digestion then declines in power with the decline of the day, and the fruit, instead of digesting, decomposes, owing to the presence of the saccharine matter. The objection to fruit and certain kinds of vegetables late in the day, be the explanation what it may, is certainly justified by an ample experience, though some persons can eat fruit at all hours without feeling any inconvenience.

It is made a frequent recommendation to persons about to incur great exhaustion, either directly, and with the least trouble of digestion, from the nature of the service, or from their being not in a fit state for it, to eat a piece of bread before they go. If they can take a bit of bread with the cup of hot tea, so much the better, but not instead of it. The fact that there is more nourishment in bread than in almost anything else, has probably induced the mistake. That it is a fatal mistake there is no doubt. It seems, though very little is known on the subject, that what "assimilates" itself with the human body, is the best under the above circumstances. Bread requires two or three processes of assimilation before it becomes like the human body.

HYGIENE FOR SMOKERS.

As a warning to persons who ought not to smoke and as admonitory and guide to those who *will* persist in the habit, we copy from the Tribune Medicale the following precepts and advices by Dr. Berthaud.

Never smoke more than three or four pipes or cigars a day and if it is possible limit yourself to two. It is unwholesome to smoke on an empty stomach, or immediately before or after a meal. Whatever the mode of smoking, direct contact of the tobacco with the mucus buccalis (mucous lining of the cheeks) and the teeth must be avoided. Cigars should be smoked in an amber, porcelain or ivory mouth-piece.

To smoke, by relighting them, portions of cigars that have been extinguished, together with the system of blackened and juicy pipes, constitutes the surest way of being affected by nicotine. Every smoker would do well, if he could rinse his mouth after smoking. By analogy is the same precaution applicable to chewers. For the same reason it would be well to subject pipes and bowls in which tobacco has been burned to frequent washings, either with water mixed with alcohol or vinegar.

It is difficult to choose between the different ways of smoking. I give preference to the cigarette, by reason of its slight quantitative importance, and the paper, which interferes with the contact of its contents with the buccal mucous membrane. But to realize all the desiderata it would be necessary to have the papelito made of flax thread and to abstain from the practice which has become the *ne plus ultra* of its kind, retaining the aspiration at the back of the mouth, so as to pour it out of the nostrils afterward.

The premature habit of smoking is certainly hurtful to childhood and during the adolescent period of organic evolution. The economy cannot but suffer at this period from the narcotic influence, be it never so slight, and from the salivation which is inseparable from this act. All persons cannot smoke with impunity. There are pathological counter indications or idiosyncrasies to this habit that it would be imprudent and culpable to infringe.

Disease of the lungs, of the heart, chronic affections of the mouth, nose, eyes, throat and stomach are the results of the present incompatibilities. The airing of apartments where smoking has taken place should be well attended to. To sleep in rooms where tobacco smoke exists slowly constitutes a grave infraction on the elementary laws of hygiene.

HYGIENIC NOTES.

For Sick Headache.—Two teaspoonfuls of finely powdered charcoal, drank in half a tumbler of water, will often give relief to the headache, when caused, as in most cases it is, by a superabundance of acid in the stomach.

For Croup.—Take a knife or grater, and grate or shave in small particles about a teaspoonful of alum; mix it with about twice its quantity of sugar, to make it palatable, and administer it as quickly as possible. Its effects will be truly magical, as almost instantaneous relief will be afforded.

Flaxseed Lemonade (good for colds).—Pour one quart boiling water over four tablespoonfuls of flaxseed. Steep—not boil—three hours; cover closely while steeping; then strain, sweeten to taste, and add the juice of two lemons, putting in more water if too thick to be agreeable.

The Vineyard.

A FARMER ON GRAPE GROWING.

WM. REID of Waukesha Co., Wisconsin, has taken premiums for the best grapes at State Fairs for many years. In the Weekly Tribune he relates his experience as follows:

I have raised grapes for twenty years; only a few at first, but gradually increasing the number, until now I have twenty-five varieties, and I never had a failure. What I say is not for nurserymen, but for farmers, or mechanics having small gardens; and a word of advice I would offer at the outset:—Don't read half a dozen books on grape-culture, or you may get your brain in a pretty tangle, and as likely as not never set a vine at all. But if you insist on peeping at a book, by all means let it be Fuller's. I think there is more common sense in that than in any other one or half dozen I have seen.

Procure in the fall what cuttings you want, well ripened, short jointed wood—in lengths from 4 to 6 inches are better than longer—cut square off below the lower bud, and say one inch above the top bud; then keep in sand in a cool cellar, or bury out of doors in a high, dry, sandy loam, till spring. Then select a moist, deep loam (not wet), open furrows a little slanting, and full as deep as your cuttings are long, lay them up to the back of the furrows, 5 or 6 inches apart, pack the soil firmly about the lower ends, and fill up to the top bud. Now you will have an inch or two of filling to do yet; go to your woodpile and get some sawdust, cover the top buds with it; then sprinkle sand in to keep the wind from blowing off the sawdust; now watch for two buds where one is only wanted, and take one of them off; hoe faithfully and persistently, grow vines, and not weeds, and if you have some sticks to tie to, all the better. In the fall, when the frost has stripped off the leaves, go and lift the vines carefully, reject all that have made a feeble growth, cut the top to within three buds of the bottom, prune the roots back to three or four inches, tie in dozens and heel-in in a high dry place, raising a mound to shed water.

The next spring, when the ground is in good working order, don't be in a hurry, time enough in May, at least in the first half of it in this latitude, set out your plants, say two or three feet apart, with a stake to each, placing the roots on the sunny side, points deeper than where they are attached to the stem, say at an angel or incline of three or four inches to the foot. As soon as you can tie up the strongest shoot, take the others off, pinch off the points of the side shoots from time to time during the summer, and don't be afraid of the hoe. Take up again in the fall, as before, cutting the cane back to three buds, and the roots back to within five or six inches of where they were cut the preceding year; the next season do precisely the same, and set them out again, only give more room this time than last season, but lift again as usual. The next fall prune to three or four buds, as before, the roots to within six or eight inches of where they were pruned the previous autumn. Take care of them one winter more as before, and, my word for it, you have a grape root such as no nurseryman has for sale, or probably would get paid for if he had. A plant of the same age that has not been lifted and root pruned, is not as good as a one-year old, for with care you can make a good plant of a one-year old; with the other you cannot.

When ready to set the vines in permanent place, we don't want either dead cattle, horses or hogs, old boots, bones or blood; all we want is a piece of land that will grow a middling hill of corn or potatoes without manure. I will just tell what I did three years ago with vines treated as described. I had 200 of them, mostly Concord, Isabella and Roger's No. 15. I put them out in rows running east and west, 10 feet apart, in the last week in May, which was very late, and the buds were all started, some of them having made a growth of 3 or 4 inches, but as they were root pruned in the fall, wounds all healed, and needed no trimming, and taking care they did not get dry, they never seemed to know they had been moved. I dug the holes on the south side of the stakes, about 7 or 8 inches deep at the stake, sloping to about a foot at the ends of the roots; set in the vines, carefully working in the soil among the roots, filling the holes half full of soil, then packing in a peck of leaves and covering with the remaining soil.

I then set two stakes to each vine, selecting two of the strongest shoots to grow for next year's crop, with a bunch, and sometimes two, of fruit on them, besides two other shoots. I pinched off two or three leaves beyond the last branch; of course the selected shoots got no pinching till September, except the side shoots, or laterals as they are called, which were pinched three or four times during the summer. In September, or early in October, I picked 400 pounds of well-ripened fruit from these vines. I pruned again in the fall, this time leaving two canes four feet long to each, excepting a very few that had not grown quite so strong, and on which I left only one. I laid on the ground for winter protection with a few sods to hold them down, while a light covering of leaves held in place with a little dirt, secured them for the winter. Next season I gave them a trellis, and they gave me nearly an average of ten pounds each. Among them was a cane with three bunches that took the State Fair premium for the best three bunches of Concord on a single cane. Now I never was in a vineyard in my life unless my own may be called such, never saw one till I came to this country, and to find out what I had really accomplished I went to our State Fair in 1870 and took the first premium for most and best varieties of grapes, and the Transactions of the State Horticultural Society will show that I take more premiums than any one else.

I believe that unless vines are treated as I have described, they will not suit our severe climate. When Dr. Grant was blowing his horn so loudly about the Delaware, and advising fall planting, and layering so much from year to year, his pretty theory and pictures induced me to take $20 worth of bait (two dozen vines). I prepared the ground according to rule, set out in the fall, protected well with sandy soil (which was easily done, as the plants were little or no bigger than a timothy straw), and the result was that next spring three of the vines made an attempt to grow and finally gave up the ghost about midsummer; the others never even tried to make a live of it. That was enough for me of Dr. Grant and the Delaware for two or three years. After that I got a few cuttings, took care of them in the way described, and find them as hardy as Concord, and I think the secret of it is in caring for them the first three years; then they can be set deep enough to take care of themselves.

"PROGRESS AND IMPROVEMENT."

SPRING AND SUMMER PROSPECTS.

THE warm winter through most of the country has been very unfavorable for business, particularly in the West. In many places the roads have been almost unfathomable, and farmers have been unable to get to market, either to sell produce or purchase necessary supplies. In consequence of this state of things money has been exceedingly scarce among farmers, and business of all kinds has been unusually depressed. The coming of settled weather and better roads will of itself secure an improvement in business in many localities, and wherever any considerable portion of last year's crops remains unsold, money may even become comparatively plenty.

Notwithstanding some unseasonable weather in March, we believe the spring will prove earlier than for many years. Frosts and snows have not accumulated in large bodies, and the ice in the Northern lakes will be cleared out and open for navigation much earlier than usual. It is this cause more than any other which makes Northern springs backward. As a rule, we think farmers are preparing to sow and plant less than usual. But an early spring will enable them to do their work better, with less help, and probably, if fine weather prevails, to plant a little more than they had intended. The wheat crop seems generally to have stood the winter well, and farmers in Minnesota had commenced sowing spring wheat early in April. Wages are generally lower than for several years past, and if farmers would take the true view of the matter, the encouragements for hiring and planting largely were never better.

For the last two or three years winter wheat has been more injured by cold, dry weather in April and May than by winter freezing and thawing. Cold northwest winds have dried the partially exposed roots of winter grain, and prevented it from pushing forward. In such weather harrowing wheat instead of being beneficial has sometimes proved an injury, as pulverizing the soil without admitting moisture has only resulted in exposing new surfaces of roots to the winds. Forecasting the weather is always a difficult matter, but it is probable that this spring will be much more favorable for harrowing wheat than either of the last three previous ones.

What farmers should plant or sow for profit this year is beyond the wisdom of any one to advise. Every farmer must be guided by his circumstances and necessities. It is pretty safe to advise as great a diversity of crops as possible, and to have such crops as will be not only always salable, but furnish continuous employment through the season. Where only one crop is grown, the work comes all at once, requiring greatly increased cost of labor or neglect at the critical season. It is also safe to advise attempting a good deal—not however beyond your means to accomplish. Other things being equal, the farmer who sows and plants most largely, having of course plenty of manure and labor, will reap most abundantly, and he who only sows sparingly shall reap also sparingly. We read so much about the importance of concentrating effort, and of the profit of a little land well tilled, that we are apt to forget the other truth lying beside it, which is that on a large farm it is hardly possible for a farmer to make much money by cultivating only a few of his many acres. If two acres or ten acres are enough to cultivate they are enough to own, and the farmer had better sell the remainder of his farm than to keep it lying idle.

USE THE WHOLE FARM.

FARMING must be conducted on business principles or it cannot be successful. The first endeavor of a shrewd business man is to keep all his capital profitably employed. He is not satisfied to make large profits on a part while the greater portion is lying idle, nor will he allow lack of care or capital to rob him of profits which he might otherwise have made. Too many farmers, on the contrary, think they are doing well when they make large profits on one or two crops, or fields, though other parts of their farm may not be paying anything. Often on the cultivated parts of a farm the results are satisfactory enough, if it were not that these were so small as not to pay necessary expenses of conducting it. The farmer finds himself as badly off as the merchant who made a disastrous failure while selling all his goods at one hundred per cent. profit. The explanation is, that the merchant kept a peanut stand and his receipts were only fifty cents a day. The twenty-five cents clear profit did not pay the man's board and lodging, and he was bankrupted by personal expenses.

Looking at the subject from this point of view, we have innumerable agricultural and other journals urging farmers to reduce their expenses—to economize to the utmost extent in their homes, in travel, and on the farm itself. They seem to forget that farmers are already far more economical than any other class, and, without any prompting, have denied themselves luxuries, and even comforts, deemed almost indispensable by the residents of cities. The great majority of farmers, knowing that they cannot economize in their homes and personal expenses more than they do, accept this advice as recommending the hiring of less labor—planting and sowing fewer acres, scanty manuring and imperfect cultivation. In the meantime, family and personal expenses remain as before, because they have already been reduced to the lowest limit. It is easy to foresee that such a policy can only result in still smaller profits and greater pecuniary embarassment.

This policy is based entirely on a fallacy. Because farming does not pay it does not follow that holding a farm and doing nothing with it will be more profitable. It may be proved that owning land is unprofitable, but if the owner cannot sell at fair prices, he ought to make the most of his farm while he holds it. In this view, too little rather than too much help is employed. In the great majority of farms the profit depends more in the labor and manure put upon the land than upon the number of acres. Two men working fifty acres will produce and sell more than one man on one hundred acres. Often on a farm of one hundred acres, three, four, or even five men can be profitably employed, the number depending almost wholly on ability to secure manure. It does not pay to hire labor to cultivate sterile soil, or in fact any soil which cannot be made to produce large crops.

Farmers have been limited by their inability to get manures, except as made on the farm itself. Some of the shrewdest farmers of former years have yearly kept and fattened sheep and cattle, mainly as a means of increasing the manure pile. Others have sown clover seed, and manured it with gypsum.

It is only quite recently that farmers have practically learned the advantage of commercial fertilizers, and their greatest benefit is not yet fully understood. It is not the question whether commercial fertilizers are better than barnyard manures. Concede, if you please, that they are not so good. The fact remains, that where the farmer relies entirely on manures made in his barnyard he cannot, on one hundred acres, manure more than eight or twelve at the most so as to get a paying crop. Commercial manures will enable him to fertilize double or treble that amount of land without doubling or trebling his expenses. In this way he more than doubles his profits, besides the fertility of his farm. The peanut merchant would have done an exceedingly profitable business if he could have sold fifty dollars a day. What farmers need is to extend rather than decrease their operations, using more labor and more manure, and thereby cultivating the whole rather than merely a part of their farms. Doing this they will produce more cheaply, and not only have more to sell, but make a larger profit on every bushel of grain, or pound of meat, that they dispose of.

A QUESTION OF "JEALOUSY."

A CORRESPONDENT of the Boston Cultivator asks that journal:—"Please tell me what is the trouble between WILLARD and ARNOLD. I see in the Husbandman severe strictures on my friend WILLARD, and they accuse him of abusing ARNOLD. What is the matter? This I have to say:—If our great teachers, to whom we have looked for instruction in dairying, are so jealous of each other as to throw mud, I think it is time for dairymen to look elsewhere for what they need. We (*i. e.*, the St. Lawrence County Dairymen's Association) have been friends of both, have employed them both and paid both for their services rendered, and we now insist that they *must be good friends and work together* for the good of the whole dairy interest of the country, or we must look elsewhere for dairy instruction."

So far as the RURAL NEW-YORKER is concerned, its Dairy Editor last week proved conclusively that he had not been "jealous" of Mr. ARNOLD, or if he had, that he kept such "jealousy" very secret, noticing and commending Mr. A. frequently and warmly, urging his appointment to prominent positions in dairy matters, and every way dealing by him fairly and honorably. The charge that Mr. WILLARD was jealous of Mr. ARNOLD originated with the latter through his organ *two weeks before* the RURAL NEW-YORKER made its exposure of the Dairy Ring. If that exposure—simply stating the facts—was "throwing mud," we need a new definition of those words. The exposure was made solely from public motives—to save the Dairy interest at the Centennial from a mistake which threatened to make the display a failure. Read the Remonstrance of leading Northwestern Dairymen for proof.

The truth is that Mr. ARNOLD has long been "jealous" of Mr. WILLARD, and has been making this complaint among his personal friends for some time past. Only last year Mr. WILLARD was asked by the Secretary of the N. W. Dairy Association to recommend him to some suitable person to deliver an address, and he named Mr. ARNOLD. After delivering the address, Mr. ARNOLD complained to the Secretary that Mr. WILLARD had ignored and tried to injure him. Of course the slander was refuted, and Mr. A. was informed that it was on Mr. WILLARD'S recommendation that he had been invited to deliver the address. In the absence of the Dairy Editor of the RURAL NEW-YORKER we make this explanation, which throws a great deal of light on this subject. When a man is charged with "jealousy" of another he may, though entirely free from that feeling, find it difficult to prove a negative. Mr. WILLARD has conclusively shown that he has not exhibited "jealously" of Mr. ARNOLD in his actions or writings. The latter's warmest friend cannot say as much for him in his relations, not only to Mr. WILLARD but to other well-known writers on dairy subjects. We name as one, Prof. WICKSON, late of the Utica Herald and now of the Pacific Rural Press.

RURAL NOTES AND QUERIES.

Wants a File.—The Editor of the Rural Home neither denies nor admits the falsifying which the RURAL NEW-YORKER proved upon him two weeks ago. He does, however, plead that he wrote the falsehoods about the RURAL NEW-YORKER and its Editor without knowing whether they were true or not. "They were penciled while on the cars, with no file of the NEW-YORKER to consult," is his excuse. And now this cheeky Editor wants some one to send him a file in order to see how much lying he has been doing. He should have thought of that before. It seems to us that he might as well gnaw away at the file he already has, even though the RURAL NEW-YORKER does set his teeth on edge. The R. H. is, too, evidently anxious to get into a controversy; but it is hardly worth while to dispute with a journal which makes false charges at random and inquires as to their truth afterwards. Our contemporary shows so plainly its animus that its own readers, seeing only what it publishes, cannot mistake its character.

An Unjust Punishment.—Massachusetts is earning a hard name for her treatment of criminals. The latest case is that of Moses S. Wheeler, convicted eight years ago of arson on testimony of his sister. On her death-bed the sister confessed that she perjured herself and established her brother's innocence. He, having worked for the State eight years under an unjust sentence, naturally demands some compensation. The Legislative Committee investigating the case report against allowing it, "because it might establish a dangerous and costly precedent." The justice of his claim seems not to have been considered. At the best, Mr. Wheeler has lost eight years of his life besides all the disgrace of imprisonment. He could probably recover judgment by suing the State for damages, and this method of getting justice is worthy his consideration.

The Profits of the Centennial Exhibition.—The Philadelphia Ledger makes this computation: "If the Centennial Exhibition costs $7,500,000 the amount claimed to complete it, in order simply to realize this sum it will be necessary for 15,000,000 people to visit it once at the price of admission, 50 cents; and as the time is confined to 158 days (from May to Nov. 10, deducting Sundays, on which it will be closed), it will require the daily attendance of over 94,900 people." It is very doubtful whether this high average can be maintained, and besides this, there will remain innumerable incidental expenses, aside from the Exhibition buildings, which must be paid out of the receipts. Not one of the great international exhibitions have paid a profit, and our own, with the millions of Europe so far away, is not likely to prove an exception.

Where the Shoe Pinches.—The Editor of the Rural Home says:

"When it (the RURAL NEW-YORKER) went to New-York, it left the best portion of its special field for other occupancy."

That this is not true the Editor of the Rural Home has been gradually discovering, and this is what is the matter with the R. H. and one or two other journals which lose no occasion to assail the RURAL NEW-YORKER. The Spanish proverb says, "The tongue will always find the aching tooth." We have felt quite sure that the R. H. could not help telling the secret cause of its attacks on this journal and its editors, and this it has at last unmistakably done.

The American Insurance Co. of Chicago.—Long before the time of the great Chicago fire, it became apparent that though a company taking large risks in cities could do a profitable business by insuring farm property also, the combination was not beneficial to the farmer. This impression was greatly strengthened when the ruin of so many companies by that and other great fires compelled the farmers to pay a second, and in some instances a third, time for the same insurance, and taught them the safety of insuring with companies doing a farm business only. This did not suit the companies doing a mixed business, and, in the West especially, they have been making war upon the American Insurance Company of Chicago, because it was, and is, and promises to continue, one of the leading and most successful farmers' companies. The charges brought against it by its busy maligners are such as impose upon the ignorant only. The American, regarded as an all cash company, has ample assets and as large a surplus in proportion to its liabilities as any company. Besides this, it has a couple of millions of premium notes, which are first-class assets to fall back upon, giving it a larger amount of resources in proportion to its liabilities than any of the companies that are trying to prejudice the public against it. This company does business upon all the improved plans, notably, the installment plan, by which it insures for a term of years, but collects the premiums year by year. It insures only detached property. It has always done a safe and prosperous business, has the fullest confidence of its patrons, and is, in every respect, a company to be relied upon.

The Senate and the Postage.—The U. S. Senate has passed Senator HAMLIN'S postage bill with some amendments, the principal of which is to allow reduced postage—one cent for three ounces on newspapers, but requiring the present rate on third-class matter. This places the Senate in antagonism to the House, and a committee of conference will probably be appointed before either bill can become a law. In demanding a cheap and uniform rate of postage on all third-class matter, the lower House of Congress unquestionably represents the people. Congress ought not to give way to the Senate and won't, if the people back their representatives as they should. A motion to pass the bill as it came from the House was only defeated by a tie vote—25 to 25. If the House does not back down the Senate speedily will.

Kerosene Dangerous.—Dr. WILSON of Meriden, Conn., says that kerosene oil is the origin of diphtheria. The disease is a comparatively new one, and was not known before the oil wells were discovered. Wherever diphtheria prevails, Dr. W. prohibits the lighting of kerosene lamps. He says that the substitution of candles always effects a marked change for the better in his patients. He also calls attention to the great prevalence of diphtheria where kerosene refineries are in operation.

Wheat Killed.—The Indiana Farmer says that thousands of acres of wheat have been killed in that State, and will be plowed up and sown with oats. It adds that the oat sowing will probably be very large.

RURAL BREVITIES.

THE Maine Farmer asks for a Dairymen's Board of Trade for that State.

A CALF in Massachusetts on the day of its birth weighed 164 lbs. It was of the Short-Horn breed.

FEED horses liberally as the working season approaches, if you would have crops got in early and in good order.

DAVID DENNETT of New Orleans has published a book, "Louisiana as it Is," which may be interesting to those wishing to go South. Its price is 63 cts., including postage.

CANARY seed is worth $6 to $6.50 per bushel, and it is suggested that it can be profitably grown—at least enough for home use. Sow the seed early in rich soil, as it is liable to injury by summer drouths.

M. B. BATEHAM, in the American Farm Journal, very highly commends the Sterling strawberry, a seedling of the Jucunda, introduced by MATHEW CRAWFORD, and now grown by G. H. LODGE, near Cleveland, Ohio.

SENATOR HAMLIN objects to a reduction of postage because he wants to make the Post-Office Department "pay" the Government. Suppose he should apply this rule to himself. How quickly he would go out of the Senate, as a legislator whose services have never been worth the pay he received.

THE Twelfth Annual Report of the Ohio Dairymen's Association and Proceedings of the Western Reserve Dairymen's Association come to us in a neatly-printed and valuable pamphlet of thirty-two pages. Col. S. D. HARRIS of Hudson, Summit Co., O., is Sec. and Treas., and from him copies of the pamphlet may be procured by those interested.

BUSINESS NOTICES.

Valuable and Reliable.—"**Brown's Bronchial Troches**" are invaluable to those exposed to sudden changes, affording prompt relief in Coughs, Colds, etc.

HUNDREDS of testimonials, from all sections where the "**Phœnix**" **brand Pure White Lead** has been sold, certify to its great superiority over all other paints.

IDYL OF SPRING.

O'ER the earth the Springtime, smiling,
Scattering leaves and flowers along,
Sweeps her harp of vibrant branches,
And the earth breaks forth in song;
Blue the wild flower clothes the hillside,
Green the ivy's trailing vine
Drapes the rocks in graceful festoons,
Sunshine gilds the somber pine.

In the icy steps of Winter,
Ferns and flowers are gay and green;
O'er the stream, freed from its bondage,
Budding willows wave and lean;
Now the blackbird and the swallow,
Glad-voiced darlings of the Spring,
Fill the air with pleasant twitter,
Their sweet mother welcoming.

The Story-Teller.

NELLIE HARTWELL'S HOUSEKEEPING.

"My dearest Nellie!"

"Dear Horace!"

"And you will be content to take me as I am—a poor clerk, with only seven hundred a year? Will you be happy to pass life with me in a small house, and attend to the domestic affairs yourself?"

"Yes, Horace."

"But, have you considered, my best beloved, how great a burden this may sometimes be?"

"A burden! O, Horace, as if anything that I could do for *you* would be a burden! A sweet little vine-wreathed cottage will be delightful. A cozy house all to ourselves, and no prying housemaids to spy into everything we do, and prate of our faults and failings to the whole neighborhood!"

"And no burnt steak and black coffee! Doubly delicious the ambrosial nectar that your lily hands shall prepare, my day-star, my wife—that is to be."

Immediately upon this followed a concussion which made the windows clatter as in the breath of a tempest; and, from what little experience we have had in such promises, we must venture to affirm that he kissed her—which of course sealed the compact.

Horace Hartwell was a fine-looking young fellow of twenty-three—a clerk in the jobbing-house of Martin & Turner; and Nellie Armstead was the daughter of a man who, though by no means wealthy, had a wonderful talent for appearing so. In this laudable endeavor he was aided by his wife—a handsome, showy woman, who brought her daughter up to ornament the parlor, to the utter utter exclusion of the kitchen. Therefore, Nellie was well qualified by education to become the mistress of a house, and the regulator of its domestic affairs.

Horace Hartwell had fallen in love with her pretty face at a picnic; and, on obtaining an introduction, the infatuation had increased, until he came to the conclusion that he could not live without her; and Nellie was firmly convinced that she should pine away and die if separated from Horace. And having succeeded in convincing Mrs. Hartwell of this fact, that lady informed her husband, and the good man had nothing to do but consent to the marriage which was to be the means of saving two valuable lives.

One fine, sunshiny morning in May, Horace and Nellie stood before the clergyman, and after that people called Nellie Mrs. Hartwell, and congratulated her on the happiness which was within her reach.

The young couple took up their residence in a neat, one-story house a little removed from the bustle of the city, and easy of access from the store where Horace was employed. And here they first came to realize that Longfellow was not far from the truth, when he said,

"Life is real, life is earnest."

Their house was comfortably, if not luxuriously furnished, and an ample stock of the good things of life was laid in for Nellie to exercise her skill upon as a *cuisinier*.

When everything was put to rights, and Horace had gone to his place of business, leaving many a lover-like kiss on the white forehead of his wife together with the intimation that he would expect dinner at three o'clock, Nellie consulted her watch, and found that she had full four hours in which to prepare that important meal. She would dress before she commenced doing anything about the kitchen, she thought; she had read so much of untidy housekeepers, it never should be said *she* went round the house in slip-shod shoes or dingy wrappers. O, no, housework should never make a sloven of her.

So Nellie went up to her chamber, arranged her hair in becoming ringlets, donned a pretty white cashmere *peignoir* over an embroidered skirt, and with black velvet bracelets on her arms and a blush rose in its own sweet buds and foliage on her bosom, it must be confessed that little Nellie looked pretty enough to challenge anybody's admiration.

"Let me see," quoth she, meditating, "what shall I have for dinner? Horace is fond of broiled steak; I've heard him say so. And pudding; yes, there must be pudding; a rice one, I guess, will be best. And then there must be potatoes and bread. That will suffice for the eatables; now for the drinkables, as Aunt Keziah says. Shall I have tea, coffee, chocolate or water? My head doesn't feel very well, and it shall be tea; tea helps settle anybody's head, I have heard mother say. That's all, I believe—no, there's the sauce; there must be some kind of sauce. Shall it be apple or cranberry? For this once, cranberry; it's an abominable job to pare apples, and it stains one's hands so shockingly; and Horace can't endure stained hands. I'll go and make a fire now."

And suiting the action to the word, Nellie, after some search, found the coal shovel, and put into the stove a peck of coal and an ignited bunch of friction matches, then stood quietly awaiting the conflagration which was to ensue. Nothing alarming occurred; there was considerable smoke, and a powerful, strong smell of brimstone, but no great fire. She concluded that the matches didn't get fairly burning, so she tried another bunch; and believing this could not fail of accomplishing her design, she retired to the pantry as the next field of operation. After considerable thought on the subject, she decided to make the pudding first; it would be the most difficult job, she argued. Well, how was it to be made? "The Revised American Cook Book and Delicate Housewife's Especial and Valuable Friend in Need" was called in play. There was a paragraph on the cover to the effect that you would find everything worth knowing within the lids of that invaluable casket of diamonds; and Nellie fondly believed that people in general prefer speaking truth to a lie! So she opened the book in full faith touching its veracity.

"Rice Pudding. Put the rice to soak in lukewarm water, having picked it clean of all impurities; and milk, sugar, and salt to your taste. A little nutmeg and a couple of eggs improve it."

"Goodness me!" ejaculated Nellie, "how am I to know anything about it, I wonder? How much is a little nutmeg? And how much rice, and milk, and sugar, will be enough? And, as I live, if there ain't the awfulest smut spot upon my skirt! I must wash that out the first thing!" And, forgetful of pudding and dinner, she flew to the wash-bowl, and scrubbed the soiled cambric till its gaping threads cried eloquently for quarter.

By the time this was cleansed she espied a second spot, located on the sleeve of her dressing-gown, and this must undergo the same elaborate process as the former blemish. When thus much was gone through with, she saw that the rose on her bosom was in a disabled condition—the rose itself being among the missing, and the two delicate buds broken and wilted. So Nellie had to go up stairs and get a fresh blossom. Horace admired flowers, and thought Nellie became them amazingly.

"Now the pudding must be mixed, for certain," said she, assuming an air of pretty importance, which, unfortunately, no one was there to see. "Let me read that receipt over again. 'Pick it clean of all impurities.' I wonder if that means the water, or the rice. It can't mean the rice, assuredly, for that is as clean as it possibly can be; it is the double refined—no, double distilled—mercy! strange that I should forget the label on the box! Well, it is pure rice, that don't need any picking, any way. How much rice will it take? Goodness! I wish the cook book was a little more definite. Some time, I'll write one myself, that will give all the particulars to a teaspoonful. Well, we shall want the large white dish full; I'll measure it, and see how much it holds."

And away flew Nellie to guage the pudding-dish, in order to calculate the quantity needed for the pudding. She found the plate capable of containing two quarts, and from this she concluded that two quarts of rice would be quite enough. The extravagant item was measured out, and committed to a tin pan full of water to undergo the soaking process, and Nellie surveyed with dismay what remained in the box.

"Dear me! it must be a terrible expense to keep house—here's every bit of that rice gone for a pudding; and Horace only having seven hundred dollars a year. I must try to be very saving. I won't use as much sugar as I intended to; and the recipe says a little nutmeg—and I won't put in so much as that. Economy is a real virtue."

Soliloquizing thus to herself, Nellie mixed the rice, water and all, with a cupful of milk, a teacupful of sugar, two unbeaten eggs, a half a cup of salt, and a few grains of nutmeg. This precious compound she put into the oven of the stove and then proceeded to examine the fire. This was not so easily done, as there was no fire to be examined. Nellie thought she never did see such a contrary stove in her life; and by way of improving its contumacious disposition, she poured two or three spoonfuls of burning fluid on the coal, and then touched a lucifer to it. The effect was astonishing; the covers of the stove were blown off like a beaver hat in a nor'wester, and the fire proved to be a mere "flash in the pan."

"Never mind," said Nellie, in a consolatory tone: "I guess it will kindle; there seems to be a small blaze underneath."

The potatoes were brought next, and having carefully peeled them, she placed them in a kettle with some water and put them over the stove. Then she cut the steak—and her finger at the same time; and the extraordinary gyration which she made under the influence of the pain upset the flour bucket into the slop-pail and entangled her crinoline in the hooks of the steelyards which depended from the wall. It was a long time before she could break clear from those tenacious intruders; the steel frame-work of her skeleton held on like true metal, and the hooks of the steelyards were bound not to let go; so a compromise was made, and Nellie divested herself of the war-like garment and disengaged the combatants at her leisure.

Nellie had heard her mother's cook say that pounding meat made it tender; and, in pursuance of this knowledge, she put the pieces of steak into a mortar and pounded them until the perspiration streamed down her face and her arms ached with the exertion. As for the meat, it is best not to say much regarding the appearance; but it more strongly resembled a poultice than anything else.

While she was thus engaged the cat—a family pet—had taken possession of the remainder of the steak, and was enjoying it to her feline heart's content, in the shadow of the pickle jar.

"Scat, scat, you beast! Shoo, scat, there! Shoo, I say!" cried Nell, dropping the mortar, and making at pussy with the pestle elevated over her head. The cat, to avoid the impending blow, made a sidelong spring, knocking down a shelf which held several vessels of milk, and this shelf falling upon the egg basket, smashed a chosen dozen of as good eggs as ever a hen cackled over.

Nellie had quite a mind to sit down in the midst of the ruin and indulge in a good cry; but she controlled herself, and after mopping up the milk, to the great detriment of her white garments, she went out into the kitchen to see what progress the fire was making. There was not the least vestige of a fire about the premises, and poor Nellie was in despair. Just then she spied a boy going by, and called out:

"Here, boy, here! I'll give you ninepence to do a little job for me."

The boy's eye glistened at the prospect, and he obeyed her call with alacrity; but, when she told him to make a fire, he laughed in her face. However, he was a capable lad—as Nellie thought—and ere long, by his skillful application of kindlings, a brisk fire was in progress. The stipulated price was paid, and Nellie considered it a good bargain.

The pudding was in the oven, the potatoes in the pot, the steak on the gridiron upon the top of the stove—everything was *en traine*. By-and-by the dripping from the fat began to smell rather unpleasantly; it filled the room with smoke so dense and stifling that poor Nellie's eyes grew red and tearful; and the tortured meat sizzled and hissed, and turned black as a bear's skin. Nellie threw open the doors and stuck to her task of turning the gridiron, resolved in vulgar, though expressive parlance, "to grin and bear it."

The pudding boiled over a continued stream; the potatoes bounced up and down in the kettle like cockle shells in a stormy sea; the steak groaned and spit; and in the midst of it all the clock struck three. Punctual to the hour, Henry's step sounded in the entry; the kitchen door was flung open with a lover's impetuosity, and that individual invaded the smoky room.

"Good gracious, Nellie! is the house on fire? Come here this moment, darling. What under the canopy ails your face? It's blacker than the ace of spades—begging your pardon for the comparison. Do look into the glass, Nell!"

He wheeled her round towards the mirror, and surely, the picture there presented was not the most attractive one that a young husband might wish to look upon. The ashes which had been evolved from the stove through her unremitting attempts to make a fire, had settled on her hair, until her head was as white as that of an ancient militia captain, powdered for training day. One long curl had dipped itself in the hot water, over which she had been standing in vain effort to scrub the stains from her clothes, and it was straightened out as perpendicular as a candle, and hung, dripping with water, down her back. To finish the *tout ensemble*, a streak of smut extended from her left temple across her nose to her right cheek, and at sight of the ridiculous figure she made poor Nellie burst into tears. This only made matters worse; but Horace, like a true hero, kissed away the tears, soot and all, transferring by far the larger portion of the latter substance to his own face. Then he off coat, turned up sleeves, and announced himself ready to assist about the dinner. In this respect Horace was a jewel, and his wife blessed him for the generous heart which prompted his ready sympathy. But his abilities as a cook were in no wise equal to his will. He turned the steak, and lost half of it in the fire through the bars of the gridiron, "set" the table with the cloth wrong side out, the knives in the spoon-holder, the butter in the preserve bowl, and mistook the pudding dish for the meat plate.

The potatoes were fished out of the pot, boiled to a complete mash; not one particle was left upon another; and Horace, to his wife's dismay, insisted upon straining potatoes and water through the dish-cloth, in the hope of saving the remains.

At last they sat down to dinner—baker's bread, suspicious-looking butter, meat, and a pie from the confectioner's. The pudding was to answer for the dessert.

"Is there tea or coffee, dearest?" asked Horace, looking dubiously over the table.

"Goodness, if I didn't forget it!" cried Nellie, springing up with such force as to upset the castor, and send the vinegar dancing to the floor. "How much tea will it take for us?"

"I don't know, I'm sure," said Horace, slowly. "What does your cook-book say?"

Nellie consulted the work.

"It says 'a quantity proportionate to the size of the family.' How much would that be for us?"

"Well, I don't know, about a cup full, I should think."

So a cup full was put into the urn; hot water was added, and the two housekeepers sat down and waited patiently for the steeping to be finished. At last the tea was drawn; Horace sugared and creamed it, and put the cup to his lips.

"Good heavens!" cried he, in dismay; it is strong enough to bear up a long-boat; and black, too. No more black ink needed in this house yet a while. We must drink water to-day. There, there, never mind; it was all my work."

Nellie's tears had begun to flow again, and Horace leaned over the table to kiss her forehead, upsetting the tea at the same time into the bosom of his white vest. The amount of caloric contained in the fluid was decidedly unpleasant, and poor Horace, under the influence of the pain, kicked over his chair and broke the looking-glass with the flourish of his elbows. Then he begged Nellie's pardon, picked up the chair, removed the fragments of the mirror, kissed his Niobe of a wife, and sat down to finish his dinner. Alas for his appetite! The steak was nothing but a burnt cinder—outrageously detrimental to molars and

SOAP BUBBLES.

Incisors; the potatoes were *non est;* and Horace saved all his powers for the pudding. And he had need of them.

The dessert was brought on and poured into its appropriate receptacle, and Horace helped himself and his wife to bountiful portions.

"Turk's Island! and crystallized limestone!" cried he, dropping his first mouthful back into his plate. "Lot's wife must have been imported in the last steamer."

"Why, Horace!" exclaimed Nellie, in alarm, "what is the matter with the pudding?"

"Salter than salitudus! Do taste, Nell!"

One mouthful was sufficient. Nellie's pretty face was screwed up into a hundred puckers.

"Why, Horace, who would have thought it? I only put in half a cup full."

Dinner passed off rather soberly. Nellie was mortified at the ill success of her hard work. Horace was obliged to quit the table hungry, and we all know that a man with an empty stomach, and the prospect of that organ's remaining thus, is a formidable animal.

However, his good humor returned directly. He kissed Nellie good-by, and left her to the task of washing the dishes—no easy duty, by the way.

The dinner and its accompaniments were but the prototype of many another dinner. It would be infinitely amusing to the reader to follow Nellie Harwell through the four weeks following her removal to a house of her own.

She invariably forgot to make the bed until she went up stairs to retire; the lamps were never filled till the moment they were wanted; the carpets were swept after she had dusted the furniture; she boiled the calico clothes and the white ones together; made starch of cold water; ironed Horace's dickies wrong side out; sewed up the fingers of his gloves; mistook salt for saleratus and tartar emetic for salt; burnt the meat, forgot to sweeten the sponge cake, and made a hundred other blunders that every inexperienced housekeeper can imagine for herself.

A month of this kind of existence passed away, and Nellie broached a plan to her husband. Horace was only too delighted to consent. Their house was shut up; the young man went to a boarding-house and Nellie went to Aunt Martha Chase, a widowed sister of her father, who resided in a country town some twenty miles away.

Aunt Martha was a lady more celebrated for the excellence of her pies and preserves than for the number of her flounces, and under her tutelage Nellie became, in time, what every woman should be, without regard to her station, a good housekeeper. And when at the end of three months she went back to her own house, there were no more salt puddings or burned steaks.

Little lady, think well beforehand, if the adoration of your accepted lover will live after marriage if fed upon bad bread and black coffee.

FAST LIFE.

Every newspaper reader must have noticed the unusually large number of exposures of dishonest clerks and cashiers lately made in this city. Whether these have been crowded into a few weeks by the general scrutiny which the close of the year always makes in mercantile affairs or not, we do not know. It is certain, however, that the magnitude of some of those thefts and the baseness of certain breaches of trust show a most unfortunate state of things. In the four or five cases of the deliberate stealing of goods from mercantile houses which have been reported within a few weeks, the facts look blacker for the thieving employes than they would if the purloiners had been driven to theft by sheer distress. One young man, who had smuggled his plunder out of the warehouse for more than two years, and had systematically repacked and sold it, is described as a person of good habits and "highly respectable connections." Yet he had stolen about $20,000 worth of goods from his employers before he was detected.

It will be found that almost all the betrayals of commercial trusts to which we refer have extravagant or fast living for their immediate motive. It need not be supposed that expensive habits necessarily involve gambling, drinking, or secret immoralities. That there is too much of this in the career of young men of small incomes and extravagant lives everybody admits. One young man who managed to make away with nearly one hundred thousand dollars of his employer's cash was, a week or two since, discovered to be maintaining a costly private establishment. Another dishonest cashier was suddenly found to be a gambler, and a third, over-fond of fast horses and fine equipages, went into the stock market to "make a raise," lost, and finally retrieved himself by stealing from his employers' cash-box and falsifying his accounts. But although these particularly flagrant breaches of trust seem to prove that vicious habits lead directly to dishonest practices, multitudes of other cases remain unaccounted for on any such theory.

Somehow it seems hard for our people—more particularly our city people—to come down to the plainer style of living which we knew before the war. The times have changed, but the manners have not. Ever since the panic of 1873 we have been "coming down to bed-rock," as the expressive phrase runs, but thousands of people refuse to modify their expenditures accordingly. In the nature of things, it is impossible for men to make the sudden fortunes, with almost no capital, which were once so common. But young men in commercial life, shut up to the prospect of a certain fixed and not princely salary, are discontented because they cannot keep luxuriously furnished apartments, entertain their friends handsomely, and dress expensively. The highly respectable young man, of correct habits, who muddles away his modest salary on fine clothes, upholstery, pictures and bric-a-brac, is in a fair way to be tempted to steal from his employer whenever he has a good chance. He cannot endure a plain style of living—so many of his associates' manners of life makes him seem mean. In this way the temptations of a city life are really much greater than the moralists make them appear.

The consequences of this false style of living are clearly apparent. If some new Asmodeus could take the roofs off our city houses, he would be appalled by the revelation of domestic unhappiness caused by ambitious extravagance. But worse than this is the crime into which so many young men are led by a similar weakness. Employers do not know much about the habits and expenses of their servants. We do not exactly see how they can. The conditions of society have changed very much since the time when young men in shops, warehouses and banking-houses were regarded as apprentices, and were a part of the family of their employers. The only hope for the future is in a more general practice of economy in all departments of life. The old-fashioned virtue of frugality seems quite lost. Few young men save anything. Many of them spend more than they earn. The result is that the shore is strewn with moral wrecks.—*N. Y. Times.*

A GOLDEN GIRL.

There is a servant girl living in a family on Howard street who wouldn't be permitted to change places if $10 per week would be any inducement for her to stay. She makes it her special duty to meet agents and beggars at the door, and to dispose of them without the least annoyance to the family. She has a rule to meet each case, and her rules are perfection. The door-bell never fools her. She can tell a caller's ring from a beggar's ring as certainly as the bell is touched. When she opens the door and finds a man with a red goatee having a clothes-wringer in his hand, she doesn't wait for him to hem and haw and say that his clothes-wringer beats all the other wringers ever made. She gets the start by saying:

"You seem like a decent, respectable man, and as a friend I warn you that the owner of the house saw you come up the steps and he ran into the back yard to unchain his Russian bloodhound."

The man with the red goatee slings that wringer over his right shoulder and canters out of that neighborhood with his teeth on edge and cold chills playing lag up and down his back.

The next one may be a young lady, who boldly inquires for the lady of the house, and has a new kind of lace powder to sell.

"You can go in," whispered the girl, "and I will stand at the door so as to rush in when you call. If the mistress asks you to taste anything, beware of poison. She may not have her little revolver with her this morning, and I guess it will be safe for you to go in."

"Why—why—?" stammers the young lady.

"Go right in—she may not be dangerous!"

"Never mind—I'll call again—I'm in a hurry!"

And that settles that case.

The next is one of those old chaps who go about with tears in his eyes, willing to work if work can be had, but never finding any work their health will permit them to do.

"Madam," he says, as she opens the door, "for mercy's sake, let me work at something long enough to earn a slice of bread!"

She motions him to go around to the side door, and is there to let him in. She hands him an ax weighing seven pounds, with a straight handle, points to three or four big knots which have became almost petrified, and softly says:

"You look hungry, and as soon as you split those up, I'll give you the best meal you've had in a month."

She goes in, and he spits on his hands, looks at that old ax, and then folds his little tent and slips through the gate like a shadow of fate.

Then the little girl who canvasses for the orphan asylum, rings the bell. She is met with a smile, and the hired girl says:

"You poor little thing! I pity the orphans, and I'd like to give you some money. If you will get the mayor to come here and say that it is all right, I will give you three cents."

The little girl thoughtfully pursues her way, and another case comes, is met and disposed of, and the mistress of that house is never disturbed or annoyed.

KEEP CHEERFUL.

It is not very difficult for a person to be sunny-tempered when everything is going prosperously with him. When a man has made two or three hundred dollars a day, and all the signs are favorable for his making the same amount to-morrow, how good-natured he can be. When the hour comes to close the store, he takes his hat from the peg, buttons up his overcoat, draws on his gloves and starts for his home with the feelings of a king. He feels kindly towards everybody. He buys a paper of the newsboy, snaps him a ten cent scrip, and hurries along without waiting for the return change, chuckling to himself as if he had perpetrated a first-class joke. When he comes to his house he smiles at the servant, kisses his wife,—or ought to—bounces the baby, and fills the entire household with a sense of his own supreme satisfaction. Ah me. How easy it is to be good-natured under such circumstances. What saints we all are when we have all we want!

But times change. The business sky looks dark and becomes black with ominous clouds. Under our feet run rumblings and the premonitory unsteadiness which always precede a financial earthquake. The commercial atmosphere is motionless and oppressive; everybody senses danger. Buyers are timid; sellers are suspicious. The current of trade shrinks. Goods remain unsold; paper on which you had relied goes to protest; household expenses begin to crowd; small bills accumulate; duns grow imperative. Ah, now is the time, friend when good nature in you is a virtue; yea, a grace, and a grace, so white that it shall be seen in the highest heaven and noted there. Now is the time for you to show what stuff you are really made of. Now is the time, if you are a gentleman, to prove it. If you love your wife, now is the time to show it; if you have faith in something nobler, higher, sweeter, than this world and its possessions, let that faith be manifest in your conduct everywhere. Don't take a gloomy face, and a surly voice, and a sour temper to your household. That household has its own cares, and troubles, and clouds enough in its own sky. Tell your wife your difficulties; but in such a brave, gentle and loving way as, instead of oppressing her spirits, will cause them rather, to rise buoyantly at the thought that she is fully trusted by you and may be able to help you. "Bear ye one another's burdens and so fulfill the law of Christ."

SLANG OF ARTISTS.

The conversation of artists, when it has reference to their profession, is usually patched up with phrases peculiar to themselves, and which may not improperly be called the slang of art. This jargon, when heard by persons unacquainted with its application, is apt to lead to awkward mistakes. A laughable instance occurred lately. A party of artists were traveling in a stage coach, in which, beside themselves, a sedate, venerable old lady was the only passenger. The conversation among the artists ran as follows:—"How playful these clouds are! That group to the left is sweetly composed, though perhaps a little too solid and rocky for the others. I have seen nothing of Brown lately. I think he is clever. He makes all his flesh too chalky. You must allow, however, that he is very successful with the ladies!" The old lady began to exhibit symptoms of uneasiness, and at the close of each observation cast an anxious and inquiring look at the speaker. Her companions, however, unconscious of the alarm they were exciting (for she entertained doubts as to their sanity), went on in the same style. She heard them, to her increasing dismay, talk of a farm-house coming out from the neighboring trees, and of a gentleman's grounds wanting repose. At length they approached an old village church. A great many observations were made about the keeping, and so forth, of the scene, which the old lady bore with tolerable equanimity. But at last one of the party exclaimed, in a kind of enthusiasm, "See how well the woman in the red cloak carried off the tower." This was too much. The lady screamed to the coachman to stop, paid him her fare, although advanced only half way on her journey, and expressed her thankfulness for having escaped alive from such a set of madmen!

A CONNECTICUT WEDDING FEE.

The Hartford Courant narrates the following ludicrous incident:—A clergyman who was formerly located in this city, but who is now in New York, married a little over a year ago a couple who at once started for Europe and have recently returned. The bridegroom was a gentleman of wealth, and before he presented himself before the altar he placed a $100 greenback in his vest pocket to give the parson for the marriage fee. While crossing the ocean he discovered, greatly to his astonishment, the bill in the pocket where he had placed it, and could account for its presence there only on the theory that he must have had another bill of different denomination, and which he had given to the clergyman by mistake. On getting back to this country he determined to solve the mystery, and waited upon the reverend gentleman and inquired if on a certain occasion he did not marry a certain couple. The clergyman remembered the occasion perfectly. "I know I am about to ask an impertinent question," said the visitor, "but I should like to be informed what fee you received for performing the ceremony?" The clergyman said that he would, of course, gratify him. "I received," he went on to say, "a very small quantity of fine-cut chewing tobacco, folded in a very small piece of paper." The only thing remaining to be done the gentleman did. He laughingly apologized for the mistake, shook hands, and made good his original intention by leaving $100 in the hands of the clergyman.

CÆSAR SMITH AS A FINANCIER.

The "man and brother" is arriving, though by slow degrees, at the distinction of securities. With him, as with his less deeply frescoed fellow-citizen, absolute security for capital invested is of higher moment than large interest. Thus it was with Mr. Cæsar Smith, who applied recently to his neighbor, Mr. Thompson, for advice.

"Mr. Thompson," asked Mr. Smith, "wud you len' Cuff Jones forty dollars ef you was me?"

"What security can he offer?"

"A morgidge."

"A mortgage? Why, what has he got to mortgage?"

"Dat's w'at bodders me, Mr. Thompson. I knows he don't own nuffin but do ol' duds on his back."

"Well, then, how can he give you a mortgage?"

"Dat's de queshun, Mr. Thompson. No, he can't do it, an' I's made up my mln' dat he can't have de money onless he gives me his note o hand.—*Harper's Magazine.*"

Sabbath Reading.

OUR DAILY BREAD.

A beggar boy stood at a rich man's door—
"I am houseless, and friendless, and faint, and poor,"
Said the beggar boy, as a tear-drop rolled
Down his thin cheek, blanched with want and cold.
"Oh, give me a crust from your board to-day,
To help the beggar boy on his way!"
"Not a crust nor a crumb," the rich man said,
"Be off and work for your daily bread."

The rich man went to the parish church,
His face grew grave as he reached the porch;
And the thronging poor, the untaught mass,
Drew back to let the rich man pass.
The service began—the choral hymn
Arose and swelled through the long aisles dim:
Then the rich man knelt, and the words he said,
Were "Give us this day our daily bread."

LET US HELP ONE ANOTHER.

This little sentence should be written on every heart and stamped on every memory. It should be the golden rule practiced not only in every household, but throughout the world. By helping one another we not only remove thorns from the pathway and anxiety from the mind, but we feel a sense of pleasure in our own hearts, knowing we are doing a duty for a fellow-creature. A helping hand, or an encouraging word, is no loss to us, yet it is a benefit to others. Who has not felt the power of this little sentence? Who has not needed the encouragement and aid of a kind friend? How soothing, when perplexed with some task that is mysterious and burdensome, to feel a gentle hand on your shoulder, and to hear a kind voice whispering, "Do you feel discouraged. I see you are troubled—let me help you." What strength is inspired, what hope created, what sweet gratitude is felt, and great difficulty is dissolved as dew beneath the sunshine. Yes, let us help one another by endeavoring to strengthen and encourage the weak and lifting the burdens off from the weary and oppressed, that life may glide smoothly on and the fount of bitterness yield sweet waters; and he whose willing hand is ever ready to aid us, will reward our humble endeavors, and every good deed will be as "bread cast upon the waters, to return after many days," if not to us, to those we love.

"NEW EVERY MORNING."

How many bright things there are in the Book of Lamentations! It has a sad title, and in our happy moods we should hardly think of turning its leaves. Our instinct would be to go to it in our grief to find suitable utterances of our burdened hours. We open to its lines as to those who walk under a weeping sky and beneath the rain of falling tears. But our walk will often, as we look up, show us a rift in the clouds, and the blue sky shining through, and the blessed sunshine streaming down.

Here is an utterance that has the sunbeams in it:—"The Lord's mercies are new every morning." What an assurance this is to carry with us in all our wayfaring through this world!

The future is always dark to us. The shadows brood over it. A veil hides it from our sight. What is under the shadows, what is behind the veil, what is advancing to meet us out of the impervious mist, none of us can know. We have no anxious questions to ask. This is enough for all that is coming—"The Lord's mercies are new every morning." The mornings yet to break upon us may be heavy with storms; no matter, the new mercies will not fail.—*A. L. Stone, D. D.*

GOLDEN THOUGHTS.

Our dead are never dead to us until we have forgotten them.

The quality we call moral courage is necessary to finished success.

Man may judge us by the success of our efforts; God looks at the efforts themselves.

It was George Herbert who said a handful of good life is worth a bushel of learning.

Our court dress in heaven and our garment of sanctification for daily wear, are the condescending gifts of Christ's love.

The study of literature nourishes youth, entertains old age, adorns prosperity, solaces adversity, is delightful at home and unobtrusive abroad.

If you will not do that which God hath enabled you to do, how can you expect that he should do that for you, which, of yourself, you cannot do?

Trials teach us what we are; they dig up the soil, and let us see what we are made of; they just turn up some of the ill weeds to the surface.

Experience teaches, all is true; but she never teaches in time. Each ever brings its lesson, and the lesson is remembered; but the same event never occurs again.

If life had its fixed beginning and end, we could finish our works or our affairs, before going into the other world; but as everything is begun when we come to the earth, nothing is ended when we leave it.

What would be wanting to make this world a kingdom of Heaven if that tender, profound and self-denying love practiced and recommended by Jesus were paramount in every heart?—*Krummacher.*

It is in the whole people that we must put our hope and trust—the whole people, as they shall be operated upon by slowly-advancing ideas of truth, justice and purity.

Ladies' Portfolio.

THE FOOTSTEP ON THE STAIR.

I HAVE very many treasures
That my heart has hid away;
There's a little curl that's brighter
Than the sunshine of the day;
And a little shoe that's faded
Is among my treasures there—
And I listen when I see it
For a footstep on the stair,
For a patter, patter, patter
Of the footstep on the stair.

Now those little feet are silent,
And the face is hidden low,
Underneath the meadow grasses,
And the daisies' fragrant snow;
And I miss them in the morning,
Pattering feet and face so fair—
But I listen most at bedtime
For the footstep on the stair.

Then she'd come and kneel beside me
In her little gown of white,
And she'd say her short prayer over,
And would kiss me sweet good night.
And I listen in the twilight,
Though I know she is not there,
But I cannot still my yearning
For the footstep on the stair,
For the patter, patter, patter
Of the footstep on the stair.

OUR INFLUENCE.

WE women are not apt to stop and consider the influence that our words, looks and actions exert over those around us. We are constantly surrounded by critical imitators, and those who look to us as being models from which they are to mold their morals and manners. As the mother is, so are her sons and daughters. If a family of children are blessed with an intelligent, cultivated mother, who is dainty and refined in her manners, and does not consider it necessary to be one woman in the drawing-room and an entirely different person in her every-day life, but who is a true mother and always a tender, charming woman, you will invariably see her habits of speech and perfect manners, repeated in her children.

Great, rough men and noisy, busy boys, will always tone down their voices and step quietly, and try to be more mannerly, when she stops to give them a kind word and pleasant smile—for a true woman will never fail to say and do all the kind, pleasant things she can, that will in any way help to lift up and cheer those whose lives are shaded with care and toil. The dear Lord has given us the bright, beautiful sunshine, and we should gather an unlimited supply, so that we can give a generous measure to all who have failed to look up and take this great blessing into their own lives.

The mother of to-day rules the world of to-morrow, and what an untold responsibility rests with her to whom God has given the care of an immortal soul? Talk about "Woman's work!" What work can she do that will be so *grand and complete* as that of training her boys and girls to be true men and women?—To what work can she devote her life that will bring her so great a reward and so bright a crown as this? God pity the poor little ones who are really worse than motherless, and who are left to the tender mercies of a servant, or else sent into the street to be educated, and whose mother is only happy when those "tormented young ones" are out of her sight and hearing. Perhaps that mother is President of some Woman's Rights' Society? God has given her "rights," but she deliberately casts them under her feet,—those precious rights that many a woman would give a kingdom for—but to her, they are irksome bonds that bind her lofty soul to earth! But though there are women who despise the life work that our Heavenly Father has given them, we can thank God that there are so many good and true women who gladly take upon themselves the cares and responsibilities of married life, and who endeavor to live so that their presence shall be like a ray of sunshine in a darkened room, and their sons and daughters shall rise up and call them *blessed!* M. A. D.

Buffalo, N. Y., 1876.

PLAIN WOMEN.

AMONG women of exalted rank who have been wanting in beauty are Margaret of Sweden, Matilda, Empress of Germany, and Christiana of Sweden. Fulvia, wife of Anthony, had a few personal charms; nor had Terentia, wife of Cicero, if one may trust to the majority of historians; but most of these have found some admirers among biographers. Neither Anne of Cleves nor Catherine of Aragon was good-looking; still for a while they swayed the fickle heart of their Bluebeard husband. Queen Anne was a dowdy, graceless woman in her best days. Cromwell's wife was plain. When Queen Anne of Bohemia came to India as a bride, there was a pageant at Cheapside of a castle with two towers, from both sides of which ran fountains of wine; and we are told that the beautiful girls who blew gold-leaf in the faces of the king and queen caused the plain bride to look plainer; yet she made her way in the good graces of king and people.

In France the gay and pleasure-loving, plain women have gained many laurels. Madame de Stael is a memorable instance, though no one was more conscious of her personal defects. Even her name was a power in itself. The great Napoleon condescended to be so jealous of her influence that no persuasion would induce him to allow her to return to France. Mademoiselle de Lespinasse, one of the most fascinating women of her day, who exercised a marvelous influence on those around her, was marked with small-pox. Madame Geoffrin was a plain woman. Madame d'Epinay was neither beautiful nor clever, but most attractive. Madame de Mailly was the plainest woman of the Court. Maria Leczinski, daughter of Stanislaus, King of Poland, wife of Louis XV., was good, but interesting; and that famous Palatine princess, second wife of Philip, Duke of Anjou, brother of Louis XIV., and mother of the Duke of Orleans, the regent during Louis XV.'s minority—a woman who exercised more sway than any of her time—was coarse of feature, and so ungainly that her large hands passed into a proverb. She was of masculine habits, clinging to the customs of Germany, and wore a short, close wig like a man's.

HINTS TO THE GIRLS.

AN old stager who has been through the mill, gives the following parental advice to the girls:

Take lessons on the piano and learn to paint and sing, but let your mother do the washing.

Do worsted work, and make nice little neckties for the heathen, but don't acquire that mystic art to cook "pork and beans."

Go to boarding-school and *pursue* some French, Spanish and German, but neglect your good old mother English.

Flatly deny the soft impeachment that you are engaged. Treat your young sprig precisely as if you were ashamed of him. It is complimentary anyhow, to the young sprig.

When you laugh, laugh hearty. Your gold fillings may be seen. It is a card for the dentist.

Tell people who are posted, and consequently know better, that you are exactly nineteen last or next summer, you forget which. They'll believe it, you know.

Say naughty things of your rival and next-door neighbor, and speak disparagingly of Miss Q.'s nose. But entirely overlook your own incongruities.

By all means "tote" a nice little dog after you on the street. There is a chance of you being taken for some one else, while it speaks volumes—for the dog.

Walk four abreast and keep the center of the sidewalk, but never for a moment allow yourself to be disconcerted. It shows consideration for the happiness of others.

Finally, quit being girls by marrying some old bald-headed duffer, with lots of "tin," and ruthlessly thrust aside a man of brains with a becoming competency.

BRINGING THEM UP.

A GOOD old lady, whose grand-children play about her knee, remarks relative to the training of children:

Bad temper is oftener the result of unhappy circumstances than of unhappy organization. It frequently, however, has a physical cause, and a peevish child often needs dieting more than correcting.

Some children are more prone to show temper than others, and sometimes on account of qualities which are valuable in themselves. For instance, a child of active temperament, sensitive feeling and eager purpose, is more likely to meet with constant jars and rubs than a dull, passive child; and if he is of an open nature, his inward irritation is immediately shown in bursts of passion.

If you repress these ebullitions by scolding and punishment, you only increase the evil by changing passion into sullenness.

A cheerful, good-tempered tone of your own, a sympathy with his trouble whenever the trouble has arisen from no ill conduct on his part, are the best antidotes; but it would be better still to prevent beforehand all sources of annoyance.

Never fear spoiling children by making them too happy. Happiness is the atmosphere in which all good affections grow—the wholesome warmth necessary to make the heart-blood circulate healthy and freely; unhappiness, the chilling pressure which produces here an inflammation, there an excrescence and worst of all, "the mind's green and yellow sickness"—ill temper.

THE SINGER AND THE SHOP GIRL.

A BRIGHT and sunny-faced lady went shopping the other day in Boston, as all true women do, and was being waited upon by a young girl who, in the course of the brief conversation, was led to speak of Clara Louisa Kellogg, who was singing in opera at the time.

"How do you like her singing?" asked the lady.

"Indeed, I never heard her," replied the girl "I have wanted to hear her, but never felt as though I could afford to do so, and the times are so hard now that I cannot think of it."

The lady customer took a card, and writing something, handed it to the girl. The lady was Clara Louise Kellogg, and the card was an order for admission for the girl. It is safe to say that Miss Kellogg had one more enthusiastic auditor for that day's shopping.

CHILDREN are children, as kittens are kittens. A sober, sensible old cat, that sits purring before the fire, does not trouble herself because her kitten is hurrying and dashing here and there, in a fever of excitement to catch its own tail. She sits still and purrs on. People should do the same with children. One of the difficulties of home education is the impossibility of making parents keep still; it is with them, out of affection, all watch and worry.

Reading for the Young.

FRIGHTENED BIRDS.

"Hush! hush!" said the little brown thrush,
To her mate on the nest in the elder-bush;
"Keep still! don't open your bill!
There's a boy coming bird-nesting over the hill.
Let go your wings out, so
That not an egg or the nest shall show.
Chee! chee! it seems to me
I'm as frightened as ever a bird can be!"

Then still, with a quivering bill,
They watched the boy out of sight o'er the hill.
Ah, then in the branches again,
Their glad song rang over vale and glen.
Oh! oh! if that boy could know
How glad they were when they saw him go,
Say, say, do you think next day
He could possibly steal those eggs away?

MINNIE'S BIRTHDAY.

DON'T you think birthdays are delightful? I do. And so did Minnie, as her eyes popped open bright and early, the morning she was nine years old. She dressed herself quickly, and hurried down stairs all in a flutter of anticipation as to the presents, for she always found them at her place upon the breakfast-table. Charlie, her little baby brother, was there before her, and such a shout as greeted her! He wasn't able to talk, but he made it all up in shouting and pantomime. There was a nice little umbrella, marked with her own initials, a pair of shears, to make it easy for her to cut the labels for Uncle George; vases and pictures, a box of pencils, one of tiny stationery, a carriage to take her doll out for the daily airing, a pretty handkerchief, and an autograph album. That was a nice lot of presents for one girl to get, wasn't it? You see Minnie was blessed with many aunts, uncles and cousins, and all remembered the little girl on her birthday. But the best of all was the party. Several days before, Minnie had herself written invitations to some dozen or fifteen little girls of her own age. This is the way she wrote them:

Minnie would be happy to see Flora and Annie Thursday afternoon, Sept. 2d, from three o'clock till seven.

If the day proved pleasant, the table was to be set under the trees on the lawn, and as Minnie was going to bed Wednesday night she said, "I think if God knew how much I wanted my party out-doors, he would make it pleasant."

And the good Father knew, for He never made a pleasanter day than greeted the little girl on her birthday.

At three the guests began to arrive. Many brought their dolls, in their best dresses, and such attention as they received, such admiration! Had it been the owners of the dolls, their heads would have been quite turned with the flattery.

After the dolls, Minnie's presents were shown; and then they all went out into the yard for play, till tea was announced.

The table was spread under a large tree, and was made lovely with flowers, and no doubt the children thought with the fruit, nuts, ices, cakes, etc., also. After all were seated at the table but Flora and Annie, who had maintained an air of profound secrecy, these two little girls approached, bearing a basket of most beautiful flowers, which they placed before Minnie, at the same time sweetly singing the following

BIRTHDAY SONG.

O sweet are the flowers that are blooming to-day,
To brighten thy pathway and ours;
But sweeter the maidenhood happy and gay,
That reigns in these verdure-clad bowers.

For flowers, fair flowers will soon pass away,
And leave but a memory bright,
But maidenhood ripens with each gladsome day,
Into womanhood's dower and right.

The flowers, sweet flowers, we bring thee, dear,
To honor thy festival-day;
Glad hopes, and true prayers we leave with them here,
That our Father will bless thee alway.

After tea they lingered out-of-doors playing various games, until the dew began to fall, then they formed in couples, and marched singing into the house, where they remained, enjoying themselves singing and chatting, till seven o'clock came, when they all bade Minnie good-night, assuring her that they had had a "splendid time."

"O my! you didn't say what they wore!" Why sure enough! and you have been expecting that would come all the time. To tell the truth, I was so intent upon watching their bright, happy faces, I scarcely noticed their dresses. They looked as sweet as could be, and I think most of them had on white dresses with pretty sashes.

"Did they look stylish!"

Why, bless your heart, child, don't talk about those little girls being stylish for a dozen years yet. No, I'm thankful to say they were not stylish, but pretty and simple, as children should be.

And so Minnie's birthday was over. And a most happy one it was, too.

Her little brother Harvey said that night to his mamma, as he was going to bed, "Mamma, *won't* you let me have a party on my birthday?" "Why, whom would you invite to your party?" asked mamma. "O," he replied, "I'd have all the same girls, but I'd want *some* boys in it."—*Journal and Free Press.*

ADVICE GRATIS.

"How do you build your nest, sir?" asked the crow of the rook. "I'm going to make a new one, and should like to improve on the last."

"Much as you do," replied the rook, "only I don't think you make yours quite deep enough."

"Thank you, sir," said the crow.

"How do you build your nest, sir?" asked the crow of the raven.

"In your fashion, but larger; yours was too small. Make the nest at least two sizes larger."

"Thank you, sir," said the crow.

"Mag, how do you build your nest?" he asked of the magpie.

"O any how," said Mag. "I just pack the sticks together, much as you do, only I make a cover to it. You should make a cover."

"Yes, Mag, I should," said the crow.

"How do you build your nest, Jack?" the crow asked of the jackdaw.

"O, I use sticks, as you do; but I like a nice, soft lining, and I choose a snug chink to build in. Take my advice, friend; if you want to be quiet and safe from weasels and other enemies, settle in the old tower, or in yonder stone quarry."

"Thank you, Jack; I certainly will," said the crow.

So the rook and the raven, and the magpie and jackdaw, all gave the crow great credit for being humble-minded and willing to learn, and felt much interest in her work, and went in a body to see the new nest, each expecting to find an improvement after his own suggestion, when lo! they found it to be in size, in form, in lining and position, precisely like the old one.

"Ah!" cried the raven to the rest, "I'm not surprised; I never knew advice valued that cost nothing!"

THINK FOR YOURSELF.

Do your own thinking. Yes, that is the idea. Think for yourself. It is well to listen to the expressed thoughts of others, and it is an agreeable pastime to give expression to your thoughts; but when alone, weigh what you have said. It is well to do this, for it will assist in curing you of false notions, and eradicate unprofitable ideas, and in time make you better men and women. You will thus gain from surroundings, you will unwittingly transmit to the rising generation, and the result will be that you will do your share in the glorious work of elevating the human family. Do your own thinking.

The Puzzler.

ILLUSTRATED REBUS.—No. 8.

☞ Answer in two weeks. PAUL BOYTON.

BIBLICAL ENIGMA.—No. 5.

I AM composed of 66 letters:
My 59, 34, 42, 47 a wicked king of Judah.
My 66, 39, 20, 16 a bird mentioned in the Bible.
My 12, 41, 64, 36, 1, 57, 9, 29 a Bible gem.
My 5, 39, 15, 13, 52, 61 a musical instrument.
My 48, 27, 60, 43, 17, 38, 7, 51 was raised from the dead.
My 11, 6, 28, 40, 46, 55 an insect mentioned in the Bible.
My 14, 3, 8, 22, 44, 58 a Jewish prophet.
My 19, 4, 31, 32 a metal mentioned in the Bible.
My 62, 24, 33, 56, 10, 26 a queen of Persia.
My 63, 35, 20, 2, 23, a bird mentioned in the Bible.
My 25, 30, 37, 49, 51 a companion of Paul.
My 65, 50, 9, 3, 54 a Jewish month.
My 35, 46, 38, 18, 54, 45 a city in Greece.
My 21, 58, 53 a judge.
My 49 is a consonant.
My whole is a verse in the Bible.

DECAPITATION No. 3.—1, D-over; 2, A-den; 3, B-ear; 4, W-heel; 5, B-ass; 6, F-ox; 7, G-out; 8, B-ark; 9, B-lock; 10, B-ale.

CROSS-WORD ENIGMA No. 8.—Centennial.

ACROSTIC No. 1.—"Progress and Improvement."

PUBLISHER'S SPECIAL NOTICES.

The Rural is a very good present to send to a friend, and it pleasantly reminds the recipient of the donor fifty-two times a year—this year fifty-three times. Any *subscriber* can send it to a relative or friend, as a present, at our lowest club rate—only $2.15, including postage.

Holiday Presents will be plenty this year among our Agent-Friends and others who form clubs for RURAL. Our list comprises many articles appropriate for presents. Induce a few of your friends to take the RURAL, and thus secure a Premium.

Officers of Agricultural Societies and Clubs, Granges, &c., can, if they will, materially aid in augmenting the circulation of the RURAL. Scores of such are already forming clubs; how many others will kindly do likewise?

Renew early if you would secure the uninterrupted continuance of the RURAL to your address; and pray don't forget to ask friends to join you in sending for the Fifty-three Numbers which we shall publish during 1876.

Back Numbers of this Year (from Jan. 1) can be furnished to all new subscribers, but we shall not send them hereafter unless specially requested. Those who desire can begin with any number, however.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper*, and in Premiums to Agents.

Select Your Premiums.—All persons entitled to Premiums will please designate what they prefer and notify us how and where to forward—whether by Freight or Express—if articles are not mailable.

Act as Agent!—Reader, if there is no agent for the RURAL in your locality please become one by forming a club. *It will pay.*

At Our Risk.—You can remit by Draft, P. O. Money Order or Registered Letter *at our risk.*

News of the Week.

HOME NEWS PARAGRAPHS.

R. H. SMITH, editor of the Waterbury (Conn.) American, was fined $75 for contempt of court, he having written and published an editorial "calculated to injure the dignity and efficiency of Judge Broughton." Smith refused to pay, and was locked up in the New Haven jail.

While hunting for woodchuck recently, near Livonia, N. Y., some boys found in a hollow stump a gold watch and chain, which had been stolen by a tramp twelve years ago. The thief was sent to prison for three years, but refused to tell where he had hidden the watch unless paid well for the information. When found the watch was apparently uninjured.

The master armorer of the Springfield Armory is preparing for the Centennial Exposition an exhibit of the different operations which each of the parts of a Springfield rifle goes through in its manufacture. The barrel goes through 87 operations; the bayonet 44, and its fastenings 23. The parts peculiar to the breech-loading system number 146; the mountings, 175; ramrod and bayonet scabbards, 27. The components of the lock require 135 pieces, and the rear sight, 73.

John Coltrell is a man whom the people of Clark County, Ill., would have lynched if they had not changed their intention. He drove his two stepsons, aged seven and ten years, out into a cold snowstorm. They started, scantily clad, for an uncle's residence some fifteen miles distant. The younger was exhausted when half the journey had been made and fell down in the road. The other tried to carry him, but was unable. He then laid him under the shelter of a fence and trudged on until he came to a house where he was taken in. The seven-year-old was dead when found.

John P. Treadwell, at one time an innkeeper in New York, died in New Milford, Conn., April 8, aged 65. He was part proprietor of the St. Nicholas Hotel from 1853 to 1863. He began business as a clerk in the old Franklin House, Broadway and Dey St.

Eighty-two veterans of the Fifth New York Volunteers, known as the Duryee Zouaves, formed themselves into a civil organization on April 10. They propose to visit Philadelphia during the Exhibition. Gen. A. Duryee is elected President.

The River and Harbor bill which passed the House on April 10 did not have the approval of the Appropriation Committee, the members considering the amounts extravagant and not properly distributed. Michigan gets $525,000, or $43,000 more than New York, which aggregates $482,000. Even West Virginia gets $495,000, Tennessee $445,000, Texas $432,000, Wisconsin $390,500, and Iowa $275,000. These seven States get more than one-half of the entire amount appropriated.

Sup't. Cooper of the Atlantic and Great Western Railroad says that a locomotive drew a director's car nine and three-fourths miles on that line in seven and one-fourth minutes. The time was from a flying start to a dead stop, and it is calculated that the highest speed was at a rate of 87 miles an hour. It was on a down grade.

It is proposed to use the late Hamilton Murray's bequest of $15,000 to Princeton College in erecting a new building for the Philadelphian Society, the oldest religious society of the institution. The membership has largely increased of late, and better accommodations are needed.

Near Yreka, Cal., a herd of horses roamed for several years. They had strayed from their owners from time to time, and became so wild by a free life in the mountains that they could not be recaptured. The uncommonly deep snow of last winter confined them in a gorge and they starved to death. Their bodies and those of many deer that perished in the same way have been found.

The Congregational churches of Connecticut will celebrate the National Centennial on Sunday, July 9, and endeavor to raise money for a memorial building in Hartford.

In the railway shops at Port Jervis the working hours have been increased from 35 to 40 hours per week. At Susquehanna 150 hands have been discharged.

It will cost six or eight thousand dollars to have such a celebration as was proposed, and the Newburghers' patriotism is oozing out of their pocketbooks.

The people of Georgia do not believe in newspaper quarrels. The Grand Jury of Polk County, at its recent session, made the following report to the court after returning several indictments: "We also feel it our duty to censure the course and conduct of our two newspapers toward each other, and urgently request the two editors to cease wrangling about themselves and branch off into agricultural articles, or others that will tend to develop the interests and welfare of our country."

The Centennial Committee of the Philadelphia Councils have decided not to have the crack in the old Independence Bell repaired, believing that it is too precious a relic to be meddled with.

The San Francisco Board of Supervisors are considering with some favor a proposed order to the Sheriff to cut close the hair of every prisoner sent to the county jail immediately upon his incarceration. This ordinance is aimed at the Chinese, who cherish their queues with religious devotion.

Mr. Henry W. Raymond, the only son of the late Henry J. Raymond, has become a partner in the firm of Hadley Brothers & Co., booksellers, in Chicago.

A wolf broke away from a cage in which he was confined at Joplin, Mo., recently, and attacked the little son and daughter of his owner, who were very badly bitten before the animal was driven off.

A counterfeit five-cent piece is in circulation which fails to be genuine only because it is not issued by a United States mint, as it contains the full amount of metal in weight and fineness. It is said that the five-cent pieces cost the Government only half a cent apiece.

There is a camel ranche near Elgin, Texas. The animals were imported at the opening of the Mormon war in expectation of a contract with the United States Government for transportation, and they have considerably multiplied since that time.

Horace Greeley's old homestead at Chappaqua was burned Friday night, April 14. It had not been tenanted for some months, but was to have been occupied by Col. Nicholas Smith and wife (Ida Greeley) during the summer. The money loss was small. The house was the favorite residence of Mr. Greeley the last twenty years of his life and had a historic interest.

A. T. Stewart's will left one million dollars to Judge Henry Hilton, his executor, and the remainder, except some few small bequests, to his wife. Now Mrs. Stewart has sold all the property to Judge Hilton, excepting New York real estate, for one million dollars. It is supposed that the intention is to make some public use of the vast property in accordance with Mr. Stewart's often expressed intentions; but no one knows what will be done.

About May 15 the Harlem Railroad Company will put on ten extra trains daily between the Grand Central Depot (N. Y. City) and Williamsbridge. The time to Williamsbridge will be 30 minutes, including stoppages, and to Harlem 12 minutes. The fare to Williamsbridge will be 30c. from the Grand Central Depot.

There are over 16,000 soldiers buried in the National Cemetery at Vicksburg. The spot has been rendered very beautiful and is visited daily by large numbers of people.

FOREIGN NOTES.

THE Bank of France has in circulation 2,463,806,490 francs, and in its vaults specie to the amount of 1,776,741,081 francs, or 721 francs of gold to every 1,000 francs of paper in circulation. This gold accumulation is said to be the largest ever got together anywhere.

In May, an interesting collection of manuscripts and letters left by Thomas Moore, will be sold at auction in London. It includes the original MS. of "Lalla Rookh" and the last letter written by Byron to Moore from Missolonghi, only a month before Byron's death.

The official Tashkent Gazette states that the immigration of Russian settlers into Turkestan is going on on a very large scale. The colonists chiefly come from the provinces of Astrakan, Samara and Tamboff.

Liverpool is to be supplied with water from Lake Windermere. The estimate of cost varies from £2,000,000 for a daily supply of ten million gallons, to £4,500,000 for forty millions.

The Governor of Great Britain's latest acquisition, the Fiji Islands, Sir Arthur Gordon, would seem to be a very different kind of man from the ordinary American office holder or salary grabber. Owing to the revenue having fallen short of previous estimates, Sir Arthur, although entitled to his salary of £5,000 a year, accepts only £3,000.

The British bark Emma L. Oulton, Capt. Mackenzie, which sailed from Baltimore, March 3, for Queenstown, was abandoned at sea March 13, in a sinking condition. Her crew was rescued.

In the department of the Loire, France, over 12,000 women are employed in the glove trade.

The Austro-Hungarian Empire has 1,501 mining establishments, which employ 87,431 men.

A statue is to be erected at Calcutta in commemoration of the services of Lord Napier, the hero of Magdala.

A committee is in session in London charged with an inquiry into the cause and extent of the depreciation in the value of silver.

Two large dry goods houses in London have well-salaried private chaplains to conduct morning prayers, and give addresses to the young men and women in their employ.

The Mayor of Fordwich, England, is dead, after an uninterrupted tenure of office for 28 years. It is the rule in the borough, if any person refuses to accept the office of Mayor, to pull down his house.

Penny banks have been established in London in connection with the public schools, and within a few months 5,266 children have deposited $5,620.

Divers are at work trying to recover the remaining $115,000 of the specie lost on the Schiller when wrecked at the Scilly Isles. Last summer $285,000 was saved.

The Italian Government has decided to restore the five ancient churches of Chiltile, which are said to be the most ancient Christian temples in Europe. They date from the fourth century, and contain remarkable mural paintings and sculptures.

A dispatch from Havana, April 10, says that advices from Jacmel to the 30th of March report the town still blockaded. President Dominique had given the insurgents notice that in 96 hours the place would be bombarded. The time had expired and the threat remained unexecuted. Dominique is very unpopular, but the movement against him this time will probably fail. It is reported that several of the passengers on the steamer Thyra, from St. Thomas, had been shot on landing at Jacmel. Two United States men-of-war at Port-au-Prince threaten to use force if the decree taxing foreigners is carried out against Americans, or the moneys already collected are not returned to them. The French Consul insists on the same treatment for French citizens.

The Liebig memorial fund in Munich has reached the sum of $375,000, and it is announced that no more money is needed. The mode of commemorating the great chemist has not yet been determined, but it is thought that scholarships will be founded, or a fountain will be erected in one of the squares in Munich.

The inhabitants of the island of Ayos Strati, near Lemnos, have been troubled with locusts, and thinking that witchcraft was the cause, they confined half a dozen women at the bottom of a well to effect a cure. They are now in a sad state of disappointment, because the authorities have released the women, one of whom has since died, and still the locusts don't disappear.

The Vatican has received a note from Cardinal Simeoni, the Nuncio at Madrid, stating that Spain proposes to enforce the Concordat of 1851 if the Vatican will promise not to oppose the clause of the Constitution relative to liberty of public worship.

The Italians have no special fancy for trees, like the English and Germans. The only tree cultivated in Italy is the mulberry, which has a great practical value as furnishing food for silk worms. Poplars are raised in Lombardy only.

The monks in their monasteries make the best beer in the Rhine and Bavarian cities. The reason of this is that they are too old fogyish to use the scientific ingredients which the profane employ, and keep on making beer to-day just as it was made a couple of hundred years ago. They put hops in it too. There is plenty of room in the United States for monk-made beer.

The Senate of the University of Prague have prohibited the attendance of women at the lectures at that institution.

The French Chamber of Deputies has annulled the election of M. Veillet, Conservative, from the Department of Cote du Nord.

The second report of the result of the investigation into the dynamite explosion at Bremerhaven, some months ago, is published. It mentions that three cases of furs shipped at Halifax in the missing steamer City of Boston, by "James Thomas," were uninsured.

The Beefsteak Club has been revived in London, Eng., with 200 members, noblemen and gentlemen connected with literature, art, and the drama, all of whom must have accomplished something of some importance to gain an entrance.

The Danish Government has awarded two life pensions of 3,000 crowns each to the composers of Niels Gade and Berggrun.

The opponents of vaccination will be disgusted to learn that the last returns of the Stockwell Small-pox Hospital, London, show that while among thirty-four cases with good or moderate vaccination not a single death has occurred, the rate of mortality of those who had not been vaccinated was as high as 45.8 per cent.

"It does not speak well for the intelligence of the public," says the London Lancet, "that the stamp duty on patent medicines during last year yielded an increase of £13,849 over the produce of the previous year. It is scarcely credible that the passion for consuming unknown quantities of unknown drugs should be so strong as this thriving trade in nostrums indicates."

President MacMahon has pardoned several inhabitants of Marseilles who were imprisoned for participation in the Commune.

The Pall Mall Gazette's Dublin special says it is pretty certain that the emigration from Ireland in 1876 will be the smallest since 1851. It was only 51,462 last year.

The plague is increasing at Bagdad, Turkey, where, on March 26, thirty new cases and ten deaths were reported.

A stock company is organizing in Russia for the introduction and development of the cultivation of cotton in Central Asia.

The Madrid *Diario*, ministerial paper, energetically denies that the Government intends to re-establish the concordat of 1851.

Turkey is considering the proposition of the Jewish bondholders, in conjunction with some other denominations, to exchange their bonds for land in Syria.

The Spanish Court of Cassation has rejected the appeal of Pastor, condemned to death for an attempt to shoot King Amadeus. The whereabouts of Pastor is unknown.

The reported negotiations for the cession to the German empire of the right of the Duke of Edinburgh, as heir presumptive to the duchy of Saxe-Coburg and Gotha, are denied on trustworthy authority.

On the 3d inst. the champion bale of cotton was exhibited at Memphis. It was cased in blue silk of American raising and American manufacture, and on being brought to the Cotton Exchange it secured the premium of $1,000 offered for the finest and earliest cotton of the season.

THE SEASON, CROPS, PRICES, ETC.

West View, Goochland Co., Va., April 7.—The winter here has been very mild, in contrast with what we experienced in Maryland. There have been but two freezes, each of three days' duration; these enabled the provident to secure a supply of ice, varying from two and a-half to four inches in thickness. Plowing has scarcely been interrupted at all. Our only snow fell on the morning of the 15th of March, to the depth of two inches, but before morning it changed to rain, and by next morning every vestige of snow had disappeared. Wheat and winter oats are looking very fine. There is a large crop of corn still in barn. It has heretofore, since the war, sold for $4@5 ₱ bbl. at this season of the year, and farmers are loth to dispose of it at $2.75. Wheat is worth $1.50; oats, 65c.; hogs, 10c.; butter, 25c.; eggs, 12c.; fat cattle, 4@6c., gross; timothy hay, $20; clover, $16; shucks, $13; straw, $12 per ton.—L.

Insurance.

THE AMERICAN INSURANCE CO. OF CHICAGO.

The American of Chicago has been much slandered of late. Let us see why. Has it ever failed to meet its obligations—to pay every loss maturing against it? No: that is not claimed by its bitterest enemies. Are its officers or stockholders unreliable business men, or of inferior moral standard? The mention of their names disproves that. No one has dared to impugn such men as Hon. H. N. Hibbard, Hon. J. M. Bailey, Hon. W. H. Bradley, H. Z. Culver, L. L. Munn, Wm. H. Ovington, Nicholas Krausz, M. A. Hoyne, R. B. Currier, D. A. Knowlton, Jr., and Chas. L. Currier. Yet these are the men to whom the American's interests are intrusted. Does it lack enterprise or stability? Its cash income of $817,000 and the $40,000,000 of insurance written last year, and its $905,000 cash assets, together with its $2,000,000 of installment notes, are sufficient denials of that. What then is the matter? *Success! Merit!* These are what draw the enemies' fire. Perhaps the reader of this has received or had shown him by some rival agent one of numerous circulars which are being so industriously distributed over the country. If so, let him probe the motive of the source from whence it came. The insurance commissioners of four different States have just done this, and after a searching official examination of the American's plan of business, its assets and liabilities, all came to the same conclusion. In closing his published report, the Hon. W. D. Hill, Superintendent of Insurance for Ohio, says: "It is my opinion that the American Insurance "Company of Chicago is as safe and sound financially as other insurance companies possessed "of the same amount of capital and assets." The same results were reached by Col. C. P. Ellerbe, Attorney, and Hon. A. Harvey, the eminent Actuary, both of whom represented the State of Missouri in its official examination of the American's standing. Also by ex-Auditor Cattell for Iowa, and Mr. Kellogg, Actuary of the Illinois Department. These men declared what they knew, for they went to the Company's office and saw for themselves. Are not the results found by them, after days of personal examination, trustworthy, and to be accepted, instead of misrepresentations indulged in by business rivals for mercenary and selfish purposes? The American does business only in eight of the Western States, and insures no business property whatever, confining its risks to detached dwellings, school-houses and churches; yet there are only six companies in the United States whose business equals the American's, and these write heavy lines in large cities throughout the Union. Of course their agents fight the American. It's their bread and butter to do so. The American is getting the cream of the non-hazardous business. It will take no other. It knows how to get it, too; for in 1871 its cash income was only $238,672, while in 1875 it reached the splendid proportions of $817,424. It shapes its business to the needs of its members in writing five years' policies and collecting in cash only one year's premium, taking installment notes payable in one, two, three and four years for the balance. In conclusion, the American is old in years, prosperous in business, strong in reputation and money, and what is better than all, prudently and honestly managed by experienced, successful business men, with unsullied reputations for integrity and moral worth.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, April 15, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	85,707	Rice, bbls	1,428
Whisky	2,817	Cut meats, pkgs	6,673
Corn meal, bbls	1,000	Lard, pkgs	2,068
Corn meal, bags	4,255	Tobacco, hhds	1,791
Wheat, bush	228,000	do. cases	10,933
Corn, bush	56,850	Butter, pkgs	9,282
Oats, bush	111,400	Cheese, bxs	—
Rye, bush	2,400	Cotton, bales	22,443
Malt, bush	42,946	Rosin	—
Barley, bush	21,514	Spts. turp., bbls	1,107
Beans, bbls	2,544	Dried Fruits, pkgs	91
Grass seed, bags	3,451	Eggs, bbls	14,782
Beef, pkgs	2,355	Peanuts, bags	2,009
Wool, bales	411	Dressed Hogs	13
Hops, bales	553	Leather, sides	106,539
Pork, bbls	1,711	Sugar, hhds	—
Tallow	856	Oil cake	9,465
Molasses	—		

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise, many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible: mixing always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else.

BEANS AND PEAS.—Exports of beans past week, 900 bbls.; since Jan. 1st, 18,800 do.; same time last year, 6,813 do. Exports of peas past week, 9,400 bush.; since Jan. 1st, 262,300 do.; same time last year, 161,450. With a marked moderation in receipts of beans holders begin to feel more confidence in mediums; still, the stock is large for the coming warm weather, and old low prices are still ruling. Marrows begin to show some firmness. There is a fair export demand and sellers are generally asking full figures. Other items of beans continue to be neglected. Peas are firm, with little addition to actual stock. Most of the receipts are going through in bond. Green peas dull at the late decline. We quote:

Beans—Prime pea, $1.20@1.25; fair to good, 90c.@$1; prime mediums $1.10@1.15; fair to good, 85c.@$1; poor, 50@60c.; prime marrows, $1.50; fair to good, $1.25@1.45; prime white kidneys, $1.35@1.60; other, $1.25@1.30; prime red kidney, $1.25@1.30; other, $1@1.15; Lima (Cal.), $2.50@2.75. Peas—Canadian, bbls., free, $1.20@; do., in bulk and bond, $1.00@; green, $1.40@1.45; Southern B. E., 2-bush. bag, $2.70@2.75; split, ₱ bbl., $6.

BEESWAX.—Supplies of old have pretty well run out, and on the small offerings extreme prices are made. Quotations are at 26@27c. for best lots.

Exports since Jan. 1, 33,575 lbs.; same time last year, 53,250 do.

BROOM CORN.—Offerings are fair and demand very light.

We quote Brush, short green, 8½@10c.; hurl, green, 8½@10c.; green, medium, 5@5½c.; red and red-tipped, 3@4c.

BUTTER.—The market during the past week recovered somewhat from the weak tone that was manifested in our last. One of the instrumental features to help steady the market is the very light supply of old. There is always more or less fear that round parcels of old may be unearthed from some point, which even if they should not last long might appear for a length of time that would help to strengthen buyers, and that makes dull trade when prices are high. Prices are about as strong as buyers will stand, and the existing rates for State are very extreme. Some support is given to new State by the moderate receipts of Western. We are not apt to get the first receipt of Western make liberally, until there is a surplus. When that increase is added to the market State will have a formidable competitor, especially as in many cases good color favors some Western districts in advance of New York pastures. Old butter may be said to be out of regular trade and our quotations are nominal with some wider range.

New butter, Falls State, selected, 40@—c.; do., other 34@38c.; half firkin tubs, prime, 36@38c.; fair to good, 33@35c.; Welsh tubs selected, 35@—c.; Welsh tubs, prime, 33@35c.; fair to good, 33@35c.; Falls, Western creamery, prime, 35@—c.; fair to good, 34@36c.; Western tubs, good to prime, 32@34c.; fair to good, 30@32c.

Old State dairies, extra, 33@40c.; entire, good to prime, 34@36c.; fair to good, 28@33c.; firkins, selected fresh, 33@40c.; good to prime, 34@36c.; fair to good, 28@31c.; State, Welsh, tubs, half made, 30@33c.; dairies 33@36c.; good to prime, 35@37c.; fair to good, 32@34c.; poor to fair, 28@32c.; Pennsylvania, store packed, 26@33c.; Western, dairy tubs, selected, 33@35c.; good to prime, 31@33c.; fair to good, fresh, 28@30c.; Western, early packed, selected, 29@30c.; good to fine, 26@28c.; fair to fine, 23@25c.; poor, 16@22c. Roll butter, good to prime, 31@33c.; fair to good, 28@30c.; poor to fair, 23@27c.

CHEESE.—The market abroad has been against important export trade here. The shipments are lighter than the moderate total of last week, and have been brought about by unified views of holders. It is believed now that the old make is pretty well forward: stocks here would prove moderate only with anything like an ordinary trade.

New State factory, fancy, 13½@13¾c.; fine, 12¾@13c.; do. good to prime, 11¾@12¾c.; fair to good, 10@12c.; poor to fair, 6@10c. State Farm Dairy—fancy, 12@12¾c.; good to prime, 10½@11½c.; fair to good, 9½@10c.; Western factory, cheddar, fine, 12¾@12¾c.; good to prime, 11@12c.; flat fair, 8@11½c.; poor to fair, 7@8c.

COTTON.—Export trade has been light and prices lower. Closing prices are for April, 13 1-16@13 3-32c.; May, 13 7-32c.; June, 13 15-32@13¾c.; July, 13 21-32@13 11-16c.; August, 13 13-16c.; September, 13¾@13 21-32c.; October, 13 7-16@13½c.; November, 13¼@13 5-16c.; December, 13 5-16@13 11-32c.

Quotations for spot cotton, based on American standard of classification:

	Uplands.	*Ala.*	*Orleans.*	*Texas*

DRIED FRUITS.—A few small lots of apples are coming to hand, and are difficult to move off except at low prices. Peeled peaches quiet but, with the stock in few hands, held firmly. Pitted cherries and raspberries are higher. Blackberries are very dull.

Apples—State, sliced, 9¼@9¾c.; do., quarters, 8¼c.; Western quarters at 8@8¼c.; Southern sliced, 1875, prime, 9@9½c.; fair lots, 8@8¼c.; Tennessee qrs., 7¾c. Blackberries, 10@10¼c. Peeled peaches, good and prime Georgia, 14@15c.; do. fancy, 16@17c. Unpeeled peaches, new, 12@12¼c. for halves, and 10@11c. for quarters. Plums, 20c. Raspberries, 27c. Cherries, 20@21c.

EGGS.—The present is not a test week for eggs. Buyers have pretty generally supplied themselves for Easter. Several days of dull trade have attended the week and prices are drooping. The natural tendency of the egg market is downward after the Easter sales, and with the stock resources of the past season, it looks as though this season will not be an exception. Geese and duck eggs higher. We quote:

Near points, ₱ bbl., 20@—c.; State and Penn., 19@—c.; Western, prime, 18½@19c.; do. fair marks, 18@18½c.; Southern and Southwestern, 16½@17½c.; Canadian, 18½@19c.; duck, 28@30c.; goose, 60@65c.

ESSENTIAL OILS.—In a wholesale way, the market is nominal. We quote:

"H. G." oil peppermint, $1, in glass; Halo & Parshall do., $1@1.20 do.; pure in tin, $3.50; sassafras, 55c.; wintergreen, $3.12; spearmint, $3.50; pennyroyal $4.

FEATHERS.—The demand is light, but prices are steady. Business mainly in low-priced grades. We quote Western live geese at 55@58c.; mixed do., 35@45c.

FLOUR.—There has been a little more doing on export account, and a fairly active home trade inquiry at generally steady prices.

Superfine State, $4.20@4.60; extra do., $5.00@5.60; superfine Western, $4.20@4.60; extra do., $5.00@5.70; No. 2, $3.00@3.55; extra round-hoop Ohio, $5.00@5.30; trade brands do., $5.35@7.00; white wheat extras, $5.75@7.00; St. Louis, $5.35@9.00; City Mills extra, $5.20@6.75; Southern at $4.25@4.75 for superfine; $5.00@6.15 for poor to choice shipping extras; $6.25@8.75 for trade and family brands. Corn meal held at $2.75@3.25 for yellow Western; $3.10@3.20 for yellow Jersey; $3@3.35 for Pennsylvania.

FRESH FRUITS.—There is only a brief story about fruits. Apples are running out, and fancy exceed our figures. Strawberries are of varied quality; quoted, 25@40c. for poor to fair; 50@90c. for good to best. Norfolk berries soon due. Charleston cranberries firm. Grapes, 6@8c. for catawba. Peanuts still dull. Virginia, per bush., $1.40@1.60; Wilmington, $1.80@2.00; do. Tennessee, 95c.@$1.15. Cranberries—Jersey, choice, standard crates, $1.75@5; good to pr., stand'd crates, $4.50@1.75; "pony" crates $4@4.50; good to choice, per bbl., $14@15. No Florida oranges offering.

FURS AND SKINS.—The following are the lately-revised quotations:

	North. & Eastern.	West. and N. Y.
Otter, ₱ piece	$6 50@ 8 00	$1 00@ 5 50

Kitts	6@ 7	5@ 6
Beaver, ₱ lb	1 00@ 1 75	75@ 1 00
Raccoon	68@ 80	40@ 55
Opossum	12@ 15	12@ 15
Skunk, black		75@ 90
striped		10@ 40
Wolf, mountain		2 00@ 3 00
prairie		75@ 1 00

GRAIN.—In wheat exporters have been operating little more freely at generally steady figures. Latest sales at $1.37@1.38 for prime No. 1 Milwaukee spring; $1.41 for choice No. 1 Minnesota spring in store; $1.37 for prime No. 2 Milwaukee spring in store, fall inspection; $1.26 for prime No. 2 Northwest spring in store, of crop 1874; $1.18@1.20 for Nos. 2 and 3 spring mixed; $1.16 for choice No. 3 Milwaukee spring in store; $1.12 for No. 3 Chicago spring in store; $1.08@1.18 for ungraded spring; $1.42@1.50 for white Michigan; $1.17@1.46 for winter red and amber; $1.35@1.70 for white; $1.34@1.38 for No. 1 spring. Rye at 86c. for prime Western. Corn is in light demand, with prices weak. Latest sales at 72@72¼c. for ungraded mixed Western; 72c. for steamer mixed, N. Y. inspection; 71c. for "no grade" new mixed, N. Y. inspection, afloat; 71@72½c. for yellow Southern; 68@72½c. for choice old mixed Western; 71½@72c. for yellow Jersey. Oats are higher and moderately active. Mixed Western, 48@50c.; white Western, 48@52½c.

HAY AND STRAW.—There has been a sharp advance through the week with small receipts and considerable inquiry from shippers and the home trade.

Bale hay is quoted:—Shipping, 75@80c.; retail qualities, $1.10@1.15; clover, 75@80c.; salt, 60@70c. Straw is quoted at $1.05@1.15 for long rye; 75@80c. for short rye; 60@65c. for oat. Exports past week, 162 bales. Since Jan. 1st, 11,600; same time last year, 100,500.

HOPS.—The exports the past week add up 954 bales and since September 1, 1875, 37,818 bales, against same time last year 15,688 bales. With continued export demand and falling off in receipts, prices are easily sustained. Choice lots easily bring 18c. but offerings are mainly of a grade under.

N. Y. State, 13@18c.; Eastern, 11@16c.; Wisconsins, 11@16c.; Yearlings, 8@10c.; Olds, all growths, 4@6c.; Californias, 15@20c.

MAPLE SUGAR.—The supply is better and there is a fair demand at the prices. Extra light colored lots of Delaware, 1@2c. higher than ordinary.

New prime sugar ranges at 13@14c.; fair to good, 11@12c.; old, run over, 10@12c.; old, ordinary, 8@11c. Syrup, ₱ gal. of 11 lbs., 1@1.30.

POULTRY AND GAME.—The market for dressed poultry is mainly supplied by frozen stock, which, when prime, sells about as high as fresh dressed. We quote Philadelphia picked chickens at 21@25c.; capons at 31@33c. for large; 26@28c. for small capons and slips.

Chickens, Bucks Co., good to prime, 21@22c.; Jersey, good to prime, 19@20c.; State, good to prime, 18@20c.; Western, good to prime, 18@20c.; fair to good, 14@17c.; poor, 8@10c. Turkeys, Jersey, good to prime, 20@22c.; State, good to prime, 20@22c.; Western, good to prime, 18@21c.; inferior, 10@15c. Ducks, Jersey, good to prime, 21@23c.; State, good to prime, 21@23c.; Western, good to prime, 20@22c.; fair to good, 18@20c.; poor, 14@16c. Geese, Jersey, prime, 15@16c.; State, good to prime, 14@16c.; Western, good to prime, 13@15c.; do., poor to fair, 8@12c.

Live poultry is doing well during the scarcity of dressed.

Fowls and turkeys, Jersey, ₱ lb., 18@19c.; do. Western, 17@18c.; Geese, Jersey, ₱ pair, $2.50@3; do. Western, $1@1.25; ducks, Western, ₱ pair, 80c.@$1; ducks, Jersey, ₱ pair, $1.25@1.50; roosters, 8@10c. Spring chickens, ₱ pair, $1.25@1.50.

In game, picked pigeons quoted at $1.75. Pigeons are plenty and begin to favor the buyer.

Wild Ducks—Canvasback, 90c.@$1.10; redhead, 70@75c.; Mallard, 50@60c. Wild pigeons, feathered, ₱ doz., $1.50@1.75; English snipe, ₱ doz., $1.75@1.87; plover, ₱ doz., $1.62@1.75; sand snipe, 85@45c.

PROVISIONS.—Mess pork, bacon and lard generally lower, with a slow business. Mess pork quoted at $22.75 for job lots, $22.45@23.50 for April and May, $22.65 for June, $22.75 for July. Boxed dry-salted shoulders, 9c.; tierced pickled hams, 12½@13½c. Bacon—Western long clear, 12½c.; 13c.; short do. Lard at $13.75 for spot, April and May; $13.90 for June, and $14.12½ for July; $14.12½ for Aug.; steam, 14½c. Beef hams at $24@26. Tallow, 8½c. for prime. Beef—New extra mess $13@13.50; do. plain, $12.50@13; new tierced at $23 for prime mess, and $25 for India mess. City extra India mess, $29@30.

SEED.—Grass kinds remain dull. State clover, 16½@16¾c., and Western at 16½c. Timothy at $2.65@2.75.

TOBACCO.—There is now a good assortment of new Western leaf, and prices are more regular. Exporters are operating moderately. In seedleaf there is but little doing, but no change made in prices.

VEGETABLES.—Exports of potatoes past week, 757 bbls.; since Jan. 1st, 65,491 do.; same time last year, 30,446 do. Prices are low for potatoes, but the demand has been pretty good and the stock is not so oppressive. Canal boats have had to close out very low. Onions have again advanced. Asparagus is in market; some from California brought 50c. ₱ lb.; Norfolk quoted at $1@9 ₱ doz.

Early Rose, bulk, ₱ bbl., $1@1.12; Peach Blows, $1.00@1.25; Prince Alberts, 75c.@$1.00; common, 50@75c. Bermuda, $3@3.50; Florida, $6.50. Cabbages, ₱ 100, $5@8; red, $7@11. Squash, Marrow, bbl., $1.25@1.75; Hubbard, $1.25@1.75. Onions, red, bbl., $3@3.50; do. yellow, $3@3.50; do. white, $5.50@6. Russia Turnips, ₱ bbl., 75c.; white, 60c. Carrots, $1.00. Southern spinach, ₱ bbl., $1.50@2.25. Kale, $1@1.25. Charleston green peas, ₱ bush., $1@6. Norfolk cabbage, ₱ bbl., $1.25@1.50. Bermuda tomatoes, 5-quart box, $1.25@1.50; beets, $1.50 ₱ crate. Mushrooms, ₱ lb., 50@60c. Rhubarb, ₱ doz., 75c. Bermuda onions, ₱ crate, $1.50.

WOOL.—The market for the old clip is winding up unsatisfactorily. It is almost impossible to sell except to consumers, and most marked on other than strictly fine Western fleeces and California stock. The latter description relatively most steadily held on account of the full prices being realized for the new clip arriving at San Francisco. There is more than usual interest felt in the opening rates on the new clips this year, as the goods market remain dull, and manufacturers will probably evince but little disposition to stock up, and insist on comparatively low prices on sympathy with the education which they have been compelled to make.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., April 15, 1876.

THERE has been very little doing in cheese this week, and prices are lower. Lake ends farm dairies may be quoted at 9@10c., and factories at 11@12c.

Several lots of new cheese, both from farm dairy and factory, were on delivery. The Middleville and the Cook & Ives sent forward their goods on commission. The Barto Hill was reported as selling at 5c. All the lots on the market were badly skimmed.

There was a large delivery of butter, unwanting to about 400 tubs. Prices ranged at 32@33c., the bulk going at 35@36c.

We have advices from Europe to the fourth week of March. Our London correspondent says:

The finest English cheese is wanted and medium is neglected. American has sold very freely, especially extra-fancy September and all sorts of firm; medium grades are slow of sale and October make are neglected, together with all sorts of soft late made.

The prices are for extra American, 67@68s.; fine, 61@66s.; good, 50@53s.; secondary and common, 30@45s.

English cheddar brings 78@90s.; Wiltshire double, 70@78s.; Cheshire medium, 40@60s.; fine, 74@82s.; Scotch, 66@71s.

The butter for delivery has a tendency downward in price. The prices are as follows:

Jersey sells for 140@150s.; Dorsets, 174s.; Danish and Swedish, 110@174s.; Friesland, s.; Normandy extra, 170s.; American and Canadian, 100@120s. ₱ cwt.

Oleomargarine or artificial butter, 100@140s., and the supply not equal to the demand.

" last week	9,624	35	788	16,870	21,901

BEEVES.—There was a moderate run of generally coarse quality cattle on sale on Monday last, which sold off on a slow but firm condition of trade at 9@12¾c. ₱ lb.; weights, 6¼@11 cwt. There was an advance of ¼c. ₱ lb. on the closing rates of the previous week; only a few head of good quality beeves came to hand, and nothing choice was received. Wednesday, trade extremely dull, with several herds unsold at noon. Prices were at 8@12c.; weights, 6@11 cwt. Thursday, trade slow and small at 8¾@10¼c.; weights, 5½@7¼ cwt. Friday, the markets closed weak, with sales at 9@11¼c.; weights, 6¼@8¼ cwt. From 56@58 lbs., net, has been allowed to the cwt.; the largest number of cattle were sold at 56 lbs. net. Native steers, 8@12c.; grade, 12¼@12¾c.; oxen, 8½@11c., with a few pairs of corn-fed State at 11@12c.; mixed herds, 9@10¼c.; corn-fed Spanish herds, 9¼@9¾c.; bulls on live weight, 4@4¼c.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	12 @12¾	12 @13
Fair	11 @11¾	11 @11¾
Poor	10 @10¾	10 @10¾
Poorest	8 @ 9¾	8 @ 9¾
Gen. selling rates	9¾@10¾	9¾@10¾

MILCH COWS.—The quality of the fresh cows to hand has been so inferior that sales even at very low rates have been few and slow. Extreme range of prices, $20@75 ₱ head, with 1 cow for $80; 4 cows sold at $20@50—no calves included; 7 at $35@55; 11 at $45@65; 5 at $60@75—calves included.

VEALS AND CALVES.—On a heavy run of course quality calves, trade has been slow and sales few in the ratio of the arrivals. Meal-fed calves sold at 4@8¾c.; general sales, 6@7¾c. ₱ lb. Smooth quality veals in light supply and in moderate demand at 9@9¾c.; bobs, $2.50 ₱ head. The calves to hand quoted entirely from Central and Western New York. State veals sold at 9@9¾c.; Pennsylvania, 8@9½c.; Jersey, 9¾@9¾c.

SHEEP AND LAMBS.—The quality of the flocks on sale during this past week has been from coarse to choice. Trade has been very slow, and several car-loads of sheep have been held over from one market day to the other. Monday, sheep sold at 7@8¾c. Wednesday, trade small; sheep 7@8¾c.; spring lambs, 14¾c. Thursday, sheep at 6¾@9c.; lambs, 8¾c. Friday, the markets closed dull; sheep, 6¾@7¾c. Ohio sheep sold at 7@8¾c.; Illinois, 7¾@8¾c.; Missouri, 7¾@8c.; State, 7@8c.; Indiana, $7.31½ ₱ cwt. The lambs in hand have been received exclusively from New York State.

HOGS.—There were no live hogs on sale. City dressed quoted slow on Monday last at 10¾@10¾c.; light pigs, 10¾c. Wednesday, sales at 10¾@10¾c. The market closed weak at 10@10¾c.

HORSE MARKET.—City trade heavier and sales easier in all classes of horses; 33 head of poor quality light harness horses, $52@100 ₱ head; 41 head ordinary do., $115@195; 14 roadsters, auction fair, but not warranted sound, $225@350; 7 trotters, $250@300; 3 head coarse quality brougham horses, $300@150; 2 saddle horses, quality poor, $100@150; 5 heavy draft horses, quality coarse, $110@275; 1 pair choice quality do., sold for express work, $700; 8 pairs family carriage horses, $275@525 ₱ pair; city railroad horses, $115@200 ₱ head; stage line horses, $175@250. Thirty-five horses arrived per Erie Railroad via Oak Cliff Station.

Read the POULTRY BULLETIN.

WILLARD'S PRACTICAL Butter Book

ONLY COSTS $1,

And should be in the hands of every Farmer's wife in this country. It is full of practical and scientific information upon every branch of butter making, from the care of cows to butter in the market, and should be kept for constant reference in every house where that article is made.

☞ *This book is fully and handsomely Illustrated.*

Every one can understand it, and improve the quality and quantity of their butter by reference to its pages. Written by one who has not only made a life study of the subject, but who is himself a

Practical Dairyman,

it cannot but be thorough and useful. No book contains more solid information upon the subject in so few words. A complete index enables the reader to refer to any branch of butter making, and take in the whole subject in a very short time.

Lay it beside your churn, and apply its useful lessons each day, and your one dollar book will have yielded you fifty dollars before the end of the year.

Sent, post-paid, upon receipt of $1.

Address

RURAL PUBLISHING CO.
78 Duane Street, New York.

MOORE'S RURAL NEW-YORKER became a household word and power in the land long before we quit "going to school," and, perhaps, needs no comment from us; still "its memory is ever fresh and green," and is renewed by its appearance every week, brimful of *good things* as ever. We are glad to announce that our predictions in the January number are being more than fulfilled. We have sent it more than *five hundred* names, and we learn that subscriptions have been pouring in in like proportions from all parts of the country, despite the hard times. Long may it continue to be what it is—a power for good in the land.—*Agent's Friend.*

PERSONAL ITEMS.

DR. TRAUBE, the celebrated physician at Berlin, is dead.

PAUL MORPHY declines to play a chess match at the Centennial.

MISS ANNIE LOUISE CARY will sail for home on the 17th of May.

DR. KENEALY, the Claimant's counsel, is coming to this country to lecture.

KARL BLIND has been elected an honorary member of the Cobden Club.

STEINBERGER has been deposed in Samoa, and imprisoned on a British war vessel.

A. ST. LAZAR, Consul-General of Hayti to New York, has arrived from Port-au-Prince.

MRS. SCOTT SIDDONS sailed from San Francisco on the 30th of March for Sydney, Australia.

IT is reported that William M. Tweed has bought a house in Havana, and is living there.

PROF. HAYDEN was recently elected a member of the Imperial Society of Naturalists of Moscow, Russia.

MISS BRADDON, the novel writer, thinks of making a tour in this country and giving public readings.

A PLASTER cast of the features of the late A. T. Stewart was taken directly after his death by Bierstadt.

JUDGE PRATT of Brooklyn, April 11 sentenced Fuchs, the murderer of Simmons, to be hanged on June 2.

LOTTA, the actress, has engaged the Palmer cottage, on Bellevue Avenue, at Newport, R. I., for the season.

EX-GOV. TALBOT of Massachusetts, is one of the Vice-Presidents of the Massachusetts Anglers' Association.

MR. GWEN MARLOWE, the actor, who has been seriously ill in the Massachusetts State Hospital, is improving.

MR. CHARLES READE will be one of the contributors to The Belgravia Magazine under the new management.

SENOR DON ANTONIO MANTILLA, Spanish Minister at Washington, is sojourning at the Clarendon Hotel, N. Y. City.

COUNT FAVERNEY, long Secretary of the French Legation at Washington, has been promoted French Minister to Brazil.

MR. JOHN F. MILLS, one of the proprietors of the well-known Parker House, in Boston, died on April 9th, aged fifty-three years.

THE name of General George McClellan has been mentioned in connection with the colonelcy of the Fifth Maryland regiment.

THE Archbishop of York, it is said, has identified himself with the Church of England Temperance Society, and has become a tectotaler.

CHARLES MCMILLAN of this State, has been confirmed as the United States Consul-General at Rome, in place of the late Paul Dahlgren.

THE Harvard University stroke oar, Mr. A. P. Loring, has had to give up rowing on account of ill health, which is a set back for the crew.

PROF. SHALER of Harvard College, is reorganizing his school of geology and will start for Cumberland Gap, Tenn., in the latter part of June.

THE reported founding of a Chinese professorship at Yale and the appointment of Mr. S. W. Williams to the chair, is pronounced incorrect.

PRESIDENT PRADO of Peru, arrived at N. Y. City, April 11th. He was met at the quarantine by a delegation of eminent citizens, who escorted him to his hotel.

ONE of the trustees of Wesleyan University, whose name has not been made public, has given $25,000 toward the $500,000 endowment fund of that institution.

MR. R. H. HORNE, the author of "Orion," and Mr. R. S. Townshend Mayer, the editor of St. James's Magazine, have now decided to come to this country in September.

PRESIDENT MCCOSH of Princeton College will begin his second course of lectures in Cincinnati next Monday. His subject will be the "Motive Powers of the Human Mind."

RASPAIL, the advanced radical leader in the French Legislature, is also a chemist of celebrity, having made discoveries which have proved of considerable scientific value.

HANS CHRISTIAN ANDERSEN'S books, manuscripts, and autographs of distinguished persons will be sold by auction in Copenhagen for the benefit of the Andersen Children's Home.

PROF. HUXLEY received a check for $5,000 recently from a gentleman in Manchester, England, who sent it as an expression of the regards of his deceased father for the Professor.

BARTHOLOMEW SHUGRUE was an unmanageable maniac for years in the Norwich almshouse. He was rescued with difficulty when it burned, and has since been perfectly quiet and contented.

THE late John Forster's "Life of Dean Swift," it is now discovered, had not advanced beyond the first volume, which was published a short time ago, and the work will remain incomplete.

PROF. SIEGMUND, a distinguished German Orientalist, fell down a precipice at Amathes, in Cyprus, where he was engaged in the excavations undertaken by Gen. di Cesnola. He died immediately.

IT is stated that Mr. Moody will go to Florida after the close of his meetings in New York City. He will spend a few weeks of the summer with his mother, at Northfield, Mass., and then return to his pastoral work in Chicago.

DREER'S

IMPROVED LIMA BEAN.

The distinctive features of this sort are early maturity, prolificness, and extra quality of bean, containing more saccharine matter and producing one-third more shelled beans to the pole than the Large Lima, while the shelling becomes an easy matter, from the fact of the pods being entirely full of beans, forming one against the other like peas in a pod.

The *American Agriculturist* of Nov., 1874, says: "We regard the improving of this bean as one of the most important of the recent contributions to horticulture."

Price, $1 per pint.

20 cents per paper, mailed on receipt of price.

HENRY A. DREER, 714 Chestnut St., Philadelphia.

MOORE'S RURAL NEW-YORKER.—With its full corps of editors, and a new publisher of energy and ability, the management propose to celebrate the quarter-centennial of the pioneer RURAL in such a manner as to augment its popularity and usefulness. For a first-class, lively paper, containing matter of interest for all classes, take the RURAL NEW-YORKER, and do so at once, for the paper never was better, and its prospects never brighter.—*Freeport (Ill.) Journal.*

Roofing.

IT PAYS

any smart man who wishes to make $2,000 a year on a *small* capital, to commence in our line of business. **Roofing is a Specialty.** There is no one in your county who carries on the business. You can learn it in one week by studying our instructions, which we send to all who ask for them. Any man having $100 capital to start with, can purchase enough material to *roof three* ordinary houses. The sum realized from sale and profit on this supply, added to the regular pay for labor as Roofer, should amount to not less than **$260.** An experienced man could *easily* do the work in nine working days. Two persons of small means can join together to advantage; *one* canvassing, while the *other* attends to the work. Send for our Book of Instructions (*free* if you write *at once*), and *study* it. Ask for terms. If you are unable to advance the money, present the matter to the principal storekeeper *in your place*, and talk it over with him. He will be *glad* to furnish the stock and *divide* the profit with you. We will guarantee the territory to the *first* responsible applicant. Address N. Y. SLATE ROOFING CO., LIMITED, 8 Cedar St., N. Y., and mention RURAL NEW-YORKER.

NEWS CONDENSER.

— Cohoes wants a new cemetery.

— They are shooting mad dogs at Binghamton.

— Kentucky is shipping black walnut to Europe.

— The Centennial Exhibition is not to be open on Sunday.

— The peach crop will be all right this year in the southern portion of Illinois.

— A treaty of peace has been made between the Republic of Liberia and the revolting tribes.

— Between eight hundred and a thousand cars of live stock pass through Buffalo each week.

— The Mohawk Woolen Mills were closed for three days in respect to the late A. T. Stewart.

— A majority of the Scotch and Irish members of Parliament are in favor of women's suffrage.

— The last census of Japan places the population at 33,300,675, an increase of 189,000 in three years.

— Paris proposes to name one of her streets "Feb. 20," in honor of the late Republican victory at the polls.

— Thirty-one new members were received into the first Presbyterian Church, Troy, Sunday morning, April 9.

— The leading hotel keeper in Japan has failed for $100,000. He wasn't a Jap, though, but an outside barbarian.

— A tract of 7,000 acres of land on Maple river, Dakota, has been purchased by Eastern capitalists for a great wheat farm.

— A revival in Amherst College has resulted in the conversion of 63 out of 320 students, of whom only 50 are unconverted.

— The State Sheep Breeders' and Wool Growers' Annual Convention is to be held at Batavia on the 26th and 27th of April.

— The House Ways and Means Committe has agreed to the Tariff bill, and refused to strike tea and coffee from the free list.

— The Northern Central railway company is about to supply their track between Elmira and Canandaigua with steel rails.

— A new Episcopal Church, styled the "Free Church of the Epiphany," was dedicated at East Albany, April 10, by Bishop Doane.

— Advices from San Domingo say the election passed off peaceably. Espaillat was elected President by an overwhelming majority.

— The unveiling of the Schiller monument at Marbach, in Germany, will take place on May 9, the anniversary of the poet's death.

— On account of the establishment of a Chinese laundry at Roseburg, Oregon, a war of races is imminent, and the Celestials are arming rapidly.

— There is a valuable piece of real estate in Boston which is leased for 99 years, at an annual rental of 20 tons of pig iron. No soft money about that.

— The banana crop in Louisiana is the largest ever grown there. The fruit has grown through the whole winter, instead of being killed by frost as usual.

— Returns from the vote in Montana on granting a subsidy to the Northern Pacific Railroad show that the proposition will be defeated by a small majority.

— On the 29th of February, forty years ago, the opera of "The Huguenots" was first produced. Since that time the opera has been performed in Paris 591 times.

— The Irish citizens of Albany have formed an Association known as the Mitchell Guards, and will make a parade through the streets of Philadelphia, July 4.

— A fire in the Court House at Martinsville, Ind., April 7, destroyed all the County Clerk's and Sheriff's records for the last eight years. A plot of some kind is suspected.

— The population of Philadelphia, according to the census taken on the 3d of April, is 817,448, a gain of 143,426 in five years, as compared with the last United States census.

— The money lost by a recent fire in Charleston, S. C., would have covered three-fourths of the cost of the water works for which the city has longed for half a century.

— Musical bees are now the rage in London, where prizes are awarded for reading pianoforte and vocal music at sight, and also for skill in interpreting classical works.

— They say in San Francisco that every municipal officeholder, excepting the pound-keeper, has taken a hand at lobbying at the capital during the present session of the Legislature.

— An archeological exposition on a very extensive scale is being organized in Amsterdam to celebrate the 60th anniversary of the capital, and will be opened about the middle of this month.

— The small-pox is prevailing to quite an alarming extent in Perkinsville, N. Y., a little village near Dansville. Two persons have died with the disease and it is said to be gradually spreading.

— Old Orchard Beach from Blue Point to Saco is covered to the depth of from one to two feet with quahaugs, which were thrown up by the late storm. The people are taking advantage of this to lay in a good stock of fish bait.

— The Ohio House of Representatives has just passed two praise-worthy bills, one compelling railroad conductors to eject gamblers from trains, and another forbidding the employment of children under fourteen years of age as gymnasts or public singers.

Dairy Salt.

THE AMERICAN
DAIRY SALT COMPANY
J. W. BARKER, Pres't and Sec'y. THOMAS MOLLOY, Treasurer.
General Office, No. 1 Clinton Block, Syracuse, N.Y.
Sole Manufacturers of the Celebrated Onondaga Factory Filled
DAIRY AND TABLE SALT.
Respectfully call the attention of Dairymen and others to the quality of Salt now being manufactured by them.

Having for many years past been engaged in perfecting the various processes for the manufacture of this salt, and by adopting the best modes and machinery for the purpose, they feel warranted in saying to the consumer that the article now produced is superior to any other, either of foreign or domestic production. The following is an analysis of our salt and the Ashton, made in April, 1875, by Messrs. Waltz and Stillman, Chemists, of New York, under the direction of a Committee of the Butter and Cheese Exchange of New York, the samples being selected by the Committee from lots found on sale in market:

	Ashton.	Onondaga.
Water	0.7980	0.8280
Insoluble Matter	0.0504	0.0364
Sulphate of Lime	1.2272	0.7217
Sulphate of Magnesia	0.0703	.....
Chloride of Calcium	.....	0.0173
Chloride of Magnesium	0.0591	0.0346
Chloride of Sodium	97.7598	98.5243
	99.9074	99.9822

Circulars in regard to the various other tests made with this salt in comparison with the best foreign article, also certificates from a large number of the best dairies in the State as to its quality, may be had on application to J. W. BARKER, Secretary, Syracuse, N. Y., to whom orders for salt may also be addressed. It is also for sale by the Agents of the Company in principal Western Lake Ports; by ST. JOHN & AVERY, 101 and 103 Broad St., New York; ROBERT GEER, 109 Pier, Albany, N. Y.; E. W. PECK & Co., Burlington, Vt., and by dealers generally throughout the State of New York.
Inquire for ONONDAGA FACTORY FILLED SALT.
J. W. BARKER, Pres't and Sec'y.
THOMAS MOLLOY, Treasurer.
Syracuse, May, 1875.

Fertilizers.

These goods are analyzed by Professor G. A. Liebig of Baltimore and other eminent chemists, and their quality guaranteed. Send for Circular.

Traveler's Guide.

CALIFORNIA.

Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?

The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTHWESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oskosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.

This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.

This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.

For rates or information not attainable from your home ticket agents, apply to
MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

THE PALACE HOTEL TRAIN
BETWEEN
NEW YORK AND CHICAGO,
via Cleveland.

Wit and Humor.

A WET MOON.

THE weather depends on the moon as a rule,
And I've found that the saying is true,
For at Bala it rains when the moon's at the full,
And it rains when the moon's at the new;
When the moon's at the quarter, then down comes the rain,
At the half it's no better I ween;
When the moon's at three-quarters, "it's at it again,"
And it rains besides mostly between.

[*London Garden.*

SPARKS AND SPLINTERS.

A PREACHER'S word should be law only when it is gospel.

THE most likely thing to become a woman—A little girl.

ONE swallow does not make a spring, but a dozen make a fall.

AT a recent spelling-match one man spelt it "pasnip" and got beet.

WHEN you see a young goat asleep can you call it a case of kid-napping.

INDEPENDENCE of thought and expression is a rare virtue in these days.

MANY men are like asses, but it was only in Balaam's case that the likeness was a speaking one.

WHO was the straightest man in the Bible?—Joseph, for Pharoah wanted to make a ruler of him.

AN Irishman once ordered a painter to draw his picture and to represent him *standing behind a tree.*

WHY has an ocean voyage no terrors for physicians? Because they are accustomed to seasickness.

WHY is a mad bull an animal of convivial disposition? Because he offers a horn to everyone he meets.

THE young man who came near being transfixed by Cupid's darts, remarked that he had an arrow escape.

A VINEGAR-HEARTED old bachelor says he always looked under the head of "marriages" for the news of the weak.

WINTER clothes, worn thin, will be the prevailing style this spring. It is necessity that compels it.—*Yonkers Gazette.*

To reprove small faults with undue vehemence is as absurd as to seek to remove a fly from a friend's forehead with a sledge-hammer.

AN Irishman recently soliquized:—"What a waste of money to be buying mate when you know that half of it is bone, while you can spend it for whisky that hasn't a bone in it."

JOSH BILLINGS says:—"There is one thing about a hen that looks like wisdom—they don't cackle much till they have laid their oggs. Sum pholks are alwus a bragging and cackling what they are going tew do before hand."

"MY dear boy," said a fond aunt to a very fast nephew, "don't you know that in leading this irregular life you are shortening your days?" "It's quite possible," was the cool reply, "but then look how I lengthen my nights!"

A GENTLEMAN the other day saw a neatly wrapped package lying on the sidewalk, but was too sharp to pick it up, and merely smiled at the harmless sell and passed on. When however, he saw a bootblack stop and undo it and take out a box of fine cigars that some one had dropped, the world seemed to be all slipping away from him.

THUS rules the festive gambolaire:
Never bet on a single paire,
For three of a kind will beat you square,
Or even a straight will lead that are;
But if a full your hand shall bear,
Your chance to win may be reckoned fair—
That is, if your three are away up there;
Kings may do, but by aces swear,
Though four of a kind may make you stare,
Or a royal flush lift the four hand's hair,
Therefore, draw, boys, draw with care
And shift your cards with a careless air,
That when at last to call you dare,
You may "rake the pile" of the gay croupaire.

[*Sun.*

As a reporter passed a North Hill school-house yesterday, says the Burlington Hawkeye, a studious-looking lad emerged from one of the doors with a worried expression of countenance and ambled round to the rear of the building, closely followed by a companion, who popped from behind the fence. The two sought a retired nook, where the studious lad backed up against the wall, and reaching his hand behind him into that department of a boy's clothing that is patched next after his knees, he drew forth one buckskin mit, and again another. As he readjusted his deranged garments, he winced a trifle and rubbing a little lower down on his anatomy, gave vent to the remark "I say, they're pretty good, Jemmy, but he missed 'em seven times."

"IT'S A GONE GOOSE, SURE."

WILLARD'S Practical Dairy Husbandry.

A Complete Treatise on Dairy Farms and Farming,
Dairy Stock and Stock Feeding,
Milk, its Management and Manufacture into Butter and Cheese,
History and Mode of Organization of Butter and Cheese Factories,
Dairy Utensils, Etc., Etc.

BY E. A. WILLARD, A. M.,
Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential journals, and must speedily become (in fact is already) the *Standard and Only Authority.* It will pay every one engaged in any branch of dairy business, or who keeps a single cow, to obtain and study this work.

D. D. T. MOORE, Publisher,

RANDALL'S Practical Shepherd

A COMPLETE TREATISE
ON THE BREEDING, MANAGEMENT AND DISEASES OF SHEEP.

THIS Work, by the Hon. HENRY S. RANDALL, LL. D., (author of "Sheep Husbandry in the South," 'Fine Wool Sheep Husbandry," &c.,) is the Standard Authority on the Subject. It is the most complete and reliable Treatise on American Sheep Husbandry ever published, and (as the New England Farmer says) "should be in the hand and head of every person owning sheep."

The PRACTICAL SHEPHERD contains 452 pages, and is illustrated, printed and bound in superior style. Twenty-seventh Edition now ready. Sent by mail post-paid, on receipt of price—$2. Address
RURAL PUBLISHING CO.,

MOORE'S RURAL NEW-YORKER, conducted by our jolly friend, Hon. D. D. T. MOORE, leads all the papers of its class in this country. It is edited with great care and has a large variety of interesting and instructive departments for the family and the fireside. Convenient in form, remarkably neat in typography, abounding in timely illustrations, and well filled with the choicest of matter, both original and selected, it has no superior in its peculiar sphere.—*Yonkers Gazette.*

MOORE'S RURAL NEW-YORKER is an excellent Agricultural paper, and very popular. As a family visitant it is hard to beat in the attractions it holds forth for young and old. We are pleased to see that Mr. MOORE is full of his old enterprise and bent on making the paper better and better from year to year.—*Yates Co. Chronicle.*

THE BEST PAINT IN THE WORLD.

RUBBER PAINT,
MANUFACTURED BY THE
RUBBER PAINT CO. OF CLEVELAND, O.

ANY SHADE FROM PURE WHITE TO JET BLACK, AND, AS IT IS MIXED READY FOR USE,

EVERY MAN CAN BE HIS OWN PAINTER.

The incorporation of RUBBER in our paint makes it *unequaled* by any other. It is unaffected by change of temperature, and is perfectly waterproof. It presents the finest possible finish, will not crack or peel off, and is in every way the "*Best Paint*" for either inside or outside painting, is from one-fourth to one-third cheaper, and lasts three times as long as the best lead and oil paints. The almost *unanimous verdict* of the many thousands who have used our paint is that it is *far superior* to any other paint in use.

Be sure that our TRADE MARK (a fac-simile of which is given above), **is on every package.**

The great popularity of and demand for our paint has necessitated the establishing of "*Branch Factories,*" as follows:

Consumers Importing Tea Co.,
No. 8 Church Street,
P. O. Box 5,509. New York City.

This is a combination of capitalists to supply the consumers of Teas throughout the United States on the mutual principle.

We have experienced agents in all the best districts of China and Japan to select Teas especially for our trade.

We expect every consumer of Teas to render us all the assistance they can in carrying out our enterprise, as we make a specialty of SUPPLYING CONSUMERS ONLY (and allow no middlemen to make any profit on our importations), which will enable us to supply them with Teas at prices lower than have ever been known, and of those fine qualities that seldom reach the interior, being sold only to the large cities and among the very wealthy.

Hoping the consumer will take an interest in our enterprise, and send at once for a circular with full explanations of how to proceed to obtain our goods, we remain,

Most respectfully yours,

The Horseman.

RYSDYK'S HAMBLETONIAN.

THE fine engraving of this remarkable horse was originally prepared for Wilke's Spirit of the Times. It represents the noble horse in the fine proportions which not only marked him, but are reprodneed in Dexter and other monarchs of the turf among his descendants. He was the sire of nearly thirteen hundred foals, more than 1,225 being known, which is probably a greater number than that of any other horse. For some years his services were worth to his owner $10,000 a year, the fee to insure a foal having been $500 since 1865.

This wonderful horse was bred by JONAS SEELEY of Chester, Orange Co., N. Y., and was foaled May 15th, 1849; got by Abdallah, son of Mambrino, by imp. Messenger. Abdallah, his sire, was out of Amazonia, formerly supposed to be of Messenger breed; but it is now conceded that her blood is unknown. The dam was got by imp. Bellfounder, second dam by Hambletonian, son of Messenger. Third dam by Messenger. There was thus the highly prized Messenger blood in both sire and dam. The dam and foal (afterwards RYSDYK'S Hambletonian) was sold by Mr. SEELEY to WM. M. RYSDICK of Chester for $125. At two years old he was bred to four old mares, from which three foals were produced, and one of these was Alexander's Abdallah, the sire of Goldsmith Maid. At three years old Mr. RYSDYK took Hambletonian to Long Island, and though he made a test of a mile in 2:48, which was thought very good for those days, his owner judged that he would prove more valuable as a stallion, and he was kept for that purpose. That this was a profitable move cannot be doubted, as it is estimated that Hambletonian brought his owner $100,000 during the twenty-five years that he owned him.

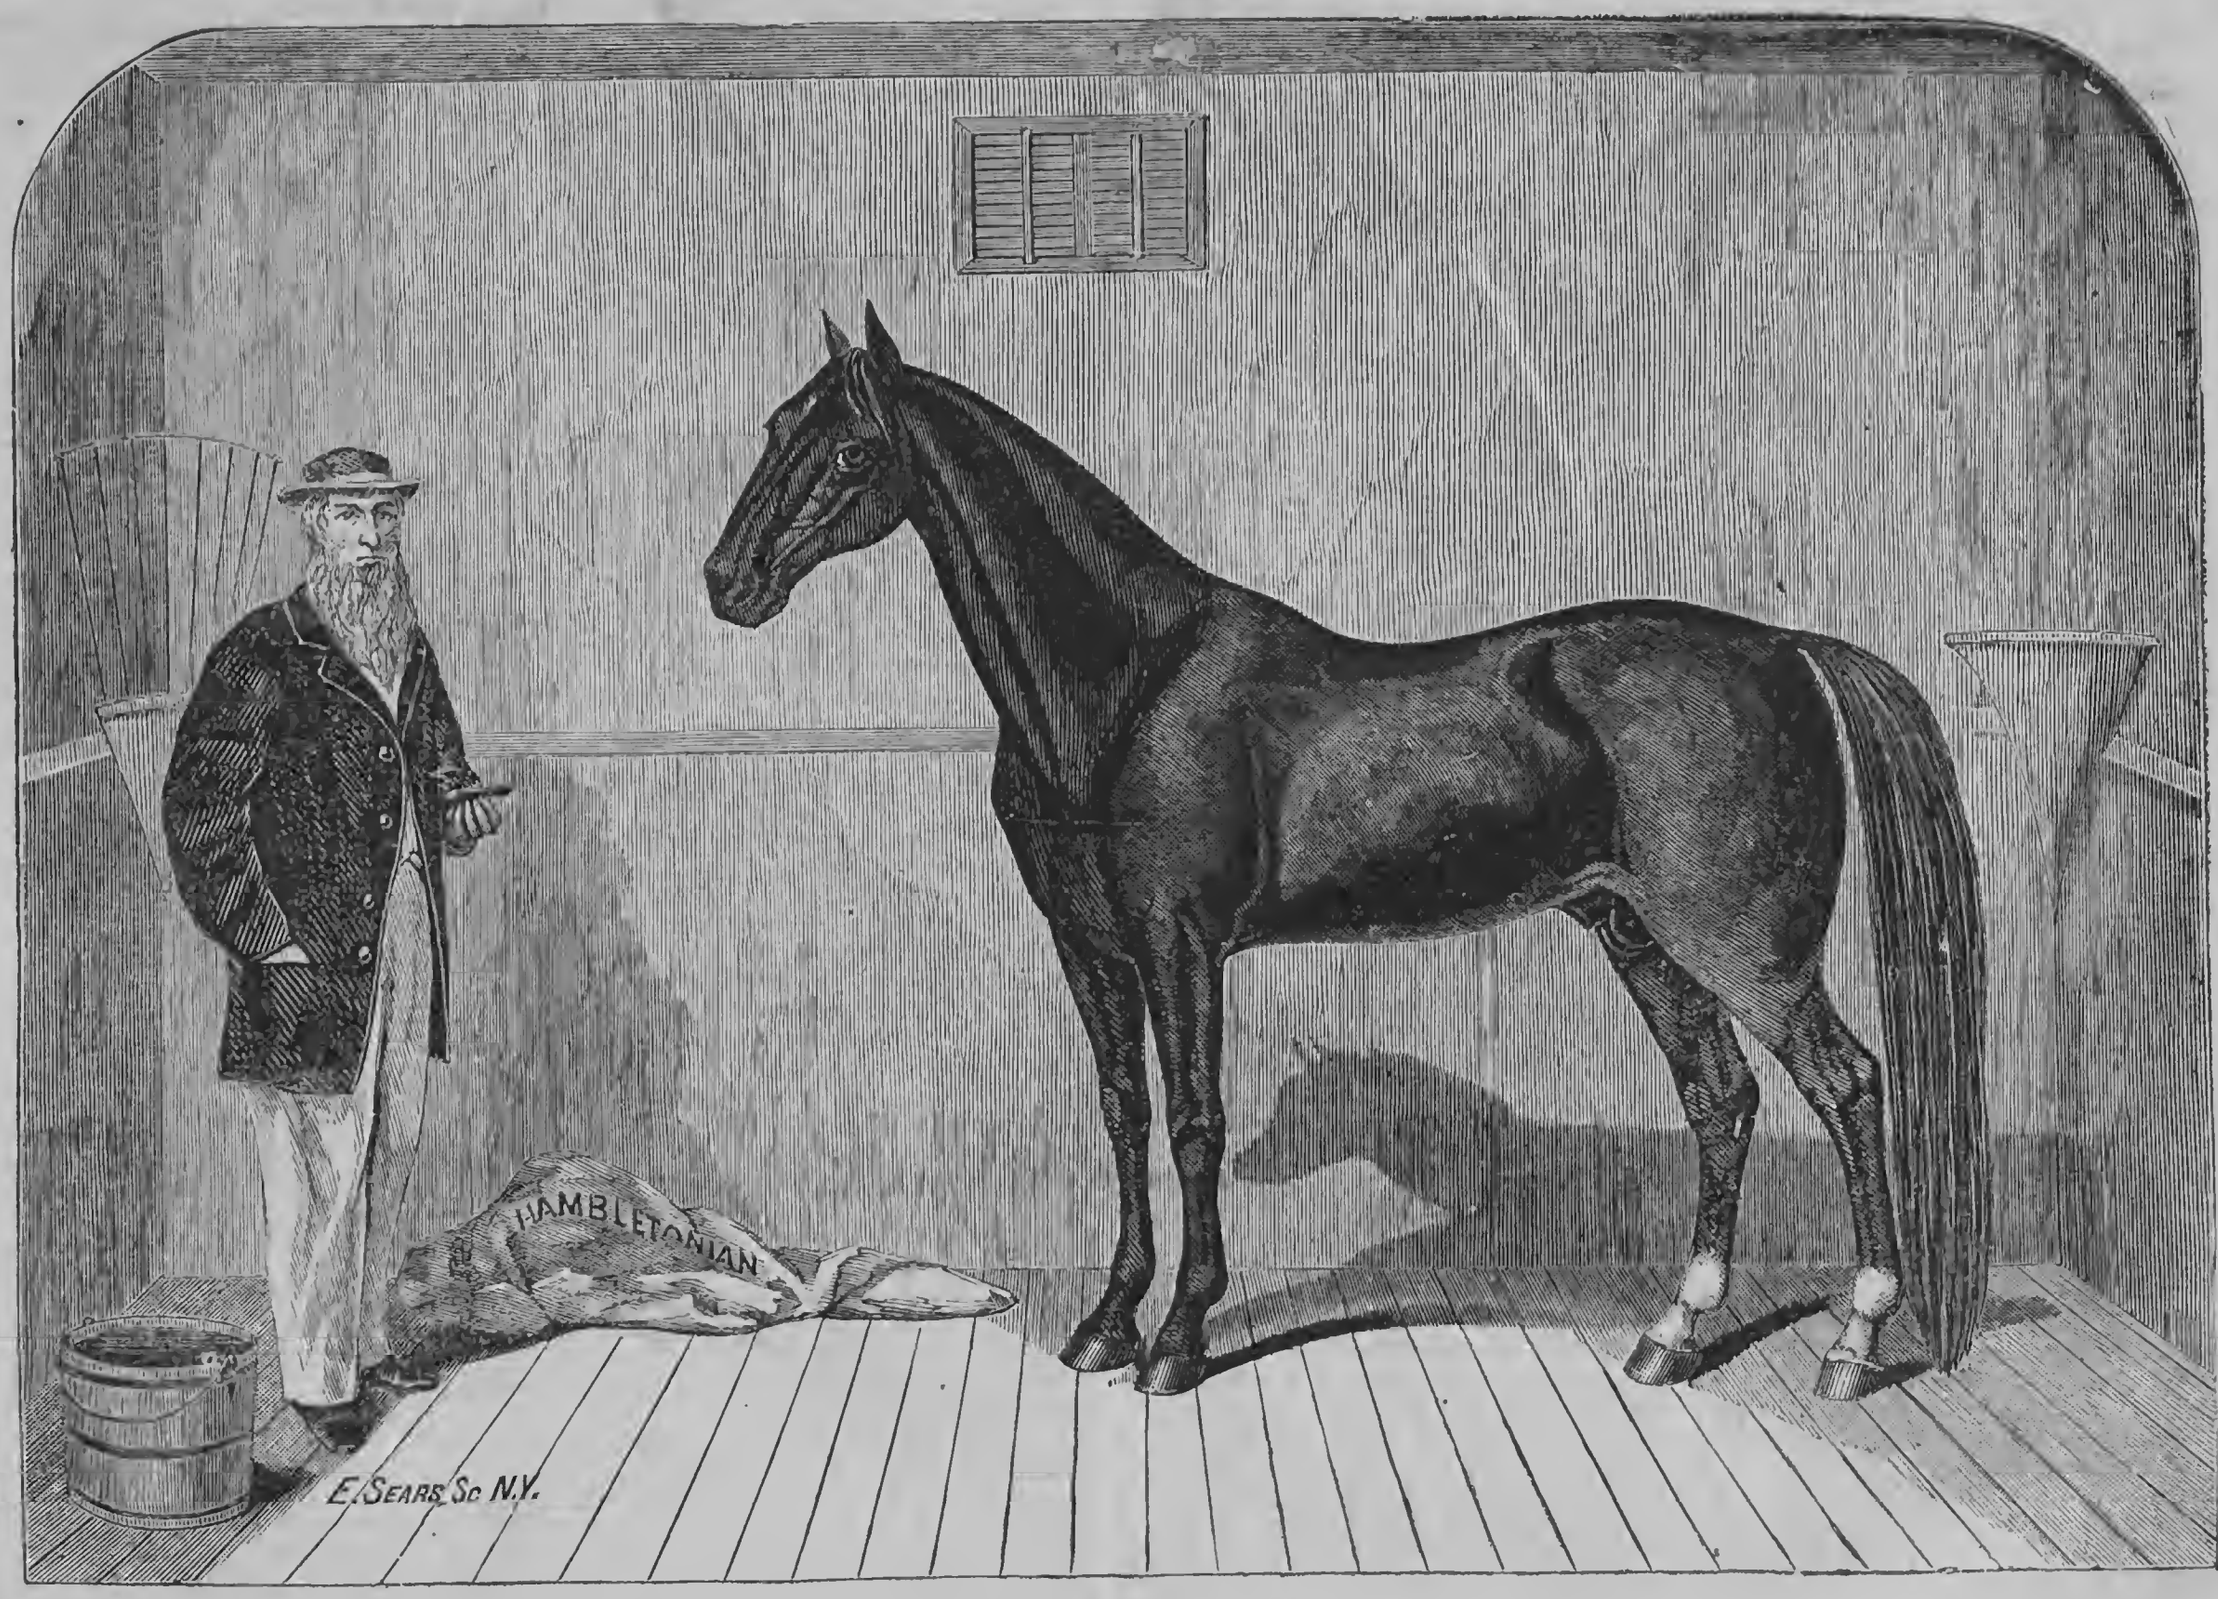
No less than fifty-eight descendants of this famous old sire have made public records of 2:30 or better, twenty-one of which are in the first generation. Of the remaining thirty-seven there are thirty-two grandsons and daughters, and five that are one generation further removed from their distinguished progenitor. Of those in the second generation twenty-nine are descended in the male line, two in the female line, and one by both branches. Of the sixty-one horses that have made records of 2:23 or better in harness, twenty-one were his descendants, and of the ten that have dropped into the 2:18 class, he claims just one half—a showing from the records that clearly entitle him to stand pre-eminent as *the great progenitor of trotting horses*. He was a horse of great substance, but, at the same time, without a particle of grossness. His bone, though heavy, was of most excellent form and apparent fineness of texture. His mane was originally light, the hairs perfectly straight, but not a vestige of it remained. His tail was once very heavy, but it also grew thin with age. In color, he was a rich mahogany bay, with a small star, and two white ankles behind, but below them the coronets were dotted with black spots, and the hoofs mainly dark. His head was large and bony; jowl deep; eyes large and prominent; ear large; neck rather short, and heavy at the throatlatch, but thin and clean; shoulders very deep, oblique, and strong; withers low and broad; back short; coupling excellent; croup high, and enormous length from point of hip to hock; broad, flat, clean legs, with tendons well detached from the bone; hock well bent rather than straight; pasterns long and elastic; and hoofs splendid.

BREAKING COLTS.

IN the RURAL of Jan 1st, "Working Farmer" furnishes your excellent paper with his views of breaking colts, from which, by your permission, I enter a demurer.

1st. "Working Farmer" thinks that the correct method is to permit the colt to run untouched until three years of age, then catch him, (if you can) and when you get him, and after a fearful struggle, get the halter on him. He being wild, in endeavoring to get away, or to elude your grasp, probably throws himself from one to twenty times, and endangering the life of the (would-be) manager, and running very much risk of breaking his limbs, or some blood vessel. In addition, it will take two men to hold, whereas, if haltered when four or six months old, one man can handle him, without danger to man or beast.

I broke a Hambletonian colt, whose mother was an English hunter by Tormentor, and consequently a very high-strung colt, that was two years old the 23d of last Oct. I haltered him when he was about from four to six months old, and before I could get him to lead—by the use of the mildest means possible—he threw himself



RYSDYK'S HAMBLETONIAN.

thirteen times. I then let him go, and when, some time afterwards, I put the halter on him again he was perfectly docile.

This winter, being two past, father gave him to me. I thought I would break him. I put the harness on, which did not seem to frighten or excite him in the least, so I led him out of the barn—led him down the road. I spent the major part of day in getting him to drive by the lines, and go where and do just what I told him, after which I hitched him up with another two year old Hambletonian (his mate) to the democrat wagon, and the other colt having been driven before, I tied his end of the doubletree back, just even, so that the colt, used to drawing some, had to draw the whole wagon when the other colt hung back. After I had driven him about half an hour, he drove up, finally, in the harness, and ever since has been as gentle as any horse in Steuben Co., and has never manifested the least ugliness or bad temper since the first days' toil with him. I think if I had undertaken to halter, harness, hitch up and drive him all in one day when three years old, I should have had not only a kicking and balking colt, but a colt not worth, in reality, one dollar, whereas I think him worth to-day, at the lowest figure, $1,000. Again, I have a two-year-old stallion (the mate of the one already referred to) that I harnessed, hitched and drove, all in one day, but he had been thoroughly broken to the halter at six months old, and he is as well broken and as gentle as the other.

My reason for referring to this last colt is this, there are no two colts that act alike when breaking, and the manager cannot adopt any one theory of breaking all colts, but must study carefully and know the disposition of the colt to be handled, and then act upon it. A colt should be well broken to the halter when weaned, as it is a great convenience, if necessary, to move them from one place to another, and they should be harnessed and way-wised to the road at two years, but not drawn hard. Then at any time in after life, when the horse has reached working naturally, he will be ready and willing to do whatever can be reasonably required of him. J. W. B.

Addison, N. Y.

MANAGEMENT OF BROOD MARES.

Mr. M. W. Dunham of Ill., last year made some large purchases of Percheron horses, and in a recent letter he thus describes the French, or Percha method of breeding.

The division of the sexes in Perche differs from most countries where horses are raised. One section has the mares and produces the colts, while another section buys and raises them. No matter what may be the class to which she belongs, light or heavy, or partaking of both, the mare is expected to breed every year. If barren, she is sold. This fault continuing, she passes into public use. During her gestation, she works constantly. A few days' rest before and after foaling is the only time lost. The remainder of her work pays abundantly for keep and the interest on her cost. At the age of five or six months the colt is abruptly weaned and sold. Led into the interior upon the fertile meadows it remains one year unproductive. In winter, it is fed on hay, in the stable, and during the fine season turned into the field to graze. To sum up, it is rather poorly nourished on bran, grass and hay. The reason is, that it is yet unproductive to its master, and it feels the effect. Wait a little. Its hardest time has gone by; and work will soften its lot. It reaches, in this manner, the age of fifteen to eighteen months. At this age the colt is put to work. Naturally docile and in the hands of a man always patient and kind, the training is generally easy. Assigned to farm labor the colt plows or draws a wagon. Harnessed with four or five colts of its own age, together they pull what would be an easy load for two good horses. Put before oxen or joined to three of its companions, the young animal plows, and is never overworked. Now it is fed better, and receives better care. Its *morale* improves, and its master seems to delight in contemplating the progress and development of the desirable qualities. Master, servant, large and small, all deeply imbued with the love of the horse, unite in this work with admirable skill. Thus, in traveling through Perche, one involuntarily stops in the middle of the fields to see the colt work, never tired of admiring the vigor it displays and the gentleness with which it is treated. At the age of three, the Beauce farmer buys the colt to work his soft and light soil. For him the young animal must be preserved intact, its development uninjured, nay, encouraged.

The colt has thus been worked one year, abundantly fed, but supplied with little or no grain. Doing enough light work to pay its keeping, the master has received enough besides the manure to pay a heavy interest on the cost of his colt. The primitive work, which would have been injurious under a careless management, is, on the contrary, beneficial so long as the colt is in the hands of a good master. This is so much the general case, that the contrary is the exception. The animal grows and becomes better developed in size and strength than if not worked.

KEEPING USELESS HORSES.

This is a subject which deserves more attention than it generally receives. Thousands of horses are kept at large expense without doing enough work to earn their board. In many cases these superfluous horses could be made useful by employing more hired help; but where this is impracticable they should be disposed of at once. J. V. W. writes very sensibly in the Country Gentleman on this topic:

The habit of keeping a lot of useless horses almost too good to give away, and hardly worth keeping, in many families is hereditary, handed down from father to son, and has become a chronic complaint. What shall be done to remedy this evil? The answer is—avoid accumulation. Very few men start in business with too many horses, but they increase in different ways. Farmer A. thinks it would be profitable to raise a few colts to sell, which is all well enough. Neighbor B. has sold one for a good price, and A. knows his colt is fully as good a one, if not better, and of course he must have the same price, or more. Time rolls on, horses are on the increase, finally a team is supposed to be ready for sale. This time neighbor C. has sold a team for a fancy price. A. feels now that he has too many horses, and would like to sell his team, and would do so if he could get the price C. sold at. He knows his team is just as good, perhaps not quite as well matched, or in as prime condition, or as well broken; yet in his own mind he is satisfied that his team is really worth the most money. He does not realize that to get a fancy price it is more important to have a good customer than a good team. Yet farmer A. is not discouraged, but means to sell his team, and have a good price for them.

In a few years he will have from six to nine horses on the farm, and no more work than three or four at most could do, if well fed and cared for. These extra horses are an expense of at least from $75 to $100 yearly, taking into account feed, shoeing, and interest on the money for which they might be sold. How much better to devote this sum to improvements, charity, travel, or good books! The amount of labor that a good team can do, when well fed and cared for by a person who makes it his business to follow them, is wonderful. Experience teaches me that they are fully equal to two teams fed and cared for in the average way among farmers; and certainly the expense is much less. This is what is to be looked after in all business; for just in proportion as expenses are curtailed or increased, will the profits be more or less.

Keeping an extra team year after year, simply to do a couple of weeks' extra work in the spring, and as much more in the fall, is worse than useless. My remedy to avoid this increase of horse stock is to sell. Whenever I can get a buyer for a horse, I do not hold on to get my neighbor's prices. As I said before, more depends on the customer than on the horse, as far as getting a fancy price is concerned. It is better to suffer inconvenience ten days in the year on account of not having teams enough, than to be harrassed all the rest of the year with too many.

WE DRIVE HORSES TO EXCESS.

By driving to excess we mean that horses are pulled and hauled, jerked and twitched too much with the reins. There is too much guiding with the lines. Concerning this subject the Prairie Farmer says (in truth) that the "most vicious and inexcusable style of driving is the manner which so many drivers adopt, to wit: Wrapping the lines around their hands and pulling the horse backward with all their might and main, so that the horse, in point of fact, feels the weight back of him, with his mouth, and not with his breast and shoulders. This they do under the impression that such a dead pull is needed in order to 'steady' the horse.

"The fact is, with rare exceptions, there should never be any pull upon the horse at all. A steady pressure is allowable, probably advisable; but anything beyond this has no justification in nature or reason. For nature suggests the utmost freedom of the action of the head, body and limbs, in order that the animal may attain the highest possible rate of speed. In speeding a horse the lines need seldom be grasped in both hands when the road is straight and free from obstructions. The true way to drive is to let the horse drive himself, the driver doing little but directing him and giving him that confidence which a horse gets in himself only when he feels that a guide and friend is back of him."

Brittle Feet.—Wash the horses' feet clean every night, and when dry apply a coating of the following with a brush:—Fish oil, one part; vegetable tar, one part; oil of tar, one-eighth part. Apply to the hoof only.—*Live Stock Journal.*

Farm Economy.

IMPROVEMENT OF OLD PASTURES.

This is a very important subject, and the means for accomplishing the object will interest many farmers. Mr. E. Woon of Concord, Mass., writes in the New England Farmer:

The pastures in this town will not keep nearly as much stock as they would twenty years ago. There are hundreds and hundreds of acres used for pasturage that are not worthy of the name. There is in one neighborhood more than a thousand acres, once noted for its value in that respect, naturally good land, undulating, too stony to plough to advantage, where, since my remembrance, cattle were fatted—now not able to carry a sheep to the acre—covered with brushes and almost worthless.

I have had much experience in improving pasture land of almost every description, and used many kinds of fertilizers in their reclamation, and came to the conclusion many years ago that the plow was indispensable in their improvement. I am aware that much depends on the nature and condition of the soil. When cows were kept on my farm, their manure was not evenly distributed, and, being taken out of the pasture nights, the grass failed. Two years since, some eighteen horses and colts were kept; they are very destructive, stamping out the grasses with their incessant running and frolicking, and their droppings, (except the liquid,) are of very little account, if left on the field and exposed.

As a last experiment I am trying sheep, and for two reasons, and the best one (it must be admitted) is the profit of early lambs. My sheep have already had sixty-nine lambs, with the loss of only two, and some of them weigh over thirty pounds. The second reason is the "improvement of the pasture." In that I have not been disappointed. In the first place, my pasture will keep more than I expected; and though sheep feed in spots where the feed is sweetest, and, of course, leave their manure there, it was not the pasture that needed to be improved the most, except to be enriched. People have expressed their surprise at the results. In passing over the pasture where the sheep frequent most, you would say it was newly top dressed, and that the grass had thickened wonderfully. On another portion good red top hay was mown, showing that my one hundred and thirty sheep and lambs were not overstock. Sheep are great scavengers, and there is hardly anything that grows naturally on the lot but what they will eat, except a coarse grass that always follows the cutting of wood. There were some seven or eight acres of this description, where wood was cut four years ago; the piece was plowed imperfectly, harrowed, and grass seed sown, but, being a dry year, the coarse grass got the advantage. Horses eat it, but sheep will not; horses would not eat an oak or birch sprout, brier or blueberry bush, but sheep eat everything of the kind. Every day you find them looking for variety, no matter how good the grass is. I cannot say as yet as to the profit, but the pasture is improving, equivalent, almost, to the cost of keeping in summer.

H. S. Randall, the best authority, says—"that four hundred sheep will, if properly managed, manure and improve from year to year forty-five acres,"—a statement which, from my own experience, I fully believe in. I do not say the business will be continued on my farm for a great length of time, but some reports shall be made satisfactory in regard to it, if not prevented by dogs or disease.

PASTURES.—ENGLISH TREATMENT.

Prof. W. J. Beal in the report of the Michigan Board of Agriculture, presents the views of English farmers on the subject of keeping a part of the farm in permanent pasture or meadow. According to their belief and practice, a pasture never becomes very good until it has been seeded six or more years, and in their opinion, it is undesirable to break up tolerably good pastures for the purpose of converting them into arable land. They have studied the nature of different grasses and the soils to which they are adapted, carefully and prepare mixtures of seeds suitable for each geological formation. The object is to have the grasses mature at different seasons of the year, producing a permanent and evergreen sward. It is the general belief in Great Britain, we are told, that permanent pasture, when properly managed, yields a better quality of grass or hay than one newly seeded, and that the quantity does not diminish with the age of the pasture. Mr. Clement Cadle, after twenty years' experience, concludes that, in England, money judiciously used in improving grass land pays a more certain return than when expended in the growth of wheat. He considers the question of applying manures properly, a difficult one, but gives the following general rule:—"In proportion as the land is inclined to grow bent or stocky grass, inclining to seed, apply ammoniacal manures. If the land produces thick, short, leafy herbage, the phosphate manures must be applied."

Mr. S. H. Thompson, another English farmer, concludes that money used in improving grass land gives a better return than on arable land. With him good barnyard manure is a standard. Coarsely-pulverized bones and barnyard manure produced lasting results, often very marked for twenty years. Mr. Lawes expresses the opinion that bones appear to be chiefly adapted to the exhausted pastures of certain localities. He recommends a dressing of barnyard manure once in five years, with application of nitrate of soda the other four years.

They conduct experiments with more care in England than we do in this country, or at least exhibit more patience in conducting experiments through a series of years, and we have outlined the views given because they are based on careful experiments.

R. H. Huntley of Coldstream, England, in the report of this year (1875) says he "laid down three fields to permanent grass by the process known as 'inoculation.'" He succeeded finely. With a plow he turned from an old pasture field strips of turf 4 inches wide. These were cut up with spades into pieces 4 inches long. They were put all over the new field in little holes 1 foot apart. Then the field was rolled. Prof. Beal has applied this system to lawns, and believes it is a surer and more rapid way than by using seed for lawns.

OAT STRAW INJURIOUS.

From a report of the Farmers' Club at the Experimental Farm in Chester Co., Pa., we take the following paper by J. L. Carter:

March 18 we began giving a common cow (selected on account of being a ravenous eater) as much oat straw as she would eat in addition to her usual feed of cut fodder, hay and meal. The first few feeds she ate ravenously of the straw, but settled to 3 or 4 lbs. at a feed. March 19 we began weighing her milk, and found that eight milkings made 91 lbs. of milk, or an average of 23 lbs. 8 oz. a day. We then ceased feeding her the oat straw and put her on her usual feed. We then found six milkings made 77 lbs. 1 oz., or an average of 25 lbs. 10 oz. a day. The whole experiment resulted as follows:—91 lbs. of milk made 8 lbs. 5 oz. of cream and 2 lbs. 14½ oz. of butter—taking 32 lbs. of milk to make 1 lb. of butter; 77 lbs. 1 oz. of milk made 7 lbs. 5 oz. of cream and 2 lbs. 14 oz. of butter, and took 26¼ lbs. of milk to make 1 lb. of butter. This showing would indicate that the oat straw was a serious injury. But during this part of the feeding the weather was quite cold and stormy, and all the cows shrunk in their milk—how much of the deficiency was due to this cause we cannot tell. We would feel better satisfied to try the experiment when the weather becomes settled, and perhaps try the whole herd.

N. J. Sharpless said it would be a good idea not to feed hay when feeding the oat straw. The impression existed that the oat straw affected the taste of the butter. Thos. M. Harvey said that Isaac S. Dance of West Marlborough was once informed by his city dealer that his butter was not as good as it had been, and he and his wife set about finding out the cause, when he accidentally discovered his cow eating her bedding, which was oat straw, and upon changing this style of bedding he heard no further complaint about his butter. Enos Barnard has had the same trouble, and remedied it in the same way. The speaker said, however, that this did not prove that it was the oat straw that did the mischief; it may have been due to the dirt which may have been on the straw and eaten with it.

"LASTING" FERTILIZERS.

Prof. Stockbridge, in a recent address before a Farmers' Club, thus disposes of the idea that it is advisable to use slow-acting manures:

If it is possible to realize the full benefit of a fertilizer in one year, rather than to wait four, let us do it. No merchant, with a convenient market for buying, will lay in a four years' stock of goods at one time. Of course, the old rule of charging 50 per cent. of the manure to the first crop, 30 to the second, 20 to the third, holds good. Even if all the chemical matter were taken up the first year, forces would be started which would increase the second crop. In considering what fertilizers he should use, the farmer must bear in mind the character of his soil and crop. The carting of muck and other heavy materials into the yard for composting is too costly, in labor, to be profitable, unless to save manure which is wasting. The surest way to decompose barnyard manure is to apply from 100 to 200 lbs. of plaster to the cord: the latter amount is better, and it should be well "forked in."

In hauling manure from barnyards, use two wagons with one team and two men—one man loading while the other is drawing away and unloading. In this way double the work can be done with only one team.

The Herdsman.

TWO KINDS OF CATTLE HUSBANDRY.

THE Colorado Farmer says of the two styles of cattle growing in the Western States:—A citizen of New Mexico owns not less than forty-two townships of land, and has it stocked with sixty thousand head of cattle. In Texas there are cattle ranches nearly as large, the number of cattle ranging from twenty to fifty thousand head. In early times ranches stocked with twenty or thirty thousand cattle were not uncommon in California.

There was an attractive side to this primitive cattle husbandry. It was a grand thing to send forward herds of cattle to market, or to ride over a domain as large as a whole county. But this kind of cattle husbandry involved no improvements. No crops were raised, roads built or fences made. In short, cattle raising as followed in New Mexico and Texas, or as formerly in California, tends to barbarism. The business develops nothing that is best for the individual; it stimulates no growth, encourages no agricultural improvements, organizes no society, supports no school, and does nothing for a well-ordered community.

There are few who sigh for the good old times when if a hungry man wanted a beef he took it from the fields, or if his horse gave out he exchanged it for a fresh one with the next ranch man. No doubt the rude hospitality of these early times was attractive. But then an ox was worth little more than his hide would bring, and a horse had no commercial value. The "pastoral days" have departed, and they are succeeded by much better ones.

The new cattle husbandry involves the best improvements. When a farmer undertakes to raise the best breeds of cattle his enterprise is sure to carry him far enough to adopt the best methods of culture. The home-farm is put under conditions of renewal. It is conveniently sub-divided, the exterior fences are well built, and the problem is, how many cattle can be sustained on a given number of acres. These high-bred cattle will pay for all the care bestowed upon them. They want rich pasture and a small area.

The sheep and cattle husbandry which have become accessories of the home-farm have an influence just the reverse of primitive cattle husbandry. The latter was continually lapsing and carrying everything towards barbarism; the other involves skill, stimulates the best methods of agriculture, and lifts up farming to an intelligent and attractive home pursuit. The great ranges of New Mexico and Texas may serve a useful purpose in furnishing beef for populous cities, but even then it is not the best. The business will disappear before the advancing wave of population, because the very conditions of success are immense ranges and an absence of population.

While it is undoubtedly true that the immense herds of cattle raised in some of the Western territories are not favorable to thorough breeding, they offer the greatest facility for profitable improvement by crossing with purely bred stock. Many small farmers in the Eastern States cannot afford to buy improved stock unless they are sure of co-operation with their neighbors, in crossing it with all the stock in the neighborhood. But where a man owns hundreds or thousands of cattle, he is made independent of such considerations, and can buy a thoroughbred bull solely for improving his own herds. This is being done to some extent, and this tendency must increase. Those who keep small herds carefully attended, can probably breed thoroughbreds to better advantage than the herdsmen of Texas or the Plains, but the latter are sure to be their best customers.

EXPERIMENTS WITH JERSEYS.

A CORRESPONDENT of the Utica N. Y., Herald, writing from Norwich, N. Y., says that John S. Shattuck of that place, has been instituting a series of experiments to test the milk and butter-making qualities of his Jerseys, compared with other cows of his dairy, the result of which I am enabled to present substantially in his own words, as follows:—I have weighed, he says, the feed of four cows, weighing the milk also, and testing the milk by churning, to see its value for butter. Two of the cows are thoroughbred Jerseys (small cows); the other two are grade Ayrshires (good sized cows). I gave to each cow the following rations each day:—5 quarts sour milk, 2½ pounds shorts, 1¾ pounds corn meal mixed, and 22½ pounds of hay to the Jerseys, and 27½ pounds to the Ayrshires. The Jerseys gave in 7 days 345 pounds milk, being an average of 24.64 pounds each per day. The Ayrshires gave 409 pounds milk, averaging 29.21 pounds daily. The Jersey cows made 1 pound 3 ounces each of butter per day; the Ayrshires 1 pound 1 ounce each; leaving a balance of 2 ounces per day in favor of the Jersey cows. This, for nine months, would be 33.75 pounds. At 40 cents, the present price of butter, this would make $13.50. The difference in the cost of keeping with hay at $10 per ton, is 2½ cents per day in favor of the Jerseys, which would make $9.12 per year. The calves from the Jerseys are worth, at a low estimate, $30 each more than those from common cows. The difference of 5 cents per pound on 250 pounds would make a difference of $12.50 in favor of the Jersey cow, which would make $57.10 in favor of the Jerseys. Samples of the butter made during this experiment were presented for the examination of the Farmers' Club at their late meeting, and a committee of butter dealers called in to report the difference in the market price of the specimens on exhibition. The committee, consisting of J. D. Reed and J. A. Carr, gave it as their opinion that there was a difference of five cents per pound in favor of the butter made from the Jersey cows at wholesale, and ten cents per pound at retail. The food in the above test was given raw or dry. Mr. Shattuck is now giving like rations to the same cows, cooked or scalded, to determine the relative advantage, if any, of feed thus prepared.

JERSEY CATTLE.

THE following article relating to Jersey cattle is taken from the Agricultural (Eng.) Gazette:

If the value of Jersey stock is to rest on color, deterioration will surely follow of those useful qualities that are so far noticeable in the good, old-fashioned, parti-colored cow than that which will be found among the generality of fine, high-bred, whole-colored fawns, grays, or foxy, so-called Jerseys. I have owned hundreds of acclimated Jersey stock, and have never, as a rule, found the whole-colored such large producers as many of the parti-colored, but the most ugly and ungainly beasts of the lot, yet her stock have never failed to show their large butter-making qualities. The true type of a Jersey cow is in fact an animal that will not make meat. I do not say that this is not improved upon by acclimatization and a slight introduction of a hardier breed, of which what are termed Chichester Jerseys are the best description; neither do I say that Jersey breeders in the Island itself have not in some instances a breed that shows a disposition to make some flesh, and very probably may then be following up the requirements of fashion; yet I maintain that a pure Jersey should throw the bulk of her feeding properties into butter, and with little to flesh. The parti-colored good cow may have but a white spot, especially under the belly, but throughout the body the rich yellow skin, under any colored hair, will be found black, white or fawn. I have seen the commencement of a whole-colored breed, the property of a noble duke, to obtain which I have seen the healthy and large-producing cows sold off to prevent an animal with the slightest stain of that one color. I have heard from good authority that usefulness has been sacrificed for fashion in this instance, which, if followed up, as it rapidly is, I have no doubt that the future rich Jersey will be beef, not butter, as it was.

HOLSTEIN COWS.

THE agent of the Shakers, at West Pittsfield, Mass., bears the following testimony in favor of the Holstein cows for the butter dairy:

One cow, seven years old in the spring of 1875, calving March 17, has given on an average, twenty quarts per day to the present date. I tested her milk in butter from the 13th of June for seven days, during which time she made fourteen pounds of nice butter, with no extra feed and no more than a common pasture.

The second cow, six years old in the spring of 1875, calved September 22d, 1875, and after four or five days, her milk was reserved by itself and set for cream, after letting the calf suck what it would three times a day. From the surplus of seven days, I found on weighing the butter, thirteen pounds of a fine article, and in total quantity per day, after three weeks of the time of the calf sucking, she had averaged from twenty-four to twenty-six quarts per day of milk.

November 24th, 1874, I bought a thoroughbred imported Holstein bull, one year old past, and his gain in ten months is four hundred pounds, making an average of forty pounds per month and not on high feed.

They are a fine growing stock, large, good feeders, and I can say with all freedom, that they are in my estimation the best for market, milkers, butter, cheese, oxen and beef of any thoroughbred stock now known in the country. I should be pleased to show the above samples to any and all who may be pleased to call.

SELLING OATS AND FEEDING BARLEY.

A CORRESPONDENT of the Utica Herald says: Farmers have been accustomed to sell their barley and feed their oats. That was quite proper when oats were worth from 30c. to 35c. per bushel, and barley $1.40 to $1.55. Now the situation is changed, and farmers should feed barley and sell oats, if they still find it necessary to grow as much barley as formerly. Barley will always be valuable as feed for horses, cows, and swine. This is something that cannot be affected by a variable market, and herein is the farmer's independence. His stock provides an excellent market for the barley he cannot sell, and it does not in this case increase the evil of intemperance, but adds materially to the wealth and prosperity of the country. The effect of barley, in fattening any kind of stock, or as a substitute for other grain, is excellent. In feeding horses, I find it better to boil the barley for the horses. Barley ground and cooked for pigs is not surpassed by any other kind of feed; it is economical, and the pigs like it. For feeding cows, I prefer mixing barley meal with the bran (as it is rather heavy), and either feeding dry or as a mash, which is decidedly the best.

Dairy Husbandry.

DAIRYING IN THE PROVINCE OF QUEBEC.

THE AGRICULTURAL CONFERENCE AT SWEETSBURG.

THE Annual Conference of the Agricultural and Horticultural Society for the District of Bedford, Province of Quebec, was held at Sweetsburg in the above Province, March 15-16. The plan of this Society is to call together all the different Agricultural Associations in the District in annual conference, discussions, addresses, &c., being contemplated for all the different societies, and to have the various societies operate in harmony together, while during a portion of the time occupied by the Conference, each society has special meetings of its own. The Dairymen's Association of the District belongs to the Conference, and this year the principal work done was through the addresses and discussions on dairying before that Association.

The original idea of this Agricultural Conference, the general features of which differ from anything in the States, belongs, as we were told, to the Hon. C. DUNKIN who, as President, organized the Association. The Annual Conference last year was very largely attended and proved, in every respect, a great success.

The President, Judge DUNKIN, having recently gone abroad for his health, the chair was occupied by Mr. GEO. CLAGES, who expressed his regrets that owing to the illness of the President and the absence of Mr. H. S. FOSTER—who had been selected by the Executive Committee to take the chair on this occasion—that the duty devolved on himself. He thought it proper that a committee be appointed to draft suitable resolutions in regard to Judge DUNKIN and the great work he had done in promoting the agricultural interest of this district, and the following Committee was appointed:—Hon. G. B. Baker, W. W. Lynch, M. P. P., W. C. Baker, W. Toof, A. P. Hulburt, and E. J. Morgan. The committee retired and subsequently presented a series of resolutions highly complimentary to the Judge.

The Chairman then introduced Mr. X. A. WILLARD of New York, who proceeded to give an address on

BUTTER DAIRYING.

The speaker commenced by referring to the enormous consumption of butter in the United States, and then gave in detail a description of the best butter cow, her management and the processes in butter making which were calculated to give the best results.

In the discussion which followed some important information was brought out in regard to dgirying in the "Eastern Township." The District of Bedford includes the Counties of Shefford, Brome and Missisquoi. Brome County is about 29 miles long by 20 miles wide. The soil is a gravelly loam and pretty well adapted to grazing. Farms vary in size from 100 to 400 acres, the average farm being about 150 acres. This will usually carry 16 cows, summer and winter. There is not much attention paid to breeding, though there are more or less grade Short-Horns and Ayrshires scattered through the herds. There are 20 cheese factories in the County, the largest of which takes the milk of about 500 cows. The average product is about 275 pounds of cheese to the cow. Mr. HAWK, who has three factories in the District and one on his farm near Brigham, informed us that the highest price paid for cheese during the past season in this section was 11c. per pound and the lowest rates were 7c. There is a good deal of butter made in the District and all at farm dairies. The milk is usually set in the common small pan, but during the past year the large pans have been introduced to some extent. All the best butter goes to the States—usually to Boston, for which 21c. was the highest figure reached last season, and much was sold at 15c. to 18c. per pound.

Farmers generally get a yield of two packages, 50 pounds each per cow; but extra herds make a yield of 150 pounds to the cow, which is considered a large yield. Dairy farms are valued at $40 per acre for best, and good, fair farms can be had from $15 to $30 per acre. The farmers usually grow all the grains needed on the farm—wheat, oats and corn. The yield of hay on the best farms is about two tons per acre. The east part of Brome County is well watered by springs.

Shefford County lies north of Brome, is somewhat rolling, rough and stony, but is an excellent grazing County. There are 15 cheese factories in this County, and there is more grain raised in the County than in Brome. About half the population is French. There is a large quantity of butter made in the County.

Missisquoi County is one of the best farming Counties in the "Eastern Townships." It is the oldest and richest. The leading business is grazing. There are 30 cheese factories in the County of about the same size as those in Brome, the largest having 600 cows. Cheese making commenced in this County at Dunham in 1865. The best farms are valued at $50 per acre, and cows are selling this spring at from $25 to $30, which two years ago would have sold at $45 per head. Meadow lands are broken up and reseeded every four or five years, but pastures are generally permanent, or not often put under the plow. In breaking up meadows, the first crop taken off is corn and the second crop is wheat, when the land is put down again to grass.

EVENING SESSION.

At the evening session Mr. WILLARD of New York gave another address on "Curing Cheese," after which considerable discussion followed as to the best plan of constructing curing rooms. It was said that the cheese factories of the District were very defective in regard to regulating temperature, and there was quite a desire on the part of factorymen present to make improvement in this direction.

SECOND DAY'S SESSION.

At the morning session the Hon. E. A. BARNARD of Montreal gave an interesting address on the more important requisites in successful farming. Mr. B. has studied the best systems of farming in Europe, having been employed by the Dominion Government to visit different countries in Europe and examine the best farming districts, with a view of introducing improved agriculture in Canada. He thought the leading principles of Agriculture could be embraced under six heads, viz.:—1st, Drainage; 2d, Mellowing the soil; 3d, Cleaning the soil or freeing from weeds; 4th, Manuring; 5th, Seeding at the proper time and with the right proportion of seeds; and 6th, Cropping, or how to obtain the best crop and make the best use of it.

Each of these points was discussed at considerable length. He referred to what had been done in Great Britian. One hundred years ago the average yield of wheat in the kingdom was only six bushels per acre; now the average was 29 bushels per acre. He regarded underdraining as the basis of all this improvement; it secures a permanent benefit, and has added hundreds of millions of dollars to profit. He estimates the profit to be at least from 30 to 40 per cent. on the average.

In regard to mellowing the soil he illustrated the better yield from this practice by comparing garden culture with field culture, and said one reason for the immense yield of gardens was that the land was better prepared to receive the seed, and the constant working of the soil operated to produce results that could not be obtained in the usual field culture. He referred to the advantages of rolling, light, sandy soils and spoke of the heavy rollers used in Belgium, where farming is perhaps conducted better than in any other country in Europe. He deprecated in strong terms the waste of manures by American farmers. The manures are not only left to be leached out by rains, but they are often left exposed to the sun and air until a large share of their most valuable fertilizing elements is dissipated. In Belgium the liquid manures are considered the most valuable and give better returns than the solid excrements. He thought the best system of saving the liquid manure was to have it absorbed by placing dry earth upon it.

The address was listened to with marked attention, and from the happy manner of illustrating points to be urged, was made very instructive and interesting.

In the afternoon Mr. WILLARD of New York gave his third address on the "Manufacture of Cheese." This was followed by a brief discussion, in which all the leading points from the production of the milk, its care in handling, together with the manipulation of the curds, were touched upon.

It was stated at the Convention that the number of cheese factories in the "Eastern Townships" at the commencement of last year, was 160, and that the product of cheese manufacture in these townships during the year, amounted to between 9,000,000 and 10,000,000 pounds. Quite a number of new factories will go into operation the present year, especially in the French country. This part of the farming population in the "Eastern Townships," having learned that much better profits can be secured by dairy farming than by grain raising, is causing many to abandon grain and adopt the dairy.

The Conference was a very pleasant one, and was considered by those present as a great success.

Industrial Topics.

DOES FARMING PAY?

Some people have no shame. In reading the newspapers of the past week may be seen complaints that farming don't pay because of competition with the West, and others say all cultivated land should be free from taxes. A Mr. Davis in Maryland intimates that the corn laws of England make that country the richest in the world, and in consequence some protection is necessary to the worn-out land of the East.

Now, there cannot be any right feeling in such people. Whose fault is it that the soil of the East is so shamefully impoverished? and then what ignorance to say English protective corn laws give her agricultural prosperity, when it is the standing reproof to all protection that the corn laws were repealed thirty years ago, since which free trade has caused an extraordinary increase in yields of grain per acre, inasmuch as farmers have all doubled their previous stock of sheep and thereby enriched their soil, so that produce of every kind has nearly doubled, and instead of farmers being ruined, they pay more rent than formerly.

There is nothing in the world which should cause a man to feel so ashamed as to live close to ever open and good markets and then grumble at competition from those who have heavy freights to pay before they can dispose of their produce at the same price; but the Eastern farmers cannot be content, and ought to have some sense of shame when they cannot compete with others who have no advantages over them, but numerous disadvantages, for they have protective duties from heavily taxed Europe, and with that cannot grow wool enough for home consumption. New England cannot grow grain to support herself, and Canada can pay import duties and freight and then send horses to New York?

Is it not a shame for farmers to have run the land down till much of it cannot grow wheat to pay for seed and harvesting? Can it be aught but a shame for all the beautiful virgin soil to be despoiled and brought down to the lowest state of sterility, so that, as it is in Connecticut, farms can be bought for less than the buildings cost to erect them?

It is a shame that land should be so reduced as not to pay for cultivation. But as such is the fact over immense tracts of the Eastern States, both north and south, it is again a great shame that it should not be used for sheep raising, as every American agriculturist should feel ashamed to know there is not wool enough grown to clothe the nation, not so much as 1 lb. in 100 lbs., in comparison with the extent of England, and then how very much ashamed farmers ought to be of those who whine and cry out about dogs, just as if there were no dogs in England, France and Australia, and shame should mantle the cheeks of every one to know there are people so ignorant as to talk about English sheep being kept in small numbers, when there are one hundred for one here. A. W. F.

WIDE vs. NARROW ROADWAYS.

In a January number of the Rural New-Yorker, in the last few lines under the subject of "Village and Suburban Roadways," appears the following:—"There is much more to be said, and after others have said something I will again write a word." We think there is room for improvement, and that considerable labor and money is expended in constructing roads. We will agree with the writer on the first point, but how could we on the second? How can the amount of travel be determined? If one lives near a city, and if there are natural advantages amounting to anything, will it not soon be found necessary to widen narrow roads, and will there not be a greater loss? For example:—Land two miles out may be worth $200 an acre. Now, in ten years, suppose the road is widened when the land is worth $2,000 per acre, would it not be cheaper to have wide roads (80 and 100 feet—none less than 60) at the first? How would one manage suppose he should desire to turn around with a wagon and four horses? According to the illustration, &c., given in the Rural of the gentleman's idea, one would have to travel perhaps half a mile to turn around. Does not property sell more readily on a wide than on a narrow street? Are not wide streets more convenient? We think a road should be not less than 60 feet wide, well thrown up in the center, so that water will run off readily—in fact, about the same as the road described, only have it wide. The sidewalks should be so constructed that all water would run off into the ditch between it and the road. The trees should be planted on the outer edge of the sidewalk and about ten or fifteen feet apart (not more than fifteen), although it depends on what kind of trees are used; then, if they are found to be too thick, every other one may be cut out, which will furnish considerable wood, and in some localities this would be quite desirable. One of the finest roads in the County of Santa Clara is the Naglee Ave., which is 100 feet wide. San Jose Reader.

San Jose, Santa Clara Co., Cal.

PRESSING STABLE MANURE.

The manure from city horse stables is now being pressed into one-third its ordinary bulk by the use of powerful machinery, made for the express purpose. The bales, which weigh about 450 lbs., are confined by suitable staves and bands, and may then be transported to all parts of the country at a cost much below that required for unpressed manure. City stable manure has been sold the past winter at prices considerably below that of former years.—*N. E. Farmer.*

Undoubtedly the use of chemical manure has limited the demands for stable manure. Most of the latter have many weed seeds, which concentrated fertilizers are free from. Besides, stable manure, even when on the ground, cannot be evenly distributed in small amounts over a large surface, while guano and the superphosphates can be applied cheaply and thoroughly in drills with the seed.

GOOD ROOFING.

"There is nothing so bad in the pocket as a hole," and the same remark applies to a roof. Here empathically the best is the cheapest. A roof that leaks is costly property. The damage done to crops in barn is far greater than at any early period, because it represents the cost, not only of growing, but harvesting and generally threshing. In sheds, leaky roofs expose stock to unusual cold, and as for houses, no man who cares for the lives and health of himself and family will live under a leaky roof. The New York Slate Roofing Co. (limited), No. 8 Cedar St., N. Y., furnish a 100-page book, free to all applicants, which gives much valuable information on roofing, house paints and like subjects.

INDUSTRIAL NOTES.

True Grit.—There is a lady in Fulton County, living near the city of Atlanta, who is running a farm herself, her husband having been an invalid for a long time, and consequently, unable to assit her. She has made this year, with one horse, 450 bushels of corn, 2 bales of cotton, 300 bushels of turnips, 90 gallons of syrup and a large crop of sweet and Irish potatoes. She has a fine garden, from which she sells vegetables to the citizens of Atlanta. She sells butter and milk, makes her own fertilizers at home and buys everything for cash. She says that any man who lives on a farm, and who buys bacon and corn to feed his family ought to be chopped up and fed to pigs.—*Georgia Grange.*

The farmers of Lancaster County, Pa., think their manure heaps so many saving funds, and strive accordingly to increase them in quantity and size. This is why farmers there stable their stock and utilize their straw. By stall-feeding cattle they can feed a larger number of cattle on the same amount of corn and hay, and, consequently, make more and better manure than by feeding outdoors. Hogs are also stabled and well littered with straw; they also make a large amount of manure of a good quality.

The Vineyard.

PLANTING GRAPE VINES.

Doubtless some of our readers will plant out grape vines this spring for the first time, and various questions will arise as to how it should be done. Of course, it is not to be supposed that everybody knows how to plant a vine or tree any more than to build a ship or a steam engine. There is not much science or skill required in doing it; still, there is a little, and *that* little is quite important if the operation is to end successfully.

AGE OF VINES TO PLANT.

New beginners in vine or tree culture are usually impatient, and want to obtain fruit as soon as possible; hence, large vines and trees for "immediate bearing," are especially attractive, and purchasers often pay large prices for large specimens and then have to wait longer for the coveted fruit than if they had commenced with smaller plants costing a far less price. Large plants are generally injured more in transplanting than small ones, starting slowly and progressing less rapidly; therefore, what is gained at the outset in obtaining large specimens is frequently lost in the years following by feeble growth.

But of all the poor things a man ever purchased in the way of plants, an old or large grape vine is about the most worthless and the least satisfactory. A good strong two-year-old vine is about as far as a man need look in the direction of age for securing the best results, and even a healthy one-year-old plant frequently proves to be of more value than one of three or four. Of course we do not say that vines three or four years old are worthless or that they cannot be safely transplanted and by proper pruning be made to thrive and remain healthy, but as a general rule, younger plants are to be preferred. The small rootlets through which the plants draw their sustenance

from the soil are principally at the extreme ends of the main roots, and when large plants are dug up these are very likely to be left in the ground, and the removed vine must produce a new set before it can make any considerable growth.

PRUNING AT TIME OF TRANSPLANTING.

No matter how large and vigorous a vine may be at the time of transplanting, the canes should be shortened or cut back severely—say to one or two feet of the ground. With young vines of one or two years' growth, cut off all but one cane and shorten this within one foot or less of the surface of the ground. From this shortened stump one or two shoots may be permitted to grow the first season, but never more than the latter number, and as a general rule, one is enough. This cane should be kept tied up to a stake during the growing season, all sprouts starting from the base or on the old cane broken off—in fact, keep in view the one object of producing as large and vigorous shoots as possible.

The accompanying figure of a vine at the end of the first season after transplanting, taken from "The Grape Culturist," may be considered a model of its kind. The laterals which have sprung from the axils of the leaves—at a, b, and c—have been checked once or twice by having their ends pinched off with fingers and thumb.

Now a vine grown in this form will have large and healthy leaves, even where one of the same sort would produce small, weakly ones if permitted to trail over the ground without care or attention. Bare number of leaves or young shoots are no indications of strength and vigor, and if the vineyardist desires to make haste in producing fruit he must adopt some such system as this for concentrating the natural forces.

A vine one year old trained in the form shown, is ready for pruning down to a starting point of some future system of training either upon trellises or stakes. It is difficult to make healthy vines out of sickly ones, and many a failure in grape culture dates from neglect in the first season after planting. One must begin with good care if he expects the best results.

Layering Vines.—Persons who are not successful in propagating vines by cuttings, should try their hand at making layers. Any shoot of one year's growth which can be bent down and covered with earth can be used for this purpose. Strong and vigorous plants can be produced the first season by layering, which is not always true of cuttings.

American Grapes in Europe.—Prof. Riley says that the grape cuttings sent from this country last year to Europe to thwart the phylloxera amounted to 14,000,000 cuttings.

Field Crops.

SOMETHING ABOUT ALSIKE CLOVER.

A writer in the Maine farmer furnishes some interesting information relative to Alsike clover, and as many may wish to make a trial of it we copy the material portions.

Ten years ago I sowed five pounds of Alsike clover seed on half an acre of land. The seed came well and in the fall I had a good stand of grass. The next season it produced two loads of hay and 100 lbs. of seed. The second year the quality of hay was about the same and it gave me 165 lbs. of seed. I used the straw and fodder and found it nearly as valuable as my hay, and much better than my coarse pea-vine clover hay, cured fully as well as the alsike. I became so well convinced of its superiority over red clover that I commenced to seed all my land with it; some years seeding thirty acres. Since the second year I raised the alsike I have not sowed one pound of red clover, nor would I if the seed were furnished me free of cost, and a premium of fifty cents a pound given me for using it. I can get more pounds of alsike clover hay from an acre than red; it is no harder to cure and is worth one-third more per ton to feed. It does not lose by standing a few days after it is fit to cut for hay as other grasses do, but continues to keep green and does not lose its leaves and heads in curing like other clover. It will not be damaged so much by rain as other clover; a storm that will spoil red clover will not damage alsike more than one-half.

The past year I had sixteen acres of this clover from which I have cleaned 2700 lbs. of seed and from the 15th Dec., to the 20th March, kept twenty Short-Horns and four horses, wholly on the straw, with the exception of one feed of other hay in the morning. I have fed a small allowance of grain and my thoroughbreds never were in better condition.

As this will be read by hundreds in this State it will either be doubted or else the inquiry will be made, "Why have I not been more successful in raising alsike?" I think I can tell where the great lack of success has been. This clover is a a little tender the first year, after which it will not winter-kill one half as bad as the red. The seeds are fine, and when the clover first comes up it is also fine and tender until it begins to send out its mass of fibrous roots. Now anything that prevents it doing this before the first winter is an injury. If the ground be in poor condition, or weedy, or the grain grows very rank and lodges (any but wheat,) or if the seed be covered too deep, it will prevent it from getting a good growth of roots for the first winter. Another reason for want of success has been in sowing too small a quantity of seed to the acre. I shall not seed in the future with less than ten pounds of alsike and four to eight quarts of timothy. I have not known a farmer to be dissatisfied with this clover if he got a good crop the first year. Another great lack of success has been in sowing a poor quality of seed. There has been a great deal of seed sold in this State for Alsike that had sorrel and white clover seed mixed with it. The seed dealers and merchants who have sold this seed have not done it intentionally but they did not know it themselves. Alsike clover seed is all of it green—from a very dark to a very light green, but none of it is a bright yellow. If there be white clover or honeysuckle mixed with it, it may be known by its color being a bright or pale yellow. The sorrel may be known by its being a three cornered seed; that which is hulled being a glossy brown and a little smaller than that which is not hulled. This has the same shape but a rougher, duller look. The best and a sure way to be successful in raising this clover, is to sow the seed as early in the spring as possible without any grain which will give a good crop of clover well headed in August, and insure its safety in the future. I have confidence enough in this clover to believe it will not be many years before it will be more largely cultivated than any other variety.

SOW WHEAT THIS SPRING.

The Maine Farmer, says:—On no account should farmers who have land suitable for it fail to sow wheat this spring. We say on land that is suitable, for it is well known that wheat requires a strong, dry soil, of fine tilth, and sufficiently well fertilized to give a strong growth of straw and to insure good filling out of the heads, but not over rich. The failure of the crop in some instances the past year should influence no one against sowing a fair breadth of this princely grain, this king of the cereals, the present spring. The trouble heretofore has been that our farmers, discouraged by some unfavorable years with this grain, failed to sow it, and very soon drifted away from wheat as one of the chief crops of the farm. This should not govern any farmer of Maine in his plans for the present season's operations; and whatever may have been your results with wheat last year, go on sowing it this year the same as ever, and depend upon it for the bread of your family. We have faith to believe the soil, the climate, all the needed conditions of successfully raising wheat are possessed by every farmer in Maine, and we feel safe in advising every farmer to sow wheat this spring. Sow early; sow late; sow in the middle—and we believe the result will not bring disappointment.

Arboricultural.

HOW NEW PLANTS ARE INTRODUCED.

THERE appears to be a great lack of information among our rural population in regard to the way new plants are discovered, originated and introduced to the public. If every would-be purchaser of new things in this line was fully informed upon the points named, the occupation of the swindling seed, tree, and plant peddlers, would be gone. We do not say that the honest agent of well-known firms would be any the less successful in selling his wares; in fact, we believe the honest, upright dealer would do far better than now, when nine-tenths of our population know so little about horticultural matters that they are fit subjects to be "humbugged."

If every owner of a garden or farm was conversant with the current horticultural and agricultural literature of the day, the peddlers of mammoth Japanese corn, Egyptian seven-headed wheat, wine plant, blue roses, tree strawberries, and a hundred other similar swindles, would not thrive and make money as they now do in spite of the frequent exposures through the press. The fact is impressed upon us that there are thousands of persons in every State who do not read the very kind of periodicals and books which would give them the very information most needed to guard against being cheated, as well as assisting them in obtaining the best results for the labor expended in cultivating the earth.

But the idea that any peddler of seed or plants can, or ever does get hold of anything new or better than can be purchased of regular and well-known dealers in such articles is simply preposterous; still, there are thousands of people who will believe one of those vagabonds before they would a man of the highest respectability and a dealer in the same article offered by an irresponsible party.

We are not obliged to go into the country to learn this fact; for right here in New York city, where there are scores of seedsmen and florists who are not only responsible, but are known to be fully informed in regard to any plant introduced into cultivation, whether good or bad, these swindling seed and plant peddlers thrive and make money through the general ignorance of the masses in regard to horticultural matters. Every spring these swindling plant dealers open a store or a number of them in different parts of the city, displaying showy pictures of blue roses, strawberries and raspberries as large as good-sized peaches and apples. Sometimes the strawberries are represented as growing on trees several feet high; but no matter how proportioned, or contrary to all known natural laws their claims or exhibition may be, they seem to find fools enough to purchase their wares at exorbitant prices. Men will flock to these places and spend their money freely with those fellows whom they have never seen before and never expect to see again.

If the honest and respectable seedsmen, florists and nurserymen tell would-be purchasers of these prodigious novelties—there are no tree strawberries, blue roses or dahlias—they are very likely to attribute the advice or information given to jealousy on the part of the respectable dealer because he has not secured a stock of such desirable articles. In fact, we have heard men assert this while on their way to purchase the worthless trash generally palmed off as something new and wonderful.

Now if those who seek such novelties as blue roses, would only stop to consider the matter, they could not fail to see the absurdity of the claims made by said dealers. We have nurserymen, florists and seedsmen with almost unlimited capital, who have their agents in various parts of the world constantly on the lookout for rarities of all kinds, and we will venture to say that a plant worth introducing never has or will escape their notice. We once heard one of our florists offer one of the blue rose men $500 for a single plant, provided it produced flowers of the color named. Of course the fellow declared that the picture shown was an exact representation of the rose, of which he offered plants at a dollar each, but to warrant them true to color was quite another thing.

The perambulating tree, plant and seed peddlers who pretend to have something of which respectable local dealers know nothing, are all of the same class as the blue rose men, the veriest frauds, one and all, and it is time that the residents of city and country let them severely alone.

We must expect a slight exaggeration of merits on the part of those who introduce new plants, because it is quite natural that they should employ high-sounding adjectives pretty freely, in order to catch the public ear; but all this can be done without a total departure from the truth. New and valuable things in the horticultural and agricultural line are far more likely to fall into the hands of our wealthy and enterprising dealers than to be hawked about the country by itinerant peddlers. When the blue rose and dahlia are discovered, we will venture to say that some such men as JAMES VICK, ELLWANGER & BARRY, BRIGGS BROS., PETER HENDERSON, or some other of our numerous and wealthy firms will get them before any peddler who can carry all his wealth or stock in trade on his back or in a one-horse wagon.

We will be much obliged to any of our readers who will send us information in regard to wonderful and new varieties of fruits, plants or seeds which are being offered by the class of swindlers we have named.

IMPORTANCE OF THICK LEAVES.

THE important functions that leaves perform, not only in the growth of the plant, but the ripening of its fruit, make it a matter of vital importance that the leaves remain whole and healthy during the time wood and fruit are maturing. Here we meet one of the difficulties of American horticulture. A large part of our plants under cultivation are European species and varieties, or their immediate descendants, selected and grown under certain conditions, meteorologic and otherwise, that render a new trial and selection necessary in America. Hence we are going through anew the process of selection, based on the changed atmospheric and climatic conditions of our peculiar climate.

One of the points most needful to notice in selection is the adaptation of the leaves to our trying climate. Here we have excessive changes, from heat to cold and from cold to heat. We have long-continued rains and protracted drouths. We have insects that multiply excessively, and fungoid growths that spread with marvellous rapidity. All these are trying to plant life, and first after the blossoms to the leaves. If the leaves are small and thin and smooth, they are apt to perish or become diseased, and the fruit, and ultimately the plant, perish. Year by year we find varieties of fruit, otherwise desirable, have to be given up because of their inability to grow leaves that will endure the atmospheric changes or the insect attacks of our climate.

Among our apples we have a notable instance of that very popular variety, the Winesap, whose leaves, in many years and situations, fail to produce a good growth of wood or fruit. The Pryor's Red seems to be gradually succumbing, for a similar reason, in Kentucky and Indiana, and the evil will probably spread as soils become more exhausted. A large proportion of the European apples we have in orchard, show by their small and scanty foliage premonitory symptoms of failure. On the other hand, we find that the Russian varieties and the Siberian crabs are now gaining in favor, and notably hardy and vigorous in leaf, with the possible exception of the Totofski, whose leaf is large but warningly thin.

This subject has received full attention in the case of the grape, whose leaves have been more looked to than those of any other fruit. The Concord's success may be said to be specially due to its large, coarse leaves, which endure all climates and seasons through a wide range of country. The failure of a large number of grapes of excellent quality may be laid to the lack of a leaf with the health and vigor of the Concord. In the case of the peach, it was early found that many sorts deemed of high value in European climates would hardly answer here at all, especially the serrate varieties, which our cultivators, notably in the Mississippi valley, are generally forced to discard.

We might extend this article by multiplying instances, but we will resist the temptation. What we desire to do, and if we have done that we have done enough for the present, is to call the more general attention of our readers to the importance of thick leaves. Seek varieties that have strong leaves, and strengthen weak-leaved varieties by manuring and high culture, which, judiciously applied, strengthens and fortifies foliage against weather changes and insect attacks.

HALE'S PAPER-SHELL HICKORY NUT.

IN the RURAL NEW-YORKER of Nov. 19, 1870, we gave an illustration and description of this splendid variety. We also named it as above for the proprietor of the farm upon which the original tree now stands, near Ridgewood, Bergen Co., N. J. At that time we stated that the Hale's was superior to any sort of the hickory nut that we had ever seen, and altogether very distinct from ordinary varieties of the Shellbark (*Carya alba*), the species to which it evidently belongs. The nuts are large for a variety of this species, varying from an inch to an inch and a quarter in length and about the same in width. Shell very thin, and instead of regular corrugations running from base to point, as usual in varieties of this species, the entire surface is broken up into small depressions or cross sections, similar to those seen on the common English walnut.

That this was one of the most distinct as well as valuable varieties of the hickory nut known, every one who has seen it is ready to admit; but the next thing to be thought of was how it could be propagated for dissemination. If the nuts were planted, the trees grown therefrom would probably revert to the original form, as in fact has been proved by experiments already tried; consequently the only way of perpetuating the variety is to propagate it by cuttings, or by budding and grafting, as usual with ordinary kinds of fruit trees. But propagating the hickory by these last-named methods is much easier to talk about than to perform, as many have doubtless learned from experience.

Mr. HALE endeavored to find some one to propagate the above-named variety, and although there were plenty who thought they could easily do it by grafting, the success of the parties who first undertook it was not very encouraging. After two years' trial, and upon as many thousand stocks, two very poor plants were produced.

Last fall, Mr. J. R. TRUMPY of Flushing, L. I., who is perhaps the most skillful propagator of plants in this country, tried his hand at propagating the Hale's Hickory, and out of eighty grafted fifty-six grew and made fine, sturdy plants. This we consider great success and worthy of being put on record, considering the many total failures made by others in attempting to propagate different varieties of the hickory by grafting.

Choice wild sorts of the Pecan nut, as well as those of our more Northern species of the hickory, are frequently found, and we often hear men express their surprise that they are not propagated by budding and grafting; but it is easier said than done. Still, as we have shown, it has been done, and probably can be again.

It is now five years since we first brought the Hale's Hickory Nut to notice, and there are less than sixty one-year-old plants as yet produced, therefore there need be little fear of the market being glutted with this variety for some time to come, unless a more rapid method of multiplying it is discovered.

Here is a good chance for those who consider themselves skillful propagators of plants to discover why hickories are so difficult to propagate by the usual modes employed with other woody plants.

TREE-PLANTING RECOMMENDED.

IT has occurred to me that a general move in tree-planting, especially in the planting of shade trees along the roadsides and in other desirable places, would be a very appropriate and commendable enterprise for the Centennial year, and that the increased interest the people now have in whatever has about it anything of historical association might be utilized in inducing them to take hold of such a movement with unusual energy and unity. What a beautiful and blessed Centennial movement such an enterprise would give our country if entered into by our whole people! With almost no cost the great majority of them could contribute to the work, and with ever-increasing pride and pleasure they would afterward point out and regard the parts they had done, the landmarks they had put up. Can you not through your columns inaugurate such a step and at least incite many of your readers to take up work in this direction which will be to their profit and your honor?

Hiram, Ohio. O. M. WOODWARD.

THE CORTLAND WAGON.

Industrial Implements.

THE CORTLAND WAGON.

IT used to be considered by farmers that neat wagons, springs and all the apparatus that go to make a comfortable vehicle were beyond their means, and was one of those anticipations whose dim perspective, instead of growing into an accomplished fact, grow small by degrees and beautifully less.

Industry, enterprise and capital, however, have changed all that, and he is unfortunate indeed who cannot ride with his family to church and to other pleasant places in a conveyance that is a source of just pride. These reflections are induced by a consideration of the claims of the Cortland Wagon Co. of Cortland, N. Y., who make a series of styles which should have the general title, "*Multum in Parvo*."

We illustrate one of the most popular styles, and one especially adapted to farmers. It can be made to serve a variety of uses, and, being made of the best materials, stands a great amount of hard work without getting out of order.

The springs are the celebrated "platform" pattern, made exclusively by this firm. The box is their patent "solid bent round corner." The wheels are *screwed* each side of the spoke through the felloe, and all the iron work is made of extra "American refined." It would be impossible to enumerate their various merits in the space of this article, and we would suggest that our readers send for their illustrated catalogue, whether they purpose buying or not, as it is always well to know the points of a good wagon and what improvements are constantly being made.

This company have been long engaged in the business, and most of their machinery has been specially devised for their uses. They have a capital of $150,000, with a factory covering over two acres of ground. They placed 1,500 wagons on the market last year, and will double the number this year. Their branch house in Chicago is at the corner of Beach and Sebor Sts., and our Western subscribers can enjoy a rare treat by going through their warerooms, where they will meet with a cordial welcome.

Scientific and Useful.

MANUFACTURE OF ISINGLASS.

ONE of the most notable industries of Russia depends upon the sturgeon, the swimming bladder of which is manufactured into isinglass. The bladder is first placed into water and left there for some days, with frequent changes of the water and removal of all fatty and bloody particles—the warmer the water the more rapid the accomplishment of the operation. The bladders, on being finally removed, are cut longitudinally into sheets, which are exposed to the sun and air, being laid out to dry, with the outer face turned down, upon boards of linden or bass wood. The inner face is pure isinglass, which, when well dried, can with care be removed from the external lamellæ. The finer sheets thus obtained are placed between cloths to keep them from flies, and are then subjected to a heavy pressure, so as to flatten them out and render them uniform, and after this they are assorted and tied up in packets. The packets composed of the isinglass of the large sturgeon usually contain from ten to fifteen sheets, and weigh a pound and a quarter; and those of others contain twenty-five sheets, weighing a pound. Eighty of these packages are usually sewed up in a cloth bag, or inclosed in sheet lead.

CHEAP CISTERNS.

IT is not generally known that cisterns can be made without either brick or stone, wherever the earth is sufficiently compact to admit of digging out the soil and leaving a firm bank upon which the cement can be spread to a thickness of one or two inches. The cement soon hardens making a wall as tough as a stone jug. The top may be covered with plank, with timber support, and then cover over all about two feet of earth to keep out the frost. Of course a man-hole through which the cistern can be entered for cleaning, is also necessary.

Pomological.

APPLE CLASSIFICATION.

A CLASSIFICATION of apples and pears has several times been attempted—by which, from certain peculiarities of the eye, seed-cells, etc., it was intended to trace the name of any given variety. But they have been so imperfect as to prove next to useless in practice. Dr. ROBERT HOGG of the London Journal of Horticulture has, after years of careful observation, at last given to the world a classification which inspires the faith in its applicability and utility that any systematic plan of tracery emanating from so distinguished a source is certainly entitled to.

"For some years past," says Dr. HOGG, "I have endeavored to apply the characters I have now adopted. The light I had at first was small and dim, but by repeated application to the subject every recurring fruit season, I began to see the foundation of what has now grown up to the structure now offered.

"My reason for not giving publicity to it before this was that I wished to work it thoroughly before committing myself to it. To do so I have procured in various years' collections of fruits from different parts of the country, from different soils and climates, and also at different seasons of the year, and in every case I was gratified to find that the characters which I observed in each variety of fruit were equally well marked in that variety from whatever district, soil or climate it came, or at whatever season the examination took place.

"The characters which I have adopted as the basis of this classification are the eye, the seed-cells, the calyx-tube and the stamens. These supply the primary and most important divisions; but they may be extended and broken up into fruit round, roundish, or oblate, and fruit conical, oblong, or ovate, and these for convenience, may be further divided into pale, colored, and russet. I will now treat of the leading characters:

"1. *The Eye.*—This is the pomological term used to signify what botanists call the sepals or limb, and mouth of the calyx.

"If we examine a great number of varieties of apples, we find that in some the eye is wide open and the segments quite reflexed, in some cases so much so as to be quite flat on the surface of the fruit. This is very apparent in Blenheim Pippin, Wyken Pippin and Court of Wick. In many cases the segments are erect and spreading or reflexed at the tips, and this form of structure also leaves the eye open. Between the spreading and the erect open eye there are many gradations which will be remarked by any observer who examines the different varieties.

"The other form is the closed eye. In this case the segments are erect and connivent at the tips, forming a small cone. In some cases of this form of closed eye the tips are spreading; but there is another very distinct form of the closed eye in which the segments are quite flat and convergent, closing in the eye like a trap-door in five divisions, as is seen in Trumpington. These two charactors, *eye open* and *eye closed*, I propose to employ as my primary divisions.

"2. *The Seed-cells.*—These constitute what is popularly called the core of the apple, and contain the seeds or pips. There are usually five, but they vary in number, and are occasionally three, four, and even six. They differ very much in structure, and are either open to the axis of the fruit or closed; and between the closed and the wide-open cells there are as many gradations as in the closed and open eye.

"The seed-cells form the second great division of my system, which are distinguished as *cells open* and *cells closed*.

"3. *The Calyx-tube.*—In making a longitudinal section of an apple in a line through the center of the eye to the stalk a more or less deep cavity will be observed under the segments of the eye and between them and the core. This is called the Calyx-tube. It is of very varied form, but all of these are modifications of two, or perhaps three, which may be regarded as distinct, and these I have called the *conical* and the *funnel-shaped*. As in the cases of the open and the closed eye and the open and the closed cells, these run into one another, and there are instances in which it is difficult to distinguish to which of them the individual belongs.

"The Calyx-tube is the character on which the third division is based, and is divided into *calyx-tube conical* and *calyx-tube funnel-shaped*.

"4. *The Stamens.*—These are the little, bristle-like bodies which are found forming a fringe round the inner surface of the calyx-tube, and it is on the position they occupy that the fourth character of this system is founded. On examining a number of different varieties of apples it will be seen that the stamens are not always in the same position. Some will form a fringe immediately under or near the base of the segments; these I call *marginal*. Others occupy a midway position between the margin and the base, and these are called *median*; and a third are situated near the base, which are termed *basal*.

"Taking the position of the stamens as my fourth great division, we have—1, Stamens marginal; 2, Stamens median; 3, Stamens basal."

We have not space to mention several hundred varieties of apples which are classified in the J. of H. according to the principles above stated in brief, and by which it would seem the determination of a given variety ought not to prove a very difficult or perplexing matter. That we should be able to trace the names of fruits the same as any plant may be traced in the hands of a botanist, is of high importance, and we trust Dr. HOGG's system may become popularly serviceable.

We see by the latest English papers that the Council of the Royal Horticultural Society have awarded to Dr. HOGG a Gold Medal for his discovery of a new classification of apples.

MANURING ORCHARDS.

PEOPLE often look at trees growing on rocky hill sides, and argue therefrom, that trees can grow without manure. They know corn, potatoes and grass must have something given to them to eat or they will not thrive, but they regard trees as a different order of vegetables—something that can thrive and flourish where no other vegetation would.

But in the case of trees on rocky hill sides, the land is any thing else than poor. The rough rocks keep the land from leaching badly by rains. The rocks themselves often contain valuable mineral matter, which, as the rock decays, is presented in a form that plants can feed upon. Then, whatever vegetation grows among the rocks, remains there to decay, and even leaves and other foreign substances that blow in the crevices and land hollows, formed by the rocks, make a valuable plant food on which the tree thrives. Indeed, trees in apparently poor, rocky places, are really much better off than many trees in a farmer's orchard where the trees are in what appears to be good land.

Fruit trees in some of the Eastern states are often planted among the rocks in places where it would not pay to try to cultivate in any other way. But the trees are not starved. For the reasons we have given they are quite well off, and, in consequence, give abundant and paying crops.

In our more level land the trees must have manure given them. In many cases it is as necessary to the best success that trees have an occasional manuring, as it is that any other farm crop have manure. There have been many discussions as to whether manure for fruit trees should be applied broadcast or plowed in. We would say that for orchard trees there is no rule. It depends on one's circumstances. If one has the trees on the ground where vegetables or grain are grown, the manure is, of course, plowed in for the sake of these crops, and the roots of the fruit trees fight with the vegetables for some of it, and get it too. But there are many orchards where there are no crops grown but the trees, and then it is excellent practice to apply manure as a top dressing at least every other year.

As to the material with which to top dress, it is not so much a matter of choice as of convenience. One may find some article an excellent fertilizer, and recommend it, and yet no one be so situated as to get it as he does. Along the New England coast, sea-weed is freely used for top dressing orchards, and the fine pear plantations the tremendous crops of which we hear so much about, are top dressed in this way. It is quite probable that there is nothing in the sea-weed itself, any more than in any other vegetable substance, that gives it advantage, but it is, most likely, from the salt it contains, and, no doubt, an orchard would be benefited even by a little common salt being scattered over the surface under the trees.

In a word, top dress your orchards occasionally, if you would have them bear an abundance of good fruit; but be not worried about what you should top dress with. We read in an agricultural paper, some months ago, of a Pennsylvania fruit grower, who, in the absence of anything better, spread clay from the digging of a cellar for a house near by, and found good results from such a weak application as this. We do not know that so poor an article as this would do any good to our trees, but it shows how little is needed in such cases to give good returns.—*Mich. Farmer.*

PEARS AND THEIR CULTURE.

THE London Journal of Horticulture, in an article upon Pears and their Culture, says of *Dana's Hovey* that "the fruit is small and very handsome, wonderfully juicy and sweet, with an aroma of extraordinary richness. It is a veritable sweetmeat, and its value is all the greater from the fact of its keeping good quite six weeks after it is ripe. Fruit which was gathered on October 25th and was quite ripe on November 29th was pronounced 'most delicious' on June 9th." And of *Beurre Superfin*, that "it is of large size, melting, juicy, with a singularly rich, piquant, acid flavor, and a most delicious pear"

We tasted this pear for the first time ten years ago last fall in the grounds of ELLWANGER & BARRY. Mr. BARRY remarked at the time that he "liked that pear because, without becoming satiated, he could eat more of it than any other."

When our own trees which we purchased at that time come in bearing, we will try the experiment and pronounce upon Mr. BARRY's conclusion.

THE American Pomological Society is to hold a grand exhibition of fruits at the Centennial on Sept. 11 to 16. There will also be a social reunion of the members on the 14th of that month, by invitation of the Pennsylvania Horticultural Society.

Floricultural.

ANNOUNCEMENT.

RURAL floricultural readers will please take notice that for the next month, or during planting time, as also in the fall, we will publish an *Exchange List* from any of our subscribers having seeds to give away and desiring others for them. For instance, if A. has Balsam, Portulaca and Zinnia seeds, and wishes Antirrhinum, Phlox and Asters, he or she so states. B., having Antirrhinum, Phlox and Asters, or some of them, and wishing Balsam, Portulaca or Zinnia—communicates with A. and the exchange is made.

Postal cards may be used and all communications addressed to the Floricultural Editor. For obvious reasons, the publication of exchange lists must be confined to *direct* subscribers of the RURAL NEW-YORKER.

NOVELTIES.

Abutilon Darwini tesselatum is mentioned by the London Garden (among new plants that received certificates from the Royal Botanical Society late in March) as "an erect-growing, very ornamental plant, especially in a young state: it has cordate leaves, boldly trilobed at their apices, of a soft green color, blotched conspicuously with golden yellow. The flowers are a bright-red, inclining to vermilion."

The variety, endurance and rapidity of growth of the Abutilons render them next to invaluable as summer bedding plants. A. *boule de Niege* is no longer a candidate for admission among first-rate plants, but has passed through the trial-furnace without a blister.

FLORICULTURAL NOTES.

Vines on Dead Trees.—A few years ago, one of our old spruces (*Abies excelsa*) died. It occupied a conspicuous place in the front grounds. We cut off all the twigs and the ends of the main branches so as to form a cone, with the apex 15 feet high and the base about 8 feet diameter. The extremities of the branches were connected from the bottom to the top with strong twine, forming an irregular network. Underneath the circumference of the base a trench was dug and filled in with good soil—then vines (Cobæas, Lophospermums, Maurandyas and Madeira vines) were planted. They soon reached the top, and so covered the netting that the eye could not penetrate beneath its entangled surface, and the effect of this cone of leaves and trumpet flowers was one that caused many a passer-by to stop and admire what—at a first glance—seemed to be a tree bearing dissimilar flowers and foliage.

Pavia Macrostachya.—The London Garden, in commenting upon, or rather supplementing, a recent article in the RURAL upon this Pavia, says:

"This is indeed a shrub of a remarkable value for all who pursue what the Saturday Review has begun to patronize as artistic gardening. It is, as Mr. CARMAN says, one of the best possible shrubs to stand alone, but we have also seen it affording a very charming effect as an undergrowth beneath low trees. Its fine foliage and long spikes of flowers almost make one dislike calling it a shrub, as it possesses all the amplitude of noble leafage and charm of stately blossom that belong to the finest of its race. It seems indeed a tree come down to nestle on the grass."

Seedling Smilax.—We have noticed of late directions as to raising this vine complicated enough to discourage many from attempting it. The truth is, the seeds germinate as freely as those of Balsam, and may, indeed, be treated in the same way. This capital little vine, so neat, bright and enduring and so useful in many ways, blooms and forms seeds not until the second year. The berries are the size of peas and of a red color. Except seeds are wanted, it is not, we think, so pretty while in flower or fruit as when unadorned by either.

Diary of a Ruralist.

DAILY RURAL LIFE.

From the Diary of a Gentleman near New York City.

PLANTING OF JERUSALEM ARTICHOKES.

April 18.—Long before the common potato became popular or even known in cultivation, the Jerusalem artichoke was much esteemed for its nutritious tubers. It is a native of the same Continent as the potato (South America), and was introduced into European gardens some two hundred and fifty years ago. NEILL says that the epithet Jerusalem is a mere corruption of the Italian word *Girasols*, from *girare*, to turn, and *sol* the sun, because its flowers resemble the common sunflower. It does, in fact, belong to the same genus, for the botanical name of the common giant sunflower is *Helianthus giganteus*, and that of the Jerusalem artichoke, *Helianthus tuberosus*. The word "artichoke" was bestowed because the flavor of the tubers resembled that of the true artichoke (*Cynara scolymus.*)

The date of the introduction of the Jerusalem artichoke into North America is probably unknown, but it doubtless came by the way of England, along with the old and more common shrubs and other flowering plants, which the early settlers brought over as very important adjuncts to a home in a new country. But it does not make much difference to us in these days whether they were brought over by the Pilgrims or a hundred years later, the fact that Jerusalem artichokes are naturalized products of many an old New England farm is well known. The tubers have also been widely disseminated throughout the Middle States, and I have dug them up from many a neglected fence corner when a boy, supposing that they were to the manor born, and not a Brazilian production.

The destruction of the potato by the Colorado ten-liners, as well as by disease, has made some of our Eastern farmers look about for a substitute, and while I do not believe that the artichoke will ever become a popular esculent for the table, it is certainly one of considerable value as food for stock, especially in localities where the more commonly cultivated roots are liable to failure. In the grasshopper-infested regions of the West, an artichoke plantation on every farm would become a magazine of food upon which the farmer could make large drafts in times of invasion of the Rocky Mountain "Hatefuls."

The tubers are so hardy that they may be left in the ground year after year without care or culture, and they will take entire possession of the soil, and the stems spring up so thickly that every other kind of plant is soon killed out. The tubers may be dug by hand as readily as potatoes, as they do not go very deep in the soil; but if the farmer desires to avoid even this labor, he has only to turn in his sheep or hogs and they will do it for him.

There appears to be two varieties of the Jerusalem artichoke, the long, smooth red and the short, rough white, the latter is a later importation from England than the former, but whether it will prove to be superior, or more productive, remains to be determined by experience. I have planted a few of both to-day, and will report the result in due time. It may seem somewhat non-progressive to return to the old Jerusalem artichoke, or recommend its culture, even as food for stock, still we do little more than travel around in a circle in this world, at best, and it may be wise, occasionally, to take a step backward, and pick up some of the good things left behind in our hurry to go ahead.

PLANTING A FEW POTATOES.

April 19.—The prospects are favorable for a large crop of potato beetles this summer, and they are already crawling about, waiting for the first leaf to come above ground, and upon which they will no doubt pounce without further delay. Now the question arises, what shall farmers do under such circumstances? Many in the vicinity of New York have already decided to plant no potatoes this season, claiming that it costs more to fight the beetles than the crop will be worth. But in this I think they make a grave mistake, and they will see it next fall, if not before. If only a few potatoes are planted the price is sure to go up, and those who do raise a good crop are pretty certain to be handsomly paid for the trouble of fighting the beetle.

I am planting a much less area of land than usual, but endeavoring to make up for it by spreading on more manure and putting the land in the very best possible condition. I think this is the true policy to pursue under the circumstances, for the less ground one has to go over in fighting the beetles the less it will cost, besides, a concentration of labor in preparing the soil is pretty certain to increase the yield. Our farmers must not be satisfied with a hundred bushels per acre, but aim at two or three times this amount and then they can afford to fight Colorado potato beetles and do it thoroughly.

Domestic Economy.

ABOUT SOME SMALL ECONOMIES.

A LADY writes in the Patrons' Helper, Iowa, concerning some apparently trifling matters, which make or mar many homes. As our lady readers will be interested in this subject. We quote:

I dined not long ago, with my friend, Mrs. Spicer; a wise little woman, who lives in her shoes—day times—and has so many children she don't know what to do. Mrs. Spicer by-the-by, is quite the character of our neighborhood, being noted for practical brains, and for original short cuts, and by-ways to domestic success.

The lady had that day, upon her table delicious tomatoes, which had been boiled in their coats, like potatoes.

"I save all the time I can," she explained, "by simplifying all the processes I can. Now this is my expeditious way of getting up a dish of tomatoes."

To Cook Tomatoes.—Put the tomatoes to boil whole in a little water, in a copper vessel. When cooked tender remove, and with a spoon, stir them quickly through a colander. This is only the work of a minute. Add the liquid in which they have been boiled, or not according to the quantity of juice wanted. Return to the fire, and put in pepper, salt and bread crumbs, and plenty of butter; cook up, and bring up piping hot to the table. If toast is preferred to bread crumbs omit the latter, and pour the tomatoes hot and juicy, into a dish lined with thin, well-buttered toast; cut into wedge-shaped sippets, of the length and breadth one's finger has.

About Bed-Comforts.—"The comforts I make now, wear twice as long as those I used to get up," Mrs. Spicer observed to me, one afternoon, apropos of something or other. "The difference is in the making," she continued, "I find it excellent economy, to put careful work into comforts."

"How do you do it?" I asked.

"Well, a comfort goes first generally at the ties."

"Precisely!"

"The cords tear through the lining, which is not stayed as the outside is, by knots, leaving the cotton loose. The loosened cotton works away from the center, where it is most needed, and rolls into the outer edges, where it is a nuisance, and where it mats into wads and tears its way out."

I could imagine my departed comforts, writing their own autobiographies.

"To prevent this waste, make sure in the first place, of strong lining. If the lining to be used, is worn in spots, tack on an inter-lining of bits of strong stuffs, no matter how unpresentable.

Second, tie with rather coarse cord—coarse cord will not wear through like a fine one.

Third, take a generous stitch on the wrong side; and set it biasing. Two stitches are best; one at right angles to the other.

Fourth, tie firmly; tie in, say five inch squares then tie once in each square. A comfort destined to be worn either side up, can be taken from the frames, when tied into squares. Then turn it over, and tie in the center of the squares on the lining side.

"Fifth, heap the cotton in the center of the comfort. Thin it gradually toward the edges; leaving a wide margin comparatively thin, for tucking in."

To Cleanse Old Comforts.—Take comforts that are ready to be put by, for the season—which will be about the time of the spring rains—and spread them in some convenient spot, out of doors. Keep them out till thoroughly cleansed by the rains. Dry them on the spot, with the least handling possible; do not bring them in till they are well livened up by sunshine and vapor; they will then be found to be clean, fresh and fluffy; altogether more so than they could be made by wash-tub, and pounding-barrel. This without tearing the outside, or matting or displacing the cotton. The work should be taken in hand, before the weather is warm enough for mildew.

Utilizing Old Woolens.—Old woolens, ripped, washed and pressed, make most inter-linings, for all manner of winter clothing; no matter how old and torn the material, or how small the bits, the cloth can be tacked upon the lining, like cotton batting, in as many thicknesses as desired. It is of course never seen, when made up, being hidden between the lining and the outside. Calicoes furnished with flannel inter-linings, do up well and make inexpensive and very comfortable working suits, for winter. Basques, sacks, boy's pants, and baby's bed-gowns, are all improved by a few layers of old woolen stuff, tacked in as above described.

To remove freshly spill ink from carpets, first take up as much as possible of the ink with a spoon. Then pour cold, sweet milk upon the spot, and take up as before, pouring on milk until at last it becomes only slightly tinged with black. Then wash with warm water, and absorb with a cloth without too much rubbing.

SELECTED RECIPES.

The surest remedy for chapped hands is to rinse well after washing with soap, and dry them thoroughly by applying Indian meal or rice powder.

To Clean Britannia metal, use finely powdered whiting, sweet oil and yellow soap. Mix with spirits of wine to a cream. Rub on with a sponge, wipe off with a soft cloth, and polish with a chamois skin.

The best way to clean the inside of old iron pots and pans is to fill them with water in which a few ounces of washing soda is dissolved, and set them on the fire. Let the water boil until the inside of the pot looks clean.

Scorches made by heated flat irons can be removed from linen, by spreading over the cloth a paste made of the juice pressed from two onions, ¼ oz. white soap, 2 ozs, fuller's earth, and ½ pint vinegar. Mix, boil well and cool before using.

Rice Pudding.—Boil one cup of rice a little while; beat well together three eggs and one-half cup sugar; add one cup raisins, one quart sweet milk, and the cup of boiled rice; any seasoning preferred can be added. Bake in a moderate oven one hour. To be eaten cold or hot, with wine sauce or sweet cream.

Chicken Salad.—Boil the chicken until done, in as little water as possible; when done, cut up into small bits; take half as much celery stalks as chicken, cut into very thin slices; have ready two hard boiled eggs; slice the whites into the chicken, mash and mix the yelks with one tablespoonful of mustard; stir in half and half vinegar and the water in which the chicken was boiled, as much as needed to cover the salad, heat to boiling, and pour over your chicken and celery.

Orange Cake.—One cup of sugar, half a cup of butter, two cups of flour, half a cup of sweet milk, a teaspoonful of baking powder sifted with the flour. Rub the butter and sugar to a cream, add the eggs, the whites and yelks beaten separately, then the milk, then the flour. Bake in jelly pans. Squeeze the juice from an orange; add to it the grated rind, make it stiff with powdered sugar, and stir the white of one egg well beaten. Spread this on the cakes and lay one on another, like jelly-cake.

Carrots for Eggs.—It is not generally known that boiled carrots, when properly prepared, form an excellent substitute for eggs in puddings. They must, for this purpose, be boiled and mashed, and passed through a coarse cloth or hair sieve strainer. The pulp is then introduced among the other ingredients of the pudding, to the total omission of eggs. A pudding made up in this way is much lighter than where eggs are used, and is much more palatable. On the principle of economy, this fact is worthy of the prudent housewife's attention.

Hygienic Information.

SLEEP THE BEST STIMULANT.

THE best possible thing for a man to do when he feels too weak to carry it through is to go to bed and sleep a week if he can. This is the only true recuperation of power, the only actual recuperation of brain force. Because during sleep the brain is in a state of rest, in a condition to receive and appropriate particles of nutriment from the blood which take the place of those which have been consumed in previous labor, since the very act of thinking consumes, burns up solid particles, as every turn of the wheel or screw of the splendid steamer is the result of consumption by fire of the fuel in the furnace. The supply of consumed brain substance can only be had from the nutritive particles in the blood, which were obtained from the food eaten previously, and the brain is so constituted that it can best receive and appropriate to itself those nutritive particles during a state of rest, of quiet, and stillness in sleep. Mere stimulants supply nothing in themselves; they only goad the brain, force it to a greater consumption of its substance, until that substance has been so exhausted that there is not power enough left to receive a supply, just as men are so near death by thirst and starvation that there is not power enough to swallow anything, and all is over.

PHOSPHORUS FOR INSOMNIA.

Dr. CUTTER relates an interesting case in his practice—that of an energetic carpenter who, in building a hot-house, was exposed to the sun's heat under glass in the summer time, this exposure being followed by symptoms of disturbance of the nervous system, evincing a loss of nerve force. Naturally of a cool temper, he became excitable, was unable to cast accounts, his steps were rapid and manner nervous, but sleeplessness was the most prominent and perplexing symptom. Chloral hydrate, bromide of potassium, opium, sulphate of morphia and valerianate of morphia were successively tried without avail. Finally, reasoning that here was a case of loss of nerve force, and knowing phosphorus to be a most important nerve food, Dr. Cutter prescribed one-fiftieth of a grain thrice daily in pill form. In a few days the patient slept as well as ever, and, discontinuing the pills, has since had his natural sleep.

CURE FOR CANCER.

I HAVE known several that have had cancers cured by the following remedy:—Take ashes (those from red oak bark are the best) and get lye that has been filtered through them twice. Now boil the lye down until it become as thick as mush and take as much as may be needed and add six grains of corrosive sublimate. Stir it well and let it remain until it is done blubbering. Now take it off the fire, and let it stand till it is cool enough to be handled with the fingers. It will be something like grained sugar. In handling it the hands should be very dry. Now break it in pieces and put it in a glass vial, keeping it from the air and from all dampness. In applying it to the cancer, put it on cotton or a sponge and hold it to the cancerous part, say ten minutes. The cancer will be killed and come out gradually.—J. B. W.

HYGIENIC NOTES.

Iceland Moss Jelly (good for colds, and very nutritious in convalescence).—Soak for an hour four tablespoonfuls of the moss in cold water enough to cover it. Then stir it into a quart of boiling water, and simmer gently till it dissolves; strain, sweeten to taste, flavor with juice of two lemons, and a little cinnamon if agreeable, and a glass of wine; strain into molds, and cool before using.

An Epidemic Predicted.—Dr. Duncan, a homeopathic physician of Chicago, has grouped a mass of evidence and opinions to the effect that the remarkable climatic conditions which have prevailed since last autumn portend a coming epidemic, while the prevailing symptoms in persons of phlegmatic temperament, chiefly women and children, are characteristic indications of the plague. His prophecies may be taken homeopathically, but it is still probable that the coming summer may be as little like ordinary summers as the winter has been unlike ordinary winters.

Cure for Epilepsy.—A writer in the Cincinnati Gazette recommends a cure for epileptic fits which he has proved himself after suffering more than twenty years. He is now in good health. The following is the remedy. Take of bromide of potassa two and one-half ounces, dissolved in one pint of rain water. Dose, a tablespoonful three times a day before eating. Should your throat become sore, weaken it. If it should make you dizzy-headed, reduce the dose. Some constitutions will not bear it as strong as others. There is no danger in the above remedy, if you are careful.

To Relieve Piles.—I give three remedies which I know have given great relief. As for curing, it is seldom done by outward application. Regulating the bowels by proper diet and gentle alteratives is very important:

First Remedy.—Lump of lard the size of a hulled walnut, rubbed on a piece of lead until of a lead color. Anoint frequently.

Second.—To one tablespoonful of thick, sweet cream add fifteen drops of essence of peppermint, and bathe often.

Third.—Make a strong tobacco poultice and apply warm. Sometimes it relieves immediately.

Celery for the Nerves.—A writer who is familiar with the use of celery says that he has known several men and women, who, from various causes, had become so affected by nervousness that when they stretched out their hands they shook like aspen leaves on windy days, and by a moderate daily use of the blanched footstalks of celery as a salad they became as strong and steady in limb as other people. He has known people cured of palpitation of the heart by the use of celery. Everybody engaged in labor weakening to the nerves should use celery daily in its season, and onions in its stead when not in season.

Darkness in the Treatment of Small-Pox.—If a patient, in the beginning of the attack, be put in a room from which absolutely all light is excluded, save that of a candle, the effect is to arrest the disease in the papular or vesicular stage; the skin between the vesicles is never inflamed nor swollen; the large scabs of matter never form over the face; there is no intense pain and only trifling itching, and the smell is either very slight or altogether wanting.

Entomological.

INSECTS OF THE APPLE.

THE following paper on the insects that prey upon the apple tree and fruit—was read at the recent meeting of the Potomac Fruit-Growers' Association by Mr. Gillingham:

1. The apple tree borer (*Saperda candida*), is a nocturnal insect, and very destructive to orchards. The female deposits her eggs on the lower part of the stem. These hatch out a footless grub, which enters the tissues of the bark, burrowing deeper as they grow, till they penetrate the heart of the tree. In the spring the perfect insect emerges to the light of day.

To destroy them, cut into the discolored and depressed portions of the bark, and, if the worm has penetrated into the wood, follow him with a strong wire. As a preventive, scrub the bark with soft soap, or other alkaline washes, in May or June, at the same time placing some in the forks of the branches, to be dissolved by the rains. Examine the trees again in August, cutting and hunting for the worms as before, injecting some of the wash. Encourage the presence of birds, especially those which destroy the grubs of wood-boring insects.

2. The thick-legged borer (*Chrysobothris femorata*) is a variety common to the West. The perfect insect, a black beetle half an inch long, may be found on the trees in June and July. It works higher up the trunk than *Saperda*. Seek for the young in their shallow burrows in the bark, in August, before they have entered the wood.

3. The twig borer (*Bostrichus bicaudatus*) attacks the small branches, producing an effect similar to blight, and causing the death of the same in midsummer. The insect is a beetle one-fourth of an inch long, and works his way into the wood near the axil of the leaf. Catch and destroy the insect; cut off and burn the dead branches.

4. Another variety of the *Leptostylus aculfera*, a short, thick, brownish-gray beetle, with spines on his wing covers. Look for it in August. The larvæ are small worms, which make long, winding burrows under the bark.

5. The bark beetle (*Tomicus mali*) is a new species; is small, smooth, black, or chestnut red, and cylindrical. The young feed under the bark, and, penetrating the wood, destroy the young trees.

The remedy for the last two is to keep the trees well washed with strong lye, made white with lime, during May and June.

6. The bark louse (*Aspidiotus conchiformis*) makes sad devastations in some sections. This louse is very prolific, and soon covers the young twigs, abstracting the vital juices. Often the leaves and fruit are overrun. The *nidus* of these insects is the well-known "scale" found on the branches, flat, brown, and overlapping. The eggs hatch in May, and attacking the bark, the lice absorb the sap.

Washings of strong lye, or solutions of potash or soda, or whitewash, lye and sulphur, or tobacco boiled in lye, &c., are remedies. Make your application in May or June. The lady bird feeds on this insect.

7. The leaf louse (*Aphis mali*) is a small green, wingless insect. They crowd upon the tips of the twigs and on the undersides of the leaves, living upon the sap. The eggs are laid in deep cracks of the bark, and hatch when the buds expand.

To destroy the eggs, scrape the bark and apply alkaline or lime washes.

8. The root louse (*Coccus pyri*) is a very great pest. It is found on the roots in warty excrescences. To destroy, remove the earth and apply hot soapsuds. This insect is specially destructive to nursery stock.

9. The codling moth (*Carpocapsa pomonella*) gives so much trouble that we have now but few perfect specimens of fruit. This moth appears early in the summer, and drops its eggs simply on the blossom ends of the fruit. The grub passes thence to the core of the apple. In three or four weeks it reaches its maturity, and eating its way out, instinctively seeks the foot of the tree, secreting itself under the bark, and passes into pupa.

We now have the opportunity to catch them. They may also be caught in rags placed in the forks of the trees, or by bands of hay placed round the trunks. These should be examined as often as once in ten days.

The moth may be caught by lamps or fire in the orchard. Wormy fruit should be picked up and cooked for the stock; or sheep, &c., kept in the orchard, will destroy many of the insects.

10. The tent or nest caterpillar (*Clissiocampa Americani*) is found not only on the apples but also on the wild cherry and persimmon trees. The eggs may be seen in the winter under a sheath, and the branches cut off and burned, or the nests may be destroyed in the spring.

11. The sapped caterpillar (*Ostrapacha Americana*) is a flat worm, and when at rest can scarcely be distinguished from the bark. They feed only at night. The remedy for these is to hunt for and destroy them.

"PROGRESS AND IMPROVEMENT."

ITS FOUNDER'S FAREWELL

TO THE READERS OF THE RURAL NEW-YORKER.

THE Founder and Conducting Editor of the RURAL NEW-YORKER this week vacates his position, thereby taking leave of its readers and dissolving many long-time and pleasant associations. The occasion awakens no ordinary emotions, for by this act we are separated from a life-work which, while being most laborious, has been fraught with many pleasures and compensations. From the outset, and during over a quarter of a century, we have earnestly and conscientiously endeavored to advance the best interests of our readers—to promote true "Progress and Improvement," Mental, Moral and Physical. But we should have failed had not our efforts been nobly seconded by the hosts who joined the RURAL standard and generously aided us with their influence and substantial support. For the extraordinary success and usefulness of the RURAL NEW-YORKER, therefore, we gratefully acknowledge our indebtedness to the thousands—aye, tens of thousands—who have contributed thereto by writing for its pages and extending its circulation. That all these, and other ardent friends of this journal, may be blessed in basket and in store—ever prosperous and crowned with Heaven's choicest favors—is our sincere aspiration.

In this connection—while tendering acknowledgments—we must not "forget to remember" our indebtedness to the Press of the whole country for its kindness, courtesy and appreciation of the RURAL. This has been so frequently and strongly manifested by many of our exchanges, that we are constrained to again tender our brethren the warmest thanks of an appreciative heart. May they, each and all, be prosperous in every relation of life—including a "rush" of subscribers and a "crowd" of advertisements.

THE RURAL was the pioneer in its peculiar sphere of journalism—the first in America to combine Agriculture, Horticulture, Science, Literature, News, &c., &c.—and, though its failure was predicted, it in a few years numbered its subscribers by tens of thousands and ranked first of its class in circulation, influence and usefulness. That it has accomplished much good—materially aided in making the fortunes and promoting the welfare of individuals and communities—we are often assured, and are vain enough, without boasting, to believe. Be that as it may, it has been assiduously and continuously conducted with a view of promoting the best interests of its readers, and especially those belonging to the Rural Population.

And here let us say that we believe the Agricultural Press is doing more to enhance the welfare and prosperity—to advance the material interests—of the people at large than any other instrumentality. As a rule, our Agricultural Journals are most zealously devoted to the interests of the producing classes, while many of them are conducted with superior ability and intelligence. And we frankly add (being now a disinterested party) that the RURAL NEW-YORKER, and many other journals we might name, should receive support at least equal to that given the trashy, ephemeral story papers, whose tendency is injurious and demoralizing. Let the reader reflect upon this, and aid in giving this journal, during the ensuing year, what it is entitled to, at least One Hundred Thousand Subscribers. There is "ample room and verge enough" for five times the number, for it already circulates and has a good reputation in every State and Territory of the Union, Canada, &c.,—a good foothold for an immense circulation.

Writing while convalescing from severe illness, and yet in some haste, we refrain lest our "Finis" prove prolix. In conclusion, therefore, with good wishes for all, we bid the readers of MOORE'S RURAL NEW-YORKER a final farewell. May every reader, and every family the RURAL visits, long be vouchsafed Heaven's choicest blessings. Whatever may be our own future, we shall, while life is spared, have pleasurable remembrances of many persons, incidents and associations connected with our career as a Journalist.

Hail and Farewell! D. D. T. MOORE.

SALUTATORY.

IN taking the Editorial Chair—made vacant by the retirement of the Founder of MOORE'S RURAL NEW-YORKER—I am not called upon to address a new audience. Having for nearly twenty years endeavored with my pen to disseminate whatever practical information I may have obtained through constant study and labor in field and garden, as well as filling an Associate-Editor's Chair in the RURAL'S Sanctum for the last five years, it will scarcely be necessary to say more of myself at this time.

My associate, Mr. ELBERT S. CARMAN, has been of late a regular contributor to the RURAL, and he is also not unknown to fame in other fields of literature. With his aid and a host of correspondents and contributors—and that of Mr. X. A. WILLARD, so long and favorably known as an authority in his specialty, to conduct the Dairy Husbandry Department—I hope to make the Old RURAL NEW-YORKER not only acceptable to all its present readers, but to many a new one, and worthy of the liberal patronage which it has received during the past quarter of a century.

No marked or radical changes are proposed, either in size of the paper or the various departments, further than to improve all, if possible, it being the aim of the present editors and publisher, who are also the proprietors of the RURAL NEW-YORKER, to heed its old-time motto (Excelsior), to spare neither time, labor nor money, to fill its pages with matter which shall be alike acceptable to the farmer, gardener, student of natural history, parents and their children, and all who desire happy homes with pleasant surroundings.

Correspondence upon all subjects of interest to our readers will always be acceptable, for it is only by an interchange of experience and ideas that man can become or remain a progressive, intelligent being. The Editor of the RURAL NEW-YORKER does not propose to take upon himself the prerogative of making every communication given in its columns exactly agree with his own ideas and convictions, but will only endeavor to guard against the dissemination of positive and well-known errors. ANDREW S. FULLER.

GODSPEED!

AFTER thirty-five years of unremittent toil as an Editor, twenty-seven of which have found him at the head of this Journal, Hon. D. D. T. MOORE is compelled by the condition of his health to seek a milder and more genial clime, thereby severing his connection with the RURAL NEW-YORKER. It is unnecessary for us here to say aught of the life-work of Mr. MOORE, of which the RURAL is to-day a living monument. Suffice it to say, that in parting with him many of the readers of the RURAL will feel as if they had lost a dear friend and a weekly counselor. Beginning his journalistic career at a very early age, his subsequent labors have attained for him in the profession a position which few men have the endurance to reach, and he is now gathering the inevitable fruits of excessive labor in a harvest of physical ills, which render him unfit for present editorial work. We learn that there has been tendered to him a foreign mission, and we wish him renewed health and continued prosperity in his new field.

And with the loss of the Editor-in-Chief, we are called upon to part with our late able and genial Associate, WILLIAM J. FOWLER, so long and so favorably known to all readers of agricultural periodicals. With him, also, we send our best wishes for his future prosperity, hoping and believing that, in whatever path he treads, his companions will find him, as we have done, always the same industrious, upright and conscientious laborer, seeking earnestly the greatest good for the greatest number.

THE LOT OF FARMERS' WIVES.

IN the labors and discomforts of the farmer's life, his wife is apt to have more than her fair share. Yet it is rare that she makes complaint. Work on the farm presses hard, and the farmer employs additional help, as he should. It is folly to suffer crops when grown to go to waste, and little less folly to let the farm lie idle where crops could be grown. But farm help makes more work in the house, unless tenant houses are furnished, which is far too rarely done. The "extra help" in busy times has, of course, to be cared for in the house. How many farmers make adequate provision for help indoors, as well as out? In cities, two, three or more servants are not uncommon in not large families. In the country it is rare that the wife of a wealthy farmer, with all her household cares and troops of hired men, has more than one assistant—sometimes not even that, if she has children old enough to in any way help her. It is too slavish a life to attract any young girl, and it is little wonder that so many, born and bred in the country, too, declare that they will never marry a farmer. But no one can foretell where love will lead, and many of them do marry farmers, nevertheless. Those bred in cities look on the farmer's life through the beautiful haze of sentiment and imagination. The rude awakening comes most severely to them.

The life of a farmer's wife is too isolated—far more so, even, than that of her husband. He goes to the market, the post office and the political meeting; but how seldom does or can his wife accompany him, even supposing her to wish to? Her life is spent at home in the dull, monotonous round of household drudgery and the care of children. She has not time for music, society, newspapers or books, and, after a few years, by a wise provision of nature, which makes useless faculties decay, she ceases to care for them. It is a wicked waste—not of money, for it sometimes saves that, but of human lives, which are far more valuable than all the wealth which the most successful farming can amass. It is in the chance it gives for greater variety and interest in the farmer's life that the Order of Patrons of Husbandry has achieved its most beneficial results.

We need not caution farmers not to make family expenses too high, nor to have too many assistants in and about the house. With all the effort which we can make to the contrary the tendency will be all the other way, and the lives not only of farmer's wives, but of farmers themselves, their children, and all connected with them, will be made dull and worthless, even where the worse result of social and moral ruin does not follow.

HOW TO IMPROVE FARMING.

IT is a wise provision of nature that whatever is largely wasted shall be produced in enormously superfluous quantities. Millions of seeds fall to the ground in the forest for every one that produces a full grown tree. It occurs to us that the enormous quantity of good advice bestowed on farmers with regard to their business, falls within the same category. Great progress has been made; but not one farmer in the country follows *all* the wise or otherwise directions which Agricultural Journals shower upon him. On the whole, it is probably quite as well that this is so. A great deal of the advice is worse than useless, and practical farmers can judge what to accept and what to reject.

One of our correspondents who has not philosophized on this subject as we have, remarked to us the other day that it was strange so many farmers who took and read Agricultural papers continued to plod on in the old-fashioned ruts of poor farming. In many cases the advice they read produces no effect whatever. Clergymen are used to this, and our brethren of the Agricultural Press must fall back on their philosophy for explanation. A shrewd old clergyman was once asked why one of his older parishioners was baldheaded. The retort was quick and pat. "You know Mr. T. sits in one of the front pews, and all the time I am preaching he always has his head bowed forward, and the gospel has hit the top of his head and glanced off so often that it has made him entirely bald." In very many cases the readers of Agricultural papers seem to have suffered in the same way, and we would not wonder if hundreds of them were as destitute of hair on top of the head as "Old Uncle NED" in the ancient negro rhymes.

"Line upon line, and precept upon precept" is doubtless good in its way; but for practical effectiveness there is nothing quite equal to example. One good thorough farmer will revolutionize the farming methods of a neighborhood, and make every acre in the vicinity worth a higher price. We have known some such cases. Where it is shown by practical experience that underdraining, thorough manuring and cultivation, improved stock and implements will pay, there is no lack of farmers who will gladly imitate these improvements. The trouble has been that seeing anything recommended in "the paper" is not conclusive evidence to most farmers that it is even practical—much less that it will pay *them* to adopt it. When the thing is tested in their own neighborhoods and proved a success, there is no difficulty in securing imitators. If one man in a town grows onions, broom corn, castor beans, hops, or some other unusual crop, and makes a success of it, one by one his neighbors take up similar methods and the old ruts are effectually broken. Go through the country, and you will find if any unusual industry has succeeded that a number of farmers in a neighborhood are engaged in it. This is notably true of hop-growing, dairying, apple, pear or peach culture, or the rearing and breeding of improved stock. Sometimes these diversified industries are favored by peculiar circumstances; but they are far more generally the direct result of the contagious influence of a good example.

Oregon.—This State is popularly supposed to be a wilderness; but the following shipments of produce for the last year will, we think, dispel this illusion:—Wheat, 3,492,553 bushels; value, $3,492,553, gold. Oats, 104,159 bushels. Apples, 1,625 boxes. Dried fruit, 448 packages. Bread, 2,576 cases. Salmon, 2,750 barrels; ditto, 8,893 cases. Beef, 72 barrels. Bacon, 763 packages. Total value, $4,000,000, gold.

RURAL NOTES AND QUERIES.

Excitement on the Pacific Coast.—The people of California, and especially of San Francisco, are just now having their periodical excitement over the large immigration of Chinese. The trouble, or at least the prevalent complaint is, that the Chinese laborers underbid the white labor in California. The remedy for this is to have the white laborers having greater skill and knowledge of business, become employers of labor as well as laborers themselves. If they lack capital, let them combine their resources on the co-operative plan until they have enough. By using the co-operative principle, California workingmen can gain as much from the cheapness of Chinese labor as they lose by the depreciation of their own. Possibly the people on the Pacific coast may devise other and better remedies; but the above seems best at this distance.

Equitable Assessments.—The State Assessors in New York are engaged in an effort to secure the uniform assessment of all property at its true value. This is a movement in which the farmers of New York are specially interested, as under the old rule of partial valuations farm property has been always assessed proportionably higher than any other. Thirty-five counties of the sixty in the State have agreed through their Supervisors to this change, and under some pressure from the State Assessors the others will probably fall into line. Any inequitable valuation is liable to revision by the Board of Supervisors, and ultimately by the State Assessors, who will take care that no injustice is done.

Wheat for the South.—The many Southern farmers who are going to plant corn largely this spring would do well to think if they cannot also vary their crops by growing wheat. We have never understood why this grain is not more popular in the South. It succeeds everywhere except in the low lands on the coast, and through Northern Georgia, Tennessee and Texas rarely fails of producing a paying crop on land that will grow anything with profit. Wheat is not subject to so many accidents from winter-killing, etc., as in the North. Southern wheat also ripens earlier and is in the market for the high early price which usually prevails before the bulk of the Northern crop is ready for sale.

The Texas State Fair.—Spring is an unusual time for holding fairs, but in the far South the season is already well advanced, and the weather is much more pleasant now than during the severe heat of summer and early fall. The Texas State Fair will open at Houston on the 2d of May and continue one week. Hon. JOHN T. JONES, Master of the National Grange, will deliver an address. The premium list is a long and liberal one, and there is no doubt that the Fair will prove successful. A special request is made for specimens of minerals from different counties—a feature which should be introduced in all State Fairs, and especially in those of the newer States.

American Horses in England.—A London dispatch of the 19th says that their trainer has been very busy with Preakness, Bay Final and Mate. On the previous Monday the horses were out on cantering exercise. On Tuesday and Wednesday they galloped two miles and a quarter; on Thursday two miles. Mate and Bay Final are wanted at Epsom a month hence and Preakness at Newmarket a week later. If they win it will astonish English trainers, who declare they cannot get ready in time. The health of the horses is very good.

RURAL BREVITIES.

THERE is a scarcity of sweet potatoes for spring planting in some portions of the South.

THERE is much excitement among California vineyardists about the Phylloxera, which has appeared in that State.

LEMON JUICE pressed into a snakebite wound is said to be an antidote for the poison. Eating a lemon is also recommended.

ACRES of huckleberries are found in some portions of Florida, and they are a regular feeding ground for bears, coons, opossums and birds.

THE Central New York Farmers' Club calls the Early Rose the best potato. Southern papers all advise planting less cotton. All right if it does not mean less work.

AGRICULTURAL HALL, on the Centennial grounds, is already assuming a different shape in its exhibits. So is Horticultural Hall. They are attracting a great deal of attention, and all visitors speak in high terms of praise.

No time should be lost in grafting trees, though any time till the middle of May will answer. It is not worth while to have inferior or worthless varieties, when in two or three years by grafting they can be transferred into valuable trees.

THE Black Hills are a fraud. More money is to be made easier and more safely in sticking to any legitimate business than in "prospecting" for gold. The only men in the Black Hills region who can make anything are the hotel keepers. They will get all that is taken there and all that is mined.

BUSINESS NOTICES.

Public Speakers and Singers will find "*Brown's Bronchial Troches*" beneficial in clearing the voice before speaking or singing, and relieving the throat after any exertion of the vocal organs. For Coughs and Colds the *Troches* are effectual.

"Phœnix Pure White Lead."—This brand of White Lead, made by Eckstein, Hills & Co., is sold by dealers with the positive assurance that it is perfectly pure.

A HUSBAND OF THE PERIOD.

YES, love, I'm breakfasting quite late;
But then, you know, it's Sunday,
And we who work for six long days
Deserve our comfort one day.
You're rather early home from church;
I hope you liked the sermon.
That velvet cloak, dear, by the way,
Looks charming with your ermine.

A chilly morning out of doors.
I'm glad you didn't wake me.
(Oh, native cutting, mother-wit,
Pray do not yet forsake me!
She heard me stumble up to bed
At three o'clock—I'll swear it!)
Dark blue is just your color, dear;
You always ought to wear it.

I've eaten very little? Yes,
It's nearly time for dinner;
This cutlet, too, seems rather flat.
(The truth, as I'm a sinner!)
A bloodshot look about my eyes?
My fingers in a flutter?
All fancy, love—I feel superb.
(That nauseating butter!)

You waited up last night till twelve?
For that, dear, I should scold you.
Of monthly meetings at the club
How often have I told you?
This waiting—had I not a key,
Perhaps I shouldn't mind it;
But having one—(By Jove, I took
An hour, last night, to find it!)

I left the hall-door open! Who
Insinuates that slander?
It's falsehood base and infamous,
If you'll excuse my candor.
Why, love, you trust mere servants' talk
I cannot well conjecture.
(She seats herself! The storm has burst!
Now comes my curtain lecture.)

The Story-Teller.

NE CREDE COLORI.

I HAD taken my chambers in Washington Square, and was inclined to like them. They were on the second floor, and consisted of three rooms. The door on the landing opened on to a narrow passage, at the end of which, on the right, was the door of the sitting-room, the three windows of which looked on to a green expanse, where stood a tall gaunt tree. In one corner of the sitting-room was a door leading into the bedroom, which communicated with a dressing-room. This dressing-room had a door leading into the end of the passage, to the left of the main entrance from the landing. Thus I could make the complete circuit of my premises; from the sitting-room, through the bed and dressing rooms into the passage, and through the passage into the sitting-room again. I am anxious to be understood on this point as a realization of the topography of the place is necessary for the comprehension of the incidents I have to relate.

I will premise by assuring my reader that at the time of which I am speaking I was in thorough physical health. As is the case with most sucking students, I rather prided myself on cultivating a habit of mind that should not permit me to be unduly impressed by causes unwarranted by calm reflection. I had been accustomed to a sedentary, to some extent a solitary life, and in moving to Washington Square had determined to apply myself unremittingly to legal studies.

My new chambers had been unoccupied for some months, and, after making sure that they had been well cleaned and scrubbed, I sent in my furniture and took possession. It was on a chill, dark October evening that, after dining at an accustomed eating-house, I wended my way to my new quarters. I shall never forget that evening; there was a heavy, clammy feeling in the air of the streets; and as I turned into the dreary square the air seemed heavier and clammier. On arriving at my chambers, I found the deaf, spirit-sodden old creature who had attached herself to me as laundress and char-woman in the act of setting out the tea-things. The lamp was lighted, and a bright fire burned in the grate. On my coming in the old woman mumbled a few words, the meaning of which I did not catch; however, well pleased with the air of comfort she had imparted to the place, I wished her a cheery good-night as she went out.

Having closed and locked the outer door, I returned down the passage into the sitting-room. I can perfectly call to mind its appearance on that night. The polished furniture was gleaming and glistening in the light, the windows were veiled by thick curtains, and the door leading into the bedroom stood ajar. I congratulated myself on my possessions, and, having poured myself out a cup of tea and lighted my pipe, settled myself with a volume of Hallam in an arm-chair by the fire. I had been reading for some time; my attention had somewhat wandered to a vague, sleepy consideration of matters not strictly relevant to constitutional history, when I became aware of a strange, all-pervading sensation of cold. The sensation was so sudden, so acute, that I rose from my chair shivering, in the expectation of finding one of the windows open. But no; they were all closed and fastened. Through the panes I could discern the gaunt branches of the trees, unstirred by any gust of wind. On glancing round the room I noticed the flame of the lamp, which, though somewhat dim, did not flicker or seem agitated by the icy stream of air which chilled me to the bones. The bedroom door, as I have mentioned, was ajar; and thinking the draught might proceed from one of the inner rooms, I lighted a candle, with the intention of looking through them. But the instant I entered the bedroom the candle went out; not suddenly, as from a current of air, but quietly, instantaneously, as though it had been introduced into an atmosphere of carbonic-acid gas. At the same moment the sensation of cold again came over me with ten times greater intensity than before. The gaslight in the square shone feebly into the rooms, and I was able to find my way through them into the passage, and back into the sitting-room. My sensations appeared to me somewhat unaccountable; but attributing them to some draught, of which I could ascertain the cause in the morning, I closed the doors and resumed my place by the fire. After a little while I fell again into my interrupted train of dreamy thought, and gradually fell asleep. Now, before proceeding further, I may state that I had never been a victim to nervous fancies. Nothing had ever occurred to me bearing in the remotest way on the events I am about to relate—events so utterly inexplicable by natural causes, and yet so fantastically real, that even after a lapse of many years I call them to mind with a shudder of horror.

I remember, as though it were yesterday, the appearance of the room as I mused lazily in my arm-chair before going to sleep. The sound of an organ, which was playing in some neighboring street, came to me fitfully, at times seeming to be almost close to me—at times, again, seeming to proceed from some great distance. The fire had burned low, occasionally cracking and ticking; the lamp, as I have mentioned, was burning dimly, and a large portion of the room was in deep shadow. I do not know how long I had slept, when I became conscious of my own being. I can not say that I awakened; for though all my mental faculties were struggling painfully into life, my vital action seemed suspended, and I was unable to move hand or foot. A cold perspiration burst from all my pores as I made tremendous but vain efforts to shake off the incubus that was upon me. My feeling was not one of impotence: it was as though I had been frozen into a solid block of ice. I endeavored to call out; I had no power over my voice, and could not utter a sound. But as I gasped and panted, there stole into my nostrils a deadly, terrible, overpowering stench, unmistakable in its penetrating sickliness to me, who had frequented hospitals. It was the dread odor of decomposing mortality that was suffocating me as I sat. I felt that I must break the spell, or die. With one terrific exertion that strained every nerve and muscle, I burst from the chair and fell cowering on my knees before the fire. The lamp had gone out, a faint gleam from the fire afforded the only light in the room. I relighted the lamp, and, having swallowed a glass of brandy, endeavored to collect my thoughts. My first idea was, that a dead body must be somewhere concealed in the room. The hideous odor still clung to my nostrils, and the absurdity of such a supposition did not strike me. I searched the room, but, of course found nothing; though, to my astonishment, the bedroom door, which I had carefully closed, was wide open. As I advanced toward it with the intention of shutting it again, my lamp was extinguished in the same unaccountable manner as before; I locked it, however, securely, and again struck a light.

By this time I had sufficiently recovered to endeavor to reconcile my sensations to natural causes, or at any rate to a formidable attack of nightmare. I lighted my pipe, in the hope of neutralizing the terrible stench that still pervaded the room. Leaning on the mantle-piece, I actually smiled, at beholding my own pale, scared-looking face in the mirror. As I looked, suddenly every pulse in my body stood still. I beheld the reflection of the bedroom-door, which gradually, noiselessly opened of itself. I tried to command myself, and turned round toward the door. The same intense thrill of cold, but not a soul was there. I considered for an instant, and cross-examined myself as to my own condition. It was evident that my nerves were completely unstrung, and I decided, as I saw reflected in the looking-glass my own ghastly-looking face, that I was not in a condition to investigate the matter any further for that night. A dread was upon me that I could not shake off; so, hastily putting on my great-coat and hat, I hurried out of the room, through the passage, found myself on the landing with a sigh of relief, and locking the outer door, walked to the rooms of a friend who lived in the neighborhood.

S——, who was reading for the Civil Service, was glad to see me, and offered me a shake-down for the night. I informed him at once of the cause of my ignominious flight from my own rooms. My experiences had been too unmistakably real for me to dread ridicule in the relation of them. So, confessing unreservedly that I had been almost frightened out of my wits, I sat patiently enough as he endeavored to prove satisfactorily that my sensations were entirely due to nerves or indigestion. Before retiring to rest, however, we agreed to spend the following night together in my chambers. In the morning we went to our respective duties, with an arrangement to meet at dinner in the evening. I did not call at my rooms during the day; and what with attending to lectures and reading tough law, had not only overcome any idea of supernatural agency in the events of the preceding night, but, as the evening drew near, entirely ceased to think of the matter.

It was about eight o'clock as we entered the rooms together. The old laundress had evidently been at work, as on the preceding evening. The fire was burning brightly, the lamp was lighted, and the tea-things were set out on the table. We walked through the rooms, and found every thing in perfect order. S——laughingly envied me my comfortable quarters, showing by his manner that he was more than ever convinced I had been the victim of an exceedingly bad attack of nightmare. After a little while we agreed to play at chess, and arranged a small side-table in front of the fire. I sat in the arm-chair with my back to the bedroom-door, as on the previous night; S—— was seated opposite to me, consequently facing the door, which I had closed, locked, and bolted, on completing our tour of inspection; S——, who was in high spirits, joking at me the while. I remembered, however, the uncomfortable tendency it had to open on its own account, and determined that it should be as securely fastened as a good lock and bolt would admit of. We were both fair chess-players, about equally matched.

Two hours, perhaps, had elapsed, when the interest of the game culminated, and we were considering it with an intentness known only to chess-players. The move was with me. Knowing it to be a critical one, I was considering it at length, in all its aspects; my decision was just formed, and I was on the point of moving a piece, when gradually, surely, I became aware of the same extraordinary sensation of cold as on the night before, just as if the surrounding atmosphere were becoming iced into solidity. I felt that the bedroom-door behind me was opening. I looked up with the intention of calling S——'s attention to the phenomenon, but my movement was unnecessary; he was equally conscious of it with myself. He had risen from his chair, and I can never forget the expression of his face, which was livid and distorted. His eyes were wide open, and turned full on the door that was just behind my chair. All his features were convulsed, and his appearance, as he bent forward, as if in an intensity of horrified expectation, was perfectly terrific. I actually saw his hair lift from his head, and great beads of perspiration burst from his forehead.

He took not the slightest notice of my movement, but slowly raised one hand, as if pointing to something in the room behind me; then suddenly, and without giving me a moment's warning, with one loud yell of agonized terror, he dashed to the door leading into the passage, through the passage, and out of the main door, which slammed heavily behind him. I hurried after him into the passage. Then I remembered that the outer door closed with a spring-lock, and that the key was in the pocket of my great-coat, which was hung up in the bedroom. We had inadvertently left the door open on coming in, and thus S—— had been enabled to escape.

It would be impossible for me to describe my feelings at finding myself alone in the passage. How long it was before I mustered up sufficient presence of mind for reflection I can not tell; but at least I realized to myself the fact that to leave my chambers it was necessary to get the key. With a desperate courage I returned to the sitting-room. The lamp was extinguished; the fire was burning with a sickly glare. With closed eyes I advanced into the bedroom. I quickly felt my way to the peg on which my coat was hanging, when something happened that caused my very heart to stand still and my blood to freeze. I heard a movement in the passage—a strange, heavy, shuffling sound, as of a body dragging itself along the floor. An impulse seized me, unaccountable as all the other events of that memorable night. I felt impelled to follow *the thing* that was painfully, slowly dragging itself down the passage. I stepped through the dressing-room; and as I moved I heard *it* move on before me, keeping at the same relative distance from me. I quickened my pace, I ran—but I could not overtake that which I still heard dragging itself along.

After three or four headlong rushes from room to room, I stopped in the middle of the sitting-room to recover breath. As I stood, a revulsion of feeling came over me. My eagerness to confront and discover the cause of the sounds I still could hear, gave way to horror. I felt my life and reason to depend on my escape. As I moved to the bedroom-door it closed in my face. I frantically endeavored to force the lock. The *thing* was dragging itself along the passage into the room in which I was. Again the nauseating stench of the night before rose into my nostrils; I rushed to the window with the intention of throwing it open and jumping into the space beneath; but it was too late. I turned my eye downward. It was close to me, and I beheld

BADEN.

PEASANT COSTUMES IN GERMANY.

it. A man writhing on the floor, his features blue, bloated, and decomposed, the eyeballs turned up, yet bearing full upon me, dead and glassy, an impure phosphorescent light emanating from the body itself. As I gazed, one discolored hand was raised to the throat, in which I perceived a hideous gash. It drew itself gradually closer to me—— I became insensible.

When I was discovered in the morning, my friends, who were telegraphed for, removed me to the country where, among cheerful scenes and people, I soon recovered. S—— died of brain fever within three days of the night on which he sat and watched with me.

I have never cared to make any inquiries as to the previous inmates of the chambers. It is true I have heard that an inmate of one set cut his throat under peculiarly horrible circumstances; but I was never curious to identify the scene of the suicide's death with the chambers he occupied for so short a time; indeed, nothing would induce me ever again to enter the apartments.—[*Selected.*

HISTORY OF THE WAW.

[THE subjoined is from the pen of the truly celebrated historian, Mr. Addums, and is instructive, as giving a comprehensive explanation of his novel, patent plan of writing history.—ED.]

INTRODUCKTORY.—*Diffrunce betwixt Myself and Other Histoarians.—Sperrit and Puppus uv the Wuk.—The Addumsian Method.*

Uv thoase great Histoarians uv the Waw—Polind, Macfearson, Hopper, Frank Mo—who is Frank Mo?—and them, I am not wun uv 'em. The reezn why I am not wun uv 'em is this—they are a writin for posterrity while I'm a writin for munny. I sum uv 'em are a writin for fame, which is the Frentch for hunger, and I hoap they'll git it and hold onto it tite, for it is very slippy. I had sum uv it wunst, but findin it didn't pass currunt for family groserles, I draptit. Litererry and polittikul fame mostly goes out in whiskey ennyway, and is uv littil vally. Tharfo I'm a writin for munny, cavin greenbacks, and hence I truss thar will be no jellosy on the part uv my contemptoraries, for I'm determined to quorl with noboddy, exsept my publisher, who will cheet me as a matter ov coase. How else could he affode to pay writers not so popplar as me, say nuthin uv his family expensis?

Another diffrunce betwixt myself and uther histoarians uv the day is that they are (or say they are) writin a true and impartshul account uv what akurd endurings uv the Waw. It is the habbit uv pepul uv this class to talk in this way, and perchause they reelybleeve and mean what they prommis. Alas! how futile is thar efforts, frum Herodditus down to Hopper with his plektchers. But I would not be pusnul. As for me, I nought as well stait frankly that I do not intend to wrote a impartshul History. Far frum imitating the exampul of the Waw Department at Washintun, and telling uv the truth recklissly and regardliss of konsekenses, I shall not hesitate, whenever it suits my puppus, to tell the most infunnul lies that ever issued frum mortul man. Ef Mr. Enybody is offendid, I shall be sorry, but the methud uv the Wuk kin in no otherwise be carried out. I make out my kase in my own mind before startin, and then wuk the facts up to it. In this way alone, I fansy, kin a truly filosophikul History be constructid.

As has bin sed, this shell be strickly a parshul History, not for the reezn that my auntysedants fubbid any other, but beeaws I chews it soe to bee. And I chews it soe to bee, beeaws I don't know enuything about the other side and don't want to know nuthin bout it. And it aint necessary I should, in odder to carry out my desine, which is to be abused—wharby my Wuk will become famus, will sell reddily, and I shell make munny. For munny is my standpint, as afosed. And from this pint uv vue, history was nevver wrote belo; the motive is purely oridginal with me, and a patint has bin aplied for. Mr. Charls Reed, orthur uv "White Lize," "Never Too Lait to Mend," and sich, calls this kind uv writin "Numskullticulture," and says it perduces the finist effects in flekshun and paintin. We shell see what it will do for history.

McCawly, in his S. A. on History, informs the publick, with grate modisty, that history was never properly wrote till he writ it. But did he doo it properly in his oan History? Cumpyar him with Allison, for instants. I paws for a wreply. Buckul alsoe gives his vues uv the proper maner to rite history, and eaven goes so fur as to string out the natms uv the books he red. But all this perade uv ternin, in my opinyun, didn't evail to perduce a reely good History, sich as this shell bee. Now, with a verry modrit apreshashun uv my abilitys, and with a perfoun ignornnce uv the facts in the kais, I undertake to say and doo say that the Wuk forthcomin from my pen is the only trewly valibul historrikul Wuk which has apeared since the Book of Jobe—which he was a good histoarianer, beeaws he confind himself to a narrytiv uv his oan suffrins, with a okashunal excurshun descriptive uv wild asses, waw-hosses, and the hevinly boddies. Meenin no irreverunce, I kin but think that Jobe would hav maid a fine Army Corrispondent.

The sperrit and puppus of the Wuk may be gethered from what has bin sed above, but the methud uv the Wuk remains to bee discribde. The sperrit uv it is the sperrit uv a man waitin pashuntly for his enemies to perrish, in odder that he may releeve himself freely; and the puppus uv it is the puppus not to annoy posterriority—which will hav waws enuf uv its oan to write and read about—but to pay bode bills and, ef possibul, a fair sheer uv the expensis uv beinge lickt.

Two methuds surgestid themselff to me.

1. To misregard all miner pussons and ivvents, and to confine myself stedily to a diskription uv the desisiv battils and the prinsipul karactures which figgerd in the Waw.

This would make a verry intrestinge History indeed, but it would not be purely oridginul. It would inable me, too, to vent my sarchasms on certin pussunidges agin whoom I feel a feelin; but that is the methud uv uther historians; and, besides, I kin do it to better idvantage in the Methud follrin.

II. The aim uv all historrykul writers is to narrate, with great or greater inaccuracy, ivents—to tell what was done. Now it acurd to me, that a oridginal History must uv nesessity consist uv a narytiv or tall uv *what was not done*—in other wirds, uv what mought hav bin done, what ought to have bin done, and yet it was neglecktid to be did. This, tharfo, is my methud—the ADDUMSIAN METHUD, introduced for the fust them in polight litterychewer, and destinded, hereafter, to be adoptid everywhar, in all lands and in all langwidges, as the only true methud uv historical comperzishun.

I shell bring toe my task a mind prejudished to the last degree in favor of my oan opinyuns, and a heart filled with malice and all uncharrytubbleness for thoas who dar to differ with me in any way whatsumever. I shell lie plut-blank, by in new endo and old endo. I shell show that whatevver I *shell* show (and this is, as yit, very unsertin) could not have bin shown in any other way by any other man ixcept myself. In a wird, I shell avoid, ef possibul, all the errors uv the histoarians uv the day, and, taktinge warning by the fait uv Hedley, Abbut, and Bankrupft, I shell so shaip my coase as to offend everyboddy puppusly, and not unintenshunly, as po Davy Hume says he did. The world is full of corns, made to be trod on, espeshly by histoarians uv thar own times; and I be durn ef I dont inten to tred on as menny uv 'em as I possibly kin.—[*Mozis Addums.*

YACOB.

YACOB was the name of an Arab boy in the Oriental city of Cairo. He was poor, and, like most of the poor boys of that city, his chief ambition was to own a donkey and hire him out to the travelers to go to the pyramids and other places of interest in the neighborhood of Cairo. As it was, he was only the driver of another man's donkey; that is, when the animal was mounted by the traveler, he ran behind, poking the quadruped with a sharp stick to keep him in a brisk trot.

One day, while Yacob was standing in front of Shepherd's Hotel in Cairo, wishing he had a donkey of his own, an English traveler on the veranda beckoned to him and asked him why he looked so wistful, and Yacob answered that he was unhappy because he had no donkey.

And when the Englishman heard his story, he called his servant and told him to bring up Marish, which was an old, sleepy donkey. Then he said to Yacob:

"Would you be happy if you owned that donkey, my lad?"

"Oh, master, I would be happy with any donkey!" said Yacob.

"Then," said the Englishman, "he is yours—I make him a present to you."

When he said this, the other travelers gathered around, with smiles on their faces, for it appeared that the Englishman was a man much given to making fun. He told Yacob to get on the donkey and ride him up and down in front of the hotel a few times, to show his gait. Yacob got astride of him, and found that he was stiff in the legs and moved slowly, notwithstanding the sharp pokes he gave him with his stick.

"I shall give the donkey a name that will draw custom for you," said the Englishman as the lad rode up to the veranda.

Yacob was much pleased that his benefactor should give the donkey a name, for he had seen some of his companions who hired their donkeys more easily than others, on account of fortunate names given them by travelers.

"I shall be much glad to call him what my master pleases," said Yacob.

"Then his name shall be Lightning," said the Englishman, and the other travelers laughed.

Yacob did not know what Lightning meant, and he continued to call his donkey by that name after the Englishman went away. He did not have much difficulty in hiring his donkey; but when the travelers started on their journey, they told Yacob he was a humbug, and that he had imposed on them with his animal. So that they only kept Lightning for a few minutes, and the same people never hired him twice.

One day, as he led his old donkey toward the hotel veranda, after being called a little humbug by an angry traveler, who refused to pay him for hire for half an hour, he was spoken to by a fat man in a long black coat, who told him he ought to call his donkey Slow-coach.

After that Yacob called him Slow-coach, not knowing any more about the name than he did about Lightning. But this change of name, instead of mending matters, made them worse. In short, no one would hire his donkey any more on any condition, and Yacob and Slow-coach were a rueful pair, as they stood idly before the hotel.

One day, as he stod thus, the Prince of Wales came out from the veranda (the Prince was then on his way to the East Indies), mounted Slow-coach and rode him two or three yards, and then got off and took another donkey. Thereupon Yacob bemoaned his bad luck in hearing of an American sitting in a tilted chair on the veranda.

"Yacob," said the American, "your donkey shall be hired as much as any other, but hereafter his name must be the Prince of Wales."

The American had a certificate drawn up and sworn to before the American Consul in Cairo, to show that the Prince of Wales had, without any doubt, mounted Yacob's donkey; and when the lad wanted to hire the animal to any man, woman or child from England, all he had to do was to show this certificate, and they straightway engaged him, notwithstanding his moping gait and stiff legs. They engaged him for whole days, fondled him, and begged Yacob not to poke him up too sharp from behind. They fed him with whatever he would eat, and the only drawback to the donkey's pleasant life was that his tail was plucked a good deal for mementos.

Yacob said, and says still, that the luckiest day of his life was when he was spoken to by the American gentleman in a tilted chair."—*Albert Rhodes in St. Nicholas for May.*

THE POPE'S AUDIENCE-ROOM.

THE monotonous hum of conversation ceased abruptly, the two sections of the wide door I have mentioned were thrown open, and the Pope, surrounded by his cardinals and a number of foreign princes, entered. The occupants of the two long settees rose, and then, as if they were automata worked by the same tyrannical wire, sunk simultaneously into an attitude of devotion. For an instant I was seized with a desperate desire not to kneel. There is something in an American knee, when it is rightly constructed, that makes it an awkward thing to kneel with before any man born of woman. Perhaps, if the choice were left one, either to prostrate one's self before a certain person or be shot, one might make a point of it—and be shot. But that was not the alternative in the present case. If I had failed to follow the immemorial custom, I would not have had the honor of a fusillade, but would have been ignominiously led away by one of those highly-colored Swiss guards, and, in my dress suit, would have presented to the general stare the appearance of a pretentious ace of spades being wiped out by a gay right bower. Such a humiliation was not to be thought of! So, wishing myself safely back amid the cruder civilization of the New World, and with a mental protest, accompanied by a lofty compassion for the weakness and cowardice of human kind, I slid softly down with the rest of the miserable sinners. I was in the very act, when I was chilled to the marrow by catching a sidelong glimpse of my benign old gentleman placidly leaning back in his seat, with his hands folded over his well-filled waistcoat and that same benevolent smile petrified on his countenance. He was fast asleep.—*Atlantic for May.*

HOW THEY FIGHT IN FRANCE.

A SANGUINARY duel took place in France the other day. In a heated political discussion a blow was given by Count de X—— to the Duke of Z——. The Duke didn't return the blow; but a few minutes later, finding himself alone with those who were to act as his seconds, he took an oath never to see his wife or little girl again until he had washed away the insult in the blood of the Count. The next day the duel took place. The Duke was wounded twice—in the fore-arm and in the right side—before the Count had received a scratch; but the Duke, notwithstanding the suffering and loss of blood from his wounds, insisted on continuing the fight. The duel went on; the Duke, making a superhuman effort, drove his sword through his adversary, who fell lifeless. Then, pallid in death, bathed in his own blood, and with difficulty sustaining himself, the Duke drew a white handkerchief from his pocket, and bending over the Count's body dipped the handkerchief in the blood gushing from his adversary's death wound, and turning to the four seconds, who looked on aghast, the Duke raised the blood-stained cloth to his face and said:—"You will tell them, gentlemen, how the Duke of Z—— avenged the insult to his honor. I wash away the insult with the blood of the one who insulted me." He then said to his own seconds: "Take this handkerchief, which I confide to you, to the Duchess, my wife; I enjoin upon her as a duty to place it among the wedding presents of my daughter when she shall be married; it is her father's gift to her—the purity of his name." The words were hardly spoken when the Duke fell back dead; and in death his features looked calm and proud, and almost wore a smile. His honor had been satisfied.

We may live without poetry, music and art;
We may live without conscience, and live without heart;
We may live without friends, we may live without books,
But civilized man cannot live without cooks.
He may live without books—what is knowledge but grieving?
He may live without hope—what is hope but deceiving?
He may live without love—what is passion but pining?
But where is the man who can live without dining?

LIFE.

AN infant on its mother's breast,
An eager boy at play,
A youth by maiden fair caressed,
A stalwart man with care oppressed,—
An old man silver gray,—
Is all of life we know:
a joy, a fear—
a smile, a tear,—
And all is o'er below!

A CONTRAST.

BOTH Luther and Calvin brought the individual into immediate relation with God; but Calvin, under a more stern and militant form of doctrine, lifted the individual above Pope and prelate, and priest and presbyter; above Catholic Church and National Church, and General Synod; above indulgences, remissions and absolutions from fellow-mortals, and brought him into the immediate dependence on God, whose eternal, irreversible choice is made by himself alone, not arbitrarily, but according to his own highest wisdom and justice. Luther spared the altar, and hesitated to deny totally the real presence; Calvin, with superior dialects, accepted as a commemoration and a seal the rite which the Catholics revered as a sacrifice. Luther favored magnificence in public worship, as an aid to devotion; Calvin, the guide of republics, avoided in their churches all appeals to the senses, as a peril to pure religion. Luther condemned the Roman Church for its immorality; Calvin for its idolatry. Luther exposed the folly of superstition, ridiculed the hair shirt and the scourge, the purchased indulgence and dearly-bought, worthless masses for the dead; Calvin shrunk from their criminality with impatient horror. Luther permitted the cross and the taper, pictures and images, as things of indifference; Calvin demanded a spiritual worship in its utmost purity.

Luther left the organization of the Church to princes and governments; Calvin reformed doctrine, ritual and practice; and, by establishing ruling elders in each church and an elective synod, he secures to his polity a representative character, which combined authority with popular rights. Both Luther and Calvin insisted that, for each one, there is and can be no other priest than himself; and, as a consequence, both agreed in the parity of the clergy. Both were of one mind that, should pious laymen choose one of their number to be their minister, the man so chosen would be as truly a priest as if all the Bishops in the world had consecrated him.

REVIVALS ONE HUNDRED YEARS AGO.

REVIVALS in different periods of the Church have had marked peculiarities to distinguish them. In the great Awakening of 1740, the people of Enfield, Conn., were unaffected, while the towns around were moved by the Holy Spirit. They were in distress for Enfield, and prayed most of the night for its awakening. President Edwards went there the next day, by previous appointment, and the people came to hear him, and were so giddy as hardly to conduct themselves with common decency in the church. He preached a clear argumentative discourse on the danger of living in impenitence,—"Their feet shall slide in due time," was the text,—his reasoning took hold of their imagination and conscience, and before the sermon was ended the people were so affected as to cry out in their distress and weeping, so that the preacher was obliged to speak to the people and desire silence that he might be heard. A great revival in Enfield followed.—*Observer.*

THE MYSTERY OF GOD'S MERCY.—I have always believed with a calm conviction in that divine history and that divine mission, but I used to worry myself about the manner of it. I am reading the Gospels for the third time within two or three months, and accepting the whole of the holy mystery as I find it. Mystery there must be, and it is wiser to take humbly the relation of eye-witnesses than to seek to reconcile what we cannot comprehend by our own feeble intelligence. I throw myself humbly, hopingly, fearingly on the mercy of God.—*Miss Mitford.*

A PLACE OF REFUGE.—Our Lord Jesus Christ is a place of secure refuge to every soul that flies to Him. The moment a sinner believes in Jesus he is safe, and continuing to believe he remains safe in life, safe in death, safe in judgment, safe in eternity. The passing out of self-righteousness into confidence in Christ is the act that saves the soul. When thy faith doth lay its hand upon the dear head of the Redeemer, what if I say upon the horns of the altar of his sacrifice, then is thy soul secure and nothing can destroy it.

HE that follows the Lord fully, will find goodness and mercy following him continually. If ever God had failed one who trusted in him, we might doubt; but he never has, therefore we should be confident.

THERE are four good mothers who have four bad daughters:—Truth hath hatred; prosperity hath pride; security hath peril, and familiarity hath contempt.

IT is when to-morrow's burden is added to the burden of to-day, that the weight is more than a man can bear.

Ladies' Portfolio.

THE LOVER'S SEASONS.

I.

When infant Spring uncloses,
And music fills the grove,
I'll make of fragrant roses
A garland for my love.

II.

When Summer's sun is shining
On every flow'r and tree,
I'll tempt my love to ramble
Through woodland shades with me.

III.

When Autumn's golden treasure
With plenty gilds the fields,
We'll thank the Lord of harvest,
For all His bounty yields.

IV.

When winter winds are blowing,
And cold's the cheerless night,
Our hearts shall still be warm, love,
And *every* season bright.

SPRING STYLES.

Affections are cut close, are worn by old and young, and are equally becoming to all. They are useful for every-day wear, for hill-climbing and rock-scaling. They come mostly in the old decided colors, and are worn long or short to suit the taste or convenience of the wearer.

Honor is beginning to be considered a somewhat antiquated goods. Several large houses are selling out below cost, preparatory to going out of business, "as there is no profit in it," they say. Large stocks have accumulated on their hands, as they found few purchasers for even the finest quality. Some apparently heavy dealers have failed entirely, and closed up for want of capital.

Generosity was much worn at the holiday season. It is not an imported goods, but of home manufacture, and comes in all prices and grades.

Intellect is much sought after at certain shops, where it is supposed to be found. A "shoddy" article is often palmed off upon shoppers, a quality with a cotton back and satin figure. But those really desirous of purchasing can always find a genuine article, and it is within the means of the poor.

Fraud, though not as popular as it was last year, is occasionally worn as a *negligé* by those retiring into bankruptcy; and at the reception of creditors by their two per cent. debtors.

There is another garment shown at the openings which promises to be as great a favorite this spring as ever. Its common name is Love. It comes in suits, prices ranging from one hundred to many thousand dollars per suit. It is made to order when desired. Sometimes much profit is realized on the sales. Many who have purchased say that it can be turned and made over for another season. There is much counterfeit in the market. It requires a practiced eye to detect the false. Only the real will wear; the frail imitation soon gets shabby by dust and friction. I am told that some of our leading fashionables invest in the cheap material, and trimmed up nicely it is thought to look as well as the genuine.

Policy is one of the most popular over-garments of the season. It seems to be worn by all ages and classes. It is considered the "correct thing" for court, business or society. Some skill is required in wearing it, so that the lining, which is often of a different texture, shall not show. Those designed for ladies are often trimmed with a bewildering combination of puffs, bows and folds; those for gentleman are ornamented with red tape.—*Scribner for May.*

TURNING POINTS.

Marriage is unquestionably as decided a turning point in human destiny as can be. It is, however, a turning point which, least of all, should be left to mere blind chance. Yet mere blind chance often rules the result. Everybody now recollects how Lord Byron staked on a toss up whether he should make his offer to Miss Milbanke or not. Mr. Grant asserts that there is an English duke now living, who wrote the following letter, when marquis, to a friend with whom he had agreed to inspect some carriages in Long Acre:—"It will not be necessary to meet me to-morrow, to go to Long Acre to look for a carriage. From a remark made by the duke (his father) to-day, I fancy I am going to be married." Not only had the marquis left his father to choose a bride for him and to make the other necessary matrimonial arrangements; but when the intimation was made to him by the duke that the future marchioness had been fixed on, he seemed to view the whole affair as if it had been one which did not concern him in the least.

We have a similar anecdote of the late Duke of Sutherland. On the morning of the day of his marriage, a friend of his found him leaning carelessly over the railing at the edge of the water in St. James's Park, and throwing crumbs of bread to the ducks. His friend, surprised to see him at such a place, and so engaged, within two hours of the appointed time for his marriage to one of the first women in England—one in whose veins the blood of the Howards flowed—exclaimed, "What, you here to-day! I thought you were going to be married this morning?" "Yes," was his answer, given with the most perfect *nonchalance*, and throwing a few more crumbs to the ducks, without moving from the railing on which he was leaning—"yes, I believe I am."

WOMEN'S FACES.

Somehow or other the women whose life and grace of face are remarkable—so remarkable as instantly to attract and fascinate—almost never approach either the ancient or modern types of beauty. If you were to take one of the women out of the pages of *La Follet*, and give her twenty times the genius of George Eliot, she would still look a fool. No power of brain could conquer the simpering stolidity of the perfectly regular face. Yet, if pressed for an answer as to what they consider the perfect type of modern beauty, most men would think of one of these women in a book of fashions. There are the clear outlines of nose, mouth and chin; the smooth forehead, small ear, rounded cheek and accurately-placed eyes. A man suddenly confronted by such a face admires it; he is not moved by any instantaneous sympathy toward it. Perfectly beautiful women (there are not many, even if we accept the low type mentioned) are much caressed by society. They adorn dinner tables, are magnificent at balls, and make good matches. (Regular luciferS, sometimes.—Ed.) But they do not break hearts; and the memory of their face, tortured with pouting or glowing with the quick joy of meeting, does not haunt a man's life. A plain woman with a cultivated brain and good taste ought always to hold her own against merely pretty women.

One View of Marriage.—As a general proposition it has been often stated that there is more misery in the world than the world knows. This is especially true of marriage, and it reminds us of an absurd story which was told of a Roman Catholic boy who, on being examined in his catechism, replied to the question "What is matrimony?" by saying, "*A middle state, in which people suffer for a time on account of their sins.*" His confusion between purgatory and matrimony well expresses what must be in the minds of many persons who have made a false move in the lottery of life, which, if it does not make their life a hell upon earth, has at least converted it into a purgatory.

Platonics.—Mr. G. H. Lewes (Geo. Eliot's husband) says that the common notion of a Platonic attachment is the affection which a man has to a girl whom he cannot or will not marry. What Plato says is, that the soul goes forth in its search for Beauty—which seems sentimental enough—but then Plato identifies Beauty with Truth, which is not so sentimental. Plato does not introduce any considerations of sex into his theory. In the Phædrus and elsewhere Plato gives us his notion of matters, and if any one thinks that Plato's dialogues are enlightened with much love talk, he can have done but little in that wilderness of dialectics.

FASHION NOTES.

The pockets on overskirts are mostly put on the right side.

The Duchess is the most desirable of the new hat shapes.

The princess or gabrielle style is adopted for little girls suits this season.

Hats are either worn low on the forehead or else very far back on the head.

Pocket handkerchiefs, neck ties and breakfast caps are all seen in cream-colored muslin.

Black velvet pockets suspended from the waist are to be worn this summer with light dresses.

Silver necklaces in the form of flowers and leaves, with the same kind of a pendant, are quite new.

The suits of larger girls have overskirts, which are merely large aprons shirred to form a fan behind.

Lace scarfs for the neck are generally about two yards and a half long, and three-eighths of a yard wide.

Coral jewelry is increasing in favor of late, as it looks very pretty with the cream lace, so much worn.

Pretty fringes are made in color, the upper twist of the tassel of chenille; the tassel itself is of silk.

The new striped stockings have the stripes only half way round, and only from the instep half way up the leg.

At A. T. Stewart's is a model of a foot and leg, with one of the new-fashioned stockings drawn on, elegantly gartered.

The new polonaises have four pieces in the front and four in the back; the seams meet on the shoulders, and are also corded.

Many of the corsages button up high in the neck, finished by a high collar, around which is worn a dog collar; no bows or ties are worn in that case.

The flowers used on the spring hats are generally very small and fine. Large flowers are almost entirely abandoned. Grasses gone to seed are freely used.

A pretty tie is made of white crepe de chene, the ends embroidered in white silk, and a fine knife-pleating on the edge of cardinal colored crepe de chene.

Cambric and print dresses for girls' school wear have blouse waists, buttoned behind; this waist is separate from the skirt, extends over the hips, and instead of a belt has a drawing string confining it to the waist.

A very pretty hat has the front faced with black velvet, which sets off a wreath of wheat. The crown of the hat has also a wreath of wheat, finished in the back with a double bow of cream-colored silk, and a bunch of small red flowers.

Reading for the Young.

A DOG HUNT.

Few, I fancy, have even seen or heard of a dog hunt. It has fallen to my lot to participate in such a hunt; one, too, which was quite as exciting as a wolf hunt must have been in the olden time. Imagine to yourself a three days' chase after a fierce and savage dog, a confirmed sheep worrier, and that in the midst of the picturesque ruggedness and grandeur of the Welsh hills.

Some three or four miles east from Bala, the Berwyn Mountains raise their heathery summits in the midst of a solitude broken only by the plaintive bleat of a lost sheep or the shouts of men in search of it.

In the least exposed corners of the sheep-walks are folds built of loose, unmortared stones, in which the sheep huddle to find shelter from the fury of the frequent storms which sweep over the mountains.

As the wealth of the hill farmers consist chiefly of sheep, if a dog once takes to worrying them, he is either kept in durance vile or killed. The habit once acquired is never got rid of; and after a sheep dog has once tasted blood, it becomes practically useless to the farmer. The quantity of sheep that can be killed by such a dog in a short time is almost incredible.

It may be imagined, therefore, with what feelings the Berwyn farmers heard of sheep after sheep being killed on their own and neighboring farms, by a dog which nobody owned, and which ran loose on the mountains catering for itself. Descending from the loftier parts of the hills, it would visit the sheep-walks and kill, as it appeared, for the pure love of killing; in most cases leaving the mangled bodies on the spot.

Month after month ran by, and it still eluded the vengeance of the indignant hillmen. The most exaggerated accounts were current respecting its size and ferocity. No two versions agreed as to its color, though all gave it enormous size. As it afterwards turned out, it was a black-and-white foxhound.

The loss of numerous sheep was becoming serious; in some instances the farmers suffered heavily. From time to time, paragraphs such as the following appeared in the papers published in the neighboring towns:

"The Rapacious Dog.—The noted sheep destroyer on the Berwyn hills still continues to commit his depredations, in spite of all efforts to kill him. The last that was seen of him was on Sunday morning, by Mr. Jones on the Syrin sheep-walk, when the dog was in the act of killing a lamb. Mr. Jones was armed with a gun at the time and tried to get within gunshot range; but it seems that the animal can scent a man approaching him from a long distance, so he made off immediately. After it became known to the farmers that he had been seen, a large party went up to the mountain at once, and were on the hills all day; but nothing more was heard of him till late in the evening, when he was again seen and again entirely lost. On Monday a number of foxhounds were expected, and if a sight of him can be obtained, no doubt he will be hunted down and captured and receive what he is fully entitled to—capital punishment."

On a bright May morning, five months after the first appearance of the sheep destroyer, a pack, consisting of a dozen couple of fox dogs, with their huntsman, started up the lane to the hills, followed by a motley crowd of farmers and laborers, armed with guns and sticks, and numbering many horsemen.

Up the lane till the hedges gave place to loose stone walls, higher still, till the stone walls disappeared and the lane became a track, and then a lad came leaping down the hill, almost breathless, with the news that the dog had been seen on a hill some six miles away.

The cavalcade proceeded until we reached the spot where our quarry had been last seen. A line of beaters was formed across the bottom of a glen and proceeded up the hill. The hounds quartered to and fro, and the men shouted. The hardy Welsh horses picked their way unerringly over the *debris*.

"Yonder he is!" was the cry, as up sprang the chase a hundred yards ahead. From stone to stone, from crag to crag, through the water, through the furze and fern fled the dog, and the fox hounds catching sight and scent, followed fast. At first they gained; but when the pursued dog found it was terrible earnest for her, she laid herself well to her work—mute.

Startled by the unusual noise, the paired grouse flew whirring away. The sheep were scattered in confusion, and a raven flew slowly away from a carcass.

"Diawl! John Jones, I am fast," we heard and saw an unfortunate pony up to its belly in the bog. We footmen have still the best of it, although it is no easy matter to run through the heather.

We had now reached the other side of the mountain, and were fast descending into the valley. There seemed a probability of our catching the quarry here; but no, she left the heather—much to my relief, it must be confessed—and made for the valley, past a farm; then through a churchyard, and along the road for some distance.

Here a man breaking stones hurled his hammer at the dog but missed her.

Turning again she made for the hills, running with unabated speed, although she had been hunted for nearly ten miles. By this time the hounds were in full cry up the hillside. Mile after mile, over the hills we followed, now only by scent, as the dog made good use of her time, while the hounds were hampered by people crossing the scent at the village.

"The shades of night were falling fast," when we came to a brook flowing from the moorland. Here the scent was lost, and the wild dog was nowhere to be seen. We held a council of war as to what was to be done. I was the only horseman present at first, but by-and-by the huntsman and others came up, bog-besmeared, and in a vicious frame of mind.

One thing was evident—nothing more could be done that evening; and on the morrow, from earliest dawn, messengers were coursing the glens in all directions, with invitations to people far and near to come and assist in the hunt.

The day after, the men kept pouring in to the place of rendezvous, till I was sure the majestic hills had never before witnessed such an assemblage. From far and near they came. Many, like myself, were mounted upon ponies. We commenced beating, and the Berwyns rang with the unearthly yells of the crowd. We reached the highest of the Berwyns without meeting with a trace.

Here I was disabled by my pony sticking fast in a bog, and the hunt went on. Soon the noise of the beaters died away and I was left alone, sitting on a stone which peered out of the bog, holding the bridle of my unfortunate steed. "Here's a pretty fix!" I thought.

Soon the mist which enveloped the summit of Cader Frouwen came sweeping down the gorge in a torrent of rain; it would have been madness to stray from where I was, as I could not see two yards before me, and I did not know the paths.

By-and-by I heard them returning. After having extricated my pony, as I was chilled and wet through, I made the best of my way back. Tired with a hard and long day's work, the men separated and made off for their respective homes. No traces of the dog had been found.

Some of the people averred that the devil must be in the dog. The major part of the farmers believed that the savage animal had been frightened away, and most probably would not be met with again for some time.

The morrow was beautifully fine; and, little expecting that I should see the death of the sheep-worrier, I had gone for a ramble over the hills, armed with my geological hammer, when a man, gun in hand, came clinking down the sloping rubbish, and excitedly told us—the two or three quarrymen and myself—that he had seen the dog lying on a rock about a mile away.

A boy was dispatched to summon the neighboring farmers. In a short time about fifty were on the spot, armed with guns. Stealthily creeping up the hill, we were sent in different directions, so as to surround the sheep-walk where she lay.

In a half hour's time a gradually lessening circle was formed, all proceeding as silently as possible, and taking advantage of every tuft of fern or stunted thorn, so as to get as near as possible before arousing the sleeping dog.

There was a distance of about eighty yards between each man, when the brute rose up and stretched herself, showing her white and glistening fangs. Uttering a low growl as she became aware of her position, she set off in a long swinging gallop towards the heather. Just in that direction there appeared to be a man missing from the cordon, and a wide gap was left through which it seemed probable she would escape, and a storm of shouts arose. Just, however, as escape seemed certain, a sheet of flame poured out from behind a clump of thorn bushes and fern, and a loud report went reverberating over the glens. The dog's neck turned red, and she rolled over and over, uttering yelp after yelp in her agony. There was a miscellaneous charge from all sides. Crash came the butt-end of the gun which had shot her, on her body, with such force that the stock was splintered. Bang! bang! everybody tried to get a hit at her, even after she was dead.

When life was quite extinct we all gathered together, and a whoop of triumph awoke the echoes, startling the lapwings on the moorland.

As we marched down to the village we fired a volley in token of our success, and cheer after cheer told of the gladness with which it was welcomed by the villagers.

The Puzzler.

DOUBLE CROSS-WORD ENIGMA.—No. 2.

My first is in fig but not in plum;
My second is in rifle but not in gun;
My third is in love but not in hate;
My fourth is in early but not in late;
My fifth is in gill but not in quart;
My sixth is in kind but not in sort;
My seventh is in walk but not in run;
My whole is two of the United States.

☞ Answer in two weeks. Berbix.

PUBLISHER'S SPECIAL NOTICES.

The Rural is a very good present to send to a friend, and it pleasantly reminds the recipient of the donor fifty-two times a year—this year fifty-three times. Any *subscriber* can send it to a relative or friend, as a present, at our lowest club rate—only $2.15, including postage.

Holiday Presents will be plenty this year among our Agent-Friends and others who form clubs for RURAL. Our list comprises many articles appropriate for presents. Induce a few of your friends to take the RURAL, and thus secure a Premium.

Officers of Agricultural Societies and Clubs, Granges, &c., can, if they will, materially aid in augmenting the circulation of the RURAL. Scores of such are already forming clubs; how many others will kindly do likewise?

Renew early if you would secure the uninterrupted continuance of the RURAL to your address; and pray don't forget to ask friends to join you in sending for the Fifty-three Numbers which we shall publish during 1876.

Back Numbers of this Year (from Jan. 1) can be furnished to all new subscribers, but we shall not send them hereafter unless specially requested. Those who desire can begin with any number, however.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper*, and in Premiums to Agents.

Select Your Premiums.—All persons entitled to Premiums will please designate what they prefer and notify us how and where to forward—whether by Freight or Express—if articles are not mailable.

Act as Agent!—Reader, if there is no agent for the RURAL in your locality please become one by forming a club. *It will pay.*

At Our Risk.—You can remit by Draft, P. O. Money Order or Registered Letter *at our risk.*

News of the Week.

HOME NEWS PARAGRAPHS.

A CIRCULAR letter, signed by Wm. Cullen Bryant, Carl Schurz and others, calling for a conference to discuss the advisability of forming a "third party," has appeared in print. It appeals to those who are dissatisfied with the present state of political affairs.

Mr. Charles O'Conor, the eminent lawyer, has addressed the Bar Association, replying to the charges against him and under investigation by that body: opinions differ as to his success in meeting them.

Mr. Moody has brought his labors in New York to a close. The meetings have been remarkable as well by the work done as by the enormous attendance. Thousands have been turned away at a single meeting. Mr. M. proposes to raise $125,000 as a fund to be left in competent hands to continue the work so nobly begun.

Gen. Macdonald and W. O. Avery, the "whiskey ring" thieves, have received their sentences of three and two years, respectively, in the penitentiary at Jefferson City, Mo.

The Grand Jury at Washington have indicted Gen. Babcock, Richard Harrington, late Assist. District Attorney; H. C. Whitley, late Chief of Secret Service; J. C. Nettleship, a late Government detective; Thos. P. Somerville, a disreputable New York lawyer; George E. Miles, a professional cracksman, and William Benton, a housebreaker and thief. The witnesses upon which the indictments were found are, A. B. Newcomb, Chief of Police Richards, Albert Cunz, O. D. Madge, Joshua Parker, E. C. Banfield, Michael Hays, H. C. Whitley, and Columbus Alexander.

President Grant has vetoed the bill reducing the salary of the President from $50,000 to $25,000 per annum. If the bill became a law, it could not, in any event, affect the pay of the present incumbent of the White House.

Dom Pedro II. de Alcantara, Emperor of Brazil, arrived in New York harbor Saturday, April 15, on the steamer Hevelius, landed without display at Martin's stores in Brooklyn early in the afternoon, and was conveyed to the Fifth Avenue Hotel in this City. The Government steamer Alert, bearing Secretaries Fish, Taft and Robeson, and other officials, went down the Bay to meet the Emperor, and the Cabinet Ministers boarded the Hevelius for the purpose of inviting Dom Pedro to accompany them to the city. The Emperor received them cordially, but declined to leave his own steamer, and the reception party were compelled to return to the City without their intended guest. The result of this action of the Emperor was that the Alert received the salutes from the forts and passing vessels, intended for the imperial party, while the Hevelius with Dom Pedro on board, quietly passed unnoticed up the East River to her usual landing-place. In the evening the Emperor attended the theater, and later was serenaded at the hotel under the auspices of a committee representing the merchants, bankers and other citizens interested in his reception. About 1 o'clock he was driven down town and visited one of the newspaper offices, to see the operation of the presses and other interesting portions of the process of making a newspaper. During his stay he has worked at sight-seeing with a fervor incompatible with comfort. Rising at 5 A. M., he would start out and not return perhaps until midnight. He is now on his way to the Pacific Coast, and will return to be present at the opening of the Centennial and leave for Europe about July 12.

The Virginia Republican Convention met to select delegates for the National Convention, and expressed their choice for Blaine by a vote of 95 to 13.

Richard Kenyon, Tax Collector of the town of Amboy, Oswego Co., N. Y., has absconded with between $2,000 and $3,000.

The Sheriff of Steuben Co., N. Y., has offered a reward of $200 for the arrest of John E. McNamara, who shot and killed Ellen M. Callinan at the Arcade Hotel on Saturday.

The late A. T. Stewart was buried on Thursday, April 4th. His marble palace was thronged with friends and others with no higher motives than curiosity. The remains rested on a catafalque in the main hall, which was composed, apparently of moss roses, lillies, camellias &c. A beautiful floral cross four feet high stood at the head of the casket. The floral display was magnificent, and is said to have cost $10,000. He was buried in the family vault in St. Mark's churchyard after a very impressive service. So great was the crowd both at the house and at the church, that numbers who held tickets of admision were even unable to get to the ushers to present them. Mr. Stewart was born Oct. 12, 1803. In his will he bequeathed the bulk of his property to his wife, but suitably provides for numerous relations of his wife and other friends. The most conspicuous legacy was that to Judge Hilton, his confidential adviser and friend, who received one million dollars. Judge H. has since paid this sum back to Mrs. S. in consideration of her interest in the business of her late husband and the firm will continue to do buisness under the name of A. T. Stewart & Co., the partners being Henry Hilton and Wm. Libby.

Beware of a set of rascals calling themselves Hayes, Arlington & Co. and who purport to act as agents for the Centennial Committee. They are scheming to induce innocent country girls to go to Philadelphia, through the medium of a circular in which it is promised that expenses shall be paid and renumerative employment in the Centennial Exhibition furnished. The girls are advised *not* to consult their parents, but to keep the offer a secret. Look out for these fellows!

The House will probably pass the bill transferring the Indian Bureau to the War Department by a large majority.

Exploded:—The story about Bristow being offered $40,000 to resign the District Attorneyship for Kentucky.

Ex-Attorney General Williams appeared before the Committee on Expenditures in the Department of Justice and testified to the payment to John I. Davenport, present United States Commissioner in New York, out of the Secret Service Fund, $30,000 for election purposes. He also testified that these payments were made at the order of the President. But further investigation adds that the money was used to prevent illegal registration and Mr. Davenport claims that he expended $25,000 of his private moneys to the same end. More light on the subject is expected.

The impeachment proceedings against Ex. Sec. Belknap are in *statu quo*. Nothing accomplished besides orginazination of the High Court.

Laborers are out on a strike at Rondout, N. Y. and have created such serious disturbance that the military have been sent for. The steamboat Pittston having gone to Saugerties for troops she was prevented from making a landing by the mob, and had to return to Rondout.

Immense damage has been done by the overflow of the Missouri to railroad and other property. Two miles of track of the Quincy and St. Louis Railroad and one hundred yards of the track of the Toledo, Wabash and Western Railroad are under water. Trains have been abandoned on the latter route. The Quincy, Missouri, Pacific and St. Louis, Kansas City and Northern Railroad are still under water for miles. A few miles above Hannibal the river is fully twenty miles wide, and just below it is fifteen miles wide. All the lowlands are overflowed.

The Missouri river is higher at Burlington, Iowa, than in the great flood of 1858, being fully eight miles wide.

The barges L. T. Eaker and D. A. McDonald were sunk in the river at Keokuk the 20th inst. by a collision. Loss, $14,000; uninsured.

The Boston, Hartford and Erie Railroad Bridge over Charles River at Newton Upper Falls, was burned Thursday evening.

The scow Dunderberg went over the Housatonic Dam in Derby on Thursday night, carrying with it the owner, Capt. Edwin Wooster, who was drowned.

After a session lasting a fortnight, Mr. Whitthorne's Sub-Committee on Naval Expenditures have concluded their labors in Philadelphia. During the fourteen days which they have been in session, meetings have been held from early morn until late at night. The testimony is voluminous, and will cover some 1,700 pages of printed matter. The investigations have covered nearly every navy yard in the country and the operations of the Navy Department for the past three years. Much hearsay testimony has been taken, but there are assurances that certain parties connected with the department in Washington, and persons who have been supplying the department with various articles for other parts of the country, will be placed in no enviable light. Several naval officers will be found to have been mixed up in questionable transactions which will call for prompt action in their cases. The Committee has personally visited both the old navy yard and the League Island Station, and witnessed the remains of the wanton destruction of property which was allowed. Builders who were employed in the yard have been examined on this point, and they stated that glycerine might as well have been put under the building and then exploded, as to allow the edifices to be destroyed in the manner they were.

The Grand Jury of New Orleans have found true bills against J. F. Barrett Jr., for attempting to bribe State officers. In default of bail, Barrett was sent to the Parish prison.

Mollie Dean, the young woman shot by William Cooper in St. Louis, died this afternoon (April 21,) and Cooper is in the hospital and expected to die any moment. It appears Cooper had paid addresses to Miss Dean for some time, but of late she had attempted to break with him, she being engaged to another man. To-day Cooper called at the house where Miss Dean lived, and she went out into the garden with him, but after a few moments' conversation she uttered a scream and ran toward the house. Cooper followed and fired two shots, both of which entered the girl's head, and she fell to the ground mortally wounded. Cooper then put the pistol to his own head, and sent a bullet through his brain.

The New Jersey Legislature has adjourned *sine die*. Gen. Sewell, President of the Senate, was the recipient of eulogistic resolutions, as were also many of the other officers. The work of the sessions, summarized, is an act providing three Inspectors for the State Prison, passed over the Governor's veto; appropriating $1,000 for the Centennial and $1,000 for an Educational Exhibition; to dam the Delaware River; to authorize persons to change their names; to reduce salaries of State officers; to reduce Sheriffs' fees 25 per cent.; to make Decoration Day (May 30) a legal holiday; to prevent the sale of liquors on election day; a commission to establish the boundaries between New Jersey and New York, &c., &c.

The Academy of Sciences is holding its annual meeting in Washington. Several papers of interest have been read, especially one on the "Work of the Mound Builders."

The testimony taken secretly by the Select Committee of Investigation of the Freedman's Savings and Trust Company has been made public. The investigation was begun Jan. 17. The first witness was ex-Postmaster-General Creswell, one of the Commissioners for closing the affairs of the Company, whose indebtedness was over $3,000,000. Mr. Creswell feared they would not be able to realize more than 40 per cent. from the assets, a large amount of the personal securities appearing to be worthless.

Charges of arson against Col. Fitzhugh, the Doorkeeper of the House of Representatives, are revived, both privately and in print. Two indictments alleging arson were found against him in Kentucky in 1871. He was, however, promptly acquitted in both cases, and gentlemen of the highest respectability assert that they were gotten up either through malice or a misapprehension of the facts. Another charge against the Colonel is that of attempted bribery while he lived in Texas last year. Col. Fitzhugh has sent for official documents and other proofs which he claims will establish his innocence of the imputed crimes, and, if necessary, he will ask for the fullest investigation by a committee of the House.

Gov. Kellogg has left New Orleans for Washington via Mobile.

There will be five State Conventions this week to choose delegates to the National Conventions. On Wednesday the Massachusetts Republicans, the New York Democrats, the California Republicans, and the Oregon Democrats meet, and on Thursday the Arkansas Republicans meet. The Utica Convention will be very likely to send a solid Tilden delegation, while the Massachusetts Republicans will send an unpledged delegation, divided between Blaine and Bristow, with the odds probably in favor of the latter. There are no indications as to what the other Conventions will do in respect to candidates.

Mr. August Belmont of New York has consented to open his gallery of paintings—one of the finest private collections in the city—throughout the day, on Tuesday and Wednesday of this week, for the benefit of the Women's Centennial Union. This is a rare opportunity and will be eagerly embraced. The ladies will place an agent at the door to sell tickets, and they can also be procured of any of the members of the Committee.

The St. Lawrence River is clear of ice above Victoria Bridge, but is filled with ice piled in masses immediately opposite and below. The islands at Boucheville and near the harbor are great obstacles to retard its dissappearance. The water has been drawn from the canal in order to make repairs.

Dom Pedro is progressing gaily across the Continent, and not without comfort withal. The Erie Railway placed a special and gorgeous "hotel train" at his disposal for which he pays like an Emperor, (at his especial request,) we are more than ever impressed that the Dom is a man of sense by this selection of a route to the West and it will be solely due to want of appetite if the irrepressible Pullman does not feed him "like a Prince."

James O'Donnell was shot at through the window of his residence in Pottsville, Pa.

An Associated Press dispatch from St. Louis states that an old Treasury clerk is to testify before the Committee on Expenditures in the Treasury Department to an astounding system of fraud in the Treasury. The dispatch says that this clerk, George Prender by name, now Signal Sergeant at St. Louis, claims that the debt statements have been tampered with; that cash has often been reported on hand when the Government was actually borrowing money for current expenses; that money was lent from the Treasury to favorites and loaned back at a good interest, and that money and bonds reported canceled and destroyed were not destroyed, but that a large portion of the redeemed paper was divided among a Ring. Prender further states that he informed Mr. Spinner and Mr. Boutwell and others of the circumstances.

FOREIGN NOTES.

THE three Northern Powers, Russia, Prussia and Austria have agreed to leave the Eastern question as it is for the present, meanwhile it is rumored that Montenegro has declared war against Turkey.

The Moscow Gazette says the Turkish soldiers have not been paid, and are selling cartridges to the insurgents for bread.

There is trouble between the U. S. Government and England on account of the forger Winslow. Both countries through their State Department interpret the Extradition Treaty differently. Meanwhile Winslow languishes on the delicacies of the season.

Another forger Wm. E. Gray is demanded from the British Government, Gray has relieved the N. Y. Stock Exchange of a considerable amount of money.

The plague has again broken out in Asiatic Turkey with disastrous effects.

Fifteen pilgrims were drowned while crossing the river Vienne near Parsac, France.

The Chamber of Commerce of Amiers, France has announced the death of A. T. Stewart by public hand bills the deceased being gratefully remembered on account of his charities to that place in 1870.

Another revolution in Hayti. Lorquet and Ramean have been shot and President Dominque left Port-au-Prince for St. Thomas, dangerously wounded. The people have called upon Gen. Canal the leader of the revolutionery forces to come to Port-au-Prince and assume the control of the Government.

It is said the Czar will retire to Yalta, a spot on the southeastern coast of the Crimea, instead of to Malta as formerly announced.

Rumor has it that Disraeli's speech *apropos* of the Queen's new title has somewhat incensed the Russian Bear, and that episode in addition to the fancied slights put upon the Czar's daughter, the Duchess of Edinburgh, has created more than a hyperborian coolness. The Duchess has returned to Russia, and it is not improbable that this is the begining of a separation from her husband that will be final and complete.

Queen Isabella and Queen Christina will soon return to Spain and occupy the Palace of Araujuez, so say prominent members of the Moderado party.

A telegram dated midnight April 21st, reports that a large fire has broken out in Glasgow, Scotland. An entire square on one of the principle streets has been consumed, and the office of the Glasgow Herald is threatened. The fire engines seem to be powerless to stop the conflagration.

Ex-President Ignacio Gonzalez of Santo Domingo has taken up his residence at Santiago de Cuba.

Senor Rubi, the Royal Commissioner, will sail for New York to morrow, on his return to Spain. The Segundo Cabo will probably take the field against the rebels in a few days. Ex-President Ignacio Gonzalez, of San Domingo, has taken up his residence at Santiago de Cuba.

Mr. Mapleson, accompanied by Mlle. Kattl Lanner, lately visited Liverpool for the purpose of selecting a number of children to study dancing in a ballet-school on the Continental principle. After a careful examination of some two hundred children by Mlle. Lanner, on the stage of the Alexandra Theatre, some fourteen or sixteen were chosen to be drafted to the ballet-school, which will be opened in London, in connection with Mr. Mapleson's new Opera House. In addition to being taught the profession of "dancing," the pupils will be educated, clothed and provided for in their old age. By the time the new opera house is opened Mr. Mapleson expects to have about fifty young coryhees ready for duty.

Owing to the prevalence of a contagious disease among cattle in many parts of Europe, the Dominion Government has issued an order prohibiting the importation of live stock from Europe, except at Halifax, St. John and Quebec, where arrivals will be subjected to a rigid quarantine.

Advices from Panama states that Nicaragua and Costa Rica are settling their quarrel amicably.

The armies of Guatemala and San Salvador were at last accounts near each other at Justlapa. The former has 8,000 and the latter 9,000 men.

In Honduras there has been a battle at Los Naranjos between the Salvadorian allies at Leiva, the deposed President, and the troops of Gen. Medina, the revolutionary president. The latter was completely defeated, and Gen. Medina himself died a few days later. The disturbances, however, continue. The Guatamala troops, who have also intervened in Honduras, have proclaimed Marcos A. Soto, a Hondurian by birth, President of the Republic. President Leiva, after defeating Medina, re-established his own government in Comayagja. A revolt in favor of Soto at Amapoa was quelled.

In Peru a school of mines is to be established to give an impetus to the immense mining interests of the Republic.

Col. Ensique Lara is appointed Secretary to the Peruvian Legation in London.

The Peruvian Government having bought the nitrate establishments for $15,000,000, it was to pay the interest due on that sum on April 1, in bills on London. The principal is to be paid within two years.

A telegram published in The Pioneer, Calcutta, announces that 17 persons implicated in the murder of Mr. Margary of the English expedition will be executed at Bhamo, Burmah, May 5, in the presence of the British escort.

According to advices from Mexico to the 13th inst. the revolution continued in Sonora and Sinaloa. Gen. Alatorre was defeated in attempting to take the city of Oaxaca. Gen. Lobeza, at the head of 1,500 troops, had occupied Chalchicomula, in the

State of Puebla, the rebels flying. The revolutionists had occupied Jalapa. The rebels had again cut the railway between Vera Cruz and the City of Mexico, and trains were only running to Puebla. Gen. Figueroa, at the head of a body of Revolutionists, had destroyed the railway at Orizaba and Paso del Macho, demanding $35,000 from the directors. The State of Chiapas was in a state of siege.

A new loan of $24,000,000 will shortly be issued by the Paris municipality for the purpose of completing the Boulevard Saint Germain and the new Avenue de l'Opera.

It is understood that Sir John Rose is now on his way from England to New York with the object of making business arrangements for his retirement from the firm of Morton, Rose & Co.

The Princess Isabella is dead. She was born in 1801, and was regent of Portugal from March, 1826, to February, 1828.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, April 22, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	62,750	Rice, bbls	135
Whisky	3,597	Cut meats, pkgs	4,800
Corn meal, bbls	1,350	Lard, pkgs	3,732
Corn meal, bags	3,775	Tobacco, hhds	2,475
Wheat, bush	328,000	do. cases	4,474
Corn, bush	114,000	Butter, pkgs	25,350
Oats, bush	115,480	Cheese, bxs	3,916
Rye, bush	—	Cotton, bales	—
Malt, bush	51,150	Rosin	5,050
Barley, bush	7,000	Spts. turp., bbls	1,137
Beans, bbls	2,875	Dried Fruits, pkgs	101
Grass seed, bush	2,175	Eggs, bbls	13,675
Beef, pkgs	1,175	Peanuts, bags	868
Wool, bales	500	Dressed Hogs	—
Hops, bales	650	Leather, sides	62,551
Pork, bbls	6,790	Sugar, hhds	47
Tallow	200	Oil cake	3,940
Molasses	90		

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise, many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible; mixing always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off-nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else.

BEANS AND PEAS.—Exports of beans past week, 2,396 bbls.; since Jan. 1st, 21,258 do.; same time last year, 7,870 do. Exports of peas past week, 31,750 bush.; since Jan. 1st, 280,115 do.; same time last year, 162,800. There has been an active export demand for marrows and quotations are firm, with a possible early improvement. Mediums are a shade stiffer; not so much because the demand for them has enlarged, but owing to the comparative scarcity of prime. Low grade of quality is a serious drawback to the large remnant of old crop we are carrying. Lima beans are doing better; growth of California. Kidneys and pea beans remain nominal. Canadian peas firmly held, with a small stock. Green peas lack their spring activity and prices are weak. We quote: Beans—Prime pea, $1.20@1.25; fair to good, 90c.@$1.00; prime mediums, $1.20; fair to good, 90c.@$1.00; poor, 50@80c.; prime marrows, $1.60; fair to good, $1.25@1.45; prime white kidney, $1.50@1.55; other, $1.25@1.30; prime red kidney, $1.25@1.30; other, $1@1.15; Lima (Cal.), $2.80@3.00. Peas—Canadian, bbls., free, $1.20@; do., in bulk and bond, $1.00@; green, $1.40@1.15; Southern B. E., 2-bush. bag, $2.70@2.75; split, ₱ bbl., $6.

BEESWAX is scarce and favoring the seller at 35½@37c.

Exports past week, 1,450 lbs.; since Jan. 1, 35,310 do.; same time last year, 53,256 do.

BROOM CORN.—There is no demand for other than small lots.

We quote Brush, short green, 8½@10c.; hurl, green, 8½@10c.; green, medium, 5@6½c.; red and red-tipped, 3@4c.

BUTTER.—The market for new has been steadily falling off since our last, and closes weak with remarkably heavy receipts. The bulk of the supply is State and prospective, free Western deliveries give the former no strength. Good quality in white has helped sales materially with easier prices. Still we begin to show some of those troublesome left-over lots which always lend depression. Sellers of State express a determination to drop with the views of of consumers, and advice their purchasing agents to make no promise of a repetition of once paid figures. It must be remembered that new butter opened at the rather forced rates of the old. Now it has the market to itself, and distributors' views must be considered for the hay and stall-fed lines. Almost the first round arrival of natural grass color creates an uncertain value upon white. The first important lots of yellow will come from the West, and as the aim of dealers in Western is to hold a full share of the trade they keep as much under State as they can. Eastern buyers are purchasing pretty freely but will no longer pay extreme prices. Old butter is now put aside for Southern and West Indian use. We hear of no call for an increase of stock.

New butter, Falls State, selected, 36@37c.; do., other 31@36c.; half firkin tubs, prime, 35@36c.; fair to good, 31@33c.; Welsh tubs selected, 31@35c.; Welsh tubs, prime, 32@33c.; fair to good, 30@31c.; Pails, Western creamery, prime, 31@35c.; fair to good, 31@33c.; Western tubs, good to prime, 30@32c.; fair to good, 28@30c.

State, old ranges at 28@40c. for fair to selected firkins, 28@37c. for fair to prime, Welsh. Early packed Western 22@26c. for fair to good; poor, 18@18c. Grease, 12@12½c.

COTTON.—There has been a sharp break in prices, with lower markets abroad and limited export movement. Closing prices are for April, 13¾@13 5-32c.; May, 13 5-32@13 3-16c.; June, 13 13-32@13 7-16c.; July, 13 19-32@13¾c.; August, 13 23-32@13¾c.; September, 13¾@13 11-16c.; October, 13 17-32@13 9-16c.; November, 13 5-16@13 ⅝c.; December, 13 5-16@13¾c.

Quotations for spot cotton, based on American standard of classification:

CHEESE.—The stock has run down to about 30,000 boxes, yet with the indifference among exporters, easy prices rule. There is a disposition to get the market well cleared against arrivals of new. Best lots quoted 13@13¼c., but few above the inside price. We quote:

New State factory, fancy, 13@13¼c.; fine, 12¾@12¾c.; do. good to prime, 11¾@12c.; fair to good, 10@11c.; poor to fair, 6@10c. State Farm Dairy—fancy, 12@12½c.; good to prime, 10¾@11¾c.; fair to good, 9¾@10¾c.; Western factory, cheddar, fine, 12¾@12¾c.; good to prime, 11@12c.; flat fair, 8@11¾c.; poor to fair, 7@8c. New has sold in a small way at 11c. for best skimmed.

DOMESTIC DRIED FRUITS.—Of apples occasional small parcels taken by shippers at easier prices. Blackberries remain dull. Peaches are lightly dealt in without further change in prices. Pitted cherries and raspberries wanted at firm prices.

Apples—State, sliced, 9¼@9¾c.; do., quarters, 8¼@8¾c.; Western quarters at 8@8¼c.; Southern sliced, 1875, prime, 9@9¼c.; fair lots, 8@9¼c.; Tennessee qrs., 7¾c. Blackberries, 10¾c. Peeled peaches, good and prime Georgia, 14@15c.; do. fancy, 16@17c. Unpeeled peaches, new, 12@12¾c. for halves, and 10@11c. for quarters. Plums, 20c. Raspberries, 27c. Cherries, 20@21c. Exports of dried apples, past week, 171 bbls. Since Jan. 1st, 1,170; same time last year, 9,090.

EGGS.—The market is passing through one of the usual cheap and dull phases that follow Easter when sales have been heavy for that festival, and they were unusually large this season. Receipts are less oppressive, but there is quite an offering of stock that was laid in speculatively which owners want to close out, and that fact alone tends to weaken prices. We quote:

Near points, ₱ bbl., 18¾@19c.; State and Penn., 17@17½c.; Western, prime, 15¾@17c.; do. fair marks, 16@16½c.; Southern and Southwestern, 16@16¾c.; Canadian, 16½@17c.; duck, 24@25c.; goose, 44@45c.

ESSENTIAL OILS.—We can merely repeat the nominal quotations:

"H. G." oil peppermint, $4, in glass; Hale & Parshall do., $4@4.20 do.; pure in tin, $3.50; sassafras, 55c.; wintergreen, $3.12; spearmint, $3.50; pennyroyal $4.

FEATHERS.—Demand moderate at 55@58c. for prime Western live geese; 35@45c. for mixed do. Common poultry feathers not wanted.

FLOUR.—The reduction of rates of freight from the West on grain having led to freer supplies of wheat and consequent low prices, the market for flour has worked in sympathy. Export trade is moderate. We quote:

Superfine State, $4.15@4.50; extra do., $4.90@5.50; superfine Western, $4.15@4.50; extra do., $4.90@5.70; No. 2, $3.10@4.00; extra round-hoop Ohio, $4.40@5.25; trade brands do., $5.30@7.00; white wheat extras, $5.75@7.00; St. Louis, $5.35@9.00; City Mills extra, $5 10@6.50; Southern at $4.25@4.75 for superfine; $5.00@6.15 for poor to choice shipping extras; $6.25@8.75 for trade and family brands. Corn meal selling at $2.75@3.35 for yellow Western; $3.10@3.30 for yellow Jersey; $3@3.35 for Pennsylvania.

FOREIGN DRIED FRUITS.—Layer raisins, $2.65@2.70; Valencia do., 10¾@10¾c.; loose Muscatel, $2.70@3.00. Currants, 6¾@7c. Turkish prunes, 6¾@6¾c. Sardines, 14¾@15c. for quarter boxes. Leghorn citron, 21@22c.

FRESH FRUITS.—Exports of apples since Jan. 1st, 4,350 bbls.; same time last year, 18,025 do. Increased receipts of apples give a tamer tone to the market, but prime stock still brings extreme figures. The reliance of the market is Russets; all other sorts now turn out poor. Strawberries have sold better. There will be liberal shipments from the South this season. Cranberries are in few hands, who sell only in small lots at quotations. Peanuts are a little higher, with a prospect of a revival of inquiry.

We quote:—Choice apples, $4.25@4.50; good, $3.75@4; fair mixed, $2.75@3.50. Strawberries, best, 80@90c.; other, 40@50c. Peanuts—Virginia, per bush., $1.45@1.85; Wilmington, $1.80@2.00; do. Tennessee, 95c.@$1.15. Cranberries—Jersey, choice, standard crates, $4,75@5; good, $4.50; extra Jersey crates, $4@4.50; bbls., $14@15.

FURS AND SKINS.—Sales have begun at the Leipsic Fair; easy prices expected to rule. Red fox show a decline of 10 per cent. We quote:

	North. & Eastern.	West. and N. Y.
Otter, ₱ piece	$6 50@ 8 00	$4 00@ 5 50
Gray Fox	1 75@ 2 00	1 50@ 1 75

Kitts	6@ 7	5@ 6
Beaver, ₱ lb	1 00@ 1 75	75@ 1 00
Raccoon	68@ 80	40@ 55
Opossum	12@ 15	12@ 15
Skunk, black		75@ 90
striped		10@ 40
Wolf, mountain		2 00@ 3 00
prairie		75@ 1 00

GRAIN.—A decline in wheat is noted through freer supplies, leading to a moderate export movement. Latest sales at $1.33 for prime No. 1 Milwaukee spring for crop of 1874; $1.27 for choice No. 3 Minnesota spring; $1.25@1.26 for good to strictly prime No. 2 Milwaukee spring afloat, of fresh receipt; $1.23 for No. 2 Chicago and Northwest spring afloat; $1.20@1.22 for mixed spring; $1.14@1.17 for No. 3 spring; $1.08@1.10 for inferior spring; $1.10@1.20 for ungraded do.; $1.32 for choice Canada Club in bond; $1.25@1.28 for red Western. Rye is higher; prime Canada in bond, 95c.; prime Western, 90c., and prime State, 95c. No. 1 Bay barley bought $1.15 and No. 2 do. $1.02½. Corn is lower and dull; sales, 65@68c. for ungraded mixed Western and 69c. for steamer do. Oats are lower and dull; mixed Western, 44½@45½c.; white do., 48@51c.; white State, 49@52c.

HAY AND STRAW.—The advance last week brought forward freer supplies, and there has been since a slight reaction in prices.

Bale hay is quoted:—Shipping, 75@80c.; retail qualities, $1.05@1.10; clover, 70@75c.; salt, 60@70c. Straw is quoted at $1.05@1.15 for long rye; 75@80c. for short rye; 60@65c. for oat.

Exports past week, 2,850 bales. Since Jan. 1st, 14,550; same time last year, 11,000.

HIGHWINES selling at $1.11.

HOPS.—There is a quiet market, comparatively, and a partial decline of one cent per pound is noted. Shippers claim that they have few orders at present. The hops in stock comprise but few strictly choice, the shipping demand having run them down close. Our home demand is moderate. The receipts for the week have been 713 bales, and since Sept. 1st, 1875, 75,488 bales, against 41,240 bales same time last year, with export clearances for the week of 1,168 bales, and since Sept. 1st, 38,983 bales, with same time last year, 15,688.

N. Y. State, 12@18c.; Eastern, 10@16c.; Wisconsins; 12@16c.; Yearlings, 3@10c.; Olds, all growths, 4@6c.; Californias, 15@18c.

LEATHER.—Hemlock sole at 21@22c. for light, 23@24c. for middle, 22@25c. for heavy, 20@21c. for good damaged.

OIL CAKE.—Western quoted at $41.50 ₱ ton.

MAPLE SUGAR.—The offering is now quite large, and as there has been no really general demand, prices have suddenly declined for the styles of large molds on sale. We quote:

Choice new sugar, 10@11c.; fair, 8@9c.; old, 6@8c. Syrup, ₱ gallon, 75c.@$1.

POULTRY AND GAME.—The supply of dressed includes near points, frozen and city killed. The abundance of the latter has weakened prices. Much of the frozen is turning moldy.

We quote Philadelphia picked chickens at 21@22c.; capons at 31@33c. for large; 27@29c. for small capons and slips.

Chickens, Bucks Co., good to prime, 19@21c.; Jersey, good to prime, 18@19c.; State, good to prime, 16@17c.; Western, good to prime, 14@16c.; fair to good, 12@13c.; poor, 4@6c. Turkeys, Jersey, good to prime, 18@20c.; State, good to prime, 17@19c.; Western, good to prime, 16@17c.; inferior, 10@14c. Ducks, Jersey, good to prime, 20@22c.; State, good to prime, 18@20c.; Western, good to prime, 16@18c.; fair to good, 14@16c.; poor, 12@—c. Geese, Jersey, prime, 13@15c.; State, good to prime, 12@14c.; Western, good to prime, 11@13c.; do., poor to fair, 8@10c.

Live poultry is in large supply, and prices are weak. The Jewish buyers who have been in the habit of storing stock on their premises, are no longer permitted to do so; this makes some reduction in the demand at present.

Fowls and turkeys, Jersey, ₱ lb., 15@16c.; do. Western, 14@15c.; Geese, Jersey, ₱ pair, $2.50@2.75; do. Western, $1@1.50; ducks, Western, ₱ pair, 70@80c.; ducks, Jersey, ₱ pair, $1.25@1.50; roosters, 8@10c. Spring chickens, ₱ pair, 80c.@$1.50.

The supply of wild pigeons is very large. Their abundance weakens other game birds.

Wild Ducks—Canvasback, 87c.@$1; redhead, 60@65c.; Mallard, 40@50c. Wild pigeons, feathered or picked, ₱ doz., $1.00; English snipe, ₱ doz., $1@1.12; plover, ₱ doz., 87c.@$1; sand snipe, 40@50c.

PROVISIONS.—A sharp decline in prices throughout has been noted, with a break at the West and a pressure to sell. Mess pork quoted at $22.20 for spot, $22.35 for April and May, $23.35 for June, $22.60 for July, and $23.75 for August. Boxed dry-salted shoulders, 9c.; dry-salted hams, boxed, 12¾@13¾c. Bacon—Western long clear, 12¾c.; short do. 12¾c. Lard at $13.60 for spot; $13.52½ for April and May; $13.65 for June; $13.80 for July; $13.97½ for Aug. Tallow at 9c. for prime. Stearine, 14¾@14¾c. Beef—New extra mess $13@13.50; do. plain, $12 50@13; new tierced at $23 for prime mess, and $25 for India mess. City extra India mess, $28@29. Beef hams at $22@23 for Southern, and $24@26 for Western.

SALT.—Quoted at $2.50 for Ashton's; $1.45@1.55 for Deakin's; $1.40@1.50 for Marshall's, Washington & Worthington's.

SEED.—Grass kinds remain dull. State clover, 16¾@17c. Timothy at $2.65@2.75.

SUGAR (Refined).—Soft yellow, 8¾@9¼c.; soft white, 9¾@9¾c.; crushed, 10¾c.; powdered, 10¾c.; granulated, 10¾c.

TOBACCO.—There has been a good export demand and prices are fair. New crop quoted as follows:

	Light. Cents.	Heavy. Cents.
Common lugs	4¾@ 5¼	5 @ 5¾
Good lugs	5¾@ 6¾	6 @ 7

VEGETABLES.—Exports of potatoes past week, 2,150 bbls.; since Jan. 1st, 67,650 do.; same time last year, 31,450; of onions, 181 bbls.; since Jan 1st, 5,377; same time last year, 1,225. Potatoes are running fairly at the low figures; red and yellow are easier now that Bermuda are taking their place; white are still advancing. Marrowfat squash are very scarce. A large invoice of Bermuda produce has been on the market this week—13,100 bxs. tomatoes, 3,550 bush. onions, 1,350 bbls. potatoes, and 125 bxs. beets. Southern green stuff is in fair demand, and the assortment is quite numerous. We quote:

Early Rose, bulk, ₱ bbl., $1@1.12; Peach Blows $1.00@1.37; Prince Alberts, 75c.@$1.00; common, 50@75c. Bermuda, $7@8.00; Florida, $7.00. Cabbages, ₱ 100, $4@8; red, $7@11. Squash, Marrow, bbl., $2.25@2.50; Hubbard, $1.25@2.50. Onions, red, bbl., $1@2.00; do. yellow, $1@2.00; do. white, $5.50@6. Russia Turnips, ₱ bbl., 75c.; white, 60c. Carrots, $1.00. Southern spinach, ₱ bbl., $1.00@1.50. Kale, $1@1.25. Charleston green peas, ₱ bush., $3@5; Savannah, $4@6. Norfolk cabbage, ₱ bbl., $1.25@1.50. Bermuda tomatoes, 5-quart box, 60@65; beets, $1.25 ₱ crate. Mushrooms, ₱ lb., 50@60c. Rhubarb, ₱ doz., 75c. Bermuda onions, ₱ crate, $3@3.35. Florida string beans, $5@7. Asparagus, ₱ doz., $1@6.

WOOL.—The market is dull and depressed. Manufacturers are taking small lots only, as attainable at inside prices XX and XXX, best lots, quoted at 47@48c. for choice light, and heavy X and XX, 41@44c. New clips, California, sold in small lots at 23@26c. for best medium, and 25@28c. for long choice. Pulled are plenty and favoring the buyer.

Timothy seed, $2.75@—; clover, $9.00@9.00. Wood, hard, ₱ cord, $8@9. Coal, $6.95@7.35 for stove.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., April 22, 1876.

NEW cheese now begins to come forward, and several factories have been represented this week. Among those having lots of the new-make on delivery were the Fairfield Association, North Newport, Top Notch and Barto Hill. About 8c. was the best offer, and most of the lots were sent forward to New York to be sold on commission.

The Fairfield Association, which shipped a fine lot of old cheese to New York some days ago, we are informed has made sales at 13¾c.

Although the country roads leading to this market are in bad condition for travel, a large number of dairymen were on the market with their butter. Prices are about 2c. lower than last week, the rates ranging at 32@34c., the bulk going at 33c.

We have advices from Europe to the first week of March. Our London correspondent says:

There have been large transactions in American cheese, while English is quiet and Dutch is firm.

The prices are for extra American, 66@68s.; fine, 64@66s.; good, 50@58s.; secondary and common, 30@45s.

English cheddar brings 80@92s.; Wiltshire double, 72@80s.; Cheshire medium, 78@80s.; fine, 75@82s.; Scotch, 64@70s. Dutch cheese—Edams, 68@74s.; Gondas, 60@66s.; Derby shape, 60@64s.—the best goods being scarce.

With the exception of oleomargarine and the substitutes for butter, the market is quiet at a reduction in price.

Jersey sells for 140s.; Dorsets, 174s.; Danish, Kiel and Swedish, 120@164s.; Normandy extra, 164s.; American and Canadian, 100@110s. ₱ cwt.

Oleomargarine or artificial butter, 124@150s.

LIVE STOCK MARKETS.

NEW YORK, April 22, 1876.

RECEIPTS OF LIVE STOCK.

" last week	8,205	51	1,067	13,430	18,737

BEEVES.—Trade opened excessively dull on Monday last, despite the facts of a merely moderate run of horned cattle and also of the Lenten season being over. Prices ranged at 8@11½c. ₱ lb.; weights, 5@9¾ cwt. Markets closed weak, with several herds unsold. Wednesday, trade slow but firm at 8¾@12c.; weights, 5¾@8¾ cwt. Thursday, trade slow but still firm on a heavier run of horned cattle than usual for the middle of the week, at 8¾@12c.; weights, 5¼@8¾ cwt. scant. Friday, the markets closed weak, with sales at 9@11¾c.; weights, 6¾@8¾ cwt. From 51@58 lbs., net, has been allowed to the cwt.; the largest number of cattle were sold at 56 lbs. net. Native steers, 8@11¾c.; grade, 12@12¾c.; mixed herds, 9@10¾c.; dry cows, $45@62 ₱ head. Spanish herds, corn-fed, 9¾c.; Texan oxen, 8¾@9c.; Tennessee, 9¾c.; Missouri, 8¾@10c.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	12 @12¾	12 @12¾
Fair	11 @11¾	11 @11¾
Poor	10 @10¾	10 @10¾
Poorest	8 @ 9¾	8 @ 9¾
Gen. selling rates	9¾@10¾	9¾@10¾

MILCH COWS.—Trade slow, quality inferior; 12 cows sold at $32@45 ₱ head, 9 at $40@62; 5 at $65; 7 at $60@70; 3 at $79.50@85; 3 springers at $182—calves always included with the cows.

VEALS AND CALVES.—Trade in smooth quality veals so small as not to influence the market. Coarse quality calves in over-supply and very slow of sale at 4@8¾c.; also at $1@4.50 ₱ head—the calves to hand quoted entirely from Central and Western New York. General sales, 7@8¾c. ₱ lb.

SHEEP AND LAMBS.—Monday last trade slow at 5@8¾c. for woolly sheep and 6@6¾c. for shorn do. Wednesday, shorn, 5¾@5¾c.; woolly, 6@8¾c. Thursday, shorn, 5¾@6c.; woolly, 7¾@7¾c.; yearling lambs, 8@8¾c.; spring, 12@17c. Friday, the markets closed weak on so small a trade as to render quotations nominal. Missouri sheep sold at 6¾@7¾c.; Illinois, 5¾@7¾c.; Ohio, 8@8¾c.; State, 6¾@7¾c.

HOGS.—There were no live hogs on sale. Monday last, city dressed sold at 10@10¾c.; Wednesday, 10@10¾c. Thursday and Friday trade still slow at the foregoing rates.

HORSE MARKET.—City trade moderate at low rates; 19 head of poor quality light harness horses, $22@55 ₱ head; 11 head at $50@90; 21 head ordinary, $100@175; 1 saddle horse, $175; 4 pairs family carriage horses, $300@570 ₱ pair; 9 head coarse quality single harness horses suited for broughams, $325@475; 7 roadsters, action fair, $270@395; 3 trotters, $50@700; 11 heavy draft horses, quality coarse, $179.50@210; 35 horses arrived direct from California via Pennsylvania held on sale at $100@150; these arrivals showed some blood and were active but light. Forty-six horses arrived per Erie Railroad via Oak Cliff Station.

WILLARD'S PRACTICAL Butter Book

ONLY COSTS $1,

And should be in the hands of every Farmer's wife in this country. It is full of practical and scientific information upon every branch of butter making, from the care of cows to butter in the market, and should be kept for constant reference in every house where that article is made.

☞ *This book is fully and handsomely Illustrated.*

Every one can understand it, and improve the quality and quantity of their butter by reference to its pages. Written by one who has not only made a life study of the subject, but who is himself a

Practical Dairyman,

it cannot but be thorough and useful. No book contains more solid information upon the subject in so few words. A complete index enables he reader to refer to any branch of butter making, and take in the whole subject in a very short time.

Lay it beside your churn, and apply its useful lessons each day, and your one dollar book will have yielded you fifty dollars before the end of the year.

Sent, post-paid, upon receipt of $1.

PERSONAL ITEMS.

RICHARD A. PROCTOR sails for home May 3.

DOLAN the murderer was hanged in New York, April 21st.

THE average American is 5 feet 9 inches in hight and his wife 5 feet 2 inches.

TWEED in Italy, traveling as an American "baron," is the latest discovery.

CHRISTIAN BORG, the Norwegian sculptor, has sent several fine pieces of statuary to the Centennial.

MR. RIPSOM is organizing a Centennial colony of Western New Yorkers to go and settle out in Arkansas.

MRS. ELIZABETH PATTERSON-BONAPARTE of Baltimore, is seriously ill. She is more than ninety years old.

Two children of John Quincy Adams of Boston, Mass., died last week from diphtheria, and a third was not expected to live.

ONE Mr. Longshore has just opened a millinery store in Herkimer. "Seaside hats" will probably be all the fashion up there.

JOSEPH SILVER was put in jail for wife-beating, in Philadelphia, the other day. That helps explain who's locking up all the silver.

THE bill to confirm the marriage of James Parton and Ellen Willis Eldredge was ordered to be engrossed in the Massachusetts Senate, by a vote of 21 to 4.

A GEORGIA journal gravely asserts that Chee Squich, an Indian, and Nabib, his wife, residing in Graham County, are aged, respectively, 175 and 130 years.

MR. OLIVER HOYT of Stamford, Conn., is the gentleman who recently gave $25,000 toward the $500,000 endowment fund of Wesleyan University. He gave a like sum a few years ago.

MR. MOODY, it is announced, will begin revival services in Augusta, Ga., May 1, to continue one week. The Charleston, S. C., Young Men's Christian Association have invited him to visit that city.

GEN. SABERT OGLESBY, who commanded a division of General Jackson's army nearest the river at the battle of New Orleans, is still living in Texas. He was one hundred years old last February.

METHRALTON, the astrologer, well known to the British public, whom he easily gulled, has been arrested and imprisoned. For ten years he has been advertising to "reveal futures" and supply "love talismans." In his house 70,000 letters were found, many of them being from people of rank.

IT is said of Heinrich Heine, whose biography has just been published in London, that having been born on the 13th of December, 1799, he willfully put forward the date to the 1st of January, 1800, in order to give an admiring patron the opportunity of saying, "You are one of the first men of the century." Heine used to say of himself that he was born with three misfortunes—born poor, born a Jew, and born a Prussian.

BENJAMIN WILLIS and his two sisters were equally determined on the question of his marrying—he that he would, and they that he shouldn't. This was in Bangor, which city is greatly excited by the row in the Willis family, which is wealthy. Benjamin got married, and while in Portland on his bridal trip the sisters had him arrested as a lunatic. A medical examination, however, demonstrated his soundness of mind, and he was liberated.

MR. ROBERT C. WINTHROP, the President of the Washington Monument Association, proposes that the design shall no longer comprehend the temple or pantheon which forms a part of the original plan, but shall be a simple shaft or obelisk, and that from time to time subscriptions shall be asked until a fund is accumulated sufficient to carry the monument up to a hight of three hundred feet. This proposal has been adopted by the Association.

DR. FLEMMING, one of the most distinguished and respected men in Germany—the founder and one of the directors of the Hanover Institute for the Blind, and a very successful experimentalist and expert in the instruction of the sightless, has been sentenced to nine year's imprisonment and to five years' deprivation of his rights as a citizen, for licentious behavior with pupils of the school. He is the father of a grown-up family, and was as highly esteemed in private life as he was honored in public.

IN aristocratic circles of Vienna and Pesth great excitement has been occasioned by the publication of a libellous novel entitled "Fata Morgana," attacking the Austrian General and Commander at Pesth, as well as his wife, in the flimsy disguise of fictitious names and localities. The real authoress is a Hungarian baroness, who, maddened by rejected love, launches virulent taunts against the character of the General's wife, who is the constant companion of the Empress of Austria.

DOM PEDRO is more royalty to the square inch than has visited these shores for some time, being 6 feet 3 inches in hight. His full name is not one to be as easily remembered as the multiplication table, although nearly as long. We give it with other interesting facts, herewith:—Dom Pedro II. de Alcantaro, Emperor of Brazil, whose full name is Pedro Joao Carlos Leopoldo Salvador Bibiano Xavier de Paula Leocadio Miguel Gabriel Raphael Gonzaga, was born in Rio de Janeiro on Dec. 2, 1825. He is a scion, in the direct male line, of the House of Braganza, the female line of which is ruling over Portugal.

Implements and Machinery.

BUY THE
A. P. DICKEY
Fanning Mill.

No good Farmer can afford to market dirty grain.

A moderate quality of grain, well cleaned, brings a better price than the nicest grade in dirty condition.

Boston, Mass.

Trees, Seeds, Plants, &c.

DREER'S
IMPROVED LIMA BEAN.

The distinctive features of this sort are early maturity, prolificness, and extra quality of bean, containing more saccharine matter and producing one-third more shelled beans to the pole than the Large Lima, while the shelling becomes an easy matter, from the fact of the pods being entirely full of beans, forming one against the other like peas in a pod.

The *American Agriculturist* of Nov., 1874, says:

"We regard the improving of this bean as one of the most important of the recent contributions to horticulture."

Price, $1 per pint.

20 cents per paper, mailed on receipt of price.

HENRY A. DREER,
714 Chestnut St., Philadelphia.

NEWS CONDENSER.

— Two more illicit distilleries have been broken up in Brooklyn.

— Prairie fires are destroying the timber lands of Western Texas.

— The Buffalo, N. Y., Society to prevent cruelty to children, is a success.

— Miss Terry was killed by a railroad accident in Darien, Genesee Co., N. Y., last week.

— An enormous loss of all kinds of live stock in Oregon during the past winter is reported.

— The just completed census of Philadelphia gives the population of that city as 817,448.

— An unknown philanthropist in Manchester, England, has given $500,000 for an art gallery.

— The inhabitants of Greeley, Colorado, have secured a $30,000 school house by contributing $10 apiece.

— "V. R. B. E. I. I." are the new initials of the Queen—"Victoria Regina Britanniæ et Indorum Imperatrix."

— On the 1st of May, Charleston, S. C., will begin shipping from 30,000 to 40,000 quarts of strawberries daily.

— A bullion yield of $21,150,000 is promised from the Utah mines this year, more than half of which will be silver.

— The Hobbema of the late M. Schneider's picture gallery at Paris has been purchased for the museum at Antwerp for 100,000 francs.

— The Paris "Trois Freres" will have a restaurant at the Centennial, and the public will have a chance to see all the mysteries of a Parisian kitchen.

— According to a decision of the Supreme Court of Nebraska railroad companies are liable for damages resulting from prairies being set on fire by engines.

— A pressing machine for the use of smugglers has been invented, whereby forty yards of ribbon, worth some $50, can be carried in an ordinary watch case.

— There is a female evangelist named Emma F. F. Snyder successfully working in Southern Illinois, who publishes a list of her converts regularly in the papers.

— Some of the people in Augusta, Ga., are decidedly nervous because the magazine containing 38,877 pounds of powder is in charge of a man named Thomassen.

— Another bonanza.—The price of seats in the San Francisco Stock Board, which last year was $20,000 each, has rapidly increased, until last week $35,000 was offered for one in vain.

— A new station has been opened on the Hudson River Railroad. It is located between Croton and Crugers, and is called "Oscawana." New York business men were the originators of it.

— Complaints are made by the Gentiles in and about Salt Lake City that the Mormon police arrest them upon trifling charges, exact oppressive bail, and levy outrageous court fees.

— The successive storms have raised the price of fish in the London market to a remarkable degree. Salmon now sells from three to four shillings, while in other years it sold as low as a shilling a pound.

— The Brooklyn Argus says:—An evidence of the hard times is found in the fact that the offal receipts of the Boston Health Department show seventy-five per cent. less meat scraps than a year ago. People gnaw the bones closer.

— Minneapolis takes to women suffrage gracefully. Under a new law permitting women to vote for school officers, about two hundred voted recently. They were very politely received by the assembled crowd, and the ballot boxes were decorated with flowers in their honor.

— In the San Francisco Mint there are manufactured in the Coiner's Department during the year at least $30,000,000, including gold and silver of every description. Of this amount the greater part is $20 pieces or double eagles; the rest is silver of every denomination, and but a small portion of minor gold is ever made, there being not much demand for coin of that description.

— The Netherlands Government has voted 240,000,000 francs for reclaiming parts of the Zuyder Sea, which during a terrible tempest in November, 1170, were invaded by the North Sea, when cities were swept away and 100,000 persons drowned. In the 16th century a similar catastrophe formed the Haarlem Lake, from which, between 1839 and 1852, 16,000 acres of fertile land were redeemed by draining. The Government now purposes reclaiming at least 200,000 acres.

— The new Republican French Director of the Press has decided that no foreign newspaper shall be prohibited from entering France, unless it contains an article for which it would be prosecuted if it were a French journal. In St. Petersburg the Government censor and his staff still detain every foreign paper for several days after its arrival, and it is only released after careful scrutiny as to whether it contains anything obnoxious to autocratic tastes.

— A political map of France has just been published in Paris. The Legitimist, the Orleanist, the Bonapartist, the Conservative Republican, and the Radical Republican constituencies are all marked by a distinctive tint. The Legitimists are nearly confined to Britrany and the adjoining provinces. The Bonapartists own large strips in the north and the southwest. The Orleanists scarcely appear in the east and center. The Radicals possess an almost unbroken tract on the south coast near the mouth of the Rhone. The Conservative Republicans cover most of the east and the center.

Traveler's Guide.

CALIFORNIA.

Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?

The shortest, surest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTHWESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oshkosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.

This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.

This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.

For rates or information not attainable from your home ticket agents, apply to
MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

RURAL CLUB LIST.

THE RURAL AND OTHER PAPERS AT LOW RATES

The periodicals in this list are offered at a large reduction from their rates, with a view to accomodating our friends who wish to subscribe for

THE RURAL NEW-YORKER

in conjunction with any other paper herein named,

TO OBTAIN ANY JOURNAL

in this list, and the RURAL, it is only necessary to send your address in full, and the money with the order, when they will be sent. POSTAGE PREPAID. Subscriptions may begin at any time.

SAMPLE COPIES

of the RURAL only will be sent on application. For copies of other publications address the publisher of the paper wanted.

You can remit by Draft, P. O. Money Order, or Registered Letter, at *our risk*; otherwise at your own. If there is no Agent for the RURAL in your locality, please become one by FORMING A CLUB. It will pay.

Now please note that we will furnish the RURAL NEW-YORKER one year and either of the periodicals named below, postage prepaid, on receipt of the price specified:

Wit and Humor.

SPARKS AND SPLINTERS.

An intemperate printer is a typographical error.

Books most influenced by hard times are pocket-books.

The money and hair of a fool are soon parted in the middle.

When farmers cannot raise good crops they do the other thing—raise the prices.

If you wish for money, send a postal card to the man who owes you, and the thing is dun.

A new test—Aunt (in alarm)—"Surely you've eaten enough, haven't you, Tommy?" Tommy (in doubt)—"F-f-feel me!"

A few days ago a jury in the Western wilds gave the following verdict in a case of suicide: "We find the deceased was a fool."

Oh, Horror!—Tommy (suddenly, on his way home from church)—What did you take out of the bag, mamma? I only got sixpence! Look here!

Hang brothers, hang with care,
Hang in the presence of the taxpayaire;
A half-inch rope for a collectaire,
A one-inch rope for an assessaire,
Hang brothers, hang with care,
Hang in the presence of the taxpayaire;

True to the last—"Man," says Victor Hugo, "was the conundrum of the eighteenth century; woman is the conundrum of the nineteenth century." An American editor adds, "We can't guess her, but will never give her up. No, never."

Why the English should be continually singing "God Save the Queen" is more than a reasonable man can conjecture. It is always advisable to save the Jack; but the Queen only counts two for game, and is always a good card to throw away.

Who saw Dom Pedro?
I, said Hamillton Feesh;
And, dom him, I wish,
When Robeson and Taft
Had followed me aft,
Where all the tars laughed,
We hadn't made such a ridiculous deesh.

Forbearance—Member of Hunt (to farmer) "I wouldn't ride over those seeds if I were you. They belong to a disagreeable sort of fellow, who might make a fuss about it." Farmer—"Well, sir, as him's me, he won't say nothing about it to-day."—*Punch.*

As Charles Lamb was returning to London in a stage-coach after dinner a person thrust his head in at the coach door and asked, "Are you full inside?" Lamb, pretending to take the query to himself, replied, "I am for one; that last slice of plum-pudding did my buisness."

We've suspected for some time past that measnres would have to be taken to check the alarmingly rapid growth of the Smith family. And here, now, sure enough, a Pennsylvania man proposes to exhibt at the Centennial a "Smith roller and crusher."—*N. Y. Commercial.*

The rapid and emphatic recital of the following is said to be an infallable cure for lisping: Hobbs meets Snobbs and Nobbs; Hobbs bobs to Snobbs and Nobbs; Hobbs nobs with Snobbs and robs Nobbs fobs. "This is," says Nobbs, "the worse for Hobbs's jobs," and Snobbs sobs.

The following are the latest observations of the season:

The wheezy south wind blows its nose
And wakes the violets from their sleep;
The guilly shade trees work their toes,
And up the sun begins to creep;
Men feel the change, and women too;
Dogs feel it; also Thomas cats;
Cheeks now put on a roseate hue,
And heads are stuck in (or against) new spring hats.

INTELLIGENT FOREIGN TOURIST.

Lo'.—Aw, yes, weally, this is Minnehaha! Where is the other fellow—Longfellow!

BUILDING PAPER!
FOR SHEATHING, ROOFING, DEAFENING, CARPET LINING, AND PLASTERING
These are the best and most economical goods; impervious to dampness, heat and cold. Send for samples to B. E. HALE & CO., 56 and 58 Park Place, New York.

ROOFS

that leak are costly property. You cannot afford them. The damage to your housed crops, which results from one storm, is often more than the cost of putting your Barn-roofs in order. The yearly decay of agricultural machinery and implements, arising from leaky roofs on outhouses, would more than pay the cost of roofing every shed, crib and storehouse on your farm. Your stock suffers from the drippings of your stable-roof, and the necessity of their lying in wet stalls. These evils affect property, but when your house-roof leaks it is worse yet; then comfort departs, and you have a garret full of pails and pans to catch the steady streams; there are wet ceilings and falling plaster; there is spoiled furniture, damp bedding and rheumatism; there is the anxious wife, wearied with running up-stairs to guard against new leaks; it is decay, and ruin, and property wasted. You *cannot afford it.* Our Slate Roofing Paint will end your difficulties and make your roofs waterlight. For *new* roofs, our Rubber Roofing Felt covered with Slate Roofing Paint will give satisfaction to any one. For full information in regard to Roofing and House Paints generally, send for our 100 page Book which is free to all who write *at once*, and *mention this newspaper.*

Floricultural.

YUCCA FILAMENTOSA.

This plant is one that improves upon acquaintance. We never thought much of it until we used it at home, and now its loss would be severely felt. It is the last plant we should use in symmetrical plots or among flowers whose attractiveness depends in part upon a precise arrangement and uniformity of size. We first recognized its fine adaptability to certain situations upon seeing it in large plots along one of the lake banks of Central Park. It there looked to be the right plant in the right place and imparted a wild, half-rugged, picturesque beauty that few other hardy plants could supply. As an undergrowth in shrubbery borders—or planted between pines and spruces, as we have seen them—the evergreens planted rather closely together so as both to conceal the property line and to serve as a wind-break—or clumped here and there in the wild garden, they are very effective. Wildness is the Yucca's charm, and it suffers the moment it is placed in the company of flaming colors or "tropical amplitude of leafage."

Its pagoda-like inflorescence is very fine and may put to blush a hundred petted hot-house things that need to be washed, smoked, forced and rested throughout the year. It is borne upon a scape four to six feet high, in a pyramidal panicle of simple racemes. The color of the bell-shaped flowers would be white but for a slight tint of green. The plant is nearly acaulescent and its lower leaves rest upon the ground, while the upper ones are more upright and clustered as in a rosette of spikes. These leaves are a perfect evergreen and retain a fresh color through the most trying vicissitudes of winter.

Unless it is desired to save seed (which germinate readily) it is best to cut out the scape as soon as the flowers have disappeared—since the dry, oblong pods are unsightly.

We have never found that it is particular as to soil or situation, thriving with us both in sandy and in wet places. It is a splendid rockery plant, and in summer plots harmonizes well with Sedums, Aloes, Cacti—or, among hardy plants, with the dwarf evergreens—with Aralia spinosa—the hardy grasses and ferns.

Here we have a plant that is an evergreen, perfectly hardy—enduring at least 20 degs. below zero without injury—that bears in midsummer hundreds of flowers more beautiful than most hot-house subjects—that is easily propagated—that will stand storms, winds the fiercest, heat, drouth, moisture; and yet we seldom meet with it.

Our engraving gives a correct view of this Yucca.

SELECTION OF PELARGONIUMS.

Messrs. G. B. of Hackensack, ask us, among the golden and silver variegated and plain Zonales, to name those we should select as the finest of their sections.

We have often thought, as we have passed through the immense glass-houses of several of our florists exclusively devoted to Pelargoniums and have endeavored to make distinctions by which we could fix the names, that three quarters of all might be destroyed as inferior to the others, or so nearly alike as not to be worth the trouble of either a name or of preservation.

In the silver variegated section for instance, there are dozens so nearly alike that it is impossible to name them at sight without that sort of microscopic study that has enabled many pomologists to distinguish hundreds of varieties of fruit trees from a close observance of color and texture of the bark. And the same may be said of the other sections.

But although we have given for several years a good deal of attention to these fine plants, and are somewhat familiar with the most of those offered by our florists—yet when we come to make a selection of those we believe to be the best, as representing by distinct markings or other characteristics the whole list of Pelargoniums, the number surprises us with its smallness.

Of the golden variegated sorts ("Tricolors") we should still select as our first choice Mad. Pollock, old as it is, (1855), for its vigor and perfect leaf. We should select Macbeth for its high color and endurance of sunshine. It is the best of the "Tricolors" for bedding. If shaded a little, it maintains a passable appearance through the summer. Among perhaps fifty varieties fully exposed to the sun, Macbeth alone preserved a trace of color. Lady Cullom and Sunset of this section are the only ones we should add to the above.

Of the silver variegated sorts, Excellent and Princess Silverwings or Miss Burdett Coutts.

Of the plain zonales with scarlet flowers we should select Rienzi for the size of its flower and Jean Sisley for its brilliancy of color, distinct white eye and imbrication of petals;—Mas. Christine, for the color of its flowers and size of the umbel, though as a bedding plant it drops its leaves and the flowers fade. Matilda has a larger flower of a prettier shade, but forms a smaller umbel.

We should select Mrs. Geo. Smith for a salmon—Marie l'Abbe for a white with a rosy eye, and Mad. Vaucher for a pure white.

Of the double zonales, our first choice would be Marie Lemoine for a rose or rather pink. This is more dwarf than Mad. Lemoine and its flowers equally large and lasting.

Of the double scarlet, E. G. Henderson. Le Nigre, though next to worthless in the house, is splendid out-of-doors and stands the sun right well. The petals are small and crowded together, of a dark claret color—the darkest color, so far as we are aware, of plain zonales—occasionally streaked with white. It is a robust grower and forms roots most readily.

Asa Gray is the best double salmon and Aline Sisley the best white—though it is *not* white and *is* worthless.

Dieul de Strasbourg resembles Marie Lemoine in every way—but the flower has a decidedly violet tint, exceedingly beautiful and delicate.

Wellington for its deep maroon color and immense truss. Like most other of the "nosegays," however, the flowers are quite perishable in the open air.

Knowing that Pelargonium growers had been at work for years to produce the white disc of Happy Thought, we had supposed this really beautiful plant was finally the successful result of their labors. But we see by a note in the London Garden that it is a sport from some old variety. We have had the plant since it was introduced to us by Mr. Currey, and either as a bedder or a house-plant, it has given great satisfaction. From this doubtless many varieties of the white or yellowish-white disc will spring—constituting a section as distinct and as attractive perhaps as either of those popularly termed "Tricolors" and "Silver Leaf."

YUCCA FILAMENTOSA.

A GIGANTIC FLOWER.

We have in our greenhouse at this time a bulb of the new Aroid, *Amorphophallus Rivieri*, upon which there is what an unscientific observer of nature would term a flower, measuring two feet ten inches long by a foot broad. But scientifically speaking, this gigantic production is not a true flower any more than the white spathe of the common Calla lily is its flower, although generally referred to as such. The flowers of such plants are quite minute and situated on the spadix or central organ, while the outer and more showy parts are little more than a leaf-like envelope to which botanists have given the name of spathe. The *Amorphophallus* referred to above is a giant among the pigmies in this family; but we must say it is more curious than beautiful.

The fetid odor emitted from the opening spathe is simply intolerable, resembling that given off from putrid animal matter. The plant dies after blooming and is produced from small offsets of the old bulb, during previous years.

This new aroid is a handsome bedding plant, with a large, showy, divided leaf; but when the bulbs reach a blooming size they may be cast aside, unless one is curious to see what a repulsive montrosity nature can produce in the way of a flower.

CULTIVATION OF DIONÆA MUSCIPULA.

In response to inquiries as to where the Carnivorous plant Dionæa muscipula could be procured, we stated that Mr. Peter Henderson was, we believed, the first to offer it. We soon afterwards learned that they could not be made to thrive in ordinary greenhouses and that Mr. H. had none for sale—whereupon we wrote to ask the reason of this and received the following reply, which, coming from so experienced a horticulturist, may be accepted by our readers as reliable:

"The reason why the Dionæa does not usually succeed is that its natural habitat is the swamps of the Southern States and there are few greenhouses that are moist enough to suit it. It would do well, however, in a Wardian case, Fernery or Jardiniere. I expect a consignment in a few days from Georgia."

NOTES.

In the old-fashioned flower garden at Wimbledon House there is a fine old plant of Cydonia Japonica, 60 feet in circumference and from 8 to 10 feet high. The whole of the plant is now cov-

ered with flowers, and is quite a picture.—*London Gardeners' Chronicle.* [After all, take them all-in-all, there are few better shrubs than the ornamental Quinces.]

Procure Ferns.—You who have shady places and suitable soils—go now to the woods and procure loads of Ferns. Few plants are prettier for semi-wild plots or for the shady sides of rockeries.

Erythronium Americana, the first of the vernal lilies, is now blooming in many a meadow and woods. It is worth going after for bouquets—it is worth a place in the wild garden or among spring bulbs.

A correspondent asks the Gardeners' Chronicle if the male plant of *Aucuba* bears red berries—and gets the reply, "The male plant certainly does not bear red berries. We should as soon expect to see cocks lay eggs."

Yucca baccata.—Hoopes Brother and Thomas offer this plant. A rare native species found in Utah, Colorado, and recently introduced into cultivation. Leaves very thick, long, narrow, concave—flowers showy, bell-shaped, white and exceedingly fragrant, succeeded by agreeable, sweet, edible fruit.

Mr. J. W. Maple of Oregon, Mo., writes us under date of April 20 that his grounds are sweet with Hyacinths and spring flowers—that the fruit trees are in full bloom and the prospects of a large crop are flattering. He says:—"Herewith I send you a leaf of a plant received last fall as Sweet Fern, the fragrance of which is very pleasant indeed. No doubt you are familiar with the plant, and I would be pleased to know its name."

Sweet Fern is not a Fern, but *Comptonia asplenifolia* under Myricaceae—a shrub with sweet-scented, fern-like leaves. We know nothing of the "Cinnamon Vine," unless it is what is known about New York as Mignonette vine or Madeira vine.

Field Crops.

MIXED MEADOW GRASSES.

At a meeting of the Central New York Farmers' Club, reported to the Utica Herald, the question "What are the best meadow grasses to sow with timothy and clover," was opened by Daniel Bachelor, who said:

"This question is easier asked than answered, for climate, with us, has as much, or more, to do with an answer than soil, however important to good grass culture good land may be. The question then is, what grasses are best for us here in our meadow mixtures? Not what are the best for the valley of the Connecticut, or for the still milder climate of New Jersey. Almost all writers on the grasses in this country, conclude their essays or books with one formula of meadow grasses for the whole United States and Canada, regardless of climate. These lists are apparently made up from Sinclair and other English authorities.

The past and passing season, with its frequent alternations of thaw and frost, has been a severe one on grass and grain in this country. Many meadows, especially where the soil is light, and nothing but timothy and clover in the sward, are badly lifted, or "hove," as it is termed. The outlook for such meadows is not encouraging. I have taken especial pains to inquire of farmers who have used mixed grasses in their land, how it is with their meadows, and the universal answers are that these look well, and the sward is not lifted. This good luck is attributed to the simple fact that the stoloniferous grasses send their roots thickly through the sod, and thereby hold the semi-bulbous roots of the timothy down into the ground. Timothy so often fails of late, and meadows require such frequent seeding that the expense, as I have already hinted, becomes a large item in farm accounts. It is next to impossible to establish a permanent meadow where timothy and clover are the only grasses grown; yet many think that these are the only grasses that should be sown, notwithstanding the fact that but few meadows thus treated will produce more than one mowing without reseeding. In fact, a close mowing, followed by dry, hot weather, will often destroy the bulbous roots of the timothy entirely, thus causing the grass to disappear, leaving no aftermath at all. Timothy is one of the best and most nutritive of grasses, yet under the usual conditions it stools but little, and the aftergrowth from the young bulbs is always thin, showing plainly that to keep this grass well in the ground, especially where it is liable to lift with the frost, it ought to be grown with such other grasses as will come on with it to the hay harvest. If it is so desirable to have mixed grasses in our meadows, the question that we discuss is very important. What then are the best mixtures? That is, what are the best to ripen here with timothy and clover for hay?

THE BEST MIXTURE.

Observations of my own and the experience of others, together with actual tests made on President Campbell's ground with various grasses, as to their time of ripening, structure, attitude, and especially hardiness, have led to the conclusion that the following are the best adapted to our climate, with timothy and clover, always taking care that timothy and clover predominate. My list would then be:

Avena flavescens; or yellow oat grass.
Avena elator; or tall oat grass.
Agrostis vulgaris; or red top grass.
Festuca pratensis; or meadow fescue.
Festuca elator; or tall fescue.
Poa trivialis; or rough stalk meadow grass.
Poa memoralis; or wood meadow grass.
Lolium italicum; or Italian rye grass.
Anthaxanthum odoratum; or sweet vernal grass.

If the meadow is moist then the *agrostis stolnifera* or creeping bent, also in very wet soils fescue grass, fowl meadow grass and alsike may be advantageously grown. Orchard grass, when grown for hay, is better grown alone or with medium clover only, as it ripens too early for a meadow mixture. The question we discuss does not embrace pasture grasses; yet I take the liberty to say that there is not a better pasture in the world than our own indigenous *poa pratensis* or June grass, and when mixed with the fescue and orchard grass, we have good early and late feed. June grass constitutes more than two-thirds of the pasture grasses of Central New York.

Mr. Bachelor exhibited important colored plates illustrating the grasses alluded to in the paper. The reading of the paper was followed by a general discussion.

Morgan Butler—I have tried one experiment which resulted in signal success. I obtained a mixture of eight or ten varieties of seed to be sown on one acre. The seed was sown after a heavy crop of barley, and the first season, also being dry, yielded but a small crop. A copious yield, however, was produced the two succeeding years. The cost of the seed was $6. The soil was gravelly. I have devoted the same land to meadow for fourteen years; and there is still a good stand of timothy.

J. W. Lyon—I have found that a heavy production is produced by sowing little clover, and a greater variety of seed.

L. L. Wight—An essential point in the preservation of timothy in meadows is to refrain from feeding too closely in the fall. It will not do to leave all the aftermath nor to graze it too closely. For moist land the best grass is red top. It yields a thrifty crop. It will remain green and juicy late in the season. It is also one of the choicest grasses for hay to be fed to milch cows, with which I am acquainted. I did not entirely succeed with mixed grasses.

Mr. Butler—The soils of the Mohawk and of the Sauquoit valleys differ widely. The former "heaves" under the influence of frost, while the Sauquoit flats are never thus affected. We feed too closely in the fall.

Mr. Wight—It is well to have sowed corn from the first of August until the season of frosts. Thus the aftermath may be spared.

POTATOES AT 15 CENTS A BUSHEL.

Since the award made by Bliss & Sons for the best yield of potatoes from a pound of seed, I have obtained some additional facts in regard to a part of these crops, which will perhaps give a new interest to the results already published.

In response to another premium offer based on the cost of production, I have received statements in regard to said crops, from which it appears that—

1. The yield of Alfred Rose was at the rate of 746 bushels per acre, and the cost a little less than 15c. per bushel.

2 The yield of J. L. Perkins was at the rate of 475 bushels per acre, and the cost also nearly 15c. per bushel.

3. The yield of J. I. Salter, which was 36½ bushels from 1 lb. of seed, is not so reported as to indicate the rate per acre, but shows the cost per bushel to be 20½c.

4 and 5. In the case of H. V. Rose and of M. M. Rose the cost was slightly above the figure of Alfred Rose.

Finally, it appears that the cost per bushel is a tie between J. L. Perkins of Iowa and Alfred Rose of New York. The premium is, therefore, divided between the two.

There are several curious and interesting questions growing out of this trial which it will, perhaps, be worth while to consider hereafter in connection with a further statement of the processes and treatment of these crops.

Conrad Wilson.

TO SAVE NEWLY-PLANTED CORN.

A writer in the Mass. Ploughman relates his method of soaking corn in tar water in order to save it from crows. We know this plan to be good having tried it frequently, using copperas instead of saltpeter, though probably the saltpeter is better to give the young plant a vigorous start. The copperas in the water will save the seed from wire-worms until the plant gets beyond their power to materially injure. The correspondent describes his method as follows:

I took about a pint of tar—from the pine—and poured to it about a quart or two of boiling water, and stirred well to dissolve. In the mean time, had one or two bushels of seed corn put in a barrel, and added hot water to cover about three inches, poured in tar water and stirred well. I used saltpeter, say one pound to the bushel of corn. I do not know what strength it would require to injure the vitality, but doubt if two pounds to the bushel would. Let the corn remain for twenty-four or forty-eight hours to soak and swell. I have had it sprout, and when ready to plant, take out and let drain, then add land plaster to fully cover seed and admit of handling. This plan is better than mere smearing with tar, as the whole grain is saturated. The gentleman I alluded to, used tar, and squirrels would get up the grain and gnaw off the tar and husk, and eat the germ. When corn soaks for one or two days, even the blade when two or three inches high is distasteful to birds. Corn soaked in saltpeter as above may be strewn on the earth and but little taken by birds. I know it serves as a stimulant, as the deep green blades and thrift proves it.

IMPROVEMENT IN CORN.

A writer in the Southern Cultivator relates his experience as follows:—The seed corn is a variety I have been improving for four year's past. When I commenced propagating the corn, the ears had, as is usual, 14 to 18 rows, and would require from 90 to 125 ears to shell a bushel. The second year, under my system of propagation, the corn had 18 to 20 rows to the ear, and 80 to 90 ears would shell a bushel. The third year the corn increased to 20 to 22 rows per ear, and 70 ears made a bushel. The fourth year—the present—my corn has 22 to 24 rows to the ear, and 60 ears, taken just as they come, shell out a bushel. By picking the ears 40 to 50 will make a bushel. I have a few fine ears that have 32 rows to the ear, which I expect to plant, and I confidently anticipate a yield of seed corn therefrom that will only require 50 ears to the bushel, taken as they grow in the field, with anything like good land and average seasons. I will add that it has been a specialty with me for four to six years to examine minutely the finest specimens of corn in various corn-growing States, and I have never yet seen any corn to equal mine.

Farm Economy.

THE ROAD PROBLEM.

It is to be hoped that the "agitation" of the Road question will continue until something feasible comes of it. That reform in this direction is greatly needed is apparent to every one, but just the wisest course to pursue is not quite so clear. As the customs are now, and as the law stands, there is little hope of improvement in our public roads.

A correspondent, on page 248, says:—"Have a law passed requiring every land-owner to build the road across his premises." It appears to me that this plan is open to very serious objections. An energetic, successful man would be likely to have good roads in front of his premises, while his shiftless neighbor would let the public wallow in the mire.

No law can be passed that will transform a dull man into an intelligent one, neither can you cause the public to work wisely by statute. This plan would also be very unjust. One farmer may have two, three, or even ten times the length of road running through his land that his neighbor has, whose land is equally valuable. We often find that the wealthiest man in a road district owns only a few rods of road, while another worth much less may have roads crossing his land at right angles.

Again, persons who own no land have a use for highways, and should help to build them; therefore, a reasonable poll tax is not at all unjust. I am of the opinion that the tax to maintain roads needs no change, except it be to increase the amount and make it all payable in cash. It is in spending the road tax that all the abuses arise.

Road Commissioners are often chosen more on account of their ability to control jobs than for any fitness for the office. Pathmasters are sometimes appointed who know little about roads, and who spend the whole tax without any benefit; nay, more, they oftentimes do positive damage by their blundering management.

Now, I propose a plan which may appear no more feasible to others than does that of others to me:

1. Divide the highways into suitable sections, and allow each section to elect its own highway officers, subject only to a general road law of the State.

2. Levy a tax upon property as now, poll tax included, and make it payable in cash only.

3. Require the proper officers to hire as many men and teams as the money raised will pay for, and keep them on the roads the season through

4. Make the employes responsible for accidents and damages caused by the neglect of duty.

Two good, industrious, intelligent men, with one team and provided with suitable tools, would accomplish more in this way for the benefit of the roads than 150 men, whose principal work usually is, when employed on the road, telling yarns and drinking cider.

I think this plan will work if we choose men with regard to their fitness for the place, ignoring their opinions about the tariff, hard or soft money, etc. Nelson Ritter.

Syracuse, N. Y., April 17.

IMPROVING ROADS.

Whatever other betterments are needed in the rural districts of our country, it is certain that good roads are a luxury not enjoyed by a large part of our rural population for a great portion of the year. I can speak knowingly and feelingly of one mile of road, within the bounds of a thriving, incorporated village of about two thousand inhabitants, which has not been in a tolerable condition for ten days in the last five months; when not frozen and rough, it is deep with heavy clay-mud, and in either case two horses could not do the work of one on a good road. Were this a solitary case, it would not be worth while to write about it; but in our country poor roads are the rule, and no better enterprise can be inaugurated during this Centennial year than that of converting our miserable roads into hard, smooth, permanent thoroughfares. In some sections the character of the soil is such that the roads are naturally good during the entire year. Several times I have driven from Schoharie Court-House to Oneonta, N. Y., when the first half of the road was almost impassable on account of the deep mud, and the last half smooth and hard, delightful to travel over. For some years I lived on the "Ridge Road"—a natural, gravelly road-bed, running parallel to the southern shore of Lake Ontario. Mud was almost unknown. Half an hour after a long rain one could walk in the middle of the road without soiling his shoes. For a long time after removing to a village where muddy roads were the rule, I was homesick for the Ridge Road.

Now, if we consider the great saving in horse-power, vehicles, harness, time and patience, would it not be good economy to make artificial road-beds in all thickly-settled sections where good natural ones do not exist? Is it not time to abandon the pioneer mode of appointing unskilled pathmasters to see that the inhabitants of their beats devote a certain number of hours annually to hap-hazard work, and to give to skillful road engineers the means for building permanent and good roads?

Centennial roadside tree-planting has been ably advocated. Road-making is properly next in order. Cannot the publishers of the Rural secure the services of an experienced road-builder to prepare an article or series of articles to awaken and instruct the people upon this important subject? Knowledge is needed. Many well-meant and expensive attempts fail through want of it. A few years since the main street of our village was covered several inches deep with small stones, which have dissolved into mud as good as the original clay. With what materials, what machinery, and in what form can good, lasting roads be built at *minimum* cost?

Warsaw, N. Y. C. H. D.

VARIABLE EFFECTS OF PLASTER.

Richard Peters, in writing, in 1796, to the "Philadelphia Society for Promoting Agriculture," said:—"I continue, after long and varied experience, in the free and extensive use of plaster. I have often been disappointed in expected results of my numerous applications of this generally powerful, sometimes fugacious, and frequently ungovernable stimulant. But I have been successful in the far greater proportion of my practice and experiments."

We think the above may be taken as a fair representation of the experience of those who use plaster at the present day. Washington experimented quite extensively with plaster on the cold, clay soil of Mount Vernon, but reported that he saw no beneficial results; while some of his neighbors, who had light, dry soils, were enthusiastically in favor of this—at that time—recently-introduced fertilizer.

Fertilizers.—Mr. Meehan says that clippings of barbers' shops are found to be very indestructible, unless treated first to a dose of sulphuric acid. We should suppose it would be an excellent fertilizer, so treated.

Dairy Husbandry.

OUR CHEESE TRADE WITH ENGLAND—PROSPECTS IN THE FUTURE.

Our English correspondent sends us some very interesting statistics. They are the official returns, showing the quantity of butter and cheese imported into England for ten years—or from 1864 to 1875—and the actual value of such imports from year to year, on a gold basis. The statistics which have not unfrequently been given of the exports of American dairy products to England, have been often only approximate. They have shown the quantity shipped from New York, not only to England, but to other countries than Great Britain. Thus we do not always get an accurate account of the quntity of cheese and butter which the English have taken of us from year to year. A knowledge of what we have been doing in dairy products with England for the past ten years, must be exceedingly interesting to American dairymen, since it snadows forth what are among the possibilities in years to come.

Ten years ago the quantity of dairy products sent from America to England, was supposed by many to be the extreme limit of what England would take from us; but it appears she has gone on, increasing from time to time the quantity, and there seems to be no complaint of a surplus of American goods in English markets *now* any more than there was ten years ago. To what amount our exports may be increased during the next ten years cannot, of course, be predicted with certainty, but it is believed by many that the quantity may be largely increased and still be within the limits of consumption. If this be so, the future of American dairying is not so cloudy as many would seem to imagine. With an outlet for a much larger quantity than we are now exporting, it will require a much larger production; and when we consider the rapid increase of our own population and the demands of home consumption, there is reason to believe that dairying will continue to be quite as prosperous a calling as any branch of agriculture which American farmers can follow.

We reduce our correspondent's figures into pounds and the aggregate values into gold dollars, to the latter of which our readers may easily add the requisite sum to represent values in our paper currency.

In 1864 there was imported into Britain from the United States, 50,062,656 pounds of cheese; 1865, 49,606,256; 1866, 46,561,312; 1867, 58,994,880; 1868, 54,781,104; 1869, 54,841,440; 1870, 62,203,120; 1871, 81,908,512; 1872, 66,997,176; 1873, 88,506,556; 1874, 95,192,496.

The real value of the product for the several years was in gold for 1864, $6,069,450; 1865, $6,480,020; 1866, $6,932,245; 1867, $7,350,065; 1868, $7,396,900; 1869, $8,081,625; 1870, $9,306,315; 1871, $10,074,025; 1872, $8,607,175; 1873, $11,765,705; 1874, $12,948,880.

During the same period of years there was imported into England from Holland, 36,000,000 to 47,000,000 pounds of cheese per year, or as follows:—The quantity was in 1864, 37,725,072 pounds; 1865, 43,339,744; 1866, 47,974,608; 1867, 37,151,136; 1868, 36,911,280; 1869, 47,814,256; 1870, 47,325,936; 1871, 38,992,576; 1872, 36,907,920; 1873, 37,705,248; 1874, 43,675,456.

It will be observed that the quantity imported from Holland has been pretty uniform, the variation being about 10,000,000 of pounds, while from the United States the quantity has almost doubled, having been increased to more than 45,000,000 of pounds.

Now as the cheese product of Holland is pretty constant, or at least subject to but little variation from year to year, we may infer that the largest shipments named have taken the entire surplus from that country. The entire quantity then that can be drawn from Holland is not above 50,000,000 of pounds. If this be so, the quantity of cheese imported into England during the past year, has been pretty nearly as follows:—From the United States, say 100,000,000 pounds, Canada, 30,000,000; Holland, 50,000,000—making a grand total from the three countries of 180,000,000 of pounds.

If there was an outlet last year for American cheese to England of 130,000,000 pounds, it is fair to conclude that at least that amount will be required the coming year; for as it has been shown, the required supply cannot be had from Holland, and hence it must come from the United States and Canada. The cheese product of Canada will doubtless be increased during the coming year to some extent, but it is doubtful whether the aggregate make in the United States will be any larger than last year. In some sections like Maine new factories will go into operation; but on the other hand, in New York there is likely to be a decrease rather than an increase of the product. On the whole, so far as we can learn, it will not be safe to estimate a larger product in the States than last year. Judging then from the past, and the figures we have given, there need be no fear that our cheese product the coming year will not be wanted in the markets of the world, and though prices may possibly go some lower than last year, we can see no reason for very much reduction in price so long as we keep the quality up to a high standard of excellence.

DAIRYING IN OHIO.

Col. S. D. Harris, Sec'y of the Ohio Dairymen's Association sends us the Twelfth Annual Report of that Society for the year 1875, to which is added the transactions of the Western Reserve Dairymen's Association. The pamphlet embraces the doings of the State Association at its meeting in Cleveland, Jan. 26-27, 1876, and also the doings of the Western Reserve Association at its meeting in Garrettsville, Feb. 9-10, 1876.

Mr. M. J. Lawrence of Cleveland, presented at the Annual Meeting of the State Association an interesting paper, giving some statistics concerning the dairy business of Ohio. Although not able to give a perfectly correct list of factories, he presented the names and address of 320 factories. These factories are distributed by Counties as follows: Geauga, 61; Portage, 57; Ashtabula, 56; Trumbull, 48; Lorain, 30; Summit, 28; Cuyahoga, 16; Medina, 11; Erie, 5; Lake, 4; Ashland, 1; Williams, 1, and Defiance 1.

He says he does not claim these to be all the factories in Northern Ohio, but he believes the list embraces nine-tenths of the whole.

From reports received from 42 factories doing business during 1875, the following averages are obtained:—Average number of cows at a factory, 310½; average amount of milk made up at a factory, 1,167,820 pounds; average time of running, eight months and four days; average amount of milk per cow for the season, 3,642 pounds; average amount of milk per cow per day, 15½ pounds; average amount of cheese per factory for season, 115,092 pounds; average amount of milk to a pound of cheese, 10.353-1,000 pounds; average price of butter sold (estimated on the ranges) 25c. per pound; average amount of money per cow for cheese, $35.25; average amount of money per factory for butter, $462.51; average amount of money per factory from combined product, $11,767.56; average amount of money per cow from combined product, $36.70; average value of 100 pounds of milk *made up*, $1.00-3.

The average net price for the April cheese exceeded the average price for the season by $1.22, and the yield for April is a little more favorable than for the season.

The highest net average price per pound for cheese for the season was 11¼c. and the lowest 8 2-10c. The highest average price per pound for butter reported was 30c. and the lowest 20c.

The aggregate quantity of cheese made at the 320 factories, taking the 42 factories as a fair basis of calculation, is estimated by Mr. Lawrence at 36,829,430 pounds. And the total amount of money realized from the 320 cheese factories in Ohio during the past season, he puts at $3,616,656.

The report contains the address of L. S. Hardin of Kentucky on "Butter Making," Mr. J. S. Van Duzer of Elmira, N. Y., on the "Progress of Cheese Dairying," Mr. H. Cooley Green of Meadville, Pa., on "The Way Out," together with a brief summary of discussions had at the meetings.

IMPROVING CHEESE FACTORIES.

Mr. A. L. Fish of Herkimer Co., N. Y., a gentleman well known in connection with improved methods of dairy manufactures, has some suggestions in a late number of the Utica Herald regarding curing-rooms. We give some of the points urged for the improvement of curing-rooms already built.

Mr. Fish advises the setting of 1¼ inch planks, eight or ten inches wide, like studs against the ceiling. The spaces should be sealed up, or lathed and plastered on the inside. Take out all the windows not wanted for light; widen the frames to those remaining to the thickness of the wall; have a floor board loose above to fill the space between the inner and the outer ceiling; from the floor above fill the space on all sides of the room with dry machine shavings and sawdust, dry tan bark or some other non-conductor, and the same overhead to exclude concentrated heat from the roof or upper room. If there are two stories, the upper and lower rooms should be arranged in the same way. Then tubes, six to ten inches square, are to be placed through the side walls once in ten feet down to the floor to admit air from without when needed to change the air in the room. Let them through inside far enough to saw the inner end off, beveling for a trap door to the upper lip. The inclination of the end of the tube will permit the door to keep shut by its own weight. If two inches from the wall, the weight of the door, when turned open against the wall, will keep itself open. By the tubes more or less air may be let into the lower strata near the floor, and it will not strike the cheese in a current. Tight tubes, twelve inches square, should pass upwards through the center of the rooms, with openings at the top of the room through which a draft is formed to carry off dampness from sweat of cheese or excess of heat. If there are two stories, the same tubes will serve both rooms, if carried high enough to form a draft.

Mr. Fish says the same structure should be adopted for storing cheese. After they are cured sufficiently for market they should be removed from the curing-room to a low temperature to arrest the fermenting process, and kept there until shipped to market. He suggests that a too high temperature in curing, or store-room, may be checked by placing a cake of ice over a tub in the center of the room, with a pipe attached to the tube to carry off the water from the melting ice; and he remarks, further, that having built and used such a room with perfect success, and finding that it serves to keep out frost as well as excess of heat, the plan is recommended to dairymen.

There has been considerable inquiry of late concerning the most practical plan of improving the cheese curing-rooms of factories already built. In many localities, where there is a desire to have properly constructed rooms, the expense of building new structures has been in the way of improvement in this regard. To such the suggestions of Mr. Fish may prove of value, and we commend them to the attention of dairymen.

The Swine-Herd.

ABOUT HOG CHOLERA.

The Illinois State Board of Agriculture are seeking information in regard to hog cholera by distributing a circular among the farmers of the State. The method adopted, we think, an excellent one, and much good might result if other "State Boards" would follow the same plan, for the purpose of learning the cause and spread of other diseases as well as the one named.

In the circular before us there are forty questions asked, and between each a blank space is left, upon which the recipient can write brief answers. The questions are of a kind which would lead the farmer to observe, even if he could give no definite answer thereto, hence we consider them quite important, and worthy of a wide dissemination in other States as well as Illinois. They are as follows:

1. What breed of hogs do you keep on your farm; how many do you keep on an average; and are they of your own breeding?

2. Please state how kept: whether in pens, or in small or large yard-lots; and whether in small or large bunches?

3. How are the hogs fed, and what the general food? Do you at times, feed exclusively on one kind of food, such as corn?

4. Have you lost any hogs from the so-called hog cholera during the past year; and if so, how many?

5. Did the disease attack pigs of all ages—sows and boars, as well as pigs under a year old—large hogs as well as shoats?

6. Was the cholera more severe on pigs bred from *young* stock, than on pigs raised from *older* sows and boars?

7. Did the cholera attack weak and lean pigs as readily as the fat and thriving ones?

8. Were the hogs that had the range of the field and wood attacked with the disease, as well as those kept within limits of enclosures?

9. In your experience, is there any particular breed of hogs more liable to be attacked with the cholera than others; if so, what breed?

10. At what *age* do you allow your pigs to breed; do you allow them to breed more than *once* a year; and what is the age of your boars when you *first* breed them?

11. Do you replenish your breeding stock yearly, by accession of fresh boars and sows, or do you breed closely in-and-in?

12. Did the disease appear among your swine soon after introducing new stock; and did each accession of swine come from herds among which the cholera had prevailed? Or did the cholera appear to originate spontaneously on your place?

13. Among the hogs that died from the cholera during its last visitation on your farm, were there any that had escaped the disease during its prevalence among your hogs the year previous?

14. Have you any reason to believe that the disease is contagious or communicable; if so, give your reasons?

15. Did your hogs run after other stock in the field at the time of the outbreak of the disease?

16. Did a spell of dry and hot weather precede the outbreak of the disease, or were the yards and grounds wet and damp at the time?

17. Were there any, and if so, what, changes in diet, or drink, or location, during the thirty days next preceding the appearance of the disease?

18. Of what material is the flooring in your hog pens? Do you bed your hogs, and how often is the bedding changed, and the manure removed?

19. Was water scarce on your farm at the time of the appearance of the hog cholera?

20. Did the hogs have access to pond water, or to pool water around the barnyard? Or what kind of water had they access to?

21. If your hogs, previous to this disease, had access to a running stream of water, do you know if this stream in its course, before reaching your place, passed through farms where hog cholera prevailed?

22. Are your yards and pens provided with special drainage; or does the waste water soak into the ground? And is there any artificial drainage on your farm? If so, what kind?

23. Did any horses, cattle or sheep die suddenly on your farm, shortly before, or during the prevalence of the hog cholera?

24. Did your hogs at any time, previous to the appearance of the hog cholera, have access to carcasses of horses, or other animals, or to decaying entrails of such animals?

25. Were the hogs that died on your farm, or in your neighborhood, from the cholera, always buried; or what disposition was generally made of them? Were such dead hogs not sometimes thrown into rivers, or streams of running water?

26. If the hogs that died from cholera were not buried, would the other hogs have access to, and devour part or all of the carcasses?

27. Did the disease appear more than once during the same year at your place?

28. During the different years, when the disease visited your farm, did it seem to appear under the same supposed influences, or from the same supposed causes?

29. Did the cholera always appear on your farm at the same time of the year?

30. Can you in any way account for the fact when your neighbor's hogs escaped the disease?

31. If preventive remedies were used by you, what were they, and with what effect were they given?

32. What remedies did you administer during the disease, and with what result?

33. What per cent. of the number treated, recovered from the cholera? What per cent. of those not treated at all, recovered?

34. If any of the pigs recovered from the cholera, did they become as strong, healthy and thriving as they were before the attack? If so, how long time did it take them fully to recover?

35. The following symptoms are more or less prominent among those exhibited in hog cholera: Dullness, loss of appetite for food or water, creeping beneath the straw, or seeking dark places, with the head held low, and ears drooping; disposition to lie on the belly; retching, and vomiting of food, mucus or bile; diarrhea of dark and fetid stools, or constipation; anxious and staring look; inability to stand; mouth hot and clammy; spasmodic breathing; partial or complete paralysis; bristles stiff and dry; sometimes the animal is wild and frantic, and sometimes quite unconscious; inability to scream; subdued and painful cough; discoloration of the skin—a red or purplish tint, especially on the belly and inner surface of the hind extremities, on the back, ears, etc. Death within twenty-four hours to three days. Were the above symptoms more or less prominently exhibited by your diseased hogs?

35. If you opened any of the hogs that died from cholera, what particular organs seemed to be most affected, and what were their appearance?

37. Are your lands low, level and ill-drained, or is your farm dry and high-lying?

38. Is the soil of your farm sandy, loose and loamy?

39. Is there much clay on your farm; and is the sub-soil stiff and retentive?

40. Is water obtainable at any time of the year on your farm, by merely tapping the soil at no great depth?

CARE OF HOGS.

Hiram Lane, Humboldt, Iowa, writes: For the past three years have been very lucky with hogs. Have a pasture of about 35 acres, not much grass, but plenty of young oaks, hickories and hazel brush, with plenty of running water. I keep salt and sulphur in trough where they can help themselves, with a pile of coal, and it will surprise those who have not tried it, to see them eat it after every feed of corn. Am wintering 80 head, and since first of May last have lost but one old one and six or eight little pigs. My hogs are thoroughbred and high grade Berkshires. I have fifteen fine sows from the celebrated Glen Farm stock, and, if successful, can furnish some of my brother patrons, the coming season, as fine pigs as are raised in Iowa.

Breeds Subject to Cholera.—After several years of practical experience with hog cholera, our Western breeders have decided that no one breed is more subject to this terrible disease than another. This should encourage farmers to hold on to their choice breeds and endeavor to learn the cause as well as cure, of the scourge which is at the present time making such havoc in the swineherd.

The Poultry Yard.

VARIATION OF INSTINCT IN ANIMALS.

A CORRESPONDENT of London Nature, gives some very remarkable variations of what is generally termed instinct in fowls, from which we clip the following:

Three years ago I gave a pea-fowl's egg to a Brahma hen to hatch. The hen was an old one, and had previously reared many broods of ordinary chickens with unusual success even for one of her breed. In order to hatch the pea-chick she had to sit one week longer than is requisite to hatch an ordinary chick, but in this there is nothing very unusual, for, as Mr. Spalding observes, the same thing happens with every hen that hatches out a brood of ducklings. The object with which I made this experiment, however, was that of ascertaining whether the period of maternal care subsequent to incubation admits, under peculiar conditions, of being prolonged; for a pea-chick requires such cares for a very much longer time than does an ordinary chick. As the separation between a hen and her chickens always appears to be due to the former driving away the latter when they are old enough to shift for themselves, I scarcely expected the hen in this case to prolong her period of maternal care, and, indeed, only tried the experiment because I thought that if she did so the fact would be the best one imaginable to show in what a high degree hereditary instinct may be modified by peculiar individual experiences. The result was very surprising. For the enormous period of eighteen months this old Brahma hen remained with her ever-growing chicken, and throughout the whole of that time she continued to pay it unremitting attention. She never laid any eggs during this lengthened period of maternal supervision, and if at any time she became accidentally separated from her charge, the distress of both mother and chicken was very great. Eventually the separation seemed to take place on the side of the peacock, but it is remarkable that, although the mother and chicken eventually separated, they never afterwards forgot each other, as usually appears to be the case with hens and their chickens. So long as they remained together the abnormal degree of pride which the mother showed in her wonderful chicken was most ludicrous; but I have no space to enter into details. It may be stated, however, that both before and after the separation the mother was in the habit of frequently combing out the top-knot of her son—she standing on a seat, or other eminence, of suitable hight, and he bending his head forward with evident satisfaction. This fact is particularly noteworthy, because the practice of combing out the top-knot of their chickens is customary among pea-hens. In conclusion I may observe that the peacock reared by this Brahma hen turned out a finer bird in every way than did any of his brothers of the same brood which were reared by their own mother, but that on repeating the experiment next year with another Brahma hen and several pea-chickens, the result was different, for the hen deserted her family at the same time when it is natural for ordinary hens to do so, and in consequence all the pea-chickens miserably perished.

I have just concluded another experiment which is well worth recording. A bitch ferret strangled herself by trying to squeeze through too narrow an opening. She left a very young family of three orphans. These I gave, in the middle of the day, to a Brahma hen which had been sitting on dummies for about a month. She took to them almost immediately, and remained with them for rather more than a fortnight, at the end of which time I had to cause a separation, in consequence of the hen having suffocated one of the ferrets by standing upon its neck. During the whole of the time that the ferrets were left to the hen, the latter had to sit upon the nest; for the young ferrets, of course, were not able to follow the hen about as chicks would have done. The hen, as might be expected, was very much puzzled at the lethargy of her offspring. Two or three times a day she would fly off the nest, calling upon her brood to follow, but upon hearing their cries of distress from cold, she always returned immediately and sat with patience for six or seven hours more. I should have said that it only took the hen one day to learn the meaning of these cries of distress; for after the first day she would always run in an agitated manner to any place where I concealed the ferrets, provided that this place was not too far away from the nest to prevent her from hearing the cries of distress.

Yet I do not think it could be possible to conceive of a greater contrast than that between the shrill piping notes of a young chicken and the hoarse growling noise of a young ferret. On the other hand, I cannot say that the young ferrets ever seemed to learn the meanings of the hen's clucking. During the whole of the time that the hen was allowed to sit upon the ferrets, she used to comb out their hair with her bill, in the same way as hens in general comb out the feathers of their chickens. While engaged in this process, however, she used frequently to stop and look with one eye at the wriggling nest-full with an inquiring gaze expressive of astonishment. At other times, also, her family gave her good reason to be surprised; for she used often to fly off the nest suddenly with a loud scream—an action which was doubtless due to the unaccustomed sensation of being nipped by the young ferrets in their search for the teats. It is further worth while to remark that the hen showed so much uneasiness of mind when the ferrets were taken from her to be fed that at one time I thought she was going to desert them altogether. After this, therefore, the ferrets were always fed in the nest, and with this arrangement the hen was perfectly satisfied—apparently because she thought that she then had some share in the feeding process. At any rate she used to cluck when she saw the milk coming, and surveyed the feeding with evident satisfaction.

POULTRY BREEDING.

IN the following you need not expect any instructions on breeding "fancy" poultry; that field is filled by abler writers than I, but I shall

The Naturalist.

THE SPARROW—A FARMER'S COMPLAINT.

YEARS ago the "inch-worms"—popularly so-called—were, really and truly, a pest in cities, notably so in Brooklyn, N. Y. The leaves of the trees were eaten up before they were half-grown—the trees in mid-summer were not unlike trees in mid-winter—the sidewalks were so bespattered and soiled by the excrement of the worms and by their being crushed under foot, and they were so thickly suspended between the branches and sidewalks that—taking the risk of being run over and regardless of mud or dust—it was less annoying to walk in the middle of the street. Ladies with their flowing robes were all but constrained to remain indoors during the inch-worms' larval state—or, if they boldly ventured out, a brave boy or so was necessary to clear the way and to pick off those that were prone to drop without giving notice. All this I know, though a farmer. But hear my complaint.

The city people *knew* when they imported the greedy, fighting, songless sparrow, that they were introducing one pest to exterminate another; they knew that in the rural districts of England a prize was offered for their scalps and that they were destructive to grain and fruit of various sorts. "But let us cross that bridge when we come to it!" exclaimed they. Well, the sparrows proved a high success. The horrid worms disappeared as if by magic. The leaves remained upon the trees—and the ladies were enabled to dispense with the boy worm-catchers and to carry their enchanting heads with their wonted serenity. The sparrows being blessed, petted, fattened and, provided for in every way, multiplied prodigiously. Soon, however, they became so abundant that—like all superabundant things—their first meritorious claims were forgotten and they were obliged to betake themselves to the country for a livelihood. We have now arrived at "that bridge" and, for aught we see, the farmers are left to "cross" it alone.

Ladies and gentlemen of the city—the beautiful and useful singing birds that frequent our doors and grounds to build their nests in our trees and to pick up the morning crumb, are being driven away by the voracious sparrow. With its bleak cry like the mew of a sick kitten, it is ever there—ever ready whether to eat or to fight. The bluebird, and the wren and the snowbird stand aloof like helpless, hungry puppies in the presence of a bull-dog feeding upon an ample bone and turning to snarl threateningly at the cringing puppies respectfully distant. Every crumb is devoured or, if not, the ruffianly sparrow remains close at hand to preserve it for another meal—and our native birds are left to seek their food far off in fields and woods.

Now will the ladies come hither to assist in exterminating *their* pest—or will a lingering sentiment of gratitude to the sparrow in particular and of affection for birds in general restrain them? Much as we admire the ladies—and it seems to the dull observation of a farmer that they become more admirable and costly, if not more useful, with every succeeding season—radically as we are impressed that we could not in any wise get along without them—yet upon all bird questions we believe them to be sadly mixed up. They will shed a tear when, to preserve our fruit and grain and to recall our native pets that so assisted to render our grounds cheerful, we begin our war of extermination upon the greedy, homely, foreign sparrow—while they view their bonnets with a happy glance that is bedecked with one of our harmless native birds that are vilely slaughtered to maintain a heartless fashion—a fashion that, if there is the least chance of my being pardoned, I should designate as a "triplet relic" of barbarism. MAJOR.

WHAT IS INSTINCT AND WHAT REASON.

THIS is one of those questions upon which scarcely any two persons can agree. Still as its discussion tends to make people close and careful observers of animal life, we think that even some rather wild theories on the subject may be admissable in order to lead the careless and indifferent, to seek a more intimate knowledge of the living creatures with which they are constantly surrounded. In a late issue of the Western Rural, R. K. BLOSSOM gives his views upon this subject as follows:

All the voluntary phenomena of life, we believe, physiologists agree, are dependent on nervous matter, and the executive power is issued from that portion called the brain, or, a nervous mass of matter which answers to what in man we call cerebrum and cerebellum. Instinct then, so far as our feeble powers have yet comprehended, emanates from the same nervous matter which exercises the power of reason; at least, in the present state of mental science, our finite minds, that is, finite in their action here on earth, cannot conceive of reason and instinct as being entirely independent of each other, and manifested through separate and independent masses of nervous matter. It is true, some things we call instinct appear to be entirely free from all mental action, and yet we cannot see how such a phenomenon can be possible.

A robin, invariably in the spring of the year builds a nest, and the low-bunting never build's one, but deposits her eggs in the robin's or other birds' nests. Building a nest is said to be an instinct, and if so, the fact is clear that one bird has an instinct which another has not, and yet, the final result, the perpetuation of the species, is accomplished effectually in both cases. The robin feels that she is about to lay eggs, and this feeling suggests the important thought that a nest is needed, and then she feels that sitting on the eggs will produce young birds, and her own experience teaches her that they must be fed till able to take care of themselves, that the end of robin existence may be consummated. Now the feeling that impels the robin to build a nest may be an instinct, but procuring the materials, the mechanical skill employed in the building and the selection of a secure site, smacks more of reason and judgment than of blind instinct. So, the apparent necessity of shelter from cold may be an instinct in man, but the architectural construction which adapts it to his wants will scarcely be thought other than the deliberate acts of reason.

There are many acts and operations of animals and insects that we do not understand as being the results of reason as exhibited by man, and yet, we cannot give a satisfactory explanation of their origin from any other source than a modified or limited form of nervous exhibition inseparable from reason, possibly through ignorance, or the unexplained facts in the case. Of course no sane man will say that instinct is the culmination of fortuitous circumstances, born of chance; and he cannot well conceive of its practical existence, but through nervous matter, and as nervous matter is the medium of reason, how and where is the line of demarkation between the two? At best, we can only say, and that without being able to give any satisfactory solution, that instinct is a modification of reason, which to the human mind thus far is incomprehensible.

We have seen it stated that a frog deprived of its brain would still make instinctive movements upon being touched in certain places. We might, with as much propriety and reason, say that a hen with her head cut off is instinctively jumping about to find her head. This doctrine ignores the use of the brain in the visible production of instinct, and makes muscular sensation the author of instinctive motions, a fallacy which may decive the unthinking or those whose bigotry binds them to fixed opinions, however unnatural or untrue. In the case of the frog, immediately after taking out the brain, there remains for a short time muscular sensation, which if specially excited will make those motions, which coincide with the functions of the muscles excited, and these motions are made simply because no others could be made, and they bear no relation to instinct, any more than they do to astute metaphysical investigations of the operation of reason. A rattlesnake, with its head cut off, will still to all appearance strike at his foe as though his head still retained its natural position. The muscular power which is predominant in life is not quite extinct and the throes of death excites those muscles to action—not a particle of instinct about it.

With our present knowledge we cannot discriminate between instinct and reason, only at a distance from the division line, any better than we can tell where goodness ceases and evil begins. When a pig is carried two miles in a tight bag and let out, and takes a bee line for the place, he came from, we at once say that is instinct, and we can discover no particular relation with any process of reason; but on the other hand when the old hounds remain by the runways of the hare, and let the young dogs do the running and wait patiently till the hare comes around we recognize a clear act of reason, entirely disconnected from instinct so far as known.

In conclusion, allow me to suggest that instinct is the primeval function of all the organs of the brain, and reason is the fruit of education engrafted on instinct. Certain it is that no child was ever born with educated faculties, and equally as certain, that some instincts can be detected soon after birth. Now, if some instincts are present, is not it a fair inference that every organ as fast as sufficiently matured in physical growth has its peculiar instinct? And it is well known that many of the faculties of mind are not capable of action until long after others have been clearly manifested. In man by virtue of the volume and power of nervous matter, he is *par excellence* a reasoning being, while many of the lower animals and insects are incapable of that cultivation which elevates man into a superior reasoning atmosphere. Do you ask then, why all this difference between man and brutes? The only answer which we can offer as embracing the truth is, that it is so, because God in his wisdom so willed it to be.

The Centennial.

THE CENTENNIAL.

THE following circular, received from the Chief of the Bureau of Agriculture, will supply some desired information in regard to the exhibition of fruits at the Centennial:

INTERNATIONAL EXHIBITION,
BUREAU OF AGRICULTURE.
PHILADELPHIA, March 28, 1876.

SIR:—The Centennial Commission are erecting a special annex for the exhibition of fruits. The dimensions of the structure, situated on the east of the Agricultural Building and connected with it by a covered way, are 180 by 200 feet, affording room for the display of 8,000 dishes of fruit at periods of special displays. Although the exhibition of pomological products will extend over the entire term of the Exhibition, affording most marked manifestation of the wide range of our soils and climates, still there will be certain periods especially designated for the display of particular fruits, which have special seasons, under the influences that more immediately pertain to the States near to Pennsylvania, and which, from their proximity to the point of display, will afford the material for large and expressive exhibits.

The periods decided upon for these special displays are as follows, though any of the fruits enumerated will be received for exhibition either preceding or subsequent to these dates:

Pomological products	May 16 to 24
Strawberries	June 7 to 15
Raspberries and blackberries	July 3 to 8
Southern pomological products	July 18 to 22
Melons	Aug. 22 to 26
Peaches	Sept. 4 to 9
Northern pomological products	Sept. 11 to 16
Nuts	Oct. 23 to Nov. 1

The Pomological Annex will also be used for the exhibition of vegetables, continuously, and at the stated dates of June 20 to 24 for Early Summer Vegetables, Sept. 19 to 23 for Autumn Vegetables, and Oct. 2 to 7 for Potatoes and Feeding Roots.

Tables and dishes for both fruits and vegetables will be furnished by the Commission free of charge, producers being simply requested to pay the charges for transportation.

In addition to the above there is to be a display of Autumn Honey and Wax, Oct. 23 to Nov. 1, and stated displays as we are informed by another circular just received, of:

Mowing Machines, Tedders, and Hay Rakes	June 15 to 30
Reaping Machines	July 5 to 15
LIVE STOCK.	
Horses	Sept. 1 to 14
Dogs	Sept. 1 to 8
Neat Cattle	Sept. 21 to Oct. 4
Sheep	Oct. 10 to 18
Swine	Oct. 10 to 18
Poultry	Oct. 27 to Nov. 6

The above dates may be favorable for the assembling in Philadelphia of Societies and Associations interested in the specialties above enumerated.

The right to amend or annul this circular is reserved. A. T. GOSHORN, Director-General.
BURNET LANDRETH, Chief Bureau Agriculture.

The Garden.

MANAGEMENT OF LAWNS.

THOMAS MCCLUMI, landscape gardener of Hartford, Conn., says of the management of lawns in America, that

1. The drier climate of America requires a deeper and richer soil than England, to maintain a continued green through the heat of the summer.

2. Terraces are properly objected to and denounced, as being unnatural and discordant with true taste.

3. Sewers, where necessary, and underdrains, are the first requirements when a lawn is intended.

4. The reasons for drainage are, access to the air, and the admission of the rains to pass through it, so that "it is treated like a dirty garment, and is washed, aired and dried."

5. Deep tillage and manuring are the foundation of success with American lawns—the soil to be uniform in texture and quality, to prevent spots—and trenching, keeping the rich soil at the surface, being essential.

6. Sow in freshly mellowed soil; and if there are many annual weeds, sow in autumn, that the winter may kill them; but if there has been much grading and filling, sow in spring after the settled surface has been smoothed. Steep hillsides are recommended to be sown in summer, to prevent washing; but we suggest a better way to secure the surface by the roots of a thin crop of rye sown the previous autumn, and then sow the grass among this crop in spring, cutting the rye away as soon as the grass is well established.

7. Roll in spring old or new lawns, to smooth the surface, and tiller the grass.

8. Avoid coarse or lumpy manure, and apply as a surface dressing either finely pulverized compost, or a mixture of guano and superphosphate of lime.

9. Keep the grass cut short from the first, to cause it to grow thick and form a dense carpet.

10. Never adopt the absurd practice of allowing the grass to grow tall, to cut for hay.

11. After many trials, the selection of grass for each acre is narrowed down to Kentucky blue grass, 2 bushels; red-top, 1½ bushels; white clover, 2 to 4 lbs. For dry and gravelly ground, increase the white clover, and depend less on the grasses. Sow the clover and grass seed separately, as the latter is lighter and cannot be thrown so far.

WETHERSFIELD RED ONION.

OUR English cousins appear to have just learned that there are good varieties of onions raised on this side of the Atlantic. The Agricultural Gazette, in referring to an old and well-known variety, the Wethersfield red, says:

During the past year the Royal Horticultural Society made a trial of the varieties of onion now in cultivation, at the Chiswick Garden, and perhaps the greatest novelty in the collection was the variety above named, which was sent for trial by Messrs. James Carter & Co., Messrs. Benary & Son of Erfurt, and Messrs. Hovey & Co., an American firm. It is officially described as being of free and robust growth. The neck is small, and ripens off freely. Bulbs large, flattened or oblate, very even and regularly formed, about 12 inches in circumference, and 2 inches in depth. The outer skin is of a light red color, and peels off freely, the inner coating being light purplish, shading greatly from the crown to the base, where it is very pale. The flesh is pure white, the outer surface of the coating only being colored. It is very firm, solid, and of mild and excellent quality, and keeps well. A remarkably fine and handsome onion from America; the finest type of red onion.

PRUNING MELON VINES.—Few persons practice pruning cucumber, melon, and other similar kinds of vines; still, it is just as beneficial if properly done, as the annual prunings of the grape and other woody plants. The pruning should be confined, however, to the pinching off of the ends of shoots only.

Insurance Department.

INSURANCE NOTES AND NEWS.

A Nuisance to be Abated.—Some years since, the course pursued toward its policy holders in this vicinity by the Continental Life Insurance Company of New York, was commented upon in terms which subsequent revelations of its conduct elsewhere showed to be only too mild. And now it appears, from the California papers, that the people of the Pacific Coast are being put through the same merciless ordeal. The language of some of the complaints is rather too forcible to be quoted, but the substance shows that while one set of men, supposed to be agents, went around proclaiming the insolvency of the Company, another set followed proffering to purchase the policies at prices far below their real value. The Coast Review mentions a paid-up endowment policy of ten thousand dollars ($10,000) due and payable in less than two years for which they offered first $5,000 and afterwards raised the bid to six, and another case where a laboring man sold an endowment policy of $2,000 due in two years for $500, believing the Company insolvent. There is perhaps no way in which this Company can, if these charges are sustained, be brought to account and made to treat its policy holders more equitably. The insurance laws and insurance departments take no cognizance of these things. The only course to be pursued is preventive not remedial, and prudent people will foresee the evil and avail it by insuring their lives elsewhere.

A Righteous Judgement.—The decrease of confidence in the integrity of the management of certain Life Insurance Companies has ceased to excite surprise. It could not be expected to long survive the abundant evidences that these Companies neither treat the insured with fairness during his life nor pay their widows after their decease, except at the end of a lawsuit when the minutest flaw can be found. A case recently decided by an upright judge furnishes a notable example of this kind. The company refused to pay the loss, because the man had stated in his application that "he had not required the attendance of a physician for several years," and the Company was able to prove, that on one occasion, several years previously, a physician attending his wife had left some medicine for him, he having a slight cold. The judges very properly decided against the Company, because "it would be the grossest injustice to allow the Company to escape the payment of the policy, because the applicant had forgotten that he had taken a pill five years before."

Diary of a Ruralist.

DAILY RURAL LIFE.

From the Diary of a Gentleman near New York City.

VALEDICTORY.

For several years I have each week put on my wig and retired to this corner of the RURAL NEW-YORKER for the purpose of having a free and easy chat with its readers. Perhaps my conversation has been more gossip than wisdom; but of this others must decide; still I will say that the many letters received addressed to "Old Daily" have given me much pleasure, and I hope the writers have been equally pleased and benefited by my answers.

But changes will come and, as the young folks say, "best friends must part," and although I do not propose to leave my friends belonging to the great "Rural" family, still circumstances compel me to come out of my half-hidden rustic domain and enter a more active and laborious field, or, in other words, take a seat at the head of the RURAL table and endeavor to do the honors incumbent upon the position.

With many thanks for the kind words expressed by the readers of the "Diary of a Ruralist," I now take off my wig, drop my *nom de plume*, and subscribe myself

Yours truly,

ANDREW S. FULLER.

Arboricultural.

A NEW VILLAGE—RED CEDAR HEDGE.

NEAR the village of Hackensack, N. J., a gentleman by the name of ZINSSEM has undertaken to build a village. The wide streets are graded — curb stones set — Maples and other trees planted, and a little triangular park, filled with Pines, Spruces and Arbor Vitæ, and surrounded by a showy wooden fence, is completed. Already seven houses are constructed—all in the Gothic style, the smallest of which costing about six thousand dollars complete. These houses are models of odd, though tasteful, architecture. The lots are perhaps 50x100—inclosed by well-grown, well-planted hedges. Among these we noticed several of the Red Cedar—Juniperus Virginiana—which seemed to us more effectual as a protection against animals and far prettier than the Arbor Vitæ so commonly used. These Cedars are thickly furnished to the ground—three feet high, and, instead of the faded olive hue of old Cedars in the field, are of a purple color far less dull than the lifeless brown of Arbor Vitæ during the winter.

Mr. Z.'s residence, a fine mansion, surrounded by extensive and rolling grounds that display a keen knowledge of landscape gardening—which, by the way, is his profession—makes a part of this village, and, indeed, a very conspicuous and attractive part. Adjoining are his evergreen nurseries, to which unusual care has been given, covering possibly thirty acres. It is from these that the evergreens are taken to plant the grounds about the new houses. Only those of large size are used, which, have been frequently transplanted, are easily removed with a ball of earth and scarcely know of the change. Thus the grounds about these dwellings are made to look as if they were ten years old instead of having been recently constructed.

But what we wished especially to call our readers' attention to is the use of young Red Cedars for hedges. Two of these seedlings a foot high, taken from the fields and cut back a little, were not recognized in our grounds the next season by several horticultural gentlemen, one of whom is quite distinguished as such. They are as compact as the Irish Juniper—more prickly—more spreading—more hardy—will bear the shears as well, and can be procured in many sections for the trouble of going a short distance after them.

It would be advisable to establish a nursery from which, after a second transplantation and cutting back, they could be removed to the hedge-row.

THE FORESTS OF THE WORLD.

LAND AND WATER gives some tables or estimates in regard to the area of land covered by forests in different countries which are probably very near being correct:

The forests of Europe are estimated as being 500,000,000 acres in extent, or about 20 per cent. the whole area of the Continent. In North America it is reckoned that 1,460,000,000 are covered with trees, of which 900,000,000 are in British North America. In South America forests occupy 700,000,000 acres. The total amount for the two continents of the New World and Europe gives 3,600,000 geographical miles. The proportion of forest land to the whole area of Europe, as above stated, is computed at 20 per cent.; in America, 21 per cent. Supposing, therefore, 20 per cent. to be the proportion in Asia, Africa and Australia, the grand total of the forests of the world cover a space of 7,734,000 geographical miles. The areas of State forests and woodlands are estimated at the following figures in the following European countries.—Prussia, 6,200,000 acres; Bavaria, 3,294,000 acres; France, 2,700,000 acres; Austria, 2,230,000 acres; Hanover, 900,000 acres; Wurtemburg, 469,087 acres; Saxony, 394,000 acres; England, 112,376 acres. The range in hight of trees varies from the miniature alpine willow of a few inches in hight to the stupendous Wellingtonia, which grows to a hight of 350 feet, although indeed it is stated that one of the eucalypti often reaches a hight of 420 feet in Victoria. In Sclavonia a tree called the sapin attains a hight of 275 feet, and the umbrella pines of Italy 200 feet. The California big tree is said to girth 96 feet. The destruction of woods and forests, however, is enormous, and in the majority of instances no attempts are being made for their reproduction. In South Africa, we are told, millions of acres are destroyed and made waste annually. In New Zealand the 30 per cent. of forest existing in 1830 had sunk to 28 in 1868 and to 18 in 1878, which rate of diminution, if continued, would result in the total destruction of the New Zealand forests by 1889. In America, in the United States especially, the consumption of timber is enormous, and although public attention has been called to the matter, and the United States statute of March, 1875, imposes a fine of $500, or a year's imprisonment, for wanton injury or destruction of trees, and also a fine of $200, or six months' imprisonment, for allowing cattle to injure trees "on National grounds," the yearly consumption and improvident use of timber is almost incredible. Although, says the Scientific American, there are no available statistics to show the exact rate of speed with which they are using up the wood supply, it is easy to see that it is being done with great rapidity. Taking the legitimate use of timber alone, industries based on its manufacture constitute the second in point of magnitude in America, and are only exceeded by the iron interest. About 150,000 persons are stated to be employed in producing sawed lumber alone; $143,500,000 are invested therein, "and 1,295,000 laths, 3,265,000,000 shingles, and 12,756,000,000 feet of timber are yearly manufactured." On the secondary industries based on the use of lumber as a raw material, carpentry, cabinet-making, ship-building, etc., millions of people are employed. According to Prof. Brewer's assertion, wood forms the fuel of two-thirds of the population, and the partial fuel of nine-tenths of the remaining third; add this to the former estimate and some general idea will be obtained of the enormous drain upon American forests that is constantly in progress. As a fact, it is well known that in 1871 as many as 10,000 acres of forest were stripped of their timber to supply Chicago with fuel, and yet no attempt is made to reproduce.

BEAUTIFYING COUNTRY HOMES.

A WRITER in the April Wide-Awake—an excellent, finely-illustrated monthly magazine "for boys and girls"—but instructive and interesting, we should say, to grown people as well—concludes an article entitled "Tree-Planting for Children," as follows:

"To those who live in the country upon farms, let me say—first, plant your trees about your homes, then about the farm. Learn that he who plants a tree beautifies to that extent his home and benefits every member of the family. A country home is never beautiful without trees, and the love which unites the family is robbed of one of its happiest modes of expression and sympathy. In the improvidence that has ever ruled in our country, in the struggle to turn all things into wealth, may be found the secret of our wintry villages—the desert fields—the cheerless, uninviting door-yards; and we marvel not that as the refining influences of education are felt, the Western woman cries out that she is "hungry for the sight of a tree!" Nowhere is the beauty and utility of tree culture recognized. Forests are cut down like weeds. The most serviceable natural hedges that shelter from the blighting wind are slaughtered for fire-wood. The lands of the homestead, instead of growing rich and more attractive to children,—richer in actual value as well as in the loving traditions that should heap up with every generation—which should finally stamp every spot of ground with some reverential or endearing memory,—are wholly bereft of their charms.

It is for you, young friends, to change this. Beautiful, tree-surrounded lands—the wooded hills—the shady slopes, are the nurseries in which love germinates and grows strong among the children of GOD—and they are the natural inspirers of reverence for him. The bleak, naked, cheerless homes and fields are the natural concomitants of sorrow—of exceeding poverty. They are fitting areas in which to expiate sins."

Pomological.

BELLE BONNE.

MR. A. B. ALLEN, writing to the Gardeners' Chronicle, says: "It is the richest and most nutritious of all our sweet apples. It is of a large, size, nearly that of the Pound Sweeting, and when ripe, of a golden green color. The juice is of such a high flavor that I have often seen it granulated into sugar when the fruit was baked, as it oozed outside of it on the dish.

"The Belle Bonne ripens about the 1st to the middle of October, and although called an autumn fruit, I have kept them in a cool upper chamber of my house where it did not freeze, and also in a well-aired cellar, into the following April. Although a little shrivelled so late in the spring, the fruit still retained its fine flavor. Simple as you think it, there are few dishes that the unvitiated taste among us better relishes than a baked Belle Bonne Apple, sliced with crumbled bread into milk. This fruit, also, with cream and bread-and-butter, makes a delicious dessert, and is far preferable to the best of pies, for it is equal to these in taste, and much more easily digested.

"I wish some of the London fruit dealers would make an importion of a few of the superior sorts of American Sweet Apples, for I am confident that they would soon obtain high favor among their customers. They can begin to do this in July, together with peaches and other fruits, in refrigerators."

APPLE CLASSIFICATION.

THE Gardeners' Chronicle, in a review of Dr. Hogg's Apple Classification, (of which we gave a synopsis in last week's RURAL) thinks that, however useful it may be as an aid to the memory of a professed pomologist, it is not likely to be of much service to an amateur, or a young gardener with only a limited knowledge of the varities of apples. It deems its publication premature, and its official recognition by the Royal H. S. yet more so. The Chronicle, nevertheless, expresses a sense of the obligation Dr. Hogg has conferred on pomologists by his "gallant attempt," and confesses that in this matter it is far easier to offer objections than to substitute a better scheme.

ABANDONING THE TREE BUSINESS.

A. D. WILLIAMS, in writing a caustic reply to an article which appeared a few weeks since in our columns, in regard to raising trees on the "high, dry, windy prairies," says that wild seedling forest trees are so abundant in Nebraska, and trees are so readily raised from seed on the prairies, that all the local nurserymen are abandoning the business. This is good news, if true, to everybody but the nurserymen. If Nebraska farmers are so well informed in regard to forest tree culture as to have no further need of nurserymen, they are far ahead of their brethren in other and older States.

CORRECTION.—Speaking of Beurre Superfine, the word *ten* should have been *two* in our last issue. We hope to eat of this fruit ere the trees have grown to be ten years old from transplanting.

Patrons of Husbandry.

OF WHAT USE WILL "GRANGES" BE TO ENGLISH FARMERS?

THE farmers in England are just now somewhat interested in studying the progress of the Order of Patrons of Husbandry in America, and the above question is being freely discussed by the agricultural press of Great Britain. In our last number of the Agricultural Gazette we find the following from one of its correspondents.

I have read Mr. Wright's letter in your last, and also one he has contributed to a contemporary. The latter he confines to an onslaught upon the editor of the Preston Chronicle who, I notice in that paper of to-day, returns to the charge and I think is justified in the following remarks:—"The most practical portion of our article, that which dealt the solid blows at the 'Grange' business, got insertion in the Agricultural Gazette (forming the main portion of a correspondent's notice), and if Mr. Wright felt himself equal to reply to it, he ought honestly to have done so in that paper, and then the reader would have had before him both our indictment and his defense. He does figure in the Agricultural Gazette, but contents himself with merely mentioning our article; not a syllable of defense. His reply is laid before a class of readers who have never had the opportunity of hearing the other side! He is unable to speak in our presence, but chooses to be very valiant and grandiloquent in our absence. The fact is, that all the weighty objections we urged are never dealt with at all by him." It certainly does look strange that Mr. Wright should occupy a couple of columns in your paper without ever a word of reply to the extract I sent you for insertion. If he would adopt a less wordy and less 'frothy' style, plain, practical people such as English farmers are might be able to get a clear insight into what it is really proposed the 'Granges' should effect in this country. Mr. Wright tells of much that they have done in America, but we want to know how they are to operate here in England; what void, left by the numerous associations already in existence, they are to fill in this little country of ours. And on this point I cannot do better than quote from my old paper (established the year I was born) the Preston Chronicle which says:—'The real question lies in a little compass:—What profit will an English farmer get from a 'Grange' that he cannot get in associations of his 'own choosing' free from all the superfluous additions from America? In what way will rituals, regalias, secret signs, passwords, and such-like things, profit our English farmers? When we speak of profit, of course we except the officials; they of course will profit by the useless trappings, and adornments, and ritualism, and semi-mysterious secrets. We again assert that in England such things are out of place, purposeless, unless in connection either with the growing of crops, or rearing or breeding of cattle, or churning of milk, or making of cheese, or buying or selling of anything. All these and everything connected with farming can be done better without than with them. If the 'Granges' have been useful in America,—and we never asserted to the contrary,—well and good; here we have no need for them.' Let Mr. Wright descend from his literary altitude and come down to talk in a plain, matter of fact way, we farmers are accustomed to. Let him cease to generalize and be specific, showing exactly what the 'Granges' will do that our National, County and Local Agricultural Societies, our County Agricultural Chambers of Commerce, our Co-operative Supply Associations, our Analytical Associations, our Farmers' Clubs cannot do for us. If he can point out precisely what all those associations are unable to do which the Grange is able to do, then our farmers will get some practical information upon the matter."

From the above it would appear that Mr. Wright who has gone to England to establish the Order, is being somewhat roughly handled, but this we suppose he expected, as prejudices against Yankee institutions and customs are not yet quite dead in Merrie England.

Entomological.

KANSAS AND LOCUSTS.

"Do you think Kansas will be subject to periodical or occasional visits of the Rocky Mountain Locust?" Prof. RILEY answers this question in the Weekly Tribune as follows:

The invasions of locusts into Kansas are occasional only, not periodical. Since 1820 there have been but two generally disastrous ones, viz., those of 1866 and 1874. You may safely conclude that the State will not suffer, on an average, more than every seven or eight years, and in future, by virtue of laws that have been enacted the past Winter, and of the experience gained since 1874, the people will be better prepared to cope with and subdue the trouble than they have been in the past. I should not advise you to push too far West; but throughout the larger part of Kansas you will find most desirable soil, a delightful climate, and an intelligent and enterprising people who have prospered in the past and will prosper in the future. As I answered a similar question in these columns a year ago last October, when a gloom hung over Kansas, and there was quite an exodus from the State, and as subsequent events have so far confirmed the opinions then expressed, I repeat a few lines then written:

"If I had any intention of settling in that State, I should choose this time of all others to do so: First—Because so many of her citizens have become alarmed and are willing to sell fine homesteads at a great sacrifice; secondly, because from the past history of these invasions her people may reasonably expect exemption from them for a period of eight, ten, twelve, or more years. The same argument, also, which would deter people from settling in Kansas would deter them from settling in the western part of Iowa, in Colorado, Nebraska, Texas, Minnesota, in short, in any of the country 500 to 550 miles east of the Rocky Mountains, from British America to Mexico; for this vast extent of country is more or less subject to locust invasions. There are, indeed, few parts of the country not subject to periodic misfortune, either from meteorological or entomological excesses."

Domestic Economy.

HOUSEHOLD ECONOMY.

MANY ladies have pieces of silks, ribbons and ties, etc., which are faded, but not much worn. These can be renovated and made to look very nicely indeed by dyeing, and pressing while they are yet damp. A cheap and pretty way is to dip them in an analine dye. Tie a very little rose analine in a thin cloth and dip it in a weak soapsuds until it is dark enough to suit. Then wash the silks and throw them in the dye. As soon as they are the right shade take them out, and, when partly dry, iron them, and they are ready for use. The articles look better if the dye is used as soon as made.

Another shade of red may be obtained in the following manner: For one pound of silk take three ounces of alum. Warm the solution and soak the goods an hour in it. Then take them out and put into another dye made of cochineal, three ounces; nutgalls, two ounces; cream of tartar, one-third ounce. Let them be in this dye one hour. When few goods are to be colored, the dye-stuff must be proportioned accordingly. Silks may be colored orange with a solution of annatto and soda.

The first and last recipes are very cheap, and it is very little trouble to use them. Many a ribbon that looks past all hopes, would do good service again, if washed clean, then dyed in this way. Schoolgirls, whose pin-money is limited, can, in this way, have fresh-looking ribbons, and I think a little rose color, or scarlet, is a charming addition to almost every young ladies' toilet, if fashion has, for so long a time, ruled them out and brought faded-looking colors into favor.—

MRS. LORETTA E. K. TURNER,
Fairfield, Ohio.

A HOUSE OF OUR OWN.

NEXT to being married to the right person, there is nothing so important in one's life as to live under one's own roof. There is something more than a practical charm in the expression of the wife: "We have our cosy house; it is thrice dear to us, because it is our own. We have bought it with the savings of our earnings.

"Many were the soda fountains, the confectionary saloons and the necessities of the market we had to pass, many a time my noble husband denied himself of the comfort tobacco, the refreshing draught of beer, wore his old clothes, and even patched up boots; and I, Oh, me! made my old bonnet do, wore the plainest clothes, did the plainest cooking; saving was the order of the house, and to have 'a home of our own' had been our united aim. Now we have it; there is no landlord troubling us with raising the rent, and exacting this and that. There is no fear harbored in our bosom that in sickness or old age we will be thrown out of house and home, and the money we have saved, which would otherwise have gone to pay rent, is sufficient to keep us in comfort in the winter-days of our life."—*Selected.*

A FEW RECIPES.

Fritters.—One quart of milk, one pound of flour, add seven well-beaten eggs, a teaspoonful of salt. Drop by the spoonful into hot lard and fry a light brown.

Family Cakes.—Yelks of eight eggs, and one cup of sugar, kneaded stiff with flour. Roll out thin, cut in fancy shapes, and fry in hot fat.

Acid Tarts.—Take one egg, one cup of sugar, one cup water, one and a half teaspoonfuls tartaric acid, one teaspoonful flour, one teaspoonful extract lemon, a piece of butter size of a walnut. Cook over steam, then fill the paste and bake moderately. Put the lemon in just before baking. Ice them if you wish.

Kisses.—Two pounds of powdered sugar, the whites of eight eggs, beaten to a froth, then add the sugar and flavor with lemon or vanilla. The whole should be beaten very hard a few minutes, then drop in oval shapes on white paper which has been slightly buttered, and place in a moderate oven. Bake to a pale brown, then place the flat sides together. L. E. K. T.

USEFUL RECIPES.

Articles on which flour-paste has been used are often injured by rats, even after the paste has become dry and hard. This can be prevented by mixing a small quantity of corrosive sublimate with the paste. Those who have tried this pronounce it harmless to persons handling it, and a complete safeguard against the rats.

French Toast.—Beat four eggs very light and stir them in a pint of milk; slice some bakers' bread, dip the pieces into the egg, then lay them in a pan of hot lard and fry brown; sprinkle a little powdered sugar and cinnamon on each piece and serve hot. If nicely prepared, this is an excellent dish for breakfast or tea—quite equal to waffles.

Lemon Pie.—Boil in one and a half quarts of water the juice, pulp and grated peel of two lemons. When it boils, add three heaping tablespoonfuls of flour, mixed smooth with cold water. Before it cools add two teacupfuls of sugar, three well-beaten eggs, a piece of butter half the size of an egg, and a little salt. Bake with under and upper crusts.

To make Hominy.—Put some concentrated lye in a kettle and dissolve, take five ears of white corn, shell, put into the lye and boil one hour, or until the skins will wash off; then wash four or five times, or until free from hulls and the taste of lye, then put it into a kettle of fresh water and boil all day. When wanted for use, put in a skillet and fry with lard.

Another Lemon Pie.—Make a very short crust and roll rather thick. For every pie take the grated rind and juice of one lemon, one teacupful of sugar, and the yelk of one egg; one cupful of sweet milk or water, one teaspoonful of starch, softened with a little milk; bake about an hour; beat the white to a froth; add two tablespoonfuls of sugar and pour over the top; bake slightly.

To Make Good Molasses Candy.—Two pounds white coffee sugar, one quart molasses sirup, three tablespoonfuls of vinegar; put in a small piece of butter. You can tell when it is boiled enough by dipping your finger into a cup of cold water, then into the candy, quickly back into the water, and if that which sticks to your finger is hard and snaps, the candy is done, and should be poured upon a greased marble or tin pan; add a little essence of lemon, then pull it till it becomes white.

To make Honey-Wine or Mead.—To a gallon of water, put 2 lbs. of honey and 1 lb. of sugar; boil for an hour, put in the whites of four eggs to clarify, and skim it quite clear while boiling; then put it into a clean tub, and let it stand for a week, putting in a toast with honey to make it work; then put in a cask, adding the peels of three or four lemons, let it stand for a month, and then if it is not sufficiently fine put in more honey, and let it stand longer.

Cold Slaw.—Cut up the cabbage very fine with a sharp knife, and sprinkle over it a teaspoon of salt. For a large dish, say a quart of cut cabbage, use two eggs, a piece of butter the size of an egg, half a teacup of water, and half a teacup of good vinegar. Beat the eggs, whites and yolks together, very light, add the water, vinegar and butter, and put all in a tin on the fire, stirring all the time until it is of a creamy thickness. Pour it hot over the cabbage, stir up well with a fork, and leave to cool.

Utilizing Old Tin Cans.—The Housekeeper gives the following suggestions:—Take off the top of the can, punch holes on the opposite sides near the rim, put in a wire bail, and you have a little bucket which may serve for a paint-pot, to keep nails in, or other handy purposes. Take off the top, cut to the proper shape, and fasten on a handle by means of a screw through a hole in the bottom, and a useful scoop may be made. A saucepan for small messes may be made by cutting down a can, leaving a strip to be bent at right angles and turned around a stick to serve as a handle. A coarse grater for crackers, etc., is easily formed from a piece of tin fastened to a board. The holes in the grater should be made with an old, three-cornered file.

Hygienic Information.

MEDICICES PRODUCING DISEASE.

DR. ROBERT WALKER, in a valuable essay published in the May Science of Health, forcibly states the objections to an indiscriminate or free use of drugs.

A temporary increase of action may be induced in any organ by exciting it, but that action cannot be sustained for want of power in the organ. It is a law of nature that only as much power can be put forth by any organ as that organ possesses. If by stimulation we get an extra effort to-day, a lesser action must be the result to-morrow. As power begins to be exhausted, action begins to fail, and an organ falls as much below its usual activity when a stimulant is withdrawn, as it was raised above by the stimulant; so that no permanent gain is had in stimulation.

A strong and vigorous organ may be excited to violent action by the use of proper medicament; but if the organ is weak, the degree of action, under the influence of the medicine, will correspond. At the first introduction of a medicine to an organ, the effect will be, perhaps, vigorous, because there is power to respond; but the vigorous action exhausts the power of the organ, so that to get the desired effect, the medicine must be increased from day to day, and often is increased until all power to respond is exhausted and death ensues. A cathartic, for instance, has been the usual drug-medical plan of inducing action in the bowels, as it usually succeeds if there is power in the bowels to respond; but if there is no power in the bowels, as in paralysis of them, or in death, there will be no action, no matter how great the quantity of medicine.

Sometimes the medicine used to "cure" a disease produces a contrary one; but more generally it adds to the existing difficulty. Cathartics were intended to remove constipation, and temporarily they may appear to succeed, but they prove to be a sure way of permanently producing the difficulty. Calomel, though it temporarily overcomes torpidity of liver, is the surest way to induce torpidity of liver. Diuretics, though they may increase the flow of urine, are sure means of reducing the power of the kidneys; Alcohol is reputed to be the great "strengthener" but none become so weak as those who continually use it. If you want a steady hand, drink a cup of tea; but if you want unsteady nerves continue its use. Tea is considered almost a specific for some forms of headache, but the sure way to produce headache is to continue a free use of it. And so on through the *materia medica*. Show me a drug-medicine that will apparently increase activity of an organ or set of organs, and I will show you one that will ultimately reduce activity of them.

The same objections that we offer to drugs are applicable to hygienic agencies, when employed on drug-medical principles. Water is a valuable health agency, and when used hygienically, no exceptions are to be taken to its use; but when used as a stimulant, excitant, tonic, sedative, etc., and as a great cure-all, it is little better than drugs. Steam baths may be useful, packs are excellent, the various water-cure appliances are commendable; but they should never be used to produce a condition that the vitality in the patient cannot sustain. Baths are to be employed to fulfill the conditions necessary to health; but purity of blood and all other results must come because of vital action, permanently induced and not through temporary excitement. The true province of all treatment is to develop and distribute vital power without exhausting it. Treatment should strengthen the patient, not weaken him; it should increase vitality, not reduce it; it should supply the conditions of health, but not stimulate or excite temporary action.

The attempt to get well by stimulating into health, is like an attempt to pull one's self into the upper region by *tugging at the straps of his boots.* The effort is like struggling in quicksand, the more you struggle the deeper you sink. If one is in the quicksand, it is very tempting to struggle, but he rarely struggles himself free.

HYGIENIC NOTES.

One ounce of the essence of bitter almonds will communicate an agreeable taste and smell to an ounce of the castor oil of commerce, and will not at all effect its medical action. Persons taking this medicine should order it to be thus flavored.

Dr. Cobbold states that cases of tape-worm are twice as frequent among males as females, the difference being explained, in his opinion, by the more cautious and fastidious habits of the female sex, as contrasted with males, in relation to the ingestion of underdone meat.

Dr. Lyon Playfair, at the recent meeting of the British Social Science Association, quoted Michelet's statement that, for 1,000 years, no one in Europe used the bath, and urged that it was no wonder that the epidemics of the middle ages cut off one-fourth of the population.

Pumpkin Poultice.—The best remedy I ever used for scrofulous swellings or sores is dried pumpkin, stewed in as small a quantity of water as possible and applied as a poultice. If the swelling or sore is on the limbs, apply it directly to the affected part; if about the head or neck, apply to the wrists or hands. One or two poultices in twenty-four hours will usually be sufficient.—A. M.

In the course of a Lecture on Mercury recently delivered at Vienna, the leg-bone of a man was exhibited, whose death had undoubtedly been hastened by mercury. On striking the bone heavily on the table, out fell thousands of little glittering globules, which rolled about on the black surface before the lecturer, collecting here and there into drops. This mercury had been absorbed during life, and proved the death of the absorbent.

A Mother Wants Light.—Occasionally there appears in the Hygienic column of the RURAL some information for young mothers, which comes very opportunely to me and, I presume, a great many others. I should like very much to hear from the old and experienced:—When they consider the proper time for weaning an infant child, what food should be given it, and any hints that would help me to bring my little boy through that process with health and strength.—Mrs. H. A. B.

Will some of our readers reply.—ED. RURAL.

Industrial Topics.

FARMERS' LIFE IN WINTER.

THE Journal of Chemistry in speaking of the lonesomeness of farmers' lives, or how some manage to live pleasantly and others unhappily under the same circumstances, says:

Probably not one of the industrial classes has been so directly, and we may say disastrously, influenced by modern innovations and changes as farmers, and this relates specially to the winter life and pursuits of this class. The active work of farmers and their families was not in any degree suspended in winter until within a third of a century. Indeed, the hardest labor of the year was performed by them in cold weather; they no more thought of housing themselves when the snows came than of living by begging and stealing. The country was comparatively new, and there were clearings to be made, logs to be cut, wood to be hauled, stone-walls to be built (for many of our common field walls were put up in the dead of winter); the ways were to be kept clear of snow obstructions; corn was to be shelled and taken long distances to mill; the cows, oxen, horses and sheep were to be fed, and the pigs to be looked after.

There were no idle hours for the farmers of a generation ago in winter; and the same may be said of the women and children indoors. All was hurry in the kitchen from early daylight to sunset; and when the evening darkness came on the knitting, spinning, darning and patching continued until eight or nine o'clock, when all went to bed. The clothing worn by the family was of domestic make, fabrics of linen as well as of wool. The wool was taken from the backs of the sheep, scoured, carded, spun, woven and dyed, on the farm premises. The bark of the butternut afforded a favorite tint of yellow-brown; and chipped logwood and copperas bought of the distant grocer, gave the inky black suited to garments for Sunday use. The hum of industry never ceased in the dwellings of the earlier race of farmers, except at night and on "Lord's Day." And they were happy, healthy, contented; but little money was needed, they had few artificial wants, and their ambition was confined to the narrow limits of their homesteads.

But a great change has occurred, and now farmers have become, so far as winter life is concerned, a kind of hibernating animal, like the bears and frogs in the woods and marshes. Coal has taken the place of wood to a large extent even in the country, so there is little chopping to be done; there are no walls to build, no heavy timber to haul, but little corn to husk or shell, few sheep and cows to feed, and but little marketing to do. When the first snow storm spreads its white mantle over the face of mother earth, all is hushed and silent around most of our farm homesteads. The crowing of a solitary cock, perched upon the barnyard fence, seems to be almost painful intrusion upon the general silence. As regards the family, the boys are not seen around the chopping-block, or on the hay-mow; the girls are seldom seen at the windows with their knitting work, or in the snow path leading to the barn, with milk-pail in hand. The boys are away at school, or serving as clerks in some city store; the girls, if at home, sit listlessly about the red-hot parlor stove, discontented, lonely, with "nothing to do." And really, there is very little they can do; there is no wool to card or spin, no flax to run into threads, no industrial labor that will give them even a small return in ready money. The large factories do all the spinning and weaving, and make all the bonnets, stockings and under and outer garments; and willing hands in isolated homes find no remunerative employment. The great want of the age is some industrial labor which can be performed at farm homesteads, and the dwellings of the poor, so that a little money can be earned at home. In the progress of events, we have the expectation that some new avenues of industry will be opened in this direction, and when this occurs a blessing will rest upon thousands of happy homes.

The discouraged state in which large numbers of our farmers live is not favorable to health or happiness; neither is it favorable to success in any direction. Winter in the country, in New England and the other Northern States, is really quite a severe ordeal to pass through; but it can be made a time for mind improvement, and also a time of preparation for the active labors of the summer. Every good and useful book a farmer reads is an acquisition, the value of which cannot be stated in dollars and cents. Winter is the time to improve the intellect, the time to lay up those stores of knowledge which will serve in old age, when the eyes are dim and the hearing impaired, as food for thought and meditation. In the altered condition of things which prevails in this age, farmers must seek new modes of occupation in winter, and every one who seeks is quite sure to find.

THIRD CLASS MAIL MATTER.

MEN are elected to Congress for the supposed purpose of enacting laws which will be of benefit to the masses. Class legislation is deprecated by all honest men, and in a Republic, "The greatest good to the greatest number," is one of the fundamental principles, which should never be lost sight of in carrying out the wishes, or needs, of a free and independent people.

But much as we dislike to find fault with our representatives in the national legislature, the thought must occasionally find utterance, that a great amount of stupidity is frequently exhibited by men from whom we have every reason to expect a moderate show of common sense if not of wisdom. During the past few years there has been an almost continual tinkering of the postal laws, resulting in anything but satisfactory regulations or financial gain to the Post-Office Department. In fact, nearly every change, instead of being a progressive one, has proved quite the reverse, and all because those most directly interested in any proposed modification have not been consulted.

If seeds, cions, and plants, are to be transported in the mails, who would be better qualified to say how such articles should be packed or the rates most likely to be remunerative to the Government, than seedsmen and nurserymen? But we are free to say that these gentlemen have never been consulted or their advice asked, in regard to a subject in which they are personally interested; for the most ignorant novice in such matters would not suggest the sending seeds through the mails in an open, unsealed package, any sooner than he would undertake to carry water in a sieve.

It is however unnecessary at this time to review the various bills introduced and passed during the last twenty years, regulating the carrying of mail matter, as it is well known that nine-tenths of them are unbecoming of the financial abilities of a sidewalk huckster who sells apples at a cent apiece, or two for three cents. Our wise legislators, it seems, did try to grasp this apple problem a few years since but failed, although they aimed at it in fixing the rates of postage on circulars, in allowing three in one package at the single rate of two cents.

The people were perfectly satisfied with the previous rates of one cent each, but the tinkers at Washington gravely told the "dear people" that the rates were too high and must be reduced, and this is the way they did it:—Single rates were advanced to two cents for each circular, with permission to send three for the same, the originators of this scheme not knowing that a majority of tradesmen only publish one catalogue or circular, therefore would have no occasion to send three of the same to one address. Now the sidewalk huckster could have told the wise men of the nation that the better way to have made a reduction to large dealers would have been to have kept the rates of one cent for a single circular and two cents for three.

Something like a year since the postage laws were again tampered with and the rates on third class doubled, and we are bound to say for no other good reason than that certain express companies desired to obtain more patronage if seeds, plants, cuttings, and similar articles were excluded from the mails, or the rates were advanced to correspond with the tariff charged by themselves. The result of this change was immense losses to dealers as well as their customers, and the express companies alone reaped the benefit, the hundreds and thousands of persons who reside far away from railroads and express offices, being compelled to pay an exorbitant rate of postage or go without many greatly needed articles.

Now, while we are not in favor of admitting boots, shoes, and all kinds of merchandize to be transported through the mails at rates of postage which are not remunerative to the Department, still we are in favor of low rates upon seeds, plants, cuttings, and specimens of natural history, as well as letters, books and periodicals, whether the Government makes any money out of it or not. In fact, the Post-Office Department is a convenience and necessity, and if it fails to be self-supporting, the people make up the deficiency, hence it is not material whether they pay the amount directly in the form of postage or taxes.

As the law now stands, a man residing in Colorado who may desire to exchange botanical, entomological or other specimens of natural history with some friend in the East or institution of learning, is compelled to pay three times as much postage on said specimens as he would on a dime novel. The law makes just this discrimination against the transportation of all specimens of natural history as well as seeds and cuttings.

If our young folks desire to exchange trashy novels, the Post-Office Department will aid them to do so at the low rate of three ounces for one cent; but if they are pursuing a line of scientific investigation in any branch of natural science and desire to exchange or send through the mails minerals, shells, microscopical or other specimens, they must pay postage at the rate of one cent per ounce. This is what we call wisdom with a vengeance, or a way NOT to promote the dissemination of useful knowledge.

DAIRYMEN OF THE ALPS.

CHAS. L. FLEISCHMAN years ago, in writing of the dairymen of the Alps, said: When the sun has fairly set, and night begins to spread its sable wings over the world, the dairyman steps under the door of his humble dwelling and sings through a wooden funnel a choral melody, yet a prayer to his Maker. These melancholy sounds serve also as a guide to the belated herdsmen, as an invitation to the poor but hospitable hut of the mountaineer; and at that signal every one in hearing bends his knees, like the inhabitant of the villages below at the sound of the chapel bell, saying their evening prayer.

The dairyman has finished his day's work—made the cheese from the evening milk and cleaned the vessels of the dairy—and retires to the hayloft, wraps himself in his blanket, and snores in harmony with the pigs which take shelter near the hut on the outside.

Scarcely have the first rays of the sun illuminated the highest points of earth's rugged crust, the mountain lark sings its morning hymn, and the dairyman leaves his nest, swarming with fleas, attends to his cows, makes cheese from the morning milk, sends the cattle to the pasture, brings the cheese made the day before to the cheese-lofts, cleans his dairy fixtures, and after a frugal breakfast, he looks about to see what he can do to keep his pasture clean and safe, removes stones, distributes the dung, and builds walls or fences near precipices to protect his cattle from danger. Such is the occupation of the dairyman of the Alps, which goes on regularly every day, never interrupted by any cares whatever, except by sickness of some of his assistants or cattle, or from the loss of a cow by falling over the side of some dangerous spot.

He remains a stranger to the doings and undoings of the world below, and he may thank his Creator that civilization never will reach so high up, but will ever leave a place where man can be free and live retired from the misery of the onward progress of time.

RURAL NOTES AND QUERIES.

Western Lard.—The consumers of Western made lard may not enjoy the statement made by a correspondent of a Chicago daily newspaper, wherein he says that in the County of Sangamon 15,000 hogs have died of cholera; these were brought into Springfield and rendered, one firm alone making 1,000 tierces of grease from diseased animals. A correspondent of the Country Gentleman says that "What is true of Sangamon County is true also of several hundred other Counties in the cholera regions, so that the cholera-tainted grease or lard, instead of being measured by the 1,000 tierces, should be measured by the fifty or the hundred thousand. Considering the high price of No. 1 lard and the general debauchery in trade, politics and morals, it is not at all improbable that a considerable portion of this tainted grease will go on the markets of the world as No. 2 lard, "for cooking purposes." This is a rather nauseating state of affairs for those who depend upon the market for their supply of lard; still, for the sake of the good name of humanity, we hope it is not as bad as the above correspondence would make it.

Post-Office Department Outwitted.—A certain seed company doing business at Detroit, Mich., becoming dissatisfied with the high rates of postage on third class matter, adopted a little financiering which should teach our Post-Office Department a good lesson. The postal arrangements between the Canadas and the United States are that each is to carry all mail matter received from either side without extra charge. The seed company referred to above took advantage of this state of affairs and sent their catalogues across the river in bulk, paying the duty, then sent them back to their customers in the United States, stamped at Canadian rates of postage, our Post-Office Department being obliged to receive and distribute them without any further advance. It is said that the company saved about $2,000 by the operation, and we hope they did, for our Government officials need some such practical lessons in finance to sharpen their wits.

The Garden (Eng.) appears to have arrived at a similar conclusion in regard to wood pavements as some persons in this country, for it says:—"One of the most offensive nuisances and air-poisonings is caused by the laying down of the wood pavement, now becoming common in London. This is all the more to be regretted because the wooden pavement is not so lasting, or on the whole so satisfactory as the best asphalte. For cities, so far as our present knowledge goes, nothing equals the asphalte. When kept free from dust, &c., by aid of the hose, it is also most conducive to the purity of the air and consequently of health."

Annual Meeting of the National Ag. Congress at Philadelphia.—X. A. WILLARD, Dairy Editor of the RURAL NEW-YORKER, has been engaged to deliver the address on "American Dairying," at the Annual Meeting of the National Ag. Congress, which occurs at Philadelphia Sept. 12–14, 1876. The Secretary, Prof. G. E. MORROW of the Iowa State Ag. College, writes that the indications are that the meeting will be successful and of great interest, as it will be somewhat Centennial in cast, and all the leading agricultural industries will be represented.

New Potatoes from Florida.—We are indebted to B. K. BLISS & SONS, the well-known seedsmen of this city, for our first "mess" of new potatoes. The variety which put in its appearance so much ahead of the usual season, is one of the novelties being sent out by Messrs. BLISS under the name of "Alpha," which we should judge is likely to prove a very early and fine sort. The specimens we received, although dug so early and sent a long distance, cooked as dry and mealy as the best of our Northern grown potatoes when fully ripe.

RURAL BREVITIES.

SHEEP sales are said to be very brisk in Vermont, 1,000 rams being sold in one neighborhood this season.

A MAN who does not carefully con the advertisements in a newspaper, misses a fund of information likely to be useful as well as instructive.

THE Chinese and Japanese prefer night soil to other kinds of fertilizers, rejecting the fresh dung of cattle because it is likely to contain weed seeds in greater or less abundance.

WIRE WORMS in gardens may be trapped by placing slices of potatoes slightly covered in the soil. These should be visited every morning and all the worms collected underneath gathered up and killed.

IF any of our readers have any curiosity about Pure German Millet Seed, it would not be time wasted to look at the announcement of H. JOHNSTON & SON, Lebanon, Ky., in another column, who will be happy to furnish information gratis.

AT a late meeting of the California Academy of Sciences, a member called attention to the Golden Chestnut (*Castanea chrysophylla*), trees of which he noted in the State as being from 100 to 200 feet high, four to six feet in diameter, and with stems from 50 to 70 feet high to the branches.

THEY have had a shower of flies in Canada—not house-flies or horse-flies, but real dragon-flies, such as boys call devils' darning-needles, and with which they are said to sew up the ears of bad children who go near ponds, where they are likely to fall in and get drowned. We hope for the boys' sake that the Canada dragon-flies will not cross the St. Lawrence until after the fishing season is over.

DR. ENGLEMAN of Missouri, at a meeting of the St. Louis Academy of Sciences, exhibited a section of the stem of *Juniperus Californica* variety, which, by the rings, is 127 years old. The largest growth in ten years had been about four lines; the smallest for the same period about one and a half lines; the average growth for the whole 127 years was about one-fifth of a line. Interesting as a curiosity, curious as a plant, but not plantable for profit.

BUSINESS NOTICES.

CONSUMERS, when purchasing White Lead, should bear in mind that much of it sold as pure is adulterated. Every package of Eckstein, Hills & Co.'s **"Phœnix" brand Pure White Lead** is warranted free from adulteration.

Coughs and Colds.—Sudden changes of climate are sources of *Pulmonary and Bronchial affections.* Take at once "*Brown's Bronchial Troches,*" let the Cold, Cough or Irritation of the Throat be ever so slight.

MAY.

My Sweetheart is coming!
Make broad the highway!
My sweetheart is coming,
My beautiful May!

Keeping time to the rhythm
Of each rolling year;
One note in the music,
A note sweet and clear.

I hear it;—she's coming
With glad, flying feet,
O'er mountain and valley
Her lover to greet.

And what will she bring me
From lands far away?
O what will she bring me,
My beautiful May?

Flowers in her bosom,
And sunshine and song;
Will she bring, Oh! my Queen!
Who has tarried so long?

Then hasten, my Sweetheart,
And make no delay,
Your lover stands waiting,
O beautiful May! B.

The Story-Teller.

FOR THE LAST TIME.

BY DUDU FLETCHER.

DEAR MR. DESMOND:—I knew I could trust you not to misunderstand me! I thank you a thousand times for the way in which you have accepted my letter; but why—why ask me now to keep that old promise of mine? You, a man, can afford to speak with a sneer of the "bonds of conventionality;" but I——

My window has just blown open and a flood of sunshine has rushed in, chased by the soft spring wind. The world is warm, and smells of violets. After all, why not take that "one last ride" with you? Why not bid a pleasant farewell to my Bohemian days? Let our little Roman world talk, if it pleases! I *will* go! Get me my favorite Olga, and let the horses be ready to-morrow morning at eight o'clock. I take you at your word and go, feeling quite safe from any allusion to the past. Your friend as long as you like,

ELEANOR HARDY.

"Late? Of course you are late!" said Jack Desmond, at 8½ o'clock the next morning; "but why should you mind that? Punctuality is at once the most masculine and the most unsympathetic of virtues; how can punctuality and Miss Hardy be anything but incompatible terms? Mind you are light with your curb to-day, Miss Hardy. Olga has not been out for a week." He swung himself lightly into the saddle; the two horses threw up their heads impatiently, scrambled down the bank by the roadside and started gaily off in the morning sunshine.

Eleanor glanced shyly at her companion. "Is there much of this pavement?" she asked, with an elaborate attempt at establishing their conversation on an easy and impersonal footing; "I always feel a wild desire to gallop my horse over the stones, in spite of every one's warnings. Look at that dear Olga! she finds it as tiresome as I do, and is quite longing to make a bolt, at the risk of breaking both our necks!"

"As you are strong, be merciful," said Desmond, lightly. "Olga and yourself are both in my charge to-day, please remember, and Mrs. Van Cortlandt will hold me responsible for all your past misdemeanors. Try to curb your impatience as well as your horse until we have reached the church," he added, pointing forward with his whip; "there's a glorious place for a canter after that."

In a few moments more they had passed the rich facade of San Paolo fuori delle Mura, and had clattered along the stone colonnade; they settled themselves back in their saddles, the road gave a sweep, and in another instant the horses were cantering wildly over the strip of short, daisy-whitened turf that borders the foot-path.

"Ah, this is what I like!" said Eleanor; "now we are out of Rome!" The fresh morning wind blew back the blonde masses of her hair and brought a peach-blossom bloom to the pale, flower-like face. "Isn't this glorious, Mr. Desmond! I feel like an escaped prisoner. Think of all the poor people who are just getting up to dismal and tepid cups of coffee all over town!"

"Dismal? Perhaps! The sun is overcast enough to make an apartment in a narrow street the reverse of cheerful, this morning; but why should all the coffee be tepid, Miss Hardy? Is there anything in your being on horseback so early to account for such a change of temperature in everybody's breakfast? Or do you refer figuratively to the blight under which Rome is lying when you leave it?"

"You are pleased to be satirical as well as literal-minded, Mr. Desmond," retorted Eleanor. "As though you could hope to understand what I feel at the prospect of forty miles on horseback and not a call to make, not a note to answer, not a stupid person to entertain and, crowning joy of all, the whole day in a riding-habit, without one's dress to change!"

"But how you will miss your aunt!" said Desmond. They looked at each other and both burst out laughing.

"That is exceedingly wrong of you," said Eleanor, becoming suddenly grave. "I only laughed because you took me by surprise. My aunt is very good."

"Very," said Desmond, quickly; "I am sure no one can doubt that. Mrs. Van Cortlandt is a most interesting companion and an invaluable authority in case a card is not returned in time, or the Van Rosevelts of Albany are in danger—horrible thought!—of being confounded with the *old* Van Rosevelts of New York. There is nothing narrow-minded, of course, in such a view of life."

"Indeed, that is more than can be said for your ideas of life," said Eleanor, flushing a little as she spoke. "Artists, and people generally who go in for being 'cultivated,' always pretend to be such broad-minded, tolerant men, and I don't believe I ever met one yet who could endure for half an hour a conversation on subjects of general interest without being bored—yes, and showing it, too!"

"Subjects of general interest?" said Desmond, inquiringly; "and this includes all the artists and *litterateurs* of your acquaintance? Now do you know, Miss Hardy, I've always noticed that a woman's most sweeping attack, her most crushing generalization, is aimed at some particular man. I wonder if it is only my guilty conscience which makes me remember that last reception at the Whytes, where I had the pleasure of meeting you, and where that pretty Mrs. Dulman's dress, appearance and manner, and the momentous question as to whether that exquisite complexion of hers is owing to cosmetics or to nature, were reviewed and criticised all the time we were there, to the exclusion of those other 'subjects of general interest' by which I and my unlucky friends are supposed to be bored?"

"That is not fair, Mr. Desmond!" cried Eleanor; "you select a—well, I will admit it!—a particularly silly conversation, and speak of it as of the type of what we talk about in society. You artistic people, as I said before, claim to monopolize all the tolerance, and yet you shut yourselves up in your shells like a small company of oysters who should agree together to consider all the other fish and sea-things like so many interlopers in their domains! You build a Chinese wall about yourselves, and the rest of the world become mere outsiders. Now I, for one, am a Philistine; and I'm not ashamed of it, either! I love the world. I belong to it, heart and soul. I have not made society, and I can see a hundred points in which I would alter it if I could, but I can't, and so I accept it and find the world a pleasant place, as it always is to the people who try to please it."

"Be witness, Miss Hardy, it was not I who made the discussion a personal one! May I ask, though, how it is that with such strong convictions you are not always of this delightfully optimist opinion?"

"Because I am 'young and unreasonable,' as my aunt says, I suppose," said Eleanor, lightly; "I dare say it will pass with time!"

"I dare say it will," assented Desmond, gravely. "Honesty of impulse does not live long in the atmosphere of a ball-room. You must have had an uncommonly large quantity to start with."

"See here, Mr. Desmond," said Eleanor, facing square round in her saddle, "I won't pretend not to understand what you mean. I've that much honesty left, whatever you may think," she went on, indignantly. "You imagine because"—she hesitated—"because I may—well, probably I shall—marry a man older than myself, and very rich, that I can have no good left in me. It is not true! You are hard, you are unjust to me in every thought of yours! Don't you suppose I know myself, my own wants and needs, better than you can? Talk of giving up 'all for love and the world well lost' to a girl accustomed to a simple life, and what wonder if she listens to you, with everything to gain by it and nothing to peril? Talk of it to a girl in my position, brought up as I have been and, if she is honest, she will answer you as I do; I am accustomed to extreme luxury, I have no fortune of my own, my happiness is centered on things which are offered me freely at the hands of a man for whom I have the utmost respect and who I believe is very fond of me; why should I not accept them?"

"Why not, indeed?" echoed Desmond.

They rode on a few minutes in silence. His acquiescence had suddenly shocked and puzzled her. She had expected to be argued with vehemently when she threw down her gauntlet, and now the gage of defiance was returned to her with a polite bow by her adversary. Eleanor did not understand it and, being disconcerted, began to lose her temper.

"It is so unjust!" she said, speaking very fast; "a man will give up anything, will work all his life long to win a position and become wealthy, and you will all applaud him to the skies for doing it. And yet, let a woman have the same craving for power and influence and ease, let her have an ambition to be more than a cipher in the sum, let her bring into real life one out of the countless lessons she has received since she left the school-room, let her too make an effort to gain her ends, and where will you find epithets with which to qualify her unwomanly heartlessness, her mercenary lack of sentiment!"

Desmond struck his boot absently with his whip and smiled. "There are just a few men in the world who do not count money as the crowning good of life, and who still cling to the exploded old belief that women, by the mere fact of their womanhood, are better, nobler, purer than they," he said. "And really, Miss Hardy, you exaggerate! Who ever gave anything but praise to a girl who made a 'good match' in society.

The gentle mockery of his tone stung her to the quick. It is one thing to dismiss a lover, but quite another to have him accept his dismissal with equanimity. The woman who does not feel a secret joy and pride in being still "the one fair woman in all the world" to the man she has just refused to marry, and does not think of him with a tender, regretful approval, is as rare, perhaps, as the man who is not privately convinced that were merit the only test he would never meet with want of success. A pathetic "it might have been," the memory of some hour when it did not seem so improbable that this was to be the companion of her future life, casts its halo around many an otherwise commonplace rejected lover. Until he becomes consoled again, a man never finds a warmer (if need be, a more unscrupulous) partisan than in the woman who has just assured him she was indifferent to his love.

A quick resentment of Desmond's self-possession seized Eleanor. "Very well! we will see if I cannot make him show he cares, before the day is over!" she thought revengefully. And she smiled innocently and sweetly the while, upon her intended victim.

"Don't let us discuss," she said softly; "I never get the better when I quarrel with you, and so"——The blue eyes looked up to his appealingly and ended the sentence for her. She laughed and touched her horse with her whip; they dashed on up the hill, racing the fleet, light cloud-shadows that flitted over the fresh green of the fields. The sky had the pale, watery blue of an April day. Little gusts of the warm spring wind went and came, now bringing puffs of wild, faint fragrance, now wandering off until lost among the blossomy fields. On either side of the road a rose-flushed shower of perfumed snow covered the bushes of flowering thorn; the birds in the hedge-rows were twittering and trilling under the shelter of the small green leaves, every now and then a hurried rush of wings telling how the tramp of the horses had startled some brooding mother-bird from her nest. Behind the riders the sullen, tawny Tiber rolled slowly by, its wicked and reticent-looking waves the only thing in sight that did not seem to feel the gentle influence of the spring sunshine.

"Did you ever notice, Miss Hardy," asked Desmond, "how differently the Tiber flows from other rivers? On the surface it looks smooth enough; indeed, the strong tide hardly ripples the yellow water; but watch it a little while and you will discover that it moves with a deep pulsation, a regular rhythmic effort, as though the fierce old heart of old Rome were still beating under its waves."

"It is a cruel river, and always seems to me as though it were smiling grimly at the thought of the next inundation it means to have," said Eleanor. "What do you say to resting a moment, Mr. Desmond? I'm beginning to be a little tired." They dismounted and Jack led the horses while Eleanor plucked long wreaths of the white stars of the blackberry vine and twisted them about her hat. "What a symbolical crown—thorns hidden under flowers!" she said, with a half sigh. They sat down a moment under the hedge and listened in silence to all the sweet, small noises of the spring.

"I should like to be a gypsy!" said Eleanor.

"A gypsy *a la* Watteau, with pink satin boots and a chateau to sleep in, you mean, of course," said Jack.

Eleanor laughed. "Well, yes, I suppose so! I don't think I should like the smoky fires and short rations of real gypsydom. I love the country, but then, my ideal landscapes are always landscapes with well-dressed people in the foreground."

"And there is Ostia!" said Desmond. "I wonder if Queen Eleanor will deign to alight and have some lunch?"

"Her Majesty is graciously pleased to be most plebianly hungry," said Miss Hardy, laughing. "I shall make a state question of it if we find nothing eatable at that most unpromising of inns!"

They rode into the courtyard under a queer, pointed stone arch. Half a dozen peasants looked up from the bottle of wine they were drinking at a table outside the door; two or three fair-haired, ragged children ran up to see the beautiful lady dismount. Eleanor gathered up her trailing skirt about her and entered the kitchen. It was a high-celled, smoke-blackened room; at one end was a large brick fireplace; around the wall were ranged rows of tables and chairs; five or six hens wandered composedly about the stone floor, in supreme indifference of the old gray cat who came up purring and rubbed against Eleanor's feet. She stood tapping the table with her whip, the image of amused perplexity. "But where shall we eat?" she said.

"There is a room up-stairs," suggested the hostess. "Clean? Blessed Saint Philomena! other than clean! But will the illustrious signora object to going up a ladder?"

Eleanor burst out laughing. "Oh, Mr. Desmond!" she cried, "how can I ever thank you enough for bringing me here? Fancy my aunt's face when I tell her of the ladder!"

The room up-stairs was scrupulously clean and bare. The only ornaments of the whitewashed walls were a brass crucifix and a cup for holding holy water, but the table and wooden benches were spotless, and a cool breeze came in at the one small window. Their ride had given them an appetite, and they did full justice to the provisions that an extended experience of Campagna inns had induced Jack to send down the day before.

"As though you had been sure of my coming with you!" said Eleanor, half pleased and half provoked at the attention.

Jack laughed. "Do you imagine I could not ride down to Ostia without the protection of your escort?" he said, teasingly. "I am sure I could have found some one to take pity on me, had you been unkind enough not to come!"

The words in themselves were nothing, but the mere fact that he could speak jestingly of her gave Eleanor a curious feeling of blank surprise. He had accepted the situation, and she instantly resented his having done so; she felt injured that having once offered her his love he should so soon have become resigned to her rejection of it. With an odd, feminine inconsistency, the firmer she had been in her refusal of him the more she had secretly gloried in what she had imagined to be the strength of his passion. There had been a bitter-sweet satisfaction to her in the sacrifice of such a devotion on the altar of her worldly advancement. It had been a sort of test in her eyes, for she had argued with herself, if I can give up such love as this so easily, surely my future life promises me only pleasure. What is there left for me to renounce, after this? Ignoring her own insistence on the fact that all allusions to old times were to be banished from their conversation, she tried to lead Desmond into a vein of half-tender, half-cynical remembrance, and see if even yet she had not the power of awakening the dormant fires of a passion she had held but lightly while it was still hers. In other words, she was a woman, and could pardon her old lover anything—except his forgiving her.

"How long it seems since I have spent a day out of Rome!" she said. "The last time was at Porto d'Anzio. Do you remember the day we were there, Mr. Desmond? I have never forgotten it. I can shut my eyes now, and hear quite plainly again the wash of the waves on the beach. Do you remember the moonlight on the water, coming back?" she went on dreamily; "and

'How near to the stars we seemed that night,
We two, on the sands by the sea'?"

Her voice had sunk almost to a whisper, her cheek was resting on her hand, she seemed looking far back into the past with those sweet, wistful eyes. Desmond glanced at her a moment, his face turned very pale, and his hand clenched hard under the table; but his voice was calm and he smiled quietly as he answered,—

"I remember quite well; pretty little place, that Porto d'Anzio is! By the way, it's a curious thing, do you know, to see with what an instinctive sense of the appropriate people always quote Owen Meredith when they speak of dead and gone flirtations. 'The Flirt's own Laureate' he should be called. There is about as much sham strength and false sentiment in the one as in the other, I suppose," he added with a reflective air.

"Really, I cannot say; I am not good at literary discussions," answered Eleanor, coldly. "I am not in the habit of dissecting the things which please me. This room is really getting to be very hot and disagreeable; shall we go?"

The wind had changed, and the blue April sky was hidden by a gray veil of sirocco clouds.

"Now, Miss Hardy," said Desmond, "Ostia is all before you where to choose. About a mile down that road is the wood of Castel Fusano; that pile of earth and stones you see there is the entrance to the excavations. What is your choice, sunshine or silence? Will you spend an hour under the pines, like an irresponsible Bohemian; or shall we improve our minds and 'do' the ruins, like conscientious tourists? By the way, did you remember to bring your conscience with you?"

"No; I left it in Rome with my aunt, for safe keeping," said Eleanor, demurely; "and as for your ruins, Mr. Desmond, you may visit them alone, if you please. There are better things to do with a spring day than to spend it in a hole under ground, like an invalid rabbit!"

They turned down the quiet, grassy lane that leads to Castle Fusano. A tender, half-pathetic color brooded over the landscape; even the stately old pines seemed to bend their proud heads to the breeze and murmur half-forgotten words to the lullaby of the spring wind.

"How I love pine-trees!" said Eleanor; "to enjoy them fully one should not look at them, but lie with one's face to the grass and only hear their grand old chant overhead."

"The pines of Ostia have a song all their own," remarked Jack. "You know all this ground about here was the open sea in the time of the Romans. I always think the trees remember the dash of the waves, and to me their song is like the breaking of the surf far away on the shore."

"Look at my daisies," said Eleanor; "I am afraid it is going to rain." The crimson and white petals of the flowers she held were closing fast.

"Do you know that the Campagna daisies look like the Roman girls?" asked Jack. "See how different they are from the little English daisy, or the delicate rose-and-white *paquerette* of France. In spite of their white petals, these are not a blonde flower. They have a bolder look, a deeper dash of red, a straighter, taller stem, and that same calmly-scrutinizing, wide-eyed, unabashed gaze you see in the *contadine*. They have a curious association for me, too," he added, taking up Eleanor's bunch as he spoke. "Daisies always remind me of the first time I fell in love."

"Merely because they are innocent spring things, like lambs or veal," asked Eleanor, mockingly, "or because your *inamorata* wore them in her hat? I think I can see her now. I know your tastes so well, Mr. Desmond, I can guess at what your first ideal must have been,—a china doll face, with a simper, and marguerites in her hair; all innocence, white muslin, blue ribbons, and amiable imbecility!"

"Indeed she was not," said Jack. "Fair hair has been a latter-day revelation to me; in those prehistoric days the Corsair was my patron saint, and I raved about raven tresses and dark, Oriental eyes. She was a very beautiful girl, I remember, and I thought her an angel at the time," he added, laughing. "I wonder where she can be now?"

"That is so like a man!" said Eleanor. "We are angels as long as we don't care for you, because our eyes are of a particular shape, or the shade of our hair pleases your lordship's tastes; then we fall in love with you and become ordinary mortals on the spot, and you straightway forget

us, or, worse still, quote us as rebukes or examples for the amusement of some other woman! The fact is, the wise woman cares only for herself, and every one immediately falls to caring for her too. It's the force of example, I suppose."

"Oh, the justice of the unfair sex!" cried Jack, with mock indignation. "I say of my first love that she looked like a flower and I thought her an angel, and am instantly accused of heartless indifference for saying so. No, I can assure you, my first duel with the 'grand passion' was a most desperate affair. In spite of my Corsair proclivities I have no doubt I should have married my Medora, and repented the act in broadcloth and fine linen for the last ten years, had not another and a bolder pirate carried her off before my agonized eyes. You ought to have known me in those days! I thought I was the proud and happy proprietor of a blighted life. I had sounded the bottomless abyss of all earthly sorrow, and knew to a nicety the depth thereof! It was all the more cruel in Medora since it had been an utter surrender at the first blow, a case of love at first sight, with me."

"Speaking of first impressions," said Eleanor, "I wish you would tell me quite honestly what you thought of me the first time you saw me. I've always been curious to know how I strike my contemporaries, and never had such a chance to find out, before. We are so out of the world here, so removed from conventional life, and why not drop conventional speech as well, and tell each other quite frankly what we think, for once?"

It annoyed her to hear him allude even thus lightly to a woman he had evidently cared for very strongly in old times. A vague jealousy prompted her to occupy him with herself, even to the exclusion of dead and buried rivals; and, as she truly said, they were so far removed from every-day life that any question seemed natural to ask. As they lay under the trees in the still afternoon, life was reduced to its simplest expression, and an impulse of Arcadian simplicity seemed to possess them both, for Jack answered at once, "I had much rather not tell you what I thought. I remember it quite well, but it would not be pleasant to either of us to think of it now."

"Mr. Desmond, you shall tell me! I insist upon it! Do," she added, coaxingly. "You won't refuse me the very first favor I ask you on our last day together?"

"Thanks for your kindness in reminding me of that!" said Jack, abruptly, looking away from her.

"The fact is, I don't believe in the least you remember where or when we met!" she pouted.

"Do you think so? It was at the Whytes' private theatricals; you were dressed in some sort of blue stuff, with white flowers in your hair, and after the play was over you sang—an air from The Huguenots. Mrs. Whyte introduced me to you, and we talked together for an hour or more, until you left at twelve o'clock to go to the Prussian minister's ball."

"But that is only what you saw. I asked for what you thought. See," she said, coquettishly, "I'll give you this bunch of violets, my own pet flowers, that I've brought all the way from Rome, if you will tell me what you thought of me!"

Jack looked at her fixedly a moment, and burst out laughing. "You are a true woman, Eleanor," he said; "but it would be asking too much, perhaps, to expect you to forego proving your power. I'll tell you what I thought, that night! I watched you a long while, and I said to myself, Here at last is a face to live with and to die for,—the frank, loyal face of a girl whose love it were well worth risking one's life to obtain; a girl above the petty considerations of society; a girl with enough heart to love a man for himself and not for what he could give her, and enough courage to avow it. That, Miss Hardy, was my first impression of you."

Eleanor turned very pale. Something in his emotion had touched her; here, in the country, away from Rome and her aunt, it seemed so much more difficult to realize satisfactorily the wisdom of her choice. Everything about her was young and full of hope; all the softness of the spring seemed to whisper to her that life is short, and love the one good of life. It was hard to have to renounce it all, and something in Desmond's expression, "a girl with enough heart to love a man for himself and not for what he could give her," seemed suddenly to cast a new light, and not a pleasant one at that, on her own motives and intentions. She was at once humiliated and angry; she admired Jack for his contempt of what she coveted, a hundred times more than she had ever done before; but while acknowledging his superiority to herself, she would have punished him for it if she had had the power to do it.

"And what is your last impression of me?" she asked, slowly.

Desmond had risen and was gathering up her hat and fan and cloak. "I shall not tell you what I think of you now," he answered, quietly.

"Why don't you say at once that you despise me!" she cried, impetuously. "Don't you suppose I understand what you mean?"

"No, I don't think you do," he answered, slowly. "I have loved you too well ever to despise you; but I am sorry, very sorry for you, Eleanor. I do not blame you, mind that! It is not your fault if I was fool enough to imagine in you qualities you do not possess. You may not be what I once thought you, but no one who sees you can dispute your charm."

The grave, dispassionate pity in his voice seemed to Eleanor to give the finishing touch to her mortification. A sudden fear lest she had lowered herself irretrievably in his eyes made her silent; a sudden disgust of her own aims, tastes and wishes kept her from speaking as they walked slowly back to the inn. The violets she had offered him had fallen unheeded at his feet as she rose to go, and a sharp pang of regret passed through her as she noticed his utter indifference to her gift. "Well, I have no one but myself to thank for it!" she thought, with a desperate effort at philosophy. "Better so. The day, or something in the strangeness of our being so long alone together, has made me weak and sentimental. I shall be myself again when I get home."

At the first turn in the road Desmond stopped suddenly. "Excuse me a moment," he said. "I must see if I left my cigar-case under that tree."

Eleanor sat down on the bank by the roadside while he ran quickly back to where they had been sitting.

"At least I shall have that much of you, my darling!" he said, half aloud, as he picked up her withered and bruised bunch of violets, and put them tenderly away in his note-case.

In another moment he was again at her side, and they walked quietly, almost sadly, back to Ostia. It was now almost six o'clock. The sun had sunk low down to the utmost verge of the mist-veiled horizon; long shadows were falling across the fields, and at the pasture-gates the cattle were crowded together, waiting to be driven home. As Eleanor stood in the court-yard of the inn, waiting for Jack, who had gone to see after their horses, a neat-looking young woman with a little child in her arms came up and asked for alms. Eleanor looked at her. "Is your husband living?" she asked.

"Yes," said the woman.

"Why does he let you beg in this way, then?"

It was a bad year, the beggar told her, and her husband was out of work; he worked at the quarries when he could, but nothing had been done there for a long time.

"Is he good to you? do you love him in spite of his doing nothing for you?"

He was the best man, yes, and the handsomest, too, in the village, his wife answered, flushing as she spoke. Eleanor hastily emptied her purse into the child's hand. "There are people in the world more to be pitied than you are," she said, bitterly. "What! back already, Mr. Desmond? We had better start at once, then. It is growing late, and I am afraid my aunt will be displeased that I stayed so long."

They rode slowly back towards Rome. The sun was setting in the golden glory that so often transfigures the last hour of a sirocco day.

"I wonder why it is that there is such pathetic suggestions in a net-work of branches against an evening sky?" said Eleanor. "Do you know, I never see the hedge-rows against a red sunset without feeling that somewhere, some time—ages ago, in another life, perhaps,—I have seen the same thing and been very unhappy at the time. I always feel as though there were something for me to be wretched about; they hint of some bygone grief which I cannot remember, and make me vaguely sad at the loss of some forgotten joy."

—[Conclusion next week.

A BIT OF COMMON SENSE.

BY KENNETH DUNN.

"THE busy days are crowding fast upon us," said ELLA with a little sigh.

"Yes;" answered practical ETTA, "and now I am about to deliver a short lecture;" sitting down and folding her brown hands over her smooth white apron. "Never do your work but once, ELLA, and then do it well. A great many people do their work over six, eight, or even ten times by so much thinking and talking about it; now to-day is Monday and you and I have been doing a heavy washing——"

"Yes;" I am perfectly conscious of it;" interrupted ELLA.

"The clothes are out in the sunshine drying," continued ETTA; "do not give them another thought until it is time to bring them in; if you are very tired lie down and go to sleep, if not occupy yourself with an interesting book; we have done enough hard work to-day, you well know mother does not expect us to do anything more until supper time. To be sure we must go to house-cleaning to-morrow, but do not let the fact *enter your mind* until after breakfast to-morrow morning; then it will not require more than ten minutes to plan our work, and one can see so clearly after a good night's sleep. Now work in this way, ELLA and you will soon find yourself singing all day long, instead of wearing that ugly frown upon your brow."

"Yes; that's just it;" said their father, who had been an amused listener to ETTA'S "lecture" opening the kitchen door; "there's a bit of common sense in that small head of yours my daughter."

THERE have been some radical changes in the last century. A hundred years ago they kissed a lady's hand; now you kiss her lips—that is, of course, if you happen to be behind the wood-pile and nobody is looking, and you don't want to disappoint her. It may take 100 years to get from her hand to her mouth, but we never felt that the time was misspent.—*Norwich Bulletin.*

RECENT LITERATURE.

Riverside Press Centennial Guide Books.—1. Boston to Washington. [Cloth.—pp. 250. Price, $1.50.] 2. Washington; 3. Philadelphia; 4. New York. [Paper.—pp. 72. Price, 15 cents each.] New York: Hurd & Houghton.

THE Centennial has been provocative of a vast amount of useful knowledge in the shape of guide books, and under the pretense of illuminating the path of the verdant foreigner, we Americans will, doubtless, learn many facts about our chief cities, that we were quite willing, formerly, to assume to know, without much knowledge to support the assumption. With commendable enterprise, Messrs. HURD & HOUGHTON have produced a series of small books that are in turn histories, itineraries and guides. "Boston to Washington" is a condensed but succinct guide to the cities of Boston, New York, Philadelphia, Baltimore and Washington, including the Centennial grounds, buildings, etc. The book is especially commendable on account of the very complete arrangement of the index, which leaves nothing to be desired as a ready reference. Rather too much space is given to the enumeration of obscure New England towns through which the traveler is supposed to pass, and although seasonable, it is of no great importance to know that South Framingham "is a manufacturing town, in which straw hats and bonnets are the leading interest." The plans of the cities, inserted in appropriate places, are a very great help to the tourist, and a feature worthy of commendation. In addition, there is a large colored map of the United States that fits into a pocket on the back cover, that is convenience itself. The smaller paper books, devoted to a single city, are merely reprints of the principal book, using such matter as pertains to the place under consideration only. As guide books our preference would be given to the latter. When we add that the mechanical execution and taste displayed in the style of the publication leaves nothing to be desired, and that the same matter is obtainable in English, French, German and Spanish at the same price, we have said all that is necessary to indicate to our readers the importance of supplying themselves with some such book, ere they visit the Great National Show this summer.

Hand-Book for Fruit Growers. By F. R. ELLIOTT. [12mo.—pp. 128. Rochester, N. Y.: D. M. Dewey.

WE always expect more from the pen of an author who has already done some good work than from a novice. With this expectation we opened the handsome little volume before us, and will add that on its perusal we were not disappointed. From the author's long experience he has culled much which will be of benefit to new beginners in horticulture, and has placed it before them in plain and easily-understood language. Of course Mr. ELLIOTT has his own individual ideas and opinions in regard to the manner of cultivating, as well as the merits of the different varieties of fruits, and while in some few instances we should disagree with him, still, upon the whole, he has not strayed very far away from the generally accepted conclusions of our leading pomologists. The lists of varieties given are quite extensive,—in fact, we think too much so—and the amateur or cultivator who may only want a few sorts will in some instances be puzzled to know where to begin and where to stop, in order to get just what he wants—no more and no less. But the methods of cultivating, propagating and planting, as well as the description of sorts, are given in so concise a manner that the reader will not be wearied by long-drawn-out theories—too frequently indulged in by authors who aim at producing more pretentious works. It is altogether a handy and valuable book for those who cultivate fruits for home use and market.

Official Guide to Philadelphia.—By THOMPSON WESTCOTT. [Cloth.—pp. 425.] Philadelphia: Porter & Coates.

THE publishers are to be congratulated on securing the services of Mr. WESTCOTT in this enterprise. Probably no gentleman is better qualified to tell all about the City of Brotherly Love, or be a more entertaining guide, philosopher and friend, than is the genial editor of the Times. The compilation is thorough and happy in its arrangement, and if any visitor goes away from Philadelphia saying he "didn't see much, any how," it will be through main stupidity. The engravings are especially noteworthy, as such careful work is seldom, if ever, found in a book of this character. In conclusion, we may say that the book must perforce be "regular," as it is official, and is approved by the Mayor over his autograph.

Sea Stories.—[Paper.—pp. 276. Price, 75 cts.] New York: G. P. Putnam's Sons.

THIS book is a compilation similar in style to "Stories for the Home Circle," noticed below. The advantages of such works as these under notice are that, being carefully edited, a series of stories are presented for the amusement of young people, which are exciting and wholesomely sensational. They are happily free from any of the crude, demoralizing devices resorted to by contributors to so-called Boys' Papers, whose pernicious influence on the youth of the country can scarcely be overestimated.

Stories for the Home Circle.—New York: G. P. Putnam's Sons. [Paper, 75 cts.]

WHILE the constant reader of the literature of the day would find but little new in these fourteen stories, the first reading of any of them would be both profitable and pleasant. They are the best of their kind, and are just the stories to be read, one at a time, in the home circle where reading aloud is a habit.

Sabbath Reading.

IF I SHOULD DIE TO-NIGHT.

IF I should die to-night,
My friends would look upon my quiet face,
Before they laid it in its resting-place,
And deem that death had left it almost fair;
And laying snow-white flowers against my hair
Would smooth it down with tearful tenderness,
And fold my hands with lingering caress,—
Poor hands, so empty and so cold to-night!

If I should die to-night,
My friends would call to mind, with loving thought,
Some kindly deed the icy hand had wrought,
Some gentle word the frozen lips had said:
Errands on which the willing feet had sped—
The memory of my selfishness and pride,
My hasty words would all be put aside,
And so I should be loved and mourned to-night.

If I should die to-night,
Even hearts estranged would turn once more to me,
Recalling other days remorsefully.
The eyes that chill me with averted glance,
Would look upon me as of yore, perchance,
And soften in the old familiar way,
For who would war with dumb, unconscious clay!
So I might rest, forgiven of all to-night.

Oh, friends, I pray to-night,
Keep not your kisses for my dead, cold brow.
The way is lonely; let me feel them now.
Think gently of me; I am travel-worn,
My faltering feet are pierced with many a thorn.
Forgive! oh, hearts estranged, forgive, I plead!
When dreamless rest is mine I shall not need
The tenderness for which I long to-night.

Littell's Living Age.

AT EVENTIDE.

YES, at eventide, we are all waiting for that, waiting, watching, hoping, for "At eventide it shall be light;" light that seems all the more bright and glorious because of the darkness before it. How often after the dreariest days we see the most lovely sunsets! Do we ever stop to think that the clear sunset is not the most beautiful? Far more exquisite is the one whose light is flashed back upon us by the clouds. So the life that has

—"Just enough shadow
To temper the glare of the sun,"

is more comforted by these words, "At eventide it shall be light," and to one whose life is nearly all shadow, this assurance is doubly sweet. To every one, with the thought of evening comes the thought of rest; rest, the real object for which we are all striving and longing. So to those who are most weary, the eventide brings the sweetest rest from the work of this world, and at the last—at the eventide of our lives—if we have faithfully borne the burden, we shall find "a rest which remaineth for the people of GOD."

RUTH MORE.

THOUGHTS FOR THINKERS.

GOD hands gifts to some, whispers them to others.

A MAN does harm to others by his actions, to himself by his thoughts.

As the earth is a point compared with the heavens, so are earthly troubles compared with heavenly joys.

PERHAPS there has been no simpler definition of faith than the one given by the late Dr. Bushnell, that "it is that act whereby one person—a sinner—commits himself to another person—a Saviour."

TRANSGRESSIONS of the Divine law constitute not merely the sin and sorrow of the individual, but the sin and sorrow of nations. Outside of Christianity, neither prosperity nor freedom will ever be lasting.

OF the 180,000 families which the agents of the Southwestern Bible Society have visited in Louisiana and Mississippi, 47,000 were without the Bible. There were 12,575 families visited in New Orleans, 3,511 of which had no Bible.

MORE joyfully look at the setting than at the rising sun. Burdens are laid down by the poor, whom the sun consoles more than the rich. No star and no moon announce the rising sun; and does not the setting sun, like a lover, leave behind his image on the moon? I yearn toward him when he sets, not when he rises.—*Richter.*

The making one object, in outward or inward nature, more holy to a single heart, is reward enough for a life; for the more sympathies we gain or awaken for what is beautiful, by so much deeper will be our sympathy for that which is beautiful, by so much deeper will be our sympathy for that which is most beautiful, the human soul.—*Lowell.*

YOU ask bitterly, like Pontius Pilate, What is truth? In such an hour, what remains? I reply, obedience. Leave those thoughts for the present. Act—be merciful and gentle—honest; force yourself to abound in little services; be true to the duty you know. *That* must be right, whatever else is uncertain. And by all the laws of the human heart, by the word of God, you shall not be left to doubt.—*F. W. Robertson.*

WE are surrounded by motives to piety and devotion, if we should but mind them. The poor are designed to excite our liberality; the miserable, our pity; the sick, our assistance; the ignorant, our instruction; those that are fallen, our helping hand. In those who are vain we see the vanity of the world; in those who are wicked, our own frailty. When we see good men rewarded, it confirms our own hope; and when evil men are punished, it excites our fear.—*Bishop Wilson.*

Ladies' Portfolio.

A BALLAD.

SIGH on sad heart, for love's eclipse,
And beauty's fairest queen,
Though 'tis not for my peasant lips
To soil her name between.
A king might lay his scepter down,
But I am poor and naught:
The brow should wear a golden crown
That wears her in his thought.

Her dress seemed wove of lily leaves,
It was so pure and fine—
O lofty wears, and lowly weaves,
But hodden gray is mine,
And homely hose must step apart,
Where gartered princes stand,
But may he wear my love at heart
That wins her lily hand!

'Tis vain to weep, 'tis vain to sigh,
'Tis vain this idle speech—
For where her happy pearls do lie,
My tears may never reach;
Yet when I'm gone, o'n lofty pride
May say, of what has been
His love was nobly born and died,
Tho' all the rest was mean!

INTERCEPTED LETTERS.

NEW YORK, ——— —, ——.

DEAR MARY:—Surely you must be mistaken about the date of my last letter. It does not seem possible that I have not written to the best of little women for a whole long month! I have been in a whirl of excitement, though, and have no more idea of the lapse of time than a wee kitten before its eyes are open. Such larks! You know TOM GAINES, that great, hulking fellow, who was so awkward and had a nose that—well, however good it might have been as an olfactory organ, was certainly not beautiful. Would you believe it, he has had a *nose-mold* made, and by perseverance is now the possessor of a very attractive-looking smelling organ? I found it out in a very curious way,—will tell you when I see you—and just accused the young man to his face of tampering with the work of Nature, and the dear old fellow—he's just as *good* as he can be—told me plumply all about it and showed me how it was done. He procured the machine from England. It is in the shape of the nose the wearer desires, and by placing it firmly on the soft cartilage at the end of the nose, in a short time the organ is modified so as to look quite nicely. He told me a great secret! There are molds for the fingers, too! And I am to have one, and if I don't have a first finger that would draw tears of envy from a duchess, it will not be for lack of trying. You know how horribly that finger of mine crooks. The mold reaches up to the second joint, and in time shapes the offending member divinely. But how I am running on! I sometimes think I am like that brook that some fellow speaks of. Men may come and men may go, but I go on forever, and such rattle-brain stuff, too! We have been to all the places of amusement, and, last week, GEORGE, auntie and myself went to the opera to hear BELOCCA sing. Gracious! such a "swell" affair as it was! You know I don't usually go out of my way or waste postage stamps to praise women, but I declare I never saw so many entrancing creatures in my life! How can men remain bachelors, I wonder?

You ask me about your hair—how to make it grow. I saw Dr. GRAY. You remember him. His mother was that stuffy, fidgetty old lady who never could sit still for five consecutive minutes. I just beamed on him—asked him if he did not remember that sweet little girl up in Rensselaer County. Of course he did. "Well," said I, "she is bald—true! the dear *enfant* is as bald as the American eagle—and she wants to know what to do." I suppose I shocked him. I am always shocking somebody. But, dear, you should have seen him blush. Yes, a man and a doctor actually blushing! (I believe he likes you, any way—always did.) He was positively picturesque in his confusion, but he surrendered, and here is what he said:

"Tell her to make a wash of equal parts of tincture of sulphate of quinine and aromatic tincture, and apply it regularly every day."

I know this is correct, for I copied it as he gave it. Now do this, dear, and let me know the result. I actually feel bald myself—from sympathy, I presume—and, until I hear from you, shall remain your expectant cousin, BLANCHE.

P. S.—I scarcely know what I have written; no time to read it over. Oh! I forgot. ANNIE JONES and HENRY MEAD were married Tuesday. I believe this is what I intended to write about. B.

P. P. S.—You would never believe it, but I now know why the ladies here are so beautiful! I have found that it is merely a toilet secret, and I shall in future give you some hints and recipes that will make even the ugly pretty, and you will be everlastingly the debtor of your own BLANCHE.

ABOUT WOMEN.

A WIFE'S SECRET—Her opinion of her husband.

HOMELY PROVERB FOR THE KITCHEN—Wishes won't wash dishes.

THE Governor of Iowa has appointed a woman chaplain of the Anamosa Penitentiary.

THE Queen of Madagascar collects her duties on liquors in kind, and empties the Government share into the ocean.

THE Senate of the University of Prague, the capital of Bohemia, has prohibited the attendance of women at the lectures.

IF you cannot inspire a woman with love of you, fill her above the brim with love of herself; all that runs over will be yours.

MANY a poor woman thinks she can do nothing without a husband, and when she gets one, finds she can do nothing with him.

A CYNICAL old bachelor says:—"Ideas are like beards; men only get them when they are grown up, and women never have any."

MRS. BETSEY PERKINS of Taunton, Mass., celebrated her ninety-fifth birthday by presenting $1,000 to each of her six daughters.

MISS MARIA MITCHELL, Professor of Astronomy at Vassar College, has been engaged to deliver a lecture in Cincinnati within a few weeks.

THE designer of the famous Cathedral of Strasburg, the finest building in Europe, was Sabrina von Steinbach, known as "The Fair Saba."

ANNIE WHITNEY has contributed statuettes of Roma and Charles Sumner to the Centennial. The only contributions in modeling yet received.

ONE of the ladies in waiting on the Queen of Greece is shortly to be married, and her *trousseau*, which has been ordered in Paris, is to cost about $200,000.

THE editor and proprietor of Truth for the People, Mrs. M. J. E. Millar, Detroit, Mich., will hereafter devote a large part of her paper to the Temperance cause.

OLIVE LOGAN boasts that she is the only woman on the American continent who knows how to manage a husband. Is her way the soft, persuasive way, or the rolling-pin way?

WILL the persecution of women never cease? The benighted Legislature of Kansas has gone and passed a law taxing lady dogs $2 per head, while gentleman dogs are taxed only $1.

"A ROMAN Hetor," said Bates, whose historical information comes by detail on the fly; "a Roman Hetor! Well, I s'pose she deserved it. No one but the Roman knows."—*N. Y. Mail.*

A YOUNG lady of this city dreamed she was in heaven, but saw no Boston folks there. They scattered in little groups, outside the gates, discussing metaphysics and Ralph Waldo Emerson.

AN exchange says that "pawnbrokers will advance nothing on a temperance pledge." And yet they know that the longer they keep such a pledge the richer they grow.—*Louisville Courier-Journal.*

A LADY who had her dress trimmed with bugles before going to a ball was asked by her daughter if the bugles would blow when she danced. Oh, no," said the mother, "papa will do that when he sees the bill."

FOR the first time in his life Brigham Young has discovered a weakness in polygamy. The other day thirteen of his wives gave each a different version of a certain event of which each had been an eye-witness.

A LADY of Sebago Lake, Mrs. Henry Chadbourne, has a valuable collection of relics. She has a cane and a silver knee-buckle which belonged to Washington, also a diary written during the Revolutionary war by an officer.

KANSAS, unable to compete with her sister States in the matter of girls with small feet, advances proudly to the front with a Cloud County lass whose foot measures eleven inches and three quarters, and challenges competition.

THE editor of the Charleston (S. C.) News has caught and locked up in his wood-house, for exhibition at the Centennial, a colored woman one hundred and fifty years old, and who has a living daughter aged one hundred and ten years.

THE wet-nurse of Napoleon III., Mme. Dubois Coppenceaux, died at Geneva on the 8th of January at the age of ninety-four. This venerable woman was born at Berney. Gen. Dufour often went to see her, and they always talked long and tenderly of "their child."

A LADY, Mrs. Sarah Bonney of Sterling, Mass., has shot and stuffed twenty-five choice birds of different varieties, and will send them to the Centennial mounted on an imitation of a laurel branch. Not a very bonny business for a lady—the shooting part.

A WOMAN is naturally as different from a man as a flower from a tree; she has more beauty and more fragrance, but less strength. She will be fitted for the rough and thorny walks of the professions when she has got a rough beard, a brazen front and hard skin, but not sooner.—*Blackie,*

A DUBLIN woman, jealous of her husband, threatened to drown herself in a tub of water that stood on the porch. "You dare not hold your head in it until I touch you," said the man. The excited woman at once plunged her head in the water. The husband waited too long, for when he drew her back she was dead.

WHEN is a lady's dress like an unfortunate bull-fighter?—When it is gored? And when is it like a partisan?—When it is biased. And when is it like a toper?—When it is full. And when is it like the sails of a ship?—When it is trimmed. When is it like a season of the year?—When it is lent. When is it no longer fit for use?—After she has once worn it out.

THEY put a bevy of good-looking ladies into a school meeting at Bennington, Vt., recently, at which some disturbance was expected from the boisterous element of the district. The result, however, was a cross between an old-fashioned town meeting and a Methodist love feast. In a gushing speech one of the speakers of the roughs declared that he never felt himself so near heaven in his life.

Reading for the Young.

TO THE YOUNG RURALISTS.

WHILE we must confess that no more pleasant duties than the care of our many young RURAL friends can possibly occupy our time, we are now obliged by severer duties to refer the girls and boys of the RURAL Brigade to our two estimable old friends, Uncle TRUE and Uncle MARK, who have spent their lives among the little ones and know well their ways and habits. From Uncle TRUE you may expect occasionally a prize, and from Uncle MARK you may look for a lesson once in a while.—ED. RURAL.

CHEAP EXCURSIONS.

A Letter from Uncle True.

DEAR BOYS AND GIRLS:—Now you thought you were having a real good time among yourselves, with your "Cousins" and letters, and two columns of the good old RURAL each week, but I've been watching you, mind, and now I am a going to be young again and slip into the magic circle. The Editor was out to-day, and I slipped into his office and saw, oh! a perfectly lovely little pre——, no! I won't tell you what it was, but I took it and cramming a whole heap of Boys' and Girls' Letters into my pocket, walked out. Won't he be angry, though, when he finds out all about it? However, I got home, and I began reading what you all had to say. I declare I laughed right out, threw my crutch into the corner, hit the cat, who mewed like fun, and out came mother, who scolded the old man roundly for acting so "foolish like." But I didn't care. I just kept quiet after that and thought out a plan so that we can have some fun among ourselves this Centennial year.

Now you all say in your letters that you go to school and study lots of things, and that you like it, too, ever so much. I know you are real bright girls and boys, but if you go to school you must be getting a heap of learning, so to see how well you remember it I'm going to propose a little journey (of course, we can't *all* go to Philadelphia), but shall leave the *names* of some of the places *blank*. Now you are to sit right down, take your pen and ink, and *out of your head*, from memory, you know, *supply all the names I have omitted*. Mind, you are not to ask any of the old people to help you, for that won't count. The boy or girl who sends in to me, OLD UNCLE TRUE, care RURAL NEW-YORKER, New York City, the first *correct answer*, with all of the right names in the right places, WILL GET THAT PRESENT I slyly took from the Editor's desk, and also have his full name and address published in this column, as the winner of the prize. Now, here goes for

The Prize Journey.

I took passage on a big iron steamship at New York, and sailed across the —— ocean to Liverpool, in ——. Then I went by rail to London, and saw all the wonderful sights in that great city, not forgetting to call on Her Majesty the ——. Then I thought I would like to see France, and crossed the —— Channel to Calais in a dirty little steamer. The sea was frightfully rough, and I was awful sick. When I arrived at ——, the capital of France, I was delighted to see such a bright, gay city, and spent most of my time looking at curious things. I saw a beautiful column of bronze, made of cannon which the great Emperor —— took from the Germans and others; and after awhile I started for Switzerland, crossed the —— mountains into Italy, and went to see the Pope at ——. I didn't kiss his great toe, however, but soon left for Spain on a steamer that went down the —— Sea to Gibraltar. I saw at this place the greatest fortress in the world, now held by the ——, who captured it from the Spaniards when the garrison were all saying their prayers in church. Then I went to ——, the capital of Spain, on the river ——. Then I fell sick with a disease that we all have when far away from our native land, and I went directly ——. Well, where did I go?

Now, boys and girls, this is free to all. Put on your thinking caps, and write the names I have left out, and if I don't send something worth having to the smartest little boy or girl, my name is not OLD UNCLE TRUE.

LETTERS FROM BOYS AND GIRLS.

From a Maryland Girl.

DEAR COUSINS:—I have often thought of joining you in writing for the dear old RURAL, but I never fully decided until now. May I be numbered as one of the Cousins? I will have to wait and see if my letter is among the chosen; if it is, I will feel very thankful to the Editor. I was much pleased with "Critic's" letter, in RURAL of April 15th. I think what he said about tobacco chewers was splendid. You must excuse me for agreeing with you, Critic, but it was so much like my thoughts I could not help it; and I hope all the girls will agree with you, and let their tongues wag, as you suggest, and let you all know what they think of those that use tobacco. Now come, girls, let us talk to them about using it, not only chewing it, but using it in any way. I am sure it is not one of the accomplishments a young man has to acquire to win my favor. Who will agree with me? I tell you, girls, my GENTLEMEN (I do not say young men) that know you are not afraid to talk against using the filthy weed, will think the more of you for it. I do not mean young men only, but boys, for I call them gentlemen—if they do not make tobacco distillers or steam engines of themselves. I hope the Editor does not use it, or this letter may find its way into the waste-basket. I should like to write more, but am afraid this is too long now.—EMMA, *Spencerville, Mont. Co., Md.*

From a Virginia Lassie.

DEAR RURAL:—I thought that I would write to the Cousins. I see so many little girls' and boys' letters I thought I would write one. When I saw that letter from "Young Artist" I thought I would reply to her. I am a little girl and live in the country. I am eleven years old. I went to school in the winter, and intend to go three months this summer. I can do some house and fancy work; can milk, and have taken music lessons. I agree with "Young Artist" in regard to piecing quilts. I don't think I shall piece any more after I get the one finished I am now at work on. We are all very much pleased with the RURAL. Papa has only taken it since January. I always look at the Boys' and Girls' Letters the first thing. I think that "Young Potato Digger" must be a Yankee, or he could not have dug two hundred bushels of potatoes a day. I will let "Young Tom" rest for a while. Well, as my letter is quite lengthy I will stop.—ELLA MILLER, *Fairfax C. H., Va.*

From an Eastern New York Girl.

DEAR COUSINS:—Pardon my liberty in thus addressing you—a stranger to you all. I have long desired to have a friendly chat with you, but the opportunity was not forthcoming, and I took the liberty to introduce myself. How many Cousins are going to the Centennial? It is most likely I shall be there, as Philadelphia is my home, although I am in the country one-half of my time. I wonder if we would know each other if we should happen to meet there! Won't Y. T. please write and let us know if we shall see his fair self there? I should like very much to correspond with M. A. B. Perhaps I shall try again at some future day. Now, dear Uncle, please look with favor on this. My P. O. address is—ANNIE LEE, *Coxsackie, N. Y.*

From a Western New York Boy.

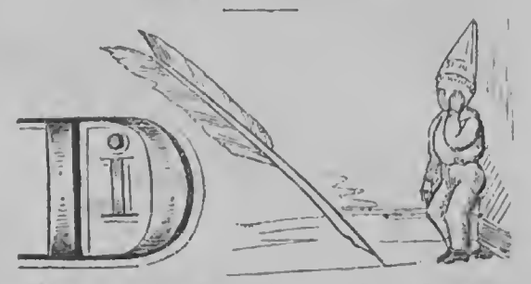
DEAR EDITOR:—This is my first effort in writing for the RURAL, and I don't know as it will be printed, but I will try and see what I can do. I have two canaries. One of them was sick and had fits; I went into the garden and got some chickweed and gave to them, and it got well and sings now; it did not sing any then. My father takes the RURAL, and has for five years. I am my father's youngest son; am twelve years old. I like the RURAL very much. Will some one tell, through the advertising columns of the RURAL, where I can get Toulouse geese eggs, and can they be sent by mail?—HENRY WELFARE, *Clifton Springs, Ontario Co., N. Y.*

From an Eastern New York Girl.

DEAR RURAL:—I have read the letters from the Boys and Girls with a good deal of interest, and especially from YOUNG TOM. I think he was pretty hard on us girls. What a funny description DELL B. W. of Rochester gave. I hope she will write again. I wish YOUNG TOM would write again. I don't think he can be scared out "as they say." I think you are very kind to publish the Boys' and and Girls' Letters. I am trying to live a Christian. —ELLA LA MONTE, *Richmondville, Scho. Co., N. Y.*

The Puzzler.

ILLUSTRATED REBUS.—No. 9.



☞ Answer in two weeks. PAUL BOYTON.

CROSS-WORD ENIGMA.—No. 9.

My first is in new but not in old,
My second is in silver but not in gold;
My third is in wind but not in rain,
My fourth is in barter but not in gain;
My fifth is in turn but not in pass,
My sixth is in water but not in glass;
My seventh is in groan but not in ache,
My eighth is in honey but not in cake.
My whole is a city on the Hudson.

☞ Answer in two weeks. E. L. H.

DOUBLE ACROSTIC.—No. 3.

1. A wooden tub. 2. Time past. 3. A short nap. 4. To discover. 5. To question. 6. The ocean.

☞ Answer in two weeks.

PUZZLER ANSWERS.—April 22.

PUBLISHER'S SPECIAL NOTICES.

The Rural is a very good present to send to a friend, and it pleasantly reminds the recipient of the donor fifty-two times a year—this year fifty-three times. Any *subscriber* can send it 10 a relative or friend, as a present, at our lowest club rate—only $2.15, including postage.

Officers of Agricultural Societies and Clubs, Granges, &c., can, if they will, materially aid in augmenting the circulation of the RURAL. Scores of such are already forming clubs; how many others will kindly do likewise?

Renew early if you would secure the uninterrupted continuance of the RURAL to your address; and pray don't forget to ask friends to join you in sending for the Fifty-three Numbers which we shall publish during 1876.

Back Numbers of this Year (from Jan. 1) can be furnished to all new subscribers, but we shall not send them hereafter unless specially requested. Those who desire can begin with any number, however.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper*, and in Premiums to Agents.

Select Your Premiums.—All persons entitled to Premiums will please designate what they prefer and notify us how and where to forward—whether by Freight or Express—if articles are not mailable.

Act as Agent!—Reader, if there is no agent for the RURAL in your locality please become one by forming a club. *It will pay.*

At Our Risk.—You can remit by Draft, P. O. Money Order or Registered Letter *at our risk.*

News of the Week.

THE NEW POSTAGE BILL.

THE following is the text of the new postage bill as passed April 12th:

Be it enacted, &c., That mail matter of the third class shall embrace all pamphlets, occasional publications, regular publications devoted primarily to advertising purposes, or for free circulation, or for circulation at nominal subscription rates, prices current, catalogues, annuals, handbills, posters, unsealed circulars, prospectuses, books bound or unbound, book manuscripts, proof sheets, maps, prints, engravings, blanks, flexible patterns, samples of merchandise, sample cards, photographic paper, letter envelopes, postel envelopes and wrappers, cards, plain and ornamental paper photographic representations, seeds, cuttings, bulbs, roots, cions, and all other matter which may be declared mailable by law as third class matter, and all other articles not above the weight prescribed by law, which are not from their form or nature liable to destroy, deface, or otherwise injure the contents of the mail bags, or the person of any one engaged in the postal service. All liquids, poisons, glass, explosive materials, and obscene books or papers shall be excluded from the mails.

Sec. 2. That packages of matter of the third class shall not exceed four pounds in weight, and shall be subject to examination and the rates of postage hereinafter provided. The postage on mail matter of the third class shall be at following rate:—For all distances one cent for each ounce, or fractional part thereof. Every package of the third class of mail matter shall bear the postmark of the office at which the same shall be mailed for transportation.

Sec. 3. That postages on third class matter shall be prepaid by stamps. If, however, the postage on third class matter mailed at an office shall be less than the full amount above prescribed in cases where the sender is known, such sender shall be notified of the fact, and the amount of postage due shall be collected from such sender before the same shall be transmitted by mail. In case the sender is not known, and it has not been the evident intention of the party depositing the package to place less than the full postage thereon, such package shall be forwarded, and double the amount of the deficient postage shall be collected from the party to whom it is addressed or delivered at its proper destination.

Sec. 4. That the sender of any article of the third class of mail matter may write his or her name on the outside thereof, with the word "from" above or preceding the same, or may write briefly or print on any package the number and names of the articles enclosed. Publishers of newspapers and periodicals may print on the wrappers of news papers or magazines sent from the office of publication to regular subscribers the time to which such subscription therefor has been paid.

Sec. 5. That transient newspapers and magazines shall be admitted to and transmitted in the mails at the rate of one cent for every three ounces or fractional part thereof, and one cent for each two additional ounces or fractional part thereof.

Sec. 6. That this act shall take effect on and after the 1st day of July, 1876.

HOME NEWS PARAGRAPHS.

THE House Committee on Foreign affairs are in receipt of a package of documents from the Emma Mining Co. of London, forwarded at the request of the Committee. The original letter of resignation of Gen. Schenck is said to be of the number. It is also affirmed that the letter is not in the handwriting of the aforesaid S., his testimony to the contrary, notwithstanding. If this is the case, the General will have another opportunity to explain his peculiar back memory on facts of peculiar importance. It does seem as if the memory is a very untrustworthy reliance.

Judge Lawrence, from the Judiciary Committee, has submitted a bill and report, which is intended to secure in full the repayment of the Nation's loan to railroads. A letter from the Chairman of the Committee, addressed to various railroad presidents, invites them to lay before the Committee within ten days their ideas on the subject.

The Committee on Ways and Means will shortly proceed to a consideration of the Funding bill, introduced by Fernando Wood, which, it is understood, has the approval of the Secretary of the Treasury. The Committee has been urged to take immediate action on this bill, in order that the Government may avail itself of the favorable condition of the money market in Europe for the placing of first-class Government loans, and of the great amount of capital, especially in England, now seeking investment in a security of this kind.

Francis P. Blair's estate amounts to only five hundred dollars. He at least never used his many opportunities to make money dishonestly, and his poverty is a large item to his credit.

Queen Victoria is growing—well, less handsome than ever. She will visit the continent the coming summer, but cannot cross the ocean to visit our Centennial.

The Delaware and Hudson Canal Company is to build a new bridge across the Hudson, between Starbuck's Island and Green Island. It will be of iron, about 500 feet long, and will cost about $100,000.

There will be running and trotting races at the Buffalo Driving Park, June 13, 14 and 15. The purses aggregate about $2,000; entries close May 27. The summer meeting will take place August 1, 2, 3 and 4, and the entries close July 18.

There are said to be over a thousand pupils in each of the 42 school buildings in Chicago; the 36,983 school children of St. Louis are distributed among 54 buildings.

A dispatch from Allentown, Penn., says a terrible explosion of fire-damp occurred in the Nesquehoning mines on the 12th inst., killing three men and badly wounding five others.

The tow-boat Dictator, owned by Hues, Loomis & Co., icemen of St. Louis, dashed itself to pieces against the Hannibal bridge and dragged down nine men, who were drowned.

Bose, a mongrel yellow dog, is the mail-carrier between Minnesota and Dakota, sixty miles. He makes the trip for nothing, and boards himself, and never fails. There seem to be no competitors for the position.

Twelve thousand of the fifteen thousand dollars necessary, has been raised to complete the building for the display of dairy products at the Centennial.

About $5,500 in silver has been paid out at the U. S. Sub-Treasury, in Boston.

Mr. Welsh of the Centennial Board of Finance, states that the whole estimated cost of the Centennial will amount to $8,500,000, which is not dear considering the magnitude of the show.

The withdrawal by the Government of the permission hitherto granted American steamers to carry cargoes and passengers between Canadian ports, will affect steamers which have been for several years arriving at Halifax from Boston, and then proceeding to Port Hawkesbury and Charlestown.

A rumor was current recently in Baltimore that Don Carlos, of Spain, had arrived in Baltimore on the steamer Hibernian, which reached there from Liverpool.

The House Committee on Appropriations April 24, agreed to that portion of the report of its Sub-Committee on Postal Appropriations which relates to the salaries of post-masters. The plan proposed, as heretofore published, provides for a saving of about $500,000.

The figure of a calf in wood, the hide being indicated by nails of every size and variety, is contributed to the Centennial, by the Gottenburg (Sweden) Nail Fabrik.

The impeachment managers have filed with the Secretary of the Senate their surrejoinder to the rejoinder of Gen. Belknap. They reiterate in the name of the House and of all the people of the United States the assertions of their first replication to the plea of Wm. W. Belknap, to the effect that the Senate has jurisdiction to hear and determine the articles of impeachment preferred, and that the House of Representatives is ready to verify and prove the same.

Gen. B. avers that he can, if allowed, prove by accounts, etc., that the whole of the $320,000,000 disbursed by his Department, while under his control, can be accounted for to the last cent. Also that he never lived beyond his means.

The concurrent resolution to fix a common unit of money for the U. S. and Great Britain has been reported to the Senate, with a recommendation for adoption.

The failure of the City National Bank of Chicago caused great surprise to the Controller of the Currency. The latest reports from the bank showed it to be apparently strong, and nothing was known in Washington which led to a belief that the bank was not in sound and healthy condition.

Jonathan Palmer Loper, son of Commodore Loper of Connecticut, has been pardoned by Gov. Tilden. Loper was sentenced to State prison, about three years ago, for seven years, for arson.

By direction of the President the following changes in Supervisors of Internal Revenue have been made:—General] Seynell transferred from New York to New England; Supervisor Tuiton from New Orleans to Philadelphia, relieving Supervisor Hunt who is sent to New Orleans. The Commissioner has not received Supervisor Matthews's resignation, and has no reason to believe it is tendered.

The expert employed by the Printing Committee testified that after a searching and thorough examination of the account books of A. M. Clapp, Government Printer, he was led to the conclusion that the books were absolutely and entirely false from beginning to end, and that he could not make head or tail of the cash book. In this book he discovered errors in the footings exceeding $400, but still the cash account balanced to a cent. In addition to the amount reported as paid into the Treasury for wastage and shavings his calculation was that $60,000 was unaccounted for up to March 10, 1876. There were no entries of documents and materials furnished to private firms, amounting to several thousand dollars. The expert then showed that there was a far greater deficit in the transactions on account of paper purchased since the Senate investigation two years ago than before. The report also of the money turned into the Treasury appeared inaccurate in every item, and the Treasury accounts as compared with his own record of money received showed that there was a large deficiency unaccounted for. In regard to the bookkeeping at the Government printing office, in response to the question of the Chairman, the expert said he could have but one opinion of the bookkeeper, and that was that he was a scoundrel.

Drexel, Morgan & Co. are the highest bidders for the whole or part of the $5,853,000 known as the Alabama Claims Loan.

As Michael Turner of Amsterdam, was carrying Culver Patterson and John I. Snell across the Mohawk in a row boat, the boat struck the ferry cable, and all three were thrown out and drowned. Snell and Patterson were lawyers.

A hail storm passed over Topeka on Saturday afternoon, April 24, covering an area a mile wide and extending miles south, which destroyed all orchard and wheat crops. Not a single leaf, bud, or blossom was left, and a number of cattle were killed. In places the hail was eight inches deep and of the size of hens' eggs. Wagon loads could be scraped up thirty-six hours after it fell. Very little damage was done in the city.

The N. Y. Democratic Convention will send a a solid Tilden delegation to St. Louis.

Massachusetts Convention has concluded, at least the major part, that Bristow is about the sort of man honest Republicans will vote for.

The N. J. Republican Convention will meet at Trenton May 17th.

The impeachment proceedings progress. Belknap through his lawyers asked that the case be adjourned until December next. The Senate voted unanimously against it. Judge Black, Mr. Carpenter and Mr. Blair, are the ex-Secretary's counsel.

In Macoupin county Ill., wheat looks well and prospects are fair for a good crop. Fruit seems to be all right yet, with the exception of peaches.

The Colorado and other mines have commenced shipping ores to the Centennial Exposition. One sends a single mass of ore weighing 4,500 pounds.

Mr. Blaine has made his speech defending himself against the charges preferred by Mr. Harrison of Indianapolis. Mr. H. says the country will hear from him again on this subject. He will make it Blaine to the dullest that he knows whereof he speaks.

A despatch from Chicago states that the rates over the Baltimore and Ohio Railroad and Erie line were on grain twenty-five cents and fifty cents on flour. Freights are very much unsettled, and figures as low as twenty cents were heard of.

The New Orleans people are afraid that Captain Eads's jetties are not the thing after all. They haven't improved trade nor reduced taxation nor increased immigration nor given every other man an office under Government, nor even given the city a navy yard, with an unequalled harbor on the ocean. These are sweetly solemn thoughts, and should lead to an immediate investigation of somebody or something.

Bernard Flaherty, better known as Barney Williams, the Irish commedian, died April 25th of paralysis, in his home at 41 East Thirty-eighth street, N. Y. He was born in Cork on the 19th of June, 1824. His father was a sergeant in the British army, and after his death Mrs. Flaherty and her two sons and three daughters emigrated to New York.

Judge Fullerton, of counsel for Mr. Moulton in his suit against Henry Ward Beecher, served notice of appeal from Judge Dykman's decision sustaining the demurer of defendant on Mr. Shearman, counsel for Mr. Beecher. The argument on the appeal is to be made at the General Term in Poughkeepsie on the 8th of May.

The new line to Philadelphia by way of Bound Brook and the Delaware river was opened for the public May 1st.

Senator Jones of Nevada has finished his great speech on the silver question, after speaking six hours in all. No speech of this session has attracted such marked interest, and few, indeed, of any session. Much of its effect was lost owing to the fact that he read from proof-slips instead of committing and delivering it off-hand. Nearly all the Senators congratulated him at the close, and for several minutes he received quite an ovation. Senator Sherman, Chairman of the Finance Committee, subsequently congratulated him in the open Senate with warm words of praise.

The New York Legislature adjourned on May 3.

The bill to equalize assessements upon real and personal property, by permitting a writ of certiorari to the Supreme Court on complaint of any taxpayer that his property has been assessed higher than his neighbors passed the Senate.

Adjutant-General Wikoff has left Columbus, O., for Massillon to direct the movement of troops, which have been ordered to the Mahoning mining region, the civil authorities having informed Gov. Hayes that they are unable to render the requisite protection to the property of operators and the lives of miners who desired to work.

FOREIGN NOTES.

A DISPATH from the Barbadoes Defence Association of Barbadoes, to the West India Committee, London, says: "Riots have occurred throughout the islands. Plantations and houses have been sacked, animals destroyed, and an enormous destruction of property taken place. More than forty of the rioters have been shot. The troops are actively employed. The city of Bridgetown is threatened. Business is suspended and families are seeking the shipping for safety. The rioters say that they have the Governor's sanction for their actions. The immediate recall of the Governor, John Pope Hennessy, C. M. G., is requisite to save the colony."

The Prince of Wales and Prince Arthur (the Duke of Connaught) have arrived at Madrid. King Alfonso and suite awaited their arrival at the Southern Railway station, with a detachment of infantry forming a guard of honor. The King and the Princes, with their suites, entered the city in seven carriages, each drawn by four horses, escorted by the Royal Horseguards. On the arrival of the royal party at the palace they were received by the grandees of Spain, the Ministers, and Court officers, and the royal band playing "God Save the Queen."

The announcement of the end of the Insurrection in Algeria was premature. The insurgents recently attacked the French camp, but were vigorously repulsed.

Mr. Godlove S. Orth, United States Minister to Austria, and family, will sail from Liverpool for New York in the steamer Egypt.

A French farmer, near Bordeaux, to protect his crops from the frost, recently placed four large heaps of wood and dried leaves saturated with oil, in a four-acre lot, and set fire to them. They produced a thick, black smoke, which hung over the ground like a mist, and the temperature became two or three degrees higher than in adjoining fields. The cost was estimated at seven cents an hour for each acre.

A caucus of the National Liberals was held at Berlin to consider the bill providing for the sale of the Prussian railways to the Empire. No formal vote was taken, but the fact appeared that all except about six members of the party will support the Government.

The Hungarian Ministers, it is reported, will neither accept nor refuse the compromise, but demand further concessions from Austria. If neither Cabinet recedes from its position a change of government is inevitable and the situation will become critical.

The Egyptian troops have begun their homeward movement from Abyssinia.

They are still fighting in Central America. Down there they DON their armor without regard to SENORITY.

The Imperial Railway bill passed its second reading in the Prussian Chamber of Deputies by a vote of 206 against 165.

The Sultan has asked Egypt for troops and money to relieve the Turkish garrisons.

The plague is increasing in Mesopotamia. It is becoming a SYRIAS thing.

Count Von Arnim has been dismissed from the public service.

Another ironclad for the English navy; the INFLEXIBLE. The Princess Louise did the christening. It must have been a stiff affair.

The following telegram was received by the Colonial Bank from Barbadoes: "Forty persons have been killed and wounded, and five hundred prisoners taken. Rioting is suspended, but the position is threatening. Confidence in the Government is entirely gone." That immortal 40 must have lost confidence in themselves also.

The King of Dahomey has refused to pay the fine recently imposed on him for maltreating a British subject, and has sent an insulting message to the British Commodore, inviting him to visit Abomey, where he promises to pay the demand in powder and bullets.

The fate of the Egyptian army in Abyssina, seems to have fired the African heart.

A public meeting was held at Lyons, France, on April 30, which was attended by 3,000 citizens. A resolution in favor of complete amnesty was unanimously adopted. The Deputies of the Department of the Rhone were present. Great enthusiasm was manifested on the passage of the resolution.

The revolt in Algeria has been completely subdued. The leaders have been captured and are held as hostages for the good conduct of their tribes.

The following is official: "Mukhtar Pasha telegraphs that he has entered Niesic in triumph, after defeating the great mass of insurgents at Presjeka and occupying their intrenchments. Niesic has been revictualed."

At last the Turks seem to have made provision for prosecuting the campaign vigorously.

The Russian Government means to see that the insurgents and Turks shall have their little affairs out unaided, as the following despatch, dated St. Petersburg, April 30, shows: "The Porte has not asked for the armed intervention of the Powers, but merely their moral co-operation to prevent the insurgents from obtaining extraneous aid."

An imperial decree is published, restoring suffrage to inhabitants of Alsace and Lorraine who, while electing to retain French nationality, are domiciled in those provinces.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, April 29, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	59,600	Rice, pkgs	678
Whisky	2,558	Cut meats, pkgs	6,122
Corn meal, bbls	1,611	Lard, pkgs	4,3 8
Corn meal, bags	2,421	Tobacco, hhds	2,570
Wheat, bush	651,000	do. cases	3,272
Corn, bush	395,000	Butter, pkgs	25,338
Oats, bush	125,200	Cheese, bxs	5,205
Rye, bush	10,200	Cotton, bales	10,276
Malt, bush	41,339	Rosin	4,952
Barley, bush	—	Spts. turn., bbls	1,305
Beans, bbls	736	Dried Fruits, pkgs	70
Grass seed, bush	1,328	Eggs, bbls	15,234
Beef, pkgs	1,408	Peanuts, bags	2,271
Wool, bales	771	Dressed Hogs	18
Hops, bales	581	Leather, sides	70,000
Pork, bbls	576	Sugar, hhds	50
Tallow	—	Oil cake	9,000
Molasses	—		

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise, many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible: mixing always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else.

BEANS AND PEAS.—Exports of beans past week, 943 bbls.; since Jan. 1st, 22,501 do.; same time last year, 8,391 do. Exports of peas past week, 28,100 bush.; since Jan. 1st, 312,511 do.; same time last year, 172,042 do. The receipts of beans have fallen to an inconsiderable quantity, and prime marks of mediums and marrows are a shade higher. Under-grades of mediums are still quoted low, and a foreign export is taking some of them out of stock. Pea beans are showing the first life they have had for many weeks. Kidneys are unchanged. Canadian peas are in light stock and steady. Green peas are dull for the season and prices are extreme. We quote:

Beans—Prime pea, $1.30@1.35; fair to good, $1.00@$1.05; prime mediums, $1.20@1.25; fair to good, 90c.@$1; poor, 50@60c.; prime marrows, $1.20@1.05; fair to good, $1.30@1.50; prime white kid., $1.50@1.55; other, $1.25@1.30; prime red kidney, $1.25@1.30; other, $1@1.15; Lima (Cal.), $2.50@3.00. Peas—Canadian, bbls., free, $1.20@; do., in bulk and bond, $1.00@; green, $1.40@1.45; Southern B. E., 2-bush. bag, $2.70@2.75; split, ₱ bbl., $5.

BEESWAX.—Choice lots are scarce and favor the seller; sales at 36¼@37c for Southern.

Exports past week, 884 lbs.; since Jan. 1, 35,191 do.; same time last year, 1,742 do.

BROOM CORN is hard to sell and dull.

We quote: Brush, short green, 8½@10c.; hurl, green, 8½@10c.; green, medium, 6@6½c.; red and red-tipped, 3@4c.

The stock of brooms is quite large in this vicinity, and until we have the usual extra demand incident to the month of May manufacturers will not operate largely in corn.

BUTTER.—Enormous receipts and peculiar grades have kept the market in an unsettled state throughout the week. Nearly every day since our last prices would show variations in buyers' favor from A. M. to P. M. The market is fully 5c. per pound lower on all styles. Some of the best lines took the lead in the decline. The boats have marked 30c. and if the receipts of pails continues so heavy they will be again marked off, and of course other packages must follow them. The easy market has sent a good deal of stock to Eastern cities, still there is danger of an accumulation, as the principal portion of distributors for consumption will not buy largely ahead. Butter begins to have a tinge of yellow and the fact is a damaging one to buy stock, after the buyer has had a few samples of anything with the least grassy flavor. Receipts of Western are improving in quantity and color. Western white is slow of sale. That coming from remote points lacks the freshness of State. Old State is about out of market. A few lots of Western remain quoted at 15@22c. for poor to good. Grease 12@12½c.

New butter, Falls State, selected, 30@31c.; do., other 26@28c.; half firkin tubs, prime, 28@29c.; fair to good, 25@27c.; Welsh tubs selected, 27@28c.; Welsh tubs, prime, 26@—c.; fair to good, 24@25c.; Falls, Western creamery, prime, 30@—c.; fair to good, 27@29c.; Western tubs, good to prime, 21@26c.; fair to good, 20@23c.

CHEESE.—The trade generally are awaiting supplies of new. Meanwhile, prices here are altogether nominal for old stock. It would be difficult to get a bid from a shipper over 12½c., although there are some fancy lots in stock for which up to 13c. is asked.

New State factory, fancy, 12¾@13c.; fine, 12¼@12½c.; do. good to prime, 11¾@12c.; fair to good, 10@11c.; poor to fair, 6@10c. State Farm Dairy—fancy, 12@12¾c.; good to prime, 10½@11½c.; fair to good, 9¾@10½c.; Western factory, cheddar, fine, 12¾@12¾c.; good to prime, 11@12c.; flat fair, 8@11c.; poor to fair, 7@8c.

COTTON.—Export trade has been light, and prices have fluctuated widely. Closing prices are for May, 12 25-32@12 13-16c.; June, 12 21-32@13c.; July, 13 5-32@13-16c.; August, 13 5-16@13 11-32c.; September, 13 5-16@13 11-32c.; October, 13¼@13 5-32c.; November, 13 1-16@13 3-32c.; December, 13 1-16@13 3-32c.

Quotations for spot cotton, based on American standard of classification:

	Uplands.	*Ala.*	*Orleans.*	*Texas*
Ordinary	9 5-16	10 5-16	10 5-16	10 5-16

Stained.

Good ordinary	9 7-16	Low middling	11 1-16
Strict ordinary	10 9-16	Middling	11 15-16

DOMESTIC DRIED FRUITS.—There is no business in this market beyond small lots on trade requirements, and prices are unsettled.

Apples—State, sliced, 9¼@9¾c.; do., quarters, 8¾@9c.; Western quarters at 8@8½c.; Southern sliced, 1875, prime, 9@9¾c.; fair lots, 8@8½c.; Tennessee qrs., 7¾c. Blackberries, 10c. Peeled peaches, good and prime Georgia, 14@15c.; do. fancy, 16@17c. Unpeeled peaches, new, 12@12½c. for halves, and 10@11c. for quarters. Plums, 20c. Raspberries, 27c. Cherries, 20@21c. Exports of dried apples, past week, 175 bbls. Since Jan. 1st, 1,313; same time last year, 9,065.

EGGS.—A fair abundance of spring produce, including shad, curtails the egg trade to a considerable extent. Prices have ruled weak, and holders are free sellers with prospective free receipts. Duck and goose eggs very dull.

Near points, ₱ bbl., 17¾@18c.; State and Penn., 16@16½c.; Western, prime, 15¾@16c.; do. fair marks, 15@15½c.; Southern and Southwestern, 15@15½c.; Canadian, 15½@16c., duck, 23@24c.; goose, 30@35c.

ESSENTIAL OILS.—Oil Peppermint, in glass, $4 ₱ lb.; in tin, $3.50. Spearmint, in glass, $3.50; in tin, $3. Wintergreen, $3. Sassafras, 55c. The market for all oils is now very slow.

FEATHERS.—Dull at 54@56c. for prime live Western geese; 35c. for mixed.

FLOUR.—There has been a sharp pressure to sell, in sympathy with wheat, and at lower prices a larger export trade resulted.

Superfine State, $4.10@4.50; extra do., $4.90@5.50; superfine Western, $4.10@4.60; extra do., $4.90@5.70; No. 2, $3.00@3.05; extra round-hoop Ohio, $4.10@5.25; trade brands do., $5.30@7.00; white wheat extras, $5.75@7.00; St. Louis, $5.35@9.00; City Mills extra, $5.00@6.25; Southern at $4.20@4.75 for superfine; $5.00@6.25 for poor to choice shipping extras; $6.25@8.75 for trade and family brands. Corn meal selling at $2.75@3.35 for yellow Western; $3.10@3.30 for yellow Jersey; $3.00@3.35 for Pennsylvania. Rye at $4.10@4.65.

FRESH FRUITS.—The better part of the apple stock has been used up and lower ranges are now quoted. Strawberries sell well. Charleston have shown a fine quality. A few Norfolks have appeared, but were poor. Cranberries unchanged. Peanuts quiet, but expected to soon realize full prices.

We quote: Choice apples, $4.00@4.25; good, $3.50@3.75; fair mixed, $2.50@3.50. Strawberries, best, 70@80c.; other, 40@50c. Peanuts—Virginia, per bush., $1.45@1.65; Wilmington, $1.80@2.00; do. Tennessee, 95c.@$1.15. Cranberries—Jersey, choice, standard crates, $4.75@5; good, $4.50; extra Jersey crates, $1@1.50; bbls., $14@15.

FURS AND SKINS.—The Leipsig sales all exhibited a low tendency compared with the London sales, and some of the finer items were withdrawn. New York quotations are:

Otter, ₱ piece	$6 50@ 8 00	$1 00@ 5 50
Gray Fox	1 75@ 2 00	1 50@ 1 75

Wolf, mountain		2 00@ 3 00
prairie		75@ 1 00

GRAIN.—For wheat there has been a decline of 10@12c. ₱ bush. on the unfavorable markets abroad and depression at the West, with larger supplies coming to hand, reacting towards the close about 2c. ₱ bush. Latest sales at $1.23@1.23½ for prime No. 1 Milwaukee spring; $1.30 for No. 1 Minnesota spring, afloat; $1.21 for prime No. 2 Milwaukee spring, afloat; $1.20 for No. 2 do., fall inspection; $1.18 for No. 2 Chicago spring, afloat; $1.15 for Nos. 2 and 3 Milwaukee spring, mixed; $1.12@1.11 for No. 3 Milwaukee spring, afloat; $1.10 for No. 3 Chicago spring, afloat; $1.08 for New York "no grade" spring, and $1.44 for good white Michigan. Rye at 96c. for State. Barley at 1.09½ for No. 2 Canada. Corn is active at a decline; sales at 61½@61¾c. for steamer grades mixed; 60@63c. for ungraded mixed. Oats are lower; sales at 39@43½c. for mixed Western, and 48@52c. for white State.

HAY AND STRAW.—Receipts are less liberal, and, with considerable demand, prices favor the seller.

Bale hay is quoted:—Shipping, 75@80c.; retail qualities, $1.00@1.10; clover, 70@75c.; salt, 60@70c. Straw is quoted at $1.05@1.10 for long rye; 75@80c. for short rye; 60@65c. for oat.

Exports past week, 400 bales. Since Jan. 1st, 14,950; same time last year, 12,200.

HIGHWINES selling at $1.11.

HOPS.—The exports for the week have been only 430 bales, while the receipts were 887 bales. Prices have not been affected on the decreased business. Some of the choicest lines are held up to 20c., with 18c. bid. Fine stock shows to a meager amount in the assortments. We quote:

N. Y. State, 12@18c.; Eastern, 10@16c.; Wisconsins, 10@16c.; Yearlings, 8@10c.; Olds, all growths, 4@6c.; Californias, 15@18c., ₱ lb.

LEATHER.—Hemlock sole at 21@22c. for light, 23@24c. for middle, 23½@24c. for heavy, 19½@21c. for good damaged.

MAPLE SUGAR.—The supply is largely in excess of the demand. Grocers have bought very sparingly this season, and a week's dull trade gives quite an accumulation to this item. Fancy small refined cakes bring 11@12c., but wholesale lots of large molds will not exceed our last rates.

Choice new sugar, 10@—c.; fair, 8@9c.; old, 6@8c. Syrup, ₱ gallon, 70c.@90c.

POULTRY AND GAME.—Frozen stock is still plenty, but does not often bring full prices. For fresh dressed the feeling is easy. Receipts from Philadelphia will be apt to fall off after the 10th of May.

We quote Philadelphia picked chickens at 18@20c.; capons at 33@35c. for large; 25@30c. for small capons and slips.

Chickens, Bucks Co., good to prime, 18@19c.; Jersey, good to prime, 16@18c.; Slate, good to prime, 14@16c.; Western, good to prime, 13@15c.; fair to good, 11@13c.; poor, 4@9c. Turkeys, Jersey, good to prime, 18@20c.; State, good to prime, 17@18c.; Western, good to prime, 15@18c.; inferior, 10@14c. Ducks, Jersey, good to prime, 19@21c.; State, good to prime, 17@19c.; Western, good to prime, 16@18c.; fair to good, 14@16c.; poor, 12@—c. Geese, Jersey, prime, 12@14c.; State, good to prime, 11@13c.; Western, good to prime, 10@12c.; do., poor to fair, 8@10c.

Live poultry has ruled quite steady, with a fair demand for fowls. Turkeys are of poor quality and slow of sale. Spring chickens are lower.

Fowls and turkeys, Jersey, ₱ lb., 13@16c.; do. Western, 14@16c.; Geese, Jersey, ₱ pair, 2.50@2.75; do. Western, $1@1.50; ducks, Western, ₱ pair, 70@80c.; ducks, Jersey, ₱ pair, $1.25@1.50; roosters, 8@10c. Spring chickens, ₱ pair, 60c.@$1.00.

We have seldom seen so large a stock of pigeons; quality good and low prices keep up an active demand. Wild ducks are no longer quotable. We quote:

Wild pigeons, feathered or picked, ₱ doz., 62@75c.; English snipe, ₱ doz., $1.25; plover, ₱ doz., $1@1.12; sand snipe, 30@40c.

PROVISIONS.—There has been a sharp decline in prices throughout, with a pressure to sell, partly occasioned by the heavy arrivals of hogs at Western points. Mess pork is quoted at $21.75@22 for spot lots, $21.80 for May, and $22.10 for June. Dressed hogs at 10¾@10¾c. Bacon at 12¾c. for Western long clear, and 13¾c. for city do. Western steam lard at $13.32 for spot lots, $13.25 for May, $13.40 for June, $13.60 for July. Stearine at 14¾@14¾c. for prime. Beef—Extra mess $13.00@—; do. plain, $12.00@12 50; tierced at $22 for prime mess, and $24 for India mess. City extra India mess, $27@28, and Philadelphia mess at $26.

SALT.—Quoted at $2.50 for Ashton's; $1.45@1.55 for Deakin's; $1.10@1.45 for Marshall's, Washington & Worthington's.

SEED.—Only small lots of grass have been placed at generally steady figures. Clover, 16¾@17c. for Western and State. Timothy at $2.65@2.70.

SUGAR (Refined).—Soft yellow, 8¾@9¾c.; soft white, 9¾@9¾c.; crushed, 10¾c.; powdered, 10⅜@10¾c.; granulated, 10¾c.; cut loaf, 10¾@10¾c.

TOBACCO.—There has been a fair export trade, and a generally steady market.

VEGETABLES.—Exports of potatoes past week, 2,473 bbls.; since Jan. 1st, 70,113 do.; same time last year, 32,773; of onions, 50 bbls.; since Jan 1st, 5,377; same time last year, 1,225. Liberal supplies of Southern produce cultivon the market, and prices are becoming popular. Bermuda stuff has had free quotations, and tomatoes are almost as low as canned. Old potatoes are dull; Southern new are declining.

Early Rose, bulk, ₱ bbl., $1@$1.12; Peach Blows, $1.00@1.37; Prince Alberts, 75c.@$1.00; common, 50@75c. Bermuda, $5.50@6; Florida, $3@5. Cabbages, ₱ 100, $5@8; red, $7@11. Squash, Marrow, bbl., $2.25@2.50; Rhubarb, $1.25@2.50. Onions, red, bbl., $1@2.00; do. yellow, $1@2.00; do. white, $5.50@6. Russia Turnips, ₱ bbl., 75c.; white, 50c. Carrots, $1.00. Southern spinach, ₱ bbl., $1.00@1 50. Kale, $1@1.25. Charleston green peas, ₱ bu., $1.75@2.25; Savannah, $1.75@2.25. Norfolk cabbage, ₱ bbl., $1.25@1.50. Bermuda tomatoes, 5-quart box, 50@—; beets, $1.25 ₱ crate. Mushrooms, ₱ lb., 50@60c. Rhubarb, ₱ doz., 75c. Bermuda onions, ₱ crate, $2.00. Florida string beans, $3@5. Asparagus, ₱ doz., $3@7. Florida cucumbers, crate, $5@7.

WOOL.—There is still a dull and dragging market. It is difficult to sell other than small lots, prices for which are irregular and pressing the buyer. XX Ohio fleeces sold at 45c.; prime western Texas at 20c.; new spring California, 24@26c.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., April 29, 1876.

THE market for new cheese is in a very unsatisfactory state this week. The cheese in delivery, both from factories and farm dairies, was badly skimmed, and as such cheese is not wanted just now, sales were slow and prices low. The highest price offered was only 8c., and only two lots sold at that figure. Others were offered at 7@7c., but the bulk both of farm dairies and factories, was sent forward to be sold on commission.

About 250 tubs of butter were on delivery, and sales ranged at 28@33c., the bulk going at 31@32c.

The country roads continue to be in a wretched condition for travel, there being deep snow banks to pass over with wagons.

We have advices from Europe to the second week of April. Our London correspondent says:

English cheese is in fair demand, while American stocks are now in small compass and all inferior sold. Prices for American are very fine, with a good demand. We give quotations as follows:

The prices are for extra American, 66@68s.; fine, 65@66s.; good, 54@55s.; secondary and common, 30@40s. English cheddar brings 84@90s.; Wiltshire double, 70@80s.; Cheshire medium, 63@68s.; fine, 78@81s.; Scotch, 63@68s. Dutch cheese—Edams, 70@76s.; Gondas, 58@63s.

All the butter to hand has cleared at a reduction of 2@3s. from highest point.

Jersey sells for 136s.; Dorsets, 104s.; Danish, Kiel and Swedish, 124@140s.; Normandy extra, 150s.; American and Canadian, 90@100s. ₱ cwt.

Oleomargarine or artificial butter, 80@120s.

LIVE STOCK MARKETS.

NEW YORK, April 29, 1876.

RECEIPTS OF LIVE STOCK.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs.
Sixtieth St.	3,371	19	1,195	5,021	000
Forty-Eighth St.	00	31	157	1,795	000
Fortieth St.	000	00	000	000	11,679
Harsimus Cove	5,670	00	000	13,185	10,943
Totals this week	9,041	50	1,352	20,001	22,622
Last week	7,876	32	814	18,754	20,575

BEEVES.—Trade slow on a heavy run on Monday last, when prices ranged at 8¾@12¾c. ₱ lb.; weights, 5½@9 cwt. The quality of these herds was generally coarse, and ranged from poor to good, with only a very few choice quality top steers. Wednesday, trade firm at 9¾@11¾c.; weights, 5¾@9 cwt. Thursday, trade slow at 9¾@11¾c.; weights, 6¼@8¼ cwt. Friday, the markets closed weak, with sales at 9¾@11¾c.; weights, 6@8¾ cwt. From 55@58 lbs., net, has been allowed to the cwt.; the largest number of cattle were sold at 55 lbs. net. The quality of these herds was from poor to good; only a few choice quality beeves came to hand; quality in general coarse but fat. Native steers, 8@11¾c.; grassy, 12@12¾c.; mixed herds, 10@10¾c.; dry cows, $18@57 ₱ head. Bulls on live weight, 4@4½c. Missouri oxen, 8½c.; Ohio, 9¾c.; Tennessee and State, 9¾c. Heifers, $10@11¾.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	12 @12½	12 @12½
Fair	11 @11¾	11 @11¾
Poor	10 @10¾	10 @10¾
Poorest	8 @ 9¾	8 @ 9¾
Gen. selling rates	9¾@10¾	9¾@10¾

MILCH COWS.—The quality of the cows to hand has not been good enough to meet the demand; sales slow at low rates; 15 cows sold at $35@72 ₱ head; 9 at $65@81.50; 7 at $120@15; 6 at $50@60—calves always included, save at rates below $10 ₱ head. Several springers come to hand and now sold at $60 ₱ head, less $5 on the lot.

VEALS AND CALVES.—Trade in smooth quality veals merely nominal 9@9½c. Course and poor quality calves in over-supply and very slow of sale at 5@8¾c. State calves sold at 5¾@8¾c. ₱ lb.; Jersey, 7@8¼c.; Pennsylvania, 6¾@8¾c.

SHEEP AND LAMBS.—Monday last the markets opened slow, with general sales in small lots. Shorn sheep sold at 5¾@6¾c.; woolly, 6@8c.; yearling lambs, shorn, 6¾c.; spring lambs, 16c. Wednesday, trade small and slow; spring, 10c.; yearling, 6½@6¾c.; shorn, 5¾@6¾c.; woolly, 5¾@8c., scant. Thursday trade firm, with a fractional advance in feeling; shorn, 5¾@6¾c.; woolly, 6¾@7¾c.; spring, 15@16c., also $7@8 ₱ head. Friday, the markets closed slow but firm; shorn, 4¾@5c.; woolly, 6¾@8c. Texan sheep sold at 4½c.; Colorado, 6¾c.; Missouri, 7@7½c.; Illinois, 6¾@7¾c.; Michigan, 7½c.; Ohio, $6.25@7.50; Jersey, 6½c.; State, 5¾@6¾c.; State yearling lambs, 6@6½c.; Jersey spring lambs, 15@16c.; Virginia, $6.

HOGS.—Wednesday last, 118 Ohio hogs, live weight, 162 lbs. ₱ head, sold at $8.10 ₱ cwt.; 142 do., 170 lbs., $8.56¾. Friday, 126 do., 195 lbs., 8¾c. ₱ lb. Monday last, city dressed slow at 10c.; Wednesday, trade active at 10¾@10¾c. Thursday and Friday trade fallen off at reduced rates—10¼@10¾c.

HORSE MARKET.—City trade moderate; 18 head of poor quality light harness horses, $52@95 ₱ head; 22 ordinary, $115@150 ₱ head; 5 pairs heavy draft horses, quality fair, $100@150 ₱ head; 5 pairs choice, $300@450; 3 saddle horses, $170@255; 1 pair stylish carriage horses, $1,100; 3 pairs family, $400@650 ₱ pair; 1 brougham horse, quality coarse, $325; railroad horses sold at $120@150 ₱ head; stage line, $150@210 ₱ head. Seventeen horses arrived per Erie Railroad via Oak Cliff Station.

PERSONAL ITEMS.

MR. MOORE is still in the city.

BARON DE SANTA ANNA arrived at Philadelphia last Saturday week.

WAGNER is not rich, though his notes are honored the world over.

DUMAS has written 300 novels and stories. He must have a large ink-come.

BRONSON HOWARD is to do the correspondence for the Detroit Free Press at the Centennial.

THE King of Holland has given $100 toward the erection of a Dutch Church in New York City.

MR. DONALD G. MITCHELL has been appointed one of the jurors at the Centennial Exhibition.

A NEW YORK man has had to pay a woman $5,000 for calling her "a withered-up old maid." Serves him right.

JUDGE DAVIS is having 1776 white oak trees set out around his residence at Bloomington, all on account of the Centennial.

CHARLES G. LELAND, well known as "Hans Breitmann," is about to publish a volume of "Pidgin-English Sing-Song."

JOHN MASON, an Englishman, who arrived in 1826 and has ever since lived there, is acknowledged to be the oldest pioneer of Oregon.

FOUND at last. It is Oliver Dyer, the author of the "Wickedest Man in New York," who writes the answers to correspondents in the Ledger.

MESSRS. JOHN JACOB ASTOR and William B. Astor have each recently given $25,000 to the funds of St. Luke's hospital in New York City.

GRACE GREENWOOD'S peculating husband has fled the country, and Grace is to be congratulated upon the departure of the graceless vagabond.

JOAQUIN MILLER calls A. T. Stewart's life "one long labor for the weal of man." In other words, the great shopkeeper merely looked upon man as a golden calf.

HATTON, the English playwright, has dramatized Hawthorne's "Scarlet Letter," and will produce the piece at Newcastle with Louisa Howard as Hester Prynne.

WILLIAM P. SARGENT of Boston, is about to build and present an elegant town house to Merrimac, his native town.

We trust Merrie Mack will enjoy it.

GEN. A. D. MARTIN of Walkill, N. Y., claims 250 acres in the heart of Newburg, under an old patent, and vows to get possession of it, too. The property is worth $3,000,000.

PROF. J. K. PAINE of Harvard, has been selected to compose the music for the Centennial Hymn, written by John G. Whittier for the Fourth of July celebration at Philadelphia.

HORATIO SEYMOUR says "Republicans have lost the confidence of the country and the Democrats haven't gained it."

Why don't they advertise in the "lost" column?

FISH COMMISSIONER SHAW of Anamosa, Iowa, is now arranging for a car load of young eels, which he will introduce into waters of Iowa. The eels will be brought from the South.

THE reason they style him "Dom," and not "Don" Pedro, is because Don is Spanish, and the language of the Brazilian Emperor is Portuguese. In each case it is derived from the Latin word *dominus*, lord.

THE Empress of Brazil has gone into mourning for the death of her husband's aunt, the Princess Isabella of Brazil, and was therefore unable to attend the Centennial Ball at the Academy of Music in New York.

IN pursuance of instructions from the Mayor, the Treasurer of Richmond, Va., has paid the bill for gas used last month by the post-office.

As there was no political Convention assembled, the bill was probably light.

JOHN D. HARVEY of Watch Hill, R. I., one of the heroes of the Metis disaster, who received a gold medal from Congress for bravery in saving life, died recently from lock-jaw.

What an excellent political disease that would be!

LI PO TAI, a Chinese physician, is the richest Chinaman in California. He owns $75,000 worth of real estate.

This statement, possibly agrees with the first part of the Celestial's name, if accounts of their habits of sending their money home are correct.

ANNA DICKINSON really is going on the stage this time. The theater is the "Globe" of Boston, and the play "Anne Boleyn." It is hinted, moreover, that Miss Dickinson will appear as "Beatrice" in "Much Ado About Nothing," if she finds herself equal to the demands of her new profession.

MR. WIRT HENRY of Virginia, a grandson of Patrick Henry, has aided in contributing a number of ancestral portraits, books and medallions to the historical department of the Centennial Exhibition.

A great many will contribute medallions. Half dollar size.

MARYLAND has decided that women must not become lawyers. That settles it. Now then, pass a law that men who are supported by women shall be considered vagrants.

Dictionary for "vagrant" is "moving without certain direction." Men only do this under *spiritual* influence. Wonder if that is what the writer means.

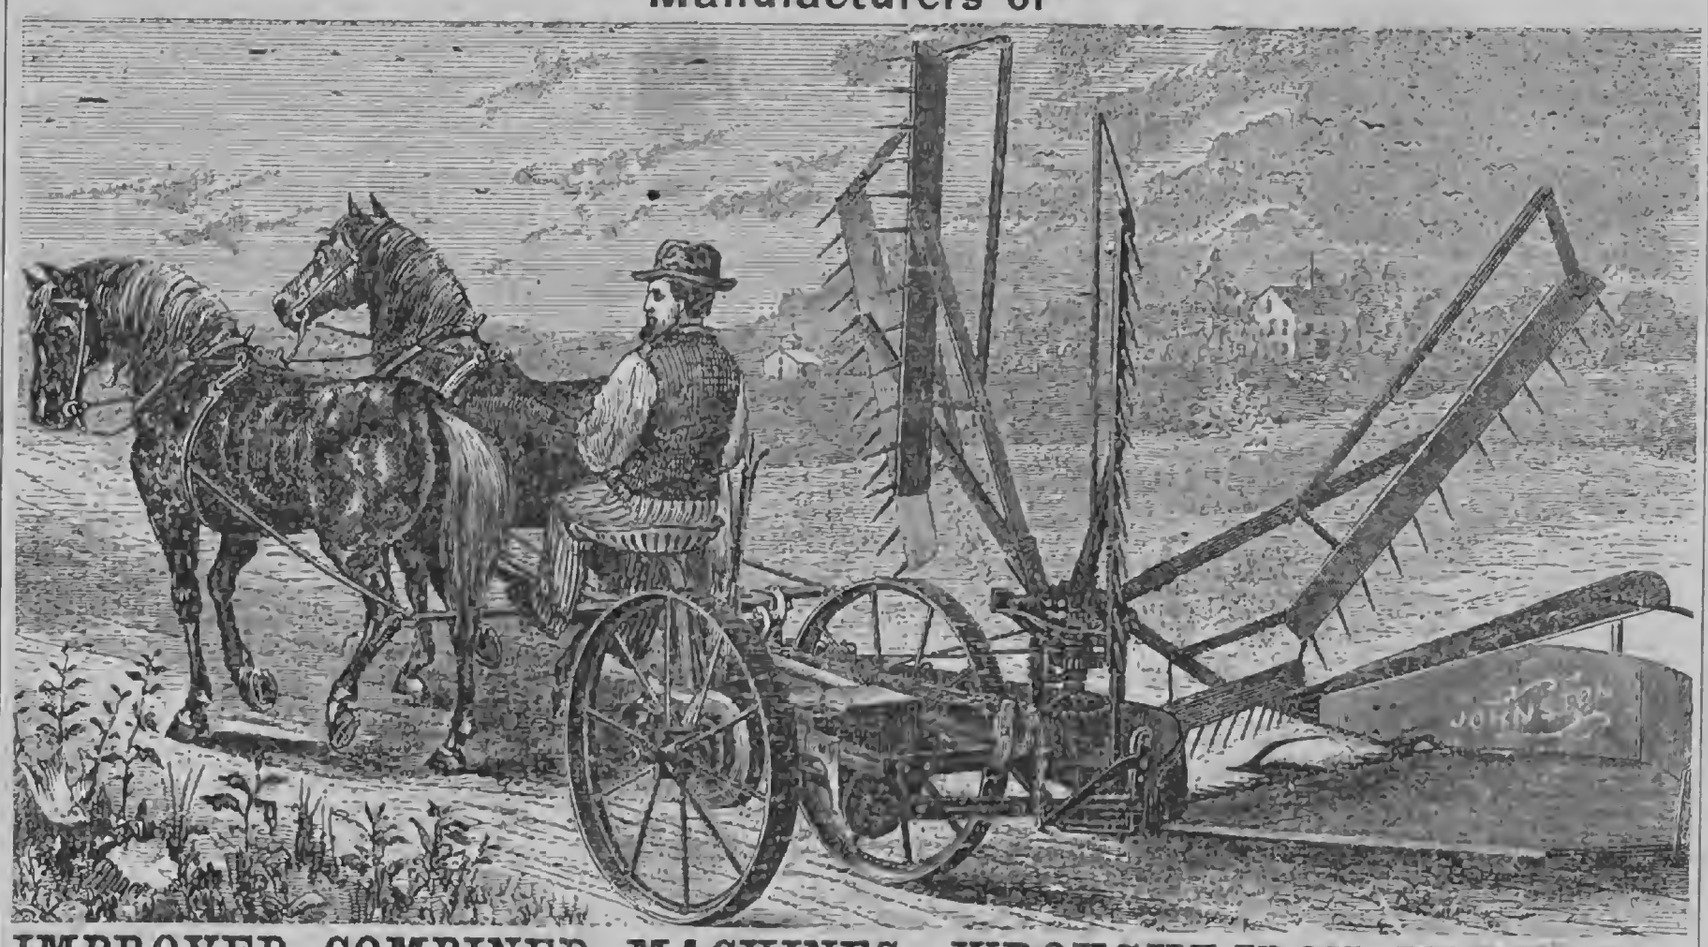
THE Hon. E. J. Ellis, M. C. from Louisiana, and Colonel Horatio C. King, Publisher of the Christian Union, have been invited to act as orator and poet respectively at the general reunion of the Phi Kappa Sigma Fraternity at Philadelphia, in June.

H. C. K. used to be *Hon.* Strange how titles float about. Can't account for it except on the germ theory. A germ may be a Kernel we believe.

Implements and Machinery.

THE JOHNSTON HARVESTER CO.,

Manufacturers of



IMPROVED COMBINED MACHINES, WROUGHT-IRON HARVESTERS, REAPERS AND MOWERS,

BROCKPORT, N. Y.

Branch Offices: CHICAGO, Ill., CLEVELAND, Ohio, and JACKSON, Mich.

SULKY PLOWS.—THE SUBSCRIBERS are the only manufacturers of

OSBORN'S SULKY PLOW,

the only Plowing Machine that has proved a perfect success in all kinds of soil. Any kind of plow can be attached. The plowman rides and handles the plow with ease, regulating the depth and width of furrow. The draft for the team is materially less, and the ordinary laborious mode of plowing is reduced to one of comfort and ease.

COMMON-SENSE FEED-CUTTER,

the most effective and durable Feed-Cutter ever invented.

RURAL PUBLISHING CO., 78 Duane St., N. Y.

ANSWERS TO CORRESPONDENTS.

We propose to hereafter devote a corner in these pages to answering questions relating to Rural affairs. Each correspondent is requested to send his (or her) full address, not necessarily for publication, but to enable us to be more explicit in giving the information desired. For instance, if a man should ask, "What is the best hedge plant for me to use?" it would be well for us to know in what part of the country he resides, for the one best adapted to the climate of Georgia might be valueless in Wisconsin. Correspondents may sign any name or initial they choose to their communications, but their full name and post-office address must also be added for the above-named reason, as well as an assurance that their questions are asked in good faith and for the purpose of obtaining needed information.

Mrs. Mary L. Faunce.—The Chinese fruit to which you refer under the name of "Lychee" is unknown to us, at least we do not know it by that name. If you have a specimen to spare, it would be very acceptable.

D. Clark.—The article to which you refer appeared in the RURAL NEW-YORKER for March 17, p. 187, under the heading of "A Cure for Obesity." The plant recommended to be used for making a drink to reduce flesh is our common "Sea Wrack," or Sea Weed (*Fucus versiculosus*). Many years ago, Dr. RUSSELL recommended applications of this plant for scrofulous swellings, but Sea Wrack tea for obesity is probably a modern discovery.

A Subscriber.—Before attempting to lay out a cemetery, you should consult some of the various works on landscape gardening, and also visit some of the old and most noted cemeteries in the country, such as Greenwood and Mount Vernon. The old geometrical system of square plats and walks at right angles is not just the thing for either cemeteries, private grounds, or public parks. Whatever plan is adopted, it should be made from careful surveys of the grounds, in order to be in keeping with the natural outlines and undulations of the surface.

Young Entomologist.—It is not known just how many different species of insects there are in the world, but we can safely say half a million. Probably not one-half of our native species in any one order has yet been named and described, therefore there is plenty of room for both old and young entomologists to work for fame and pleasure. After all the different species have received names and been described, then comes the more difficult part of the whole, *i. e.*, to discover and learn their habits or life history. There is need of at least one thousand more earnest workers in this field, in order that we may know more of the history of our common noxious and beneficial species.

Subscriber.—A good double-handful of leached ashes will answer for each hill of corn, and one-half the quantity if the ashes are unleached and fresh. It is also well to top-dress the hills with ashes after the corn is up, say six inches to a foot high.

J. C.—If you look close, the eggs of frogs will be found quite abundant in the ponds, usually in rather compact, glutinous masses. But do not forget that "tadpoles" are hatched from the frogs' eggs, and then in turn become what we call frogs.

L. A. R.—The yellow flower with filiform leaves now in bloom in your garden, is *Adonis vernalis*. The common name of this pretty little spring flower is Pheasant's Eye.

C. P.—The fine story going the rounds of the press in regard to the "new use for chicken feathers," sounds very pretty and looks very reasonable, but we do not think you need try saving those plucked from the fowls killed for market, expecting to find ready sale and at a good price. We think the supply in France is equal to the demand, and no large quantity will be wanted from this side of the Atlantic.

E. P. B.—Hungarian grass is cultivated to a reasonable extent in some few localities for fodder. It is sown in spring about the time of planting corn, about one half bushel of seed sown per acre. When cut for hay, the mowing should commence as soon as the flowers are seen on the heads, for if allowed to pass much beyond this point, the stalks become hard and the fodder will be of inferior quality.

Jno. M. W.—You will probably find no better very early potato than the Early Rose or Early Vermont. We have had some experience with these and other early sorts and class them among the best. They are especially valuable for the more Northern States, and succeed well in New Hampshire and Vermont.

E. C.—Yes; there is a variety of strawberry called the Brooklyn Scarlet. It is one of the handsomest of the scarlet sorts and of extra fine flavor, but, unfortunately, not very productive, unless planted in very rich soil.

Trees, Seeds, Plants, &c.

PURE GERMAN MILLET.

One and the only reason why our farmers do not sow this wonderful grass—they do not know what it is. We have some sample heads sent us, and they as far exceed anything in the Millet line, that we have ever seen, as day exceeds the night. It will produce four tons of hay and 100 bushels of seed to acre. All stock eat and thrive on it. There is nothing so good for milch cows. Pure seed and general information can be had by addressing H. JOHNSTON & SON, Seed Merchants, Lebanon, Ky.

Largest stock in America; quality extra. Prices reasonable. Price List free. T. S. HUBBARD, Fredonia, N. Y.

DREER'S
IMPROVED LIMA BEAN.

The distinctive features of this sort are early maturity, prolificness, and extra quality of bean, containing more saccharine matter and producing one-third more shelled beans to the pole than the Large Lima, while the shelling becomes an easy matter, from the fact of the pods being entirely full of beans, forming one against the other like peas in a pod.

The *American Agriculturist* of Nov., 1874, says:

"We regard the improving of this bean as one of the most important of the recent contributions to horticulture."

Price, $1 per pint.

20 cents per paper, mailed on receipt of price.

HENRY A. DREER,
714 Chestnut St., Philadelphia.

GRAPEVINES I will send the following by mail, post-paid—all true to name: **Brighton** (new), best early red, each $1.50; **Worden's Seedling** (new), very fine, large, early, black, $1 each; **Walker**, early—the only American Raisin Grape, $1 each; the three for $3. Also **Kerr's Prolific Strawberry** (new), very promising, $2 per doz; $5 per 100; and **Star of the West** (new), $2.50 per doz.; $5 for 50. Deduct 20 per cent. when over $5 worth of above are ordered. Raspberry and other Fruit Plants for sale in great variety at "**Hudson River Fruit Gardens.**" Plants genuine and low priced. **Berry Baskets** also, and **Crates**—many styles—largest assortment in this country. Try the "**Centennial**" Strawberry Basket this year. "**Eureka**" qts., only $11 per 1,000, nested and packed; in flats, $12. Address R. B. HAINES, Malden-on-the-Hudson, N. Y.

BEAUTIFUL EVER-BLOOMING
ROSES

Strong Pot Roses, suitable for immediate flowering, sent safely by mail, post-paid. Five splendid varieties, all labeled, **$1, 12 do. $2, 19 do. $3, 26 do. $4, 35 do. $5.** For 10 cents each, additional one **Magnificent Premium Rose** to every dollar's worth ordered. Send for our new **GUIDE TO ROSE CULTURE**, and choose from over **300** finest sorts. Traveler's Guide.

CALIFORNIA.

Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?

The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTH-WESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oshosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.

This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.

This is the ONLY LINE running those cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.

For rates or information not attainable from your home ticket agents, apply to

MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

THE PALACE HOTEL TRAIN
BETWEEN
NEW YORK AND CHICAGO,
via Cleveland.

Leaves Erie Railway Depot, foot of Chambers St. New York.

9:00 A. M., Daily except Sunday. Drawing-Room Sleeping Coaches through to Chicago; but one change of day cars.

7:00 P. M., Daily. The Palace Hotel Train to Chicago. Drawing-Room Sleeping Coaches and Pullman's Hotel Dining Car, through without change; but one change of day cars.

The only line running Hotel Dining Cars out of New York. A ride of nearly a thousand miles without leaving the car to eat, drink or sleep!

Wit and Humor.

SPARKS AND SPLINTERS.

MEN said to have a short weigh of doing business?—Coal dealers.

THE reason why rats desert a sinking ship has been rediscovered by the Burlington Hawkeye. It is because of their superior gnawtical science.

THAT balky animal, the lobster, (says the New York Herald) which blushes in hot water, into which it is always getting, will have a short crop of itself this year, owing to the storms.

A LADDY who had an offer of marriage from a Mr. Moore, wrote to him and asked for time to consider the matter. The letter was courteous and brief, closing with "No more at present."

"I DOESN'T want no lawyer; I'se gwine to tell de troof dis time," is what a regular customer of the Recorder's Court told his Honor when that functionary inquired if he had engaged legal assistance.

LADY—"Now, Mr. Snapper, as I saw you at church last Sunday, tell me what you think of our new preacher?" Mr. Snapper—"I think he would be a first-class martyr at the stake?" Lady—"Why so, Mr. Snapper?" Snapper—"Because he is so very dry."

A SLIGHT mistake at christening—Clergyman (who has forgotten the day of the month)—"Let me see; this is the—ah—thirteenth, I believe?" Fond mother (not catching the idea exactly, but thinking of her family)—"Why bless your stars! No, this is only the eleventh!"

JUXTAPOSITION.—The approved style of announcing weddings wrought a very significant combination in a Versailles, Georgia, exchange of a recent date. Mr. Harry L. Cramp was married to Miss Nettie Kollock, and a paragraph to that effect was headed "Cramp—Kollock."

AN ardent lover was once pressing his suit. The lady said:—"I like you exceedingly, but I cannot quit my home: I am a widow's darling, and no husband could equal my parent in kindness." "She may be very kind," replied the wooer; "but be my wife, we will live together, and see if I don't *beat your mother*.

"CLASS in the middle of geography, staud up," said a schoolmaster. "What is a pyramid?" he asked. "A pile of men in a circus, one on top of the other." "Where's Egypt?" "Where it always was." "Where's Wales?" "All over the sea." "Very well," said the schoolmaster, "stay there till I show you a species of birch that grows all over the land."

IT is well enough to talk of elevating the tone of social conversation, but when a well-meaning young man tries to introduce protoplasm as a subject, at a little gathering, and finds that everybody thinks he is referring to a new kind of plaster, and considers him indelicate in doing so, he is apt to feel that the life of the reformer is a kind of perpetual picnic on an ant-hill.—*Norwich Bulletin.*

FOX'S PAY DAY.—Charles Fox had an unfortunate creditor who insisted that he would not leave until a day for payment was named. "Will you go, then?" asked the mininister. "Yes, and not trouble you until the day arrives," replied the dun. "Well, then," said Fox, slowly. "I will pay you on the day of judgement. But stop; as that will be a very busy time, let us make it the day after."

WELL CONNECTED.—John Bannister, the commedian, was presented to an old lady proud of ancient and noble blood. The old lady asked a wit of the day, who was present. "Who are the Bannisters? Are they of a good family?" "Yes," said the wit; "very good indeed; they are closely connected with the *Stairs*." "Oh," said the lady, "a very ancient family of Ayrshire—dates back to 1450; I am delighted to see your friend."

ANGELS MOLTING.—A teacher in a Sunday school, says the New York Evening Post, was explaining to his class of boys the meaning of "Jacob's ladder," when one of the number, more inquisitive than attentive, inquired;—"If the angels had wings what was the need of a ladder for them?" This was a poser, and while he was meditating a reply and unable to answer, another boy exclaimed, "I'll bet I can tell what they used the ladder for." "Out with it, then," said the teacher. "Oh, I guess they were molting."

GAVE IT UP.—The custom of appointing young lawyers to defend pauper criminals, says the San Antonia (Texas) Herald, received a backset the other day in our District Court. His Honor, Judge Noonan, had appointed two young lawyers to defend an old and experienced horse-thief. After inspecting his counsel for some time in silence, the prisoner rose in his place and addressed the Bench. "Air them to defend me?" "Yes, sir," said his Honor. "Both of 'em," inquired the prisoner. "Both of them," responded the Judge. "Then I plead guilty," and the poor devil took his seat and sighed heavily.

IS THE
BEST PAINT IN THE WORLD.

There is no Paint manufactured that will resist water equal to it. It is Smooth, Glossy, Durable, Elastic, Beautiful and Economical; and of any shade from PURE WHITE to JET BLACK; and as evidence of its being the *BEST PAINT*, the necessity of their establishing the following Branch Factories will abundantly testify.
BRANCH FACTORIES:
306 West St., New York. 83 West Van Buren St., Chicago, Ill.
210 S. Third St., St. Louis, Mo.; and a Wholesale Depot at Wm. King & Bro., No. 2 North Liberty St., Baltimore, Md.
Sample Card and numerous Testimonials sent FREE on application.

(CIRCULAR.
Consumers Importing Tea Co.,
No. 8 Church Street,
P. O. Box 5,509. New York City.
This is a combination of capitalists to supply the consumers of Teas throughout the United States on the mutual principle.
We have experienced agents in all the best districts of China and Japan to select Teas especially for our trade.
We expect every consumer of Teas to render us all the assistance they can in carrying out our enterprise, as we make a specialty of SUPPLYING CONSUMERS ONLY (and allow no middlemen to make any profit on our importations), which will enable us to supply them with Teas at prices lower than have ever been known, and of those fine qualities that seldom reach the interior, being sold only to the large cities and among the very wealthy.
Hoping the consumer will take an interest in our enterprise, and send at once for a circular with full explanations of how to proceed to obtain our goods, we remain,
Most respectfully yours,
Consumers Importing Tea Co.,
No. 8 Church St.,
P. O. Box 5,509. New York City.
Entered, according to Act of Congress, in January, 1874, by the Consumers Importing Tea Co., in the Office of the Librarian of Congress, Washington, D.C.

SEND FOR CIRCULAR of Agricultural Implements to ABBOTT, BREW & CO., Mfr's, Cleveland, O.

FREE—GIFFORD'S SWINGING
CATTLE STANCHIONS,
Self-closing, self-fastening. One farm right *free* in each town to the first applicant. *Give name of town, county and State.* For Illustrated Descriptive Circular and Deed, send 25 cents to

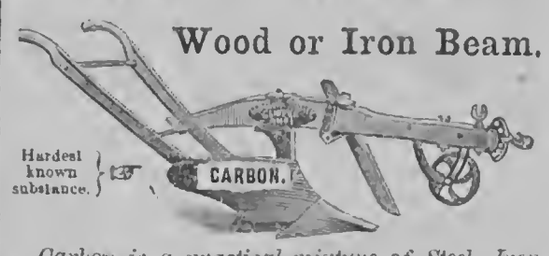
SEND TO AULTMAN & TAYLOR, Mansfield, O., for a picture of their Rooster, *free.*

"THE VIBRATOR."
1,000 SOLD LAST SEASON
WITHOUT ONE FAILURE OR REJECTION.
This is the famous Threshing machine that has "swept the field" and created such a revolution in the trade, by its MATCHLESS GRAIN-SAVING AND TIME-SAVING principles.

THE ENORMOUS WASTAGE of grain, so *inevitable with other styles* of Threshers, can be SAVED by this Improved Machine, *sufficient, on every job, to more than pay all expenses* of threshing.
FLAX, TIMOTHY, MILLET, HUNGARIAN and like seeds, are threshed, separated, cleaned and saved, as easily and perfectly as Wheat, Oats, Rye or Barley.
AN EXTRA PRICE is usually paid for grain and seeds cleaned by this machine, for extra cleanliness.
IN THE WET GRAIN of 1875 these were substantially the ONLY MACHINES that could run with profit or economy, doing fast, thorough and perfect work, *when others utterly failed.*
All GRAIN, TIME and MONEY wasting complications, such as "Endless Aprons," "Raddles," "Beaters," "Pickers," etc., are *entirely dispensed with*; less than one-half the usual Gears, Belts, Boxes and Journals; easier managed; more durable; light running; no costly repairs; no dust; no "litterings" to clean up; not troubled by adverse winds, rain or storms.
FARMERS and GRAIN RAISERS who are *posted* in the large saving made by it, will not employ inferior and wasteful machines, but will *insist* on this improved Thresher doing their work.
FOUR SIZES made for 6, 8, 10 and 12 Horse Powers. Also a specialty of SEPARATORS designed and made EXPRESSLY FOR STEAM POWER.
TWO STYLES OF HORSE POWERS, viz.: our improved "Triple Gear," and our "Spur Speed," (Woodbury Style), both "Mounted" on *four* wheels.
IF INTERESTED in Threshing or Grain Raising, apply to our nearest Dealer, or write to us for Illustrated Circular (sent free) giving full particulars of Sizes, Styles, Prices, Terms, etc.
Nichols, Shepard & Co.,
Battle Creek, Mich.

TRY THE CORTLAND PLATFORM SPRING WAGON.

Patent Carbon Plow.
Wood or Iron Beam.



Carbon is a practical mixture of Steel, Iron and other metals. Cast in form, harder than steel or any surface-chilled iron. Will scour in any soil. Costs less than steel, and but a trifle more than cast-iron.

The Ilion Patent

Self-Discharging and Hand-Lever Hay Rake.
For prices and further information, address
REMINGTON AG'L CO.,
Ilion, N. Y.

One Agent wanted in every town, city or county, to canvass for a respectable business, in which any active and intelligent man or woman can easily make from $5 to $10 per day. The business is new and permanent, as we make the same offer next year that we do this. A person who had never canvassed before, made $7 50 in one hour; an experienced agent made $72.75 in 15 hours. Full particulars free. C. A. CLEGG, Manager, 69 Duane St., New York.
$5 TO $10 A DAY SURE.
"We know C. A. Clegg to be responsible and reliable, and think he offers Agents extraordinary inducements."—*N. Y. Weekly Sun, April 19, 1876.*

SOLE MANUFACTURERS,

Pomological.

SOME APPLES OF A CENTURY.

RETROSPECTIVE investigations by laborers in any branch of science or art, are often necessary in order to prevent them from becoming too egotistical and confident in their real or supposed advancement.

Our pomologists are not wholly free from a taint of a self-laudation of their great progress, and while we are not disposed to check enthusiasm, which tends to promote the happiness or welfare of the masses or even individuals, still it may not be amiss in this, our Centennial year, to take a retrospective glance over the past century and note some of the important changes which have taken place in the production of certain kinds of fruits.

The apple being one of the most familiar and valuable fruits in Europe and America, it well represents our progress in pomology generally. It is now over one hundred years since the Ribston Pippin apple originated, as is supposed, in England, for in 1875 there were grafted trees of it for sale in the Brompton Nurseries propagated from the original tree growing at Ribston Hall, near Karnesborough.

We name this variety not only on account of the great popularity which it has since obtained, but because through its once apparent decline in England for a period of years, came the oft-discussed theory of natural deterioration of all cultivated fruits.

For some unknown cause, nearly all the trees in England were, during the early part of the present century, affected with a disease which bid fair for a while to prevent the further propagation or culture of this then famous apple.

THOS. ANDREW KNIGHT, a noted English pomologist, while trying to discover the cause of the disease, came to the conclusion that the Ribston Pippin was really dying of old age, and all its progeny must necessarily go with their parent. Singular, and we might almost say absurd, as such a theory was, there were many to accept it as a true solution of the mystery which surrounded the decline of this old and popular variety.

A few years later, however, we find the Ribston Pippin again recommended as one of the very best varieties in cultivation, and to this day it is seldom left out of the most select lists of dessert apples.

Its introduction into this country dates from almost its first advent into orchard culture in England, and the accompanying illustration is from a specimen grown in Illinois, which is slightly more elongated than the usual type of this variety.

For one hundred years this apple has ranked among the best, and the late A. J. DOWNING said that in Great Britain it stands as high as the Bank of England.

In this country it has never been valued as highly as in its native clime; still we think a variety which can show so old and valuable a record is worthy of being placed high up in the Centennial Roll of Honor.

The old Rhode Island Greening, Newtown Pippin, Baldwin, Tompkins County King, and many other popular sorts, will probably remain in cultivation and be exhibited at our bi-centennary celebration. For our part, experience shows that there is little room for progress, except in the production of varieties adapted to certain conditions or climates. In seeking this, quite a marked progress has been made during the past few years, and in no one direction is it more apparent than in what are termed

SIBERIAN (OR CRAB) APPLES.

It is not many years since our list of these apples was made up of a half-dozen small and scarcely edible sorts, raised from the small wild apple of Northern Europe.

The varieties of the common *Pyrus malus* having in the main proved too tender for the more Northern and Northwestern States, our pomologists were compelled to seek a more hardy species, and this was found in the *Pyrus prunifolia*, or Siberian Crab-apple. For a number of years only acid varieties were produced, and some of our fruit-growers began to despair of a sweet sort in this species; but it came at last, and now there are several very excellent ones in cultivation. One of the very best, if not the best, is the Van Wyck, shown in the accompanying illustration. It originated near Fishkill, N. Y., and was first brought to notice and described by us in 1869. Since that time it has been propagated and widely disseminated. We have several trees of it growing in our grounds, and they give promise of being very vigorous and productive.

The Van Wyck is quite large for a Siberian, the skin white shaded and mottled on the side exposed to the sun, with light red. The flesh is tender, sweet and rich. Ripens in September and October. We consider it one of the most beautiful and valuable of all the sweet sorts.

SWEET SIBERIAN CRAB APPLES.

"HYBRIDIZING" GRAPES AND OTHER FRUITS.

EDS. RURAL NEW-YORKER:—Will you please give your opinion on hybridizing grapes and other fruits? It is a well-known fact that when the seeds of any variety of grape, strawberry, etc., are planted, that in no case, if not hybridized, do we ever get any variety that is an exact counterpart of the parent vine or plant, and to obtain an improved variety one has to grow thousands of seedlings, and often when that number is grown not a single new variety is produced worth cultivating, even when the parent is of excellent quality. The question, then, is, Can the seeds of one variety be so affected by fructification from another variety as to produce vines embracing the good qualities of both, when the seed of each, sown separately, without any attempt at hybridizing, will fail to reproduce, except in very rare cases, the good qualities of the parent vine or plant? I am inclined to believe that this whole theory of hybridization, in every shape and manner, is fallacious — that the fructification of the flowers of one variety with the pollen of another does not, and cannot, affect the seeds of the variety thus fructified so as to cause the seedlings grown from them to partake in any degree of the qualities of the vine or plant from which the fructifying pollen was taken, and that all so-called "hybrids" are mere chance seedlings; yet I may be mistaken, and therefore ask your opinion.

FRUIT-GROWER.

Plants in a state of nature vary but slightly from generation to generation, still we may safely assert that Nature never produces two things *exactly* alike. This natural tendency to vary increases as we bring plants under domestication, until after a few generations the original type is frequently so nearly obliterated that it becomes difficult to trace back the lineage or discover any positive characteristics of original parentage.

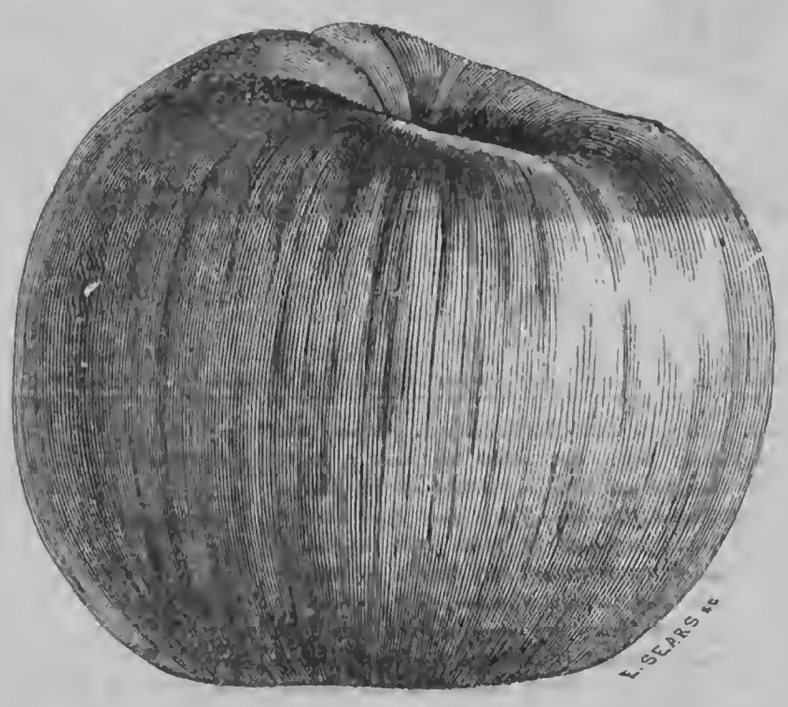
It is this tendency to extreme variations in plants under domestication which leads many a novice in horticulture to believe his maiden efforts in hybridizing and crossing have been successful, when the same results would have followed had no artificial impregnation been attempted. Still, with all the mistakes which have been made and the false claims set up for the parentage of *pseudo* crosses and hybrids, we think there are some genuine productions of the kind among our lists of new fruits. In other words, we think that direct crosses and hybrids have been and can be produced among plants as well as animals. The sexes in the former are, as a whole, as well defined as in the latter, and by proper and careful manipulation the end sought is probably readily attained.

But ordinarily the novice in horticulture is too ready to believe that the results of experi-

ments accord with his aims and desires at their commencement. For instance, should he wish to produce a cross between a white and a red apple, choosing the latter for the female parent, and then proceed with fertilizing the pistils in the usual manner, afterward sowing and planting the seed of the fruit, the result being a white or light-colored sort from a dark one, he might be led to suppose his object had been attained. But there would really be no certainty that the effect of cross-fertilization had caused the change in color or in any other characteristic, for the simple reason that nearly all of our cultivated fruits are the results of many hundreds of crosses in the past generations, and the seedlings therefrom are liable to vary naturally in all directions without artificial impregnation.

We obtain light-colored strawberries from dark-red ones, white apples from red, white grapes from black, and so on to the end of the chapter—all from seed gathered indiscriminately and without previous cross-fertilization of the flowers.

It is quite probable that a man who proceeds in a scientific manner to obtain a cross between two varieties would be more likely to accomplish it than one who runs the chances of insect aid in cross-fertilization, still it requires very great care in order to be certain as to results.



THE RIDSTON PIPPIN.

Field Crops.

POTATOES FROM SEED.

In a recent pamphlet entitled "a Treatise on the Cultivation of the Potato," by James Torbitt of Belfast, Ireland, the author quotes the essays of the late Andrew Knight, in the Transactions of the Horticultural Society, of which he was the President, in which he describes the experiments leading him to the conclusion that "every cutting will be affected by the state of the parent stock," none vegetating with vigor much, if at all, beyond the life of the parent stock, provided that died from old age." The mode of propagating potatoes by tubers or sections of a tuber is equivalent to the propagation of a plant by cuttings. The potato has attained its full duration of life, and it, with all parts cut from it, is old, worn out, and moribund: liable, therefore, to the attacks of parasites, disease, evil influences of all kinds. New life must begin for it before we can expect its original vigor to return. Let us propagate new sorts from seed, and we shall probably alight on sorts vigorous enough, as of old, to resist the attack to which the potato has since succumbed.

That is the theory. "At the meeting of the British Association at Belfast, in the summer of 1874," says Mr. Torbitt, "I stated my opinion, that the sexual combination resulting in the birth of the seed, formed the true and only starting point of the life of the individual; that plants propagated by their buds were yearly growing older, and that the process of cutting them to pieces and planting them in the earth could not, therefore, be carried out for ever. And I illustrated my statement by the following experiment:- In the spring of 1873, I planted the cutting of a vine; in the spring of 1874 it had put forth its adventitious roots and leaves. I then took it up, divided it longitudinally into two equal parts, cutting down exactly through the center of the pith, and leaving to each half an equal quantity of roots and leaves. I planted it in separate pots, and exhibited it growing healthily to the Biological Section of the Association.

I argued that it was only one individual, as regards the duration of life; that neither half had received any accession to its original stock of life—obtained a new birth or new starting point of life—and that if cutting a plant into two equal parts did not effect a new birth, neither could cutting it into two unequal parts, and calling one the stem and the other the cion, do so. I pointed out that the potato, when propagated by the 'set' for a series of years, undergoes a change; that in the season of its bloom, here and there a pedicel breaks at its junction with the calyx, the flower drops off, and a berry, which should have contained from 75 to 100 seeds, is wanting in that cluster; that when so propagated for a further season of years, all the pedicels break, and the plant becomes utterly sterile, the condition to which the Skerry Blue is now reduced; that when so propagated for another series of years, it becomes unable to reproduce its organs of reproduction, and the fields become completely flowerless, the state to which the Cruffle and others are now reduced; and I predicted that in a few years more the 'sets' of these old, flowerless plants would fail to germinate, they would rot in the earth, and that this death from old age would be supposed to be a disease, and be called, as heretofore, the 'miss.'

"I further inferred that as the potato became aged it became so weak as to be unable to resist the attack of the parasite whose growth in the body of the plant forms the disease, and that in order to extirpate the parasite it would be necessary to grow young, vigorous plants from the seed."

QUANTITY OF SEED PER ACRE.

There are various opinions held by farmers and gardeners in regard to the quantity of seed required for an acre of our common field crops, still the numerous tables published differ but slightly. The Maryland Farmer gives the following, which we think is not far out of the way and will doubtless be useful to our readers. Some of the estimates are not in accordance with our ideas, as, for instance, potatoes, but it will serve as a general guide:

Often a farmer or gardener will be in doubt as to how much seed should be planted to the acre. Of course circumstances somewhat vary this matter. One thing is certain everywhere—that is, that poor land requires more seed of every kind than rich land.

The following table gives the quantity of the leading articles sown to the acre. Of course, it is important to get good seeds. Some few seedsmen mix bad seed with the good, excusing themselves on the ground that people always sow too thick. None of good character do this of course. It is always best, however, to examine seeds carefully before sowing. The tables are intended for good, new seed:

Artichokes	4 to 6 bush.
Asparagus, in drills	6 to 8 lbs.
Beans, dwarf, in drills	1 to 1½ bush.
Beans, pole, in hills	10 to 12 qts.
Beets, in drills	5 to 6 lbs.
Buckwheat	1 to 1½ bush.
Barley	1½ to 2 bush.
Cabbage in beds to transplant	¼ lb.
Carrots, in drills	3 to 4 lbs.
Corn, in hills, 3x4	8 to 10 qts.
Corn, for soiling, in drills	3 to 3½ bush.
Cucumbers, in hills	2 lbs.
Mustard, broadcast	peck to ½ bush.
Melon, musk, in hills	2 lbs.
Melon, water, in hills	3 to 4 lbs.
Millet	½ to 1 bush.
Onions, in drills	4 lbs.
Onions for sets, in drills	6 to 8 bush.
Parsnip, in drills	3 to 6 lbs.
Peas in drills	1½ bush.
Peas broadcast	3 bush.
Potato (cut tubers)	6 to 10 bush.
Pumpkin, in hills	4 to 6 lbs.
Radish in drills	8 to 10 lbs.
Sage in drills	8 to 10 lbs.
Salsify in drills	8 to 10 lbs.
Spinach in drills	10 to 12 lbs.
Squash (running varieties) in hill	3 lbs.
Squash (bush varieties) in hills	4 lbs.
Turnips in drills	1 to 2 lbs.
Turnips broadcast	2 to 3 lbs.
Tomato, to transplant	½ lb.
Broom corn in hills	8 to 10 qts.
Clover, red alone	10 to 15 lbs.
Clover, Alsike alone	8 lbs.
Clover, white alone	8 to 10 lbs.
Clover, lucerne alone	16 lbs.
Orchard grass	12 to 20 lbs.
Blue grass	12 to 20 lbs.
Grass, mixed lawn	2 bushels.
Redtop	12 to 16 qts.
Oats broadcast	2 to 3 bush.
Rye broadcast	1½ to 2 bush.
Vetches broadcast	2 to 3 bush.
Wheat broadcast	1 to 1½ bush.
Timothy alone	½ bush.
Millet	½ to 1 bush.
Flax seed	1 to 1½ bush.

For a good lawn sod, different gardeners recommend different combinations of grasses: among them, the following is a good mixture, for an acre of lawn:

5 quarts Kentucky blue grass,
6 quarts redtop grass,
5 quarts Rhode Island bent grass,
2 quarts creeping bent grass,
2 quarts white clover.

The ground should be well underdrained, deeply plowed and made thoroughly fine and mellow, and rich with well rotted and mixed composts; then the grass will grow thick, fine, soft and even.

All the grains, and most vegetable seeds, germinate and come up evener and quicker, and grow more thriftily and ripen better, if the seed be soaked in salt brine or copperas water a few hours and then rolled in plaster, lime or ashes to dry it fit for planting; besides, another benefit is derived from this brining grains and other seeds—it does much to prevent destruction by birds, vermin and insects.

The Swine-Herd.

HOG CHOLERA.

Last week we gave a list of some forty questions sent out by the Illinois State Board of Agriculture to the farmers of the State.

Replies to these questions have been returned to the Board in large numbers, many of which appeared in the Inter-Ocean of April 27. We copy a few to show the general condition of swine, and the treatment they receive in the infected districts, as well as the opinion of farmers in regard to cause and cure:

KANKAKEE COUNTY.

Lemuel Milk, Kankakee.—Averages 1,000 head of Poland-Chinas; not confined in pens; run in lots of 75 to 100; feeds corn; lost none of own raising; lost a number of lot purchased; sows in pig suffered alike with others; fat hogs most liable; breeds at 1 year old; does not breed "in-and-in;" believes cholera is contagious or infectious; has pure water; used as preventive, 5 lbs sulphur, and 5 lbs fenigreek seed, and, as remedy during disease, carbolic acid in slop and sprinkled on bedding with good result; stomach of dead hogs generally full of worms.

STEPHENSON COUNTY.

James Flansburg, Elroy.—Average 25 or 30 Berkshires of own breeding except boars; part in pens and small lots, in winter large range and all run together; feed mostly corn, sometimes boiled potatoes and corn; never had a case of hog cholera; know of none in this section of country.

DEWITT COUNTY.

E. B. Harrold & Bro., Wapello.—Mixed breeds; keep about 100, partly of own breeding, in large herd in pasture, and follow feeding cattle, with dry corn on ground; lost none last year; usually pigs are first attacked; stock fed in feed lots of diseased stock spreads the disease, but it sometimes originates spontaneously; best preventive is remedy of A. C. Moore, Canton, Ill.; the main cause seems to be stoppage of the gall; the passage from gall bladder to intestine seems to close up; kill the animal at this period and the stomach contains only a watery jelly; think it is a sort of fever, which appears in just sixteen days after exposure although sometimes spontaneous; think wild indigo and resin weed are natural preventives when accessible to hogs.

PIATT COUNTY.

S. Cole, Bement.—Poland-China; own raising; keep in large yard, lots of fifteen or twenty; feed corn and oats alternately; lost twenty-five by cholera during year; think mixture of soda, saltpeter, black antimony, and wood ashes is sure preventive; disease rarely cured, and hogs of little value if they survive; give pure well water.

DEKALB COUNTY.

D. C. Joslyn, Cortland.—Keep twenty to fifty Berkshires of my own breeding; mostly in small yards and feed on dry corn. Never had cholera among my hogs in forty years' experience; some neighbors have had it; think crossbreeds more apt to take it; my only preventives were dry corn and sour drinks once or twice a week; have good well water; land dry and black sandy with clay subsoil.

FORD COUNTY.

Asa Canterbury, Gibson.—Berkshires; 75 of own raising; keep in large pens or pasture all together; feed corn in winter and grass in summer; lost ten head past year by cholera; took both large and small; eight years ago cholera attacked and took all; think sleeping in dry dust and mud around old stacks causes disease, probably a lung fever; have running water; gave diseased hogs copperas, with a little arsenic scattered in trough; don't know what cured them, but they have been healthy since.

MC'HENRY COUNTY.

W. W. Ellsworth, Woodstock.—Magie or Poland-China; twenty brood sows, and raise 100 to 125 annually; keep in small lots; dry corn in cold weather, and meal, shorts, and bran other times; no cholera past year; breed sows young, and change boars yearly; give well water, and bed with dry straw; charcoal, wood ashes, and salt used as preventives.

MACOUPIN COUNTY.

George Hunter, Carlinville.—Breed only pure Berkshires; about seventy-five an average; raise our own sows, and purchase fresh boars from other families of this breed; feed and sleep in small pens; pasture in large lots on good grass beets, turnips and potatoes, cooked, and a little corn. Exclusive corn diet is avoided. Lost none last year, and report following from previous experience:—Liability to attack depends on conditions, feed, care, etc., and those unfavorably situated are the first taken; age, sex, or size, of themselves are of no consequence; disease more severe in pigs from immature stock than from older, vigorous parentage. The weak are sooner attacked than the thriving, but fatness does not always indicate thrift; think the Berkshire less liable than other breeds to cholera; breed my sows at one year, and use boars at eight months and upward; experience shows that sows bred once a year produce more vigorous progeny than those bred twice.

ADAMS COUNTY.

T. J. Bates, Camp Point.—Poland-China, mostly; keeps in large lots together; feed corn; sometimes follow cattle; lost 25 from cholera past year, all under 1 year old of 60 to 125 pounds, and 6 or 8 young pigs; all were in good condition; breed young boars and sows, and change boars annually; it originated spontaneously in my yards; is not contagious; those attacked had run with fattening cattle; had plenty of water; first appearance of the disease with me for 8 years; used no preventive; hogs had access to salt once a week; treated some sick ones with a medicine purchased, and about one-half recovered, but were never as thrifty again; in some dead hogs in vicinity found lungs filled with fine worms. My opinion is that the main trouble is caused by worms; slaked lime is used by some with good results.

FULTON COUNTY.

John W. Carey, Canton.—Poland-China 100 of own breeding; keep in large yard lots in small bunches; general food is bran, shorts, oats and corn; lost none last year; think Berkshires most liable to disease; breed once a year; sows at 12 months, boars at 8 months; never "in-and-in;" don't think cholera contagious; use pine floor; straw bed in cold weather, change twice a week, and clean out manure daily; yards well drained; used ashes, salt, saltpeter and copperas once a week as preventive; farm is dry soil, with water easily obtainable.

CLINTON COUNTY.

O. B. Nichols, Carlyle.—Keeps Chester whites; keep them in small lots; feed a little corn and slops, and occasionally soap-suds and salt; do not eat one kind of feed exclusively; never had cholera among them; many neighbors have lost largely, say all their pigs and half their older hogs, since August 1875; it attacked old and young; think the lowest-bred and commonest stock suffered most; never breed mine under a year old, and never in-and-in; think cholera is contagious.

CHAMPAIGN COUNTY.

Joseph Maxwell, Mahomet.—Keep 159 Poland-China of own breeding; in large yards; in large bunches; feed exclusively ear corn; lost about 190 head from cholera, of all ages and both sexes, as well the fat, thriving ones as lean, weak pigs: they had range of field and woods; think all breeds alike subject to it; breed at one year with fresh boars, not in-and-in; wet weather preceded the disease; have free access to pond and running water: no contact with hogs of other places where cholera existed; used as preventive black antimony, sulphur, copperas, ashes, stone coal, etc., without effect; out of 240 treated only saved about 20 per cent.; a few of those became healthy again in a short time; land is a dry and sandy loam.

COLES COUNTY.

James M. Bruce, Charleston.—Keep mixed stock in large lots, in bunches of 100 to 200; feed regularly, twice daily, with oats and corn (mostly corn), and grass; lost past year 30 hogs and 200 pigs; cholera attacks all without distinction, although boars in service take it first; when disease attacks a herd nearly all suffer more or less; attack begins in wet weather, and is more fatal as weather becomes dry; have access to pond and running water; remove dead hogs at once; have generally succeeded in stopping disease with 1 oz. arsenic, 1 lb sal soda, and 2 oz. assafœtida, mixed with dry meal for forty hogs; last year all were treated, and about 83 per cent. recovered and became healthy in six or eight weeks; soil, well drained prairie; black loam.

SANGAMON COUNTY.

Geo. M. Caldwell, Williamsville.—Berkshires; 100 to 200, kept in small lots in pens without floors; feed corn and shipstuff, and free access to grass; lost no Berkshires, except nineteen pigs shown at fairs and came home sick; as a rule, best hogs are attacked and poor ones left; Berkshires suffer least of any breed.

KANE COUNTY.

F. W. Belden, Kaneville—Keep 75 to 100 pure Berkshires; run in blue grass pasture; feed corn to hogs and oats and corn ground to pigs; never lost any from cholera. Land loose, dry and loamy. Soft coal, wood ashes and salt fed.

Dairy Husbandry.

TURNING DAIRY COWS TO PASTURE.

In turning cows to pasture in the spring, there is a wide difference in the practice of dairymen. Some allow the stock to range over pastures very early in the season and before grass has started, and no attempt is made to keep it off the ground at any time during spring. We have even heard it urged that there is some advantage in this, as the old tufts of grass left from last year's growth are not wholly wanting in nutrition—that cattle will feed upon them more or less, thus saving fodder, while at the same time the grazing of the old grass gets it out of the way and is of advantage to the new crop.

There is serious objection to allowing cows to roam over pastures during early spring, while the frost is out of the ground and while it is in a soft and unsettled state. The land is poached up by the tread of cattle and the grasses killed out or very much injured in these places. Again, the long continuance of the diet of dry fodder during winter renders the animals in spring eager to get a taste of anything savoring of green herbage, and they gnaw down into the ground and pull the grass out by the roots, which is easily effected, as the land is loose and the roots not held firmly in the soil.

This practice is a fruitful source of pastures running out, and must be condemned as altogether too injurious and unprofitable, since the small amount of nutrition obtained from the forage will not much more than supply the waste of the system from the extra work of travel and of roaming about in search of green food.

The opposite course practised is to keep stock yarded until pastures have obtained a good growth of grass, and the argument urged for this course is that unless pastures get a fair start, the stock will eat it down close, keeping it short all the season, and thus the yield will not only be less, but during the season an insufficient amount of food is supplied. The objection to this course is that where cows are kept from the pasture until it has a larger growth and are then turned in, they overfeed, and the sudden change from dry to green food, affects the health of the animal, not unfrequently causing serious troubles. And again; the grass often gets such a start that a considerable portion in places becomes hard and woody before it is cropped and is left unappropriated.

The best results from pastures is where they are kept in moderate growth, or so that the animals can get a good bite of grass and all parts of the field are eaten over, from week to week. The grass must be sweet, nutritious and palatable, and this state is best secured before it has acquired a high growth and is approaching maturity.

The best results obtained is when a middle course is practical. Let the animals be kept in the yard until the ground is well settled and the grasses have made a fair start; then allow the stock to go to pasture at first but a short time during the day, but not long enough to fill themselves. This should be continued for several days, or until they have become gradually accustomed to the change of food, when they may be turned to pasture for the whole time; but hay should be fed in small quantities at least once a day so long as the cows have a desire for it.

Pastures should not be overstocked, since overstocking not only decreases greatly the average yield of milk from the whole herd, but it seriously damages the productiveness and permanency of pastures, causing the grass to be eradicated and leaving the space thus left to be occupied by weeds which, from not being cropped, accumulate, and spread with wonderful rapidity. The most productive pastures are those which are thickly set with a variety of grasses, forming a thick, smooth sward, with no intervening spaces for the lodgment of weeds or otherwise, and if proper attention be given to such lands, the best results will be obtained not only in the amount of food yielded, but also that of milk from the herds grazing upon them.

SAVING RENNETS.

A CORRESPONDENT inquires as to the best method of saving rennet. We have tried several ways in our practice—stretching the skins on a hoop or crotched stick—filling them with salt—packing them in a cask with salt, &c. But of late we have adopted the Bavarian plan, which consists in inflating the skin like a bladder, tying the end tightly to retain the inflated condition until the skins are perfectly dry. Salt should be used freely at the point where the orifice is tied to hold the air, but as the other parts dry down quickly, none is needed except, perhaps, in very hot weather,

The skins on removal from the calf, should not be soaked or washed with water. They should be turned and emptied of their contents and all dirt wiped off with a cloth. Then turning the skin back again, insert a quill or tube and inflate as you would a bladder, tying the orifice as before stated. They should be hung in a dry atmosphere, but not near a hot stove, as high heat has the effect of injuring the strength of the rennet. In saving rennets great care should be taken to select only from healthy calves. If the stomach is badly discolored or shows signs of having been inflamed or diseased, it should be at once discarded, for such rennets work mischief and cause taints to be developed in the cheese.

SOAK YOUR BUTTER PACKAGES.

I HAVE noticed constantly the habit of dairymen of packing their butter into new butter packages without being soaked. This is the greatest mistake that dairymen can make in packing butter. The packages which are new, unless soaked, impart the flavor of the wood in the butter which is readily detected and depreciates the quality and price from 2c. to 5c. per pound. I have seen butter which has come to this market which I know had been made by good and experienced butter makers and was really fine when packed, depreciated, as heretofore said, from 2c. to 5c. per pound by carelessness in not soaking the packages.

Now it is to the interest of *all* butter makers to make good butter and have it come in sweet, good condition, which will bring good prices.

Dairymen have often wondered why their butter did not bring good prices. They say our butter was fine, and refer to their neighbors to verify their statement! This may all be true; but do they ever ask, Did our butter arrive in good condition—was it sweet? etc. No; they never ask this question, but pack their butter in packages without the necessary preparations, and send it off to market in a hurry and look for top market prices.

Now we advise all dairymen to soak their packages at least twenty-four hours before packing their butter. FRANK JAMES.

DAIRYING IN TENNESSEE.

PERSONS who have visited Tennessee and have become familiar with the resources of the State and its climate, have frequently expressed to us the opinion that a considerable portion of the State, especially East Tennessee, is well adapted to the Dairy. Nearly all of this section is so among the mountains as to be cool in summer, while it is far enough South to avoid the long and severe winters which are so trying and expensive to the dairy farmer of the Northern and Middle States.

The productions of the soil of East Tennessee are the same as those of the Northern and Middle States. Wheat, corn, and other grain crops can be grown. The lands are well adapted to grass, and pastures are productive and profitable. Hay is readily grown, for which there is a fair market in Georgia and Alabama. Apples, pears, peaches, plums, cherries, berries of all kinds, and grapes do well almost anywhere in East Tennessee.

A correspondent from Rogersville, East Tennessee, in a recent letter writes us, saying there is considerable butter made by the farmers in this part of the State, but there are no factories either for butter or cheese. The butter produced is poor and sells rather low, but as good can be made here as in any part of the United States.

A good article will bring fair rates, and one lady is mentioned who has engaged her butter at 50c. per pound for the season to go to a Southern city. The railroad connections with the Southern States, he says, afford a ready market for wool, grain and provisions. There are only one or two small cheese dairies in this section, but there is a large amount of cheese brought in and sold at 25c. to 30c. per pound, the most of it coming from Ohio.

And he remarks further that cheese of good quality can be made here for much less money than can be done in any of the Northern States. The summers here are not warm, the altitude being about 1,500 feet above sea level. Again, the winters are short and mild compared to those of New York, and do not require the costly stabling or the amount of winter fodder. Snow seldom lays on the ground longer than one day. The mountains break off the winds from the North. There is plenty of pure, cold water, and all the grasses thrive well, and meadows on the bottom lands yield from two to four tons of hay to the acre.

Tennessee, he remarks further, is one succession of valleys and ridges—or lines of mountains and hills—and the fertile valleys have close at hand ridge land for pasture, for timber, for fruit and supplying the clear springs which flow from every ravine affording cool, healthful water for man and beast.

Good upland will yield, with ordinary cultivation, 40 bushels of corn and from 12 to 20 bushels of wheat per acre, or from 1½ to two tons of hay, and with good cultivation much more. The bottom lands are very productive, not unfrequently yielding enormous crops, corn reaching 100 bushels to the acre.

Such is the description of our correspondent of East Tennessee, and it corresponds with the accounts that have been given us from time to time by others. And from what we have been able to learn, this section offers great inducements for the establishment of dairying—both cheese and butter—for those who have the requisite skill for manufacturing these products, and to dairymen who are seeking a mild climate, this region must be specially inviting.

Sheep Husbandry.

CASHMERE ANGORA GOATS.

To the late Dr. Jos. B. DAVIS of South Carolina we are indebted for the introduction of the Angora goats into America. He was sent to Turkey by request of the Sultan, under President POLK'S administration, to experiment in the culture of cotton in the Sultan's dominions, and on his return to America in 1848, out of courtesy to our Government, the Sultan ordered a selection of nine head of the finest specimens of fleece-bearing goats in his dominions, and presented them to Dr. DAVIS to experiment with in America.

In the year 1854 I visited the farm of Dr. DAVIS, near Columbia, S. C. His flock at that time consisted of seven pure breed Angora females and two males, one Thibet ewe, several head of half Thibet, half Angora, and quite a number of grade females bred from the common short-haired ewe goats of the country and his Angora bucks.

I purchased of the Doctor all of his pure breed Angoras, several of his Thibet Angoras, and some of his grades bred from the common goats.

Dr. DAVIS insisted on his goats being in some manner entitled to the name of Cashmere, and this led him into an error as to the market value of the fleece. He rated it at $6@8 ℔ lb. In this he was entirely mistaken, for his goats have proved to be Angoras, and the fleece for many years has been an article of import into England under the name of Mohair, selling at from 60c. to $1 ℔ lb. The Jamestown Manufacturing Co. of Mohairs, Alpacas and Poplins, located at Jamestown, Chautauqua Co., N. Y., is prepared to purchase all of the American Mohair to be obtained at from 60@90c. ℔ lb., its value depending on its length of staple, luster and freedom from kemp. I have sold my crop of Mohair for several years at about the same figures to the New York Plush and Braid Mills, located in New York City.

The Angoras in this climate shed their overcoats in March or April of each year, if it is not sooner sheared, and they continue in their summer suit of short hair or kemp until July, when the Mohair starts out, growing slowly until September, then rapidly until January, when it gets its full growth, averaging in length about 9 inches.

I have owned Angoras from six distinct importations from Asia, and have found them to differ greatly in size, fleece, horns and shape of the ears. For twenty years I have observed the following rules in selecting a stock buck:

1. Pedigree, dating back to ancestors imported from Asia.

2. Weight and length of its pure white, silky, ringleted fleece, and its freedom from kemp and mane on the back and neck.

3. Size, form and vigor.

4. Long, pendant ears and upright, spiral horns.

By this system of selection, I have obtained a flock possessing great uniformity. In making other importations, the agent should remain in Angora, the central district of Asia Minor, at least one year, so as to be able to make his selections when the goats are in full fleece. By this plan, some fine specimens might possibly be obtained. Several of the importations were doubtless procured near the coast, they evidently being of mixed blood and in no respect superior to American grade Angoras, called in the West, "full bloods," such as are of a higher grade than a fourth cross, or 31-32 Angora, 1-32 common, short hair, native goat. The fleece of the pure breed Angora male is coarser than that of the female, and becomes shorter in both from year to year after the fifth year.

In the year 1854 I sheared 6½ lbs. from the Davis imported buck, and in March, 1876, I sheared 6¼ lbs. from one of his descendants. Mr. LANDRUM of California claims heavier fleeces for the Angora in that climate than in this. He obtained from a celebrated Costamboul no-horned buck 10 lbs., but admitted that in his opinion 7 lbs. is a very heavy Angora fleece even in California. Mr. GILMORE, also of California, sheared in December, 1875, his flock of pure breed Angoras, full blood and grades. His clip amounted to 1,980 lbs. of Mohair. A pure breed buck gave 6½ lbs.; another 6 lbs.; a pure breed ewe 6 lbs., and from grade yearlings 1½ to 3 lbs.

The grade goats are bred in California principally for their skins, for which there is an increasing demand. The San Jose Mat, Robe and Glove Manufactory is now paying from $1 to $3 for each skin from a ¼ to ⅛ blood. The Angoras may be classed with the herbivorous animals. They have not proved to be a success in the Eastern and Middle States when kept in small inclosures on grass during the summer, and in winter in close barns and fed on grain and hay. At my farm near Atlanta they have succeeded admirably, being exempt from disease and able to protect themselves from an attack by dogs; but they are allowed to run about summer and winter in an inclosure of over 100 acres of woods pasture land, which they have greatly improved by killing the undergrowth of briars and bushes.

THE GOAT OF THIBET THE TRUE CASHMERE SHAWL GOAT.

Dr. DAVIS brought with him from Asia a pair of Thibet goats. The male died very soon after its arrival. The female I found to be smaller than the Angoras, very narrow in the chest, with fox-like ears, and rather short, upright, horns. She had an undercoat of downy wool and an overcoat of white hair about four inches in length. This undercoat of wool, amounting to a few ounces from each goat, is combed out by the natives of Asia as it starts to shed in the spring, and is used by them in the manufacture of the celebrated cashmere shawls.

In the year 1859 I bought of OTIS BREWER, Esq., of Boston, Mass., a male Thibet goat, also three females having the appearance of being half Thibet, half Angora. Mr. BREWER purchased them from the captain of a vessel from the Mediterranean. The Thibet male closely resembled in form and fleece the ewe imported by Dr. DAVIS. I combed out his undercoat of wool in April, 1859, but could not apply it to any practical use.

In the year 1854, when I was about to invest in the Angora and Thibet goats, I was advised by the late Rev. JOHN BACHMAN, the much-respected naturalist, of Charleston, S. C., not to purchase the Thibet goats, but to rely on the Angoras, as in his opinion the Thibet goats, like the Llamas of the Andes, could not be successfully acclimated in a locality under ten thousand feet above the ocean. His opinion proved to be correct in my case, as all of the Thibet goats, pure and grades, in my flock died in a few years after I purchased them, from a disease of their lungs, combined with dysentery, and I have not heard of any one having been successful with the Thibets or Llamas in any part of the United States east of the Rocky Mountains. I am, however, inclined to believe that there are locations on the elevated plateaus of New Mexico and Colorado, and especially in California, where the Thibets and Llamas can be successfully acclimated. RICHARD PETERS.

Atlanta, Ga.

Industrial Topics.

SELF-COVERED SEEDS.

WE take the following from the London Garden: "Mr. F. Darwin read before the last meeting of the Linnean Society a paper on the 'Twisting of the Awn in Stipa and other Plants,' the effect of which is to force the seed into the ground; the upper feathery end of the awn being relatively fixed, the seed worms its way into the soil. Mr. F. Darwin, finding that the seeds so buried did not germinate so well as those which were simply placed on, or just beneath the surface of the soil, suggested that the burial of the seed was intended as a protection against seed-eating birds."

[The faculty of infinitesimal observation possessed in so remarkable a degree by CHARLES DARWIN—his wonderful patience and skill in those researches which have interested the people of every civilized land, have given birth and momentum to a little army of ludicrously weak imitators, whose highest aspirations seem to be to attach the most profound signification to the most trivial circumstances, and they rain a multitude of camels through the eyes of a multitude of needles with a facility that should inspire the wicked rich man with hopes of heaven.

We do not wish to belittle the atomic conclusions of Mr. F. DARWIN—but when the difference in the time of germination between a seed pressed into the ground by the "twisting of an awn" and one placed in the ground by hand, is instanced as a plant-method of preserving its seeds from birds—we think the thing is being *run into the ground*.—EDS.]

TO PREVNT NAILS FROM RUSTING.—Nails used for fastening vines to brick or stone walls soon rust and break, unless prevented by some previous preparation like the following: Take common cut nails, and, before using them, heat red-hot, then throw into cold linseed oil. This will give them a coat of varnish, and preserve from rusting and becoming brittle.

The Poultry Yard.

POULTRY FARMING.

RAISING poultry on an extensive scale, has not as a rule proved a success, no matter where or by whom attempted. The fate of large flocks appears to have been about the same in European countries as in this, and the advice given to a correspondent in a late number of the Journal of Horticulture (Eng.) meets our views upon the subject so fully that we copy a portion of it as follows:

We confess we do not believe in poultry rearing and in keeping hens for eggs for purely domestic purposes. We do not mean that a few fowls kept about a house do not answer, for they do, and very often well, and there are not many country houses without them: but to go in for a large number because a few pay, on the principle that because ten hens lay 1,200 eggs in a year that twenty hens must lay 2,400, is where the mistake is so often made, and which brings such woful disappointment to the breeder. No; we do not believe in poultry farming on the scale which so many think would pay—namely, of hiring so many perches of land, and erecting houses, stocking the runs, and then waiting for profits. We fear patience has to come into use greatly in such a case; for putting aside a percentage for interest on money expended, paying for food, rent, labor and the like must leave only a tiny balance on the credit side, and then only when the proprietor does not leave the work to attendants but does the greater part himself, and is always at hand to superintend. The profits made by the Sussex and other County cottagers are of course great; but then they work on a small scale, and are thus able to feed the birds and attend to them much more than if they had larger numbers. When their chickens are ready the higglers come round and collect them, and then other broods are brought up to take their places; but it is only because of the small size of their undertakings that they may make at times forty per cent. or even more, as no doubt they sometimes do; but once they were to get overstocked their game would be done.

We can never recommend any one to invest money on laying out yards for poultry for table purposes. The expense would be great and the results unsatisfactory. It has been tried and proved by many to be a failure, and "The Poultry Book" tells us too, that these establishments always collapse. They have had a very fair trial and the food has been various and good, but never has any real success been recorded. Companies, too, have been started, but the prospectus has invariably been drawn up upon some foolish and ridiculous basis, that it is needless to say they did not answer or would not have done had they struggled into life.

The largest scale of poultry farming for domestic purposes that can ever be attempted with success are the poultry yards connected with large farms. In such a case at one homestead it would be impossible to manage more than two runs where the birds could have perfect freedom and unlimited runs. Were we going to attempt the cultivation of poultry for eggs and chickens we should try and rent the farmyard of some large farm for the run of the birds alone. We believe this can be done and is actually being done. The food collected by the birds themselves in their wanderings over yards among the loose manure, around the cornstacks, in the fields, and in such places is immense, and would go a long way towards keeping them fed, and at the same time keep them in the most robust health. Ducks, too, might be added with success. Turkeys we would have nothing to do with. In no way depreciating them, but they are apt to be delicate and get in the way of growing chickens. Such a farm we would stock with Black Hamburghs for laying, and Brahma Dorkings for table and sitting purposes. No doubt others can recommend breeds which with them have been very useful and prolific, in which case people would use their own discretion in their choice. We have found black Hamburghs wonderful layers of good-sized eggs when kept in a farmyard, and we know the meat of Brahma Dorkings is juicy and good. A good-sized farmyard where the cornstacks and foddering yards are numerous should take from fifty to a hundred hens. We would never go beyond that number. Supposing the birds could not be divided and all had to run together we would substitute Houdans for Black Hamburghs, as the former are good layers and they make a good table cross, otherwise the Hamburgh eggs would be used for sitting, perhaps, which would hardly produce pretty table chickens.

For cocks we should have a large-bodied Brahma with not heavily-feathered legs, or the first cross between a colored Dorking and a Brahma. Three or four or more would live peacefully together if properly managed, and each would most likely take a certain number of ladies under his chaperonage. By always letting the cocks be of different ages and hatched one under the other we have generally noticed that the younger are afraid of the older, and run from them.

Supposing, of course, it would be practicable to hire some farm homestead for the fowls only, we think a fair price might safely be paid for rent, as with personal supervision the results should be good; but great care would have to be taken in looking-up the eggs regularly, for the hens would be sure to lay in mangers, and cribs, and out-of-the-way places where two-legged foxes would always be ready to lay their hands on any stray eggs.

We hope we have not damped "A. B.'s" ardor as a rising poultry farmer in embryo, but we cannot recommend anyone to enclose wire runs for keeping birds for eggs and rearing for table; for as we said, many good and practical people have tried it and found it not to pay.

Industrial Implements.

THE COATES LOCK LEVER RAKE.

A CENTURY ago, if the perfection of the hay rake, as shown in our illustration, could have been foretold, farmers, to a man, would have doubted and declared that nothing could or would take the place of the hand implement then in use. At the present time they would, perhaps, regard further improvement improbable, but not impossible.

No farmer can be found who will deny that it pays to glean well their fields, and recent improvements have materially lessened this labor, making what was once arduous toil, easy and economical work.

The old established firm of A. W. COATES & Co., Alliance, Ohio, (whose hay rake is the subject of our illustration), have been for more than twelve years engaged in the manufacture of these rakes, and with such success that upwards of 50,000 have been sold, and numberless awards at State and other fairs have been gained in honorable competition.

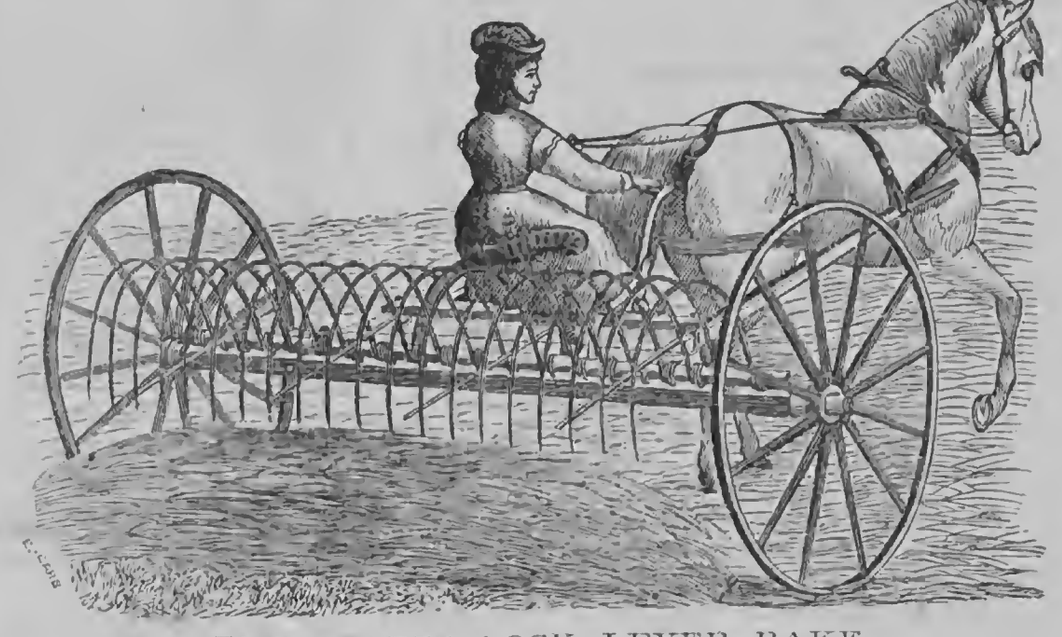
That it is to a farmer's interest to use hay rakes, none, we think, will gainsay; as experience has shown that they more than pay for themselves in the value of the grain saved by careful raking. The percentage of waste on a fair average crop does not fall short of a tenth of the entire amount. The rake in question is well and substantially made. The shafts and rake head are most durable, the best timber alone being used. The wheels are unusually high, thimble-skin axles are always used, and a new feature this season is the spring seat, which is easy, well braced, and the springs so made as to adapt themselves to the weight of a light or heavy person.

This rake is simplicity itself in its discharge, the whole mechanism being a lock lever, an ingeniously contrived joint (patented August 27, 1867,) which holds the rake rigid while down without using hands or feet, while the discharge is effected by the weight of the driver and simply the slightest upward motion to the handle of the lever.

The rake is regulated for any kind of ground by changing a pin at the joint, which raises or lowers the teeth as desired. A most important item in the rake, the teeth, are made of cast-steel, tempered in oil, and every one tested before leaving the factory. There is, therefore, no probability of their becoming weak or bent out of line.

A recent improvement in the cleaner does away with the wooden bar formerly used, and substitutes light, strong, metal bars, which pass through the teeth as they are elevated and clear the hay from the teeth completely.

It would well repay farmers and implement agents to examine the merits of this rake, and Messrs. A. W. COATES & Co. will be happy to furnish, free, information to all who apply for the same.



THE COATES LOCK LEVER RAKE.

THE JOHNSTON HARVESTER COMPANY OF BROCKPORT.

THE Rochester Democrat and Chronicle of the 8th of April says:—It is well known that this Company have, for several years, done a large business in Europe, and they have already shipped several heavy lots of machines for the continent for the harvest of 1876; but their principal object of pride just now is a communication received by them two days ago from the President of the Royal Agricultural Society of France, announcing that in a public trial of machines, which lasted through the entire season of 1875, they were awarded the first prize—the record of the judges showing a clear superiority of ten per cent. above all others.

The peculiarities of this trial entitle it to more than ordinary consideration. In the great trial of 1874, in which twenty-three different machines were entered, the three Johnston machines in their several departments, took each the first prize, but this trial lasted only five days. The Royal Society then determined to select six of the best machines in the world and put them to the test during the whole season of 1875 and then from their machinist's examination make the award.

They, therefore chose two from America—one being the Johnston—three from England, and one from France. After the harvest was over the machines were carried to Paris where they were taken to pieces and examined by machinists, to ascertain the wear. The manufacturers and owners of the machines were excluded from all access to the trial grounds, the drivers being selected by the judges themselves, and through this exhaustive and complete test the Johnston bears the palm of victory, over which the Company have reason to be proud, as it greatly enhances their business in that country, and gives them corresponding *eclat* in all the grain producing portions of Europe.

The Naturalist.

GARDEN ANTS.

MRS. SARA WOOD in her book "The Dwellers in our Gardens" in speaking of the common garden ant says:

"In each ant city there are three kinds of inhabitants, and on all three kinds the good of the whole community depends. There is no such thing as an ant living or working for itself, providing for its own wants or those of its young, as with most other creatures. All ants live and work together for the benefit of the whole population in each community. In each of the latter there are males, females, and working ants. The males and females have to produce the young, and so supply inhabitants for the city, while the working ants have to work for, and feed, and take care of the males and females and young, and construct the cave-cities, and it is these indefatigable little creatures with which we are best acquainted from seeing them above ground when they come up on matters of business. On them depends, in fact, the well-being and lives of all. It is they, as we have shown, who are so busy when the fine weather sets in in hollowing-out the caves or cells, which will be wanted for future progeny, and which they connect together with galleries and passages, so that all are communicable one with another. Some of the caves are for the reception of the females who are to become the mothers of a future generation, others are for the males, and others are destined for the eggs which produce the grubs or larvæ, and others for the cocoons from which the perfect ants are to be hatched.

"The female ants being much larger than either the males or workers, larger cells are wanted for them of an oval form suited to the shape of their bodies, and where they are waited upon and tended with great care and respect since on them depends the keeping-up of the population, which seems to be the great aim of all ant labor and industry; and when we consider how a constant diminution of their numbers must be going on from the fact that many species of birds make them their food, we can understand how necessary this strong instinct is in the nature of the little creatures, if the ant race is not to die out and become extinct. The greatest care, and exactness, and skill are shown in the formation of the little cave cells. The walls of them are built up of grains of earth fitted into each other with great precision, and then it would seem they are covered over with some kind of cement which the creature has the power of secreting from its body, and when the whole is done the small mason will carefully pass his feelers over his work to see that all is smooth, compact, and firm, just as a human mason will measure his work with his rule to satisfy himself that his bricks are all level, and his wall upright.

"During the winter ants spend their time in a torpid state in their underground caves, and at this time the hive is filled perhaps only with workers, and the cocoons ready for hatching when warm weather comes, and it is to prepare for the fresh populations that new works and additions to their cities are made in spring, and when these are once finished the whole character and employment of the working ant undergoes a complete change. The same anxiety for the good of the whole community, the same devotion to the interests of their race and city show themselves, and the same self-denial and unwearied industry go on; but they are now no longer miners or masons, no longer 'navvies,' but become most tender and careful 'nurses.' From the time that the city is supplied with new abodes, and that the warmth of the sun is felt even beneath the earth, the wonderful transformation begins within the ant-cocoon which is to change its contents into a living creature. Just when the mother bird is sitting on her eggs in her snug nest, so as to give the warmth needed for their change into young birds, the ant nurses begin their loving attentions to the cocoons in their caves, which also require heat for their change into living ants. More eager bustling begins among them, which we cannot always see, since it goes on beneath ground.

"When the sun shines out bright and warm, the cocoons in the cells deep down below in the hive must be carried up to nearer the surface, where the warmth will reach them, and to effect this the whole army of nurses is in commotion; and if we can manage to catch sight of them at such times we shall see each little worker with a white oblong cocoon—not very unlike a baby in swaddling clothes—held by the end in her jaws or mandibles which she carries before her, and which forms a load almost as large as her own body, or even larger if it be the cocoon of a future male or female. But the cocoons have, perhaps, not long been placed in the warmer cells, or laid in some passage or gallery near the opening of a shaft, when the sun becomes obscured and a shower begins to fall. Now although the white covering of the cocoons is a tolerably tough and strong material, yet it would not do for them to be exposed to both cold and damp, and the careful nurses have to set to work to carry their charges all back to the lowermost cells where the rain will not reach them—to bring them up again, it may be, before the day is over, in case the sun should reappear. No end is there, in fact, to the tender care and indefatigable attention of the nurses."

AN IMPORTANT (?) MOLE EXPERIMENT

DURING the mild weather about the first of January, we captured a mole that was slowly extending his furrow along a border.

We placed him in a large paint-pail 18 inches in diameter hoping to ascertain by experiments what sort of food he preferred and what, when pressed by hunger, he might be driven to eat.

We at first supplied him with ten grains of corn—a small onion and a small potato—marked the time of day and made a note of the food provided.

Three hours afterwards we visited our mole again.

Now we dislike to disappoint those of our readers who, having been pestered with these pestiferous creatures, are naturally interested in any series of experiments that might suggest exterminatory or preventive measures.

But we were ourselves disappointed and misery loves company.

The mole was dead!

In vain attempts to burrow, he had loosened the hard crust of paint from the bottom of the pail, and besmeared his jaws with the film of paint yet soft underneath, which was, doubtless, the cause of his death.

SPIDERS have eight legs, while true insects have six. Some naturalists say spiders are not insects.

Floricultural.

A VISIT TO PETER HENDERSON.

Last week we called upon Mr. Peter Henderson—who needs no introduction to our readers—and were kindly shown through his range of houses.

Among new or comparatively new plants, we noted the following:

Coleus Verschaffelti major, *C. aurea marginata*, and C. Merrimac. Mr. Henderson considers these three the best of the innumerable varieties of Coleï, and of them he prefers the last as the most distinct.

Tropæolum Firefly is a variety of the Nasturtium, with smallish leaves and orange flowers. Its growth is so rampant that it is best to plant it among rubbish or sand to restrain its vigor.

Begonia Froebelli—to which we have already alluded as having been offered in England—we here saw for the first. It is a native of Ecuador first exhibited by Froebel & Co. of Zurich, in August of last year. It is very striking, not for its foliage—which is the usual oblique-shape of Begonias and a plain green—but for the vivid scarlet color and good substance of its salver-shaped flowers—four-petaled. 1½ inch in diameter in the male, and five-petaled and about two inches in diameter in the female. These are well elevated above the radical leaves, which vary greatly in size and are borne on scapes about a foot in hight. Upon looking over recent English journals, we find it highly recommended as a bedding plant and, even for rockeries. Mr. Froebel himself thinks that it will form "a dangerous rival to the bedding Geranium"—an excusable predilection on the part of its introducer but one we hope may prove true. It is tuberous-rooted, requiring rest.

Begonia Verschaffelti Gilsoni is a double flowering variety (the first) raised by a colored gardener and an accidental seedling. The flowers borne in umbellate cymes are about an inch in diameter and of a blush-white color.

Hibiscus luteus sinensis plenus is sufficiently double, of a canary-yellow, crimson throat, good size and very desirable.

Among Pelargoniums Mr. H. pointed out the Earl of Roslyn as his preference among Bronzes. By the side of MacMahon its zone was better defined and the disc of a more golden hue. It originated in Boston and will not be offered till next year.

Among the Roses, Mr. Henderson remarked that he considered Douglas as one of the best winter flowering varieties, and that the buds brought him $18 per hundred, while Safrano and Bon Silene brought but $10 on account of the rarity of its color, which is a purplish-crimson.

Lightning Potting.—Observing our interest while watching the rapid movements of one of his men in potting—the same respecting whom Mr. Chitty and Mr. Henderson engaged in so warm a discussion in the Gardener's Monthly two years or more since—Mr. Henderson held his watch for precisely five minutes while the man, having arranged ample material, did his best. But, at least in this trial, he lost by his haste, upsetting one pot and making several slips, to adjust which caused a very marked check in the otherwise clock-work regularity and rapidity of his movements. Two-inch pots were used—the soil and Verbenas (three inches high) were before him—pots at his left, tray at his right, which was removed and another supplied as fast as filled. The number potted in five minutes was 100.

A bench holding 1,000 had been filled a day or so previously, working from 7 till 6. One of Mr. Henderson's men read from memoranda the incredible amount of work accomplished by this lightning potter last year as follows:

Potted, 1,248,589; shifted, 39,350 plants from smaller to larger pots; sowed 306 flats of seeds, filled 61 rustic baskets and 26 rustic stands, and transplanted 39,000 plants.

Mr. Henderson while referring to his varied experiences in Horticulture, spoke against the popular treatment of placing frozen plants in the shade and sprinkling them with cold water, as being quite ineffectual if not injurious to them—and mentioned the following circumstance as one of several that had induced this belief. During a mid-winter blustering night the thermometer sank to 12° below zero and, in spite of all the efforts of himself and men, thousands of plants in the greenhouses were more or less frozen. The following day, one of the houses was well shaded and the plants treated to cold water. The other houses were not shaded and the plants were not watered—with the result that more plants (or as many, we are not quite certain,) were destroyed in the former than in the latter.

We have ourselves always accepted the doctrine that shade and cold water constituted the best treatment of frost-bitten plants—but the magnitude of such tests and the variety of subjects affected, may lead one to question whether the old theory is not one that has been "handed down" and accepted, rather than well tried and proven by comparative tests. Mr. Henderson reasons that as freezing works its injury to the tissues by disrupting the fibers, the sooner the plants are thawed the better.

It occurs to us now, though it did not then, to ask, Why not use *warm* water upon the frozen plants—thus hastening the thawing process and benefiting them if Mr. H.'s belief is sound?

EXCHANGE.

Many thanks to the good Rural for having introduced the Floral Exchange! I have seeds of white, pink-tipped and variegated *Celosia*—a dozen kinds of Asters—mixed *Antirrhinum*—mixed *Zinnia* (including white)—mixed double Sweet William—purple Foxglove—white and mixed perennial *Phlox*. Mullein Pink—Browallia—Ammobium—ornamental Grasses—Honesty (*Lunaria biennis*)—*Helichrysum*, etc., which I wish to exchange for *Gladioli* (bulbs)—*Tigridia*—Dahlia plants—Feather Grass (*Stipa pemala*).

I have a *large collection* of hardy bulbs and shrubs, including several Lilies and a dozen Polyanthus—pink and red *Gladioli*—German Iris white with blue edge—Lily of the Valley—*Dicentra spectabilis*, which I wish to exchange later in the season for hardy things, especially *Lilium Auratum*—Mist Tree (*Rhus cotinus*)—blue double Hyacinth—variegated Tulips—*Penstemmons*—Weigela, white—while flowering Almond and *Triloma*. Address Mary M. Bowen.

Sycamore Dale, Harrison Co., West Va.

NOTES.

Marking Wild Plants.—If any of our readers acted upon our advice of last summer and fall, they may procure the shrubs, water-plants, etc., then marked or determined upon. There is not one person, having any ground whatever, so poor that he must go without flowers at his home. Those who say otherwise are lazy or do not care a tithe of what they profess to care for them.

Use the lawn-mower as soon as there is grass long enough to cut by it. Dig up Plantains—the earlier, the better. An old pair of shears with the points a little apart is a good implement to pry them out.

Uncoil and tie up vines that have been protected. All the bedding plants that have been kept in the cellar during the winter, such as Erythrinas, Abutilons, Pelargoniums—may now be put out. A little frost will harm them less than the weakening shoots that will start in the cellar.

Work diligently to get the garden in the most perfect order. It will leave you more time to do the work of arranging annuals and other seedlings in a thorough and satisfactory manner. It will prolong summer.

Look at the Magnolia trees now in bloom. Are not they as pretty as lilies, and are you not sorry that you did not plant one this spring?

Antennaria plantaginifolia is the first of the Everlastings to bloom. White, silky, six inches high. Find it—press it—mark its name.

Anemone quinquefolia is blooming now.

Around the Republic.

MILFORD, KENT CO., DELAWARE.

Your columns seem to be a favorite medium for the communication of information in reference to the merits of various localities of our country, to which immigration is invited. I therefore presume to say a few words for this section. Some twelve or fifteen years ago, northern immigration was first attracted this way, and in a short time grew to large proportions. Under the combined influence of the extraordinary demand for our farming lands, and the general inflation of values coincident with our exhausted currency, real estate advanced rapidly in price, and much land was sold to Northern settlers at extravagant prices. A large percentage of these new settlers were retired merchants, clerks and men of various pursuits who were utter novices at farming; but having made a little money they became imbued with the idea that there were millions in farming and fruit growing. They often went in debt for a considerable percentage of the purchase money, relying upon large crops and high prices to lift their mortgages.

Under these circumstances there were many failures. Mortgages fell due before they could be met. Foreclosures followed, and forced sales. Land, meanwhile, like everything else, had depreciated, and those who had bought at the top figures lost about all they had paid, and were bankrupted. Many of them returned North, bearing most damaging testimony against this section. This had its effect in checking the influx here, and for several years immigration languished. Still it did not cease. The fictitious, impracticable, visionary farmers were succeeded gradually by a more practical class—with more money. These bought land at lower figures; and, having a surplus as a guarantee against unfortunate contingencies, they succeeded bravely, and became permanent citizens, and the great majority of them are now doing well and could not be induced to exchange their location. Transportation facilities have developed rapidly within a few years, and now all parts of this Peninsula are within easy, quick and cheap communication with the best markets of the country.

Diversified fruit culture, and "mixed farming" generally, are the methods that are sure to succeed here in yielding any man of ordinary industry and management a first-rate living and reasonable profits. The climate is splendid. Our soil, much of it, is as fertile as can be found anywhere. We have good schools, churches, society, and all the elements of a high civilization. The country is very healthy. Fruit, of almost every kind, grows to the greatest perfection. Wheat, corn, rye, oats, potatoes, (sound and sweet) beets, cabbage, turnips, carrots, asparagus, celery, lettuce, peas, beans, and, in short, all the staples, cereals and vegetables of the country thrive here, and can be grown on most of our soil with profit.

Land can be bought here now *very low*. Holders of large tracts have at last realized that it is better to sell a portion of their acres at a low price than to keep more than they can cultivate to advantage. *Land will never be cheaper here than it is at the present time.* Good farms can be had for from $20 to $50 per acre, with fair buildings, in good locations. The peninsula railroad system, now being developed, and much of which is in operation already, puts the whole State practically at the doors of the great cities—New York, Philadelphia, Baltimore, &c., and the high tariff rates, that have been in the past a great drawback, are now forced, by competition, down to a very moderate scale. Indeed the entire outlook is most promising for this section, and we think it is no rash prophecy to say that before many years have passed the Delaware Peninsula will have become exceptionally wealthy. I might occupy much space in particularizing the attractions here if I dared to thus tax your indulgence. I may say, however, in a few words, that there is no section of country on the Continent where so many of the luxuries of life from land and water, can be enjoyed at so little cost of labor or money, as right here between the two great bays—the Delaware and Chesapeake.

We need more population, and do not hesitate to say that those of the North who desire to change their location, can come here with every assurance of meeting with the most cordial reception, socially, and with every reasonable facility to make for themselves prosperous and happy homes. W. C. D.

DELAWARE FRUIT CROP.

I have just returned from a visit through the State of Delaware, looking after the fruit crop.

The peach crop is very materially injured, on the whole. From St. Georges to Dover the prospect was good for from one-fourth to one-half a crop, but below Dover it will be a general failure. There was considerable fear in regard to the pear crop, but nothing definite could then be ascertained. This variety of fruit is now grown very largely, and is increasing yearly.

The apple crop promised well.

The berry crop bid fair to be very large. Owing to the mild winter few, if any, vines had been killed. Strawberries were quite backward, but few being in bloom, except in the extreme lower portion of the State. Blackberries, blackcaps and the brandywine raspberries all looked well. The latter are becoming very popular in the State, as they yield well. The fruit is firm and handsome, and can be delivered in New York markets in good condition.

This State has various facilities to get their fruits to market. The P. W. & B. R. R. runs the entire length of the State, from which several branches run through the fruit sections, not only Delaware but Maryland. At Harrington the Breakwater R. R. branches and runs through a great fruit country, connecting Milford, Georgetown, and at Lewes, with the Old Dominion Line for New York. This line freights fruit very cheap, and have lately opened a new branch, beginning at Georgetown and extending down through the State to Franklin, Md., giving very great facilities to all that part of the country for getting their produce to market cheap.

Now is the time to buy farms cheap, as there are a great many for sale at less than one-half the price they sold for during the War.

At Milford I called on Mr. Rosa, who is the Master Granger of the State, and who owns a fine farm well stocked with fruit. He has a very fine pear orchard, with prospects of a large crop.

Several of the large growers in this vicinity have erected "Evaporators" on their farms, so as to secure the entire crop from any waste.

Permit me to digress from fruit to flowers to mention one garden that I saw on the farm of M. W. Jewell, near Milford. Mr. J. devotes his time to fruit growing, while his kind wife cares for the flowers. Without exception, she posseses the largest number of varieties of any person I found in the State. Even at the early period of my visit, her garden was brilliant with the crocus, pansy and tulips. Her varieties of tulips are large, and contain many "gems" of these beauties. I was reminded of that quotation from the Scriptures: "That Solomon in all his glory was not arrayed like these."

Mrs. J. possesses rare taste, combined with skill, in keeping up a beautiful display during the entire season. Her home is designated as "Rose Cottage," owing to her large collection of those beautiful flowers in bloom during the season. I hope her example may be followed by many other ladies in the State, for there is a great need of flowers in the gardens that I saw, so much so, that in some, although laid out in fine taste, and the plats were neatly bordered with box; there were few or no flowers in them. If some of our celebrated florists would distribute a few thousand packages of their surplus stock of seed through this State free, I do not doubt but it would pay them largely in a few years. C. W. I.

New York, April 26th.

The Vineyard.

CALIFORNIA RAISINS.

There has been much said as to whether California could produce with profit sun-dried raisins. A recent issue of the Stockton Independent has the following:

It will cost but little to dry the grape, as it can be done by the heat of the sun, and the raisins thus produced are preferable to those dried by artificial means. At the ranch of L. P. Jarvis & Bro., Columbia, Tuolumne County, we lately saw a large quantity of excellent raisins made from grapes of the White Muscat of Alexandria variety. Mr. Jarvis erected a platform by inserting posts in the ground and nailing across them scantling to support its covering of rough boards. The platform thus constructed is about 4½ feet high, and he has about 150 feet in length and 75 feet wide. It is located where it receives the rays of the sun from morning till night. He also has smaller platforms similarly constructed and located. The grapes are gathered and spread upon the platforms, and with the exception of turning over the large bunches, the heat of the sun completes the manufacture of the grape into merchantable raisins. Mr. Jarvis will this year dry about 30 tons of grapes, and as he estimates that it will take about 6 lbs. of grapes for 1 lb. of raisins, his product of dried fruit should be about 5 tons. Good California raisins are worth about 12c. ₱ lb., and as a large portion of those manufactured by Mr. Jarvis will compare favorably with the imported article, he ought at least to get the highest market price. Reckoning the raisins at that price, it will make the grapes worth at least $30 ₱ ton, which is much more than they can be sold for to the wine manufacturers.

Thirty dollars a ton may be higher than wine manufacturers pay in California, but it is mighty poor pay for growing and marketing grapes. We suspect that raisins could be profitably made with grapes at 1½c. ₱ lb., though, allowing for labor, loss by drying, etc., there would not be much profit at these figures. It very rarely happens, however, that grapes in Eastern markets are not worth considerably more than 1½c. ₱ lb. Our vintners need not mourn their inability to grow from the true raisin grapes so long as common kinds pay better.

SIX ACRES OF GRAPES.

J. H. Kisten of St. Helena, Cal., reports the following as sales of grapes from six acres, or about five thousand vines during the past five years:

Year.	Tons.	Lbs.	Am't rec'd.
1871	30	1,394	$654 48
1872	29	485	482 63
1873	9	——	150 00
1874	50	1,578	915 46
1875	34	1,596	562 25
Sold other parties.			62 20
Total			$2,837 02

Think of that, a total of nearly $3,000 for six acres in five years! In one year, it will be observed, the product ran to the enormous amount of 50 tons and brought nearly $1,000. The smallness of the yield of 1873 was owing to a devastating frost, which blighted every green thing for that year—a frost which every vine grower will remember for years to come. In 1875, in the spring, 750 of the vines were cut away, so that the product of that year was from only 4,250 vines.

Vines, if planted late, and after the leaves are started, should be shaded a few days or until the roots have taken hold sufficient to abstract moisture from the soil. Of course, if all the stems having leaves on them are pruned away, shading will not be necessary; but it is frequently the case that it is well to save the buds or small leaves.

The Centennial.

CENTENNIAL CORRESPONDENCE.

PHILADELPHIA, May 6th, 1876.

ALL doubt as to the opening of the Centennial on May 10 should be dispelled at once. Gen. HAWLEY has notified the Government that the exhibition will commence as advertised. The Grand March, composed by WAGNER, the Cantata, written by LANIER, and the speech to be spoken by the President will certainly awaken the enthusiastic echoes of a great crowd of patriots, and before the RURAL readers see this the inauguration will have become a thing of the past.

Too much credit cannot be given to the managers, who have worked like Titans, night and day, to accomplish the end in view. The transformations that have been wrought seemed impossible under any circumstances. One day the grounds are a mass of mud, with man traps, erratic locomotives, howling foreigners, and frantic workers going to all points of the compass; two days elapse—the mud has become a fine sod, and shrubbery grows thereon; the locomotive has hauled itself and various ungainly obstructions out of sight, the babble of tongues has, if anything, increased, and houses have appeared that were *actually* constructed in a day and night. It is simply enterprise and energy run wild. But of description, more hereafter in the regular weekly letter, which is to be a feature of the RURAL.

The absorbing question at present is, how and when to go to the Centennial and how much will it cost? I would not, in the first place, urgently advise visitors to go at once, but rather delay the order of their going until the weather and show become more settled. Every day for 30 days at least will add to the attractiveness of the sight and the real enjoyment to be derived therefrom.

The choice of route will depend on the location of the intending visitor. All the trunk lines, except the "New York, New Haven & Hartford," have reduced their fare 25 per cent. from schedule rates, and parties of twenty-five or more will be able to command a still larger reduction.

The Erie Railway Company's new reduced tariff goes into operation on May 1. Three express trains daily will be run over this road, connecting in New York with both the Pennsylvania Central and the new Bound Brook or New Jersey Central trains. Through cars will also be run direct from Suspension Bridge, Buffalo, and Salamanca, via Elmira and the Lehigh Valley Railroad, to Philadelphia, passing through the most picturesque and beautiful part of Pennsylvania. Trains from Newburgh, Port Jervis and other local points, will be run by way of Patterson to Newark, connecting there with the Pennsylvania Central. By whatever route the Erie's passengers are carried, they will all be landed in Philadelphia upon the Centennial grounds, either at the depot near the Art Gallery or that close to Machinery Hall. Tickets will be sold from all points "to New York and return via Philadelphia," and visitors may take, in coming and going home, any route they please of those mentioned. The price of single tickets from Cincinnati and return will be $30; from Chicago, $33; Detroit, $24, and other points further west in due proportion to existing rates. Under the convention between the main trunk line companies, visitors to the Centennial may come by one road and go back by another.

The N. Y. C. R. R. makes the reduction *only* on points west of Utica. Travelers who go from Utica to Philadelphia direct by the Delaware, Lackawanna and Western Road and return by way of New York, will be entitled to a reduction of one dollar from the excursion rates, which includes New York both going and returning.

The Pennsylvania Central will run a number of trains between New York and Philadelphia, which are to be limited only by the demand. Their arrangement is very liberal, and includes "excursion" tickets (good for 15 days) $5@4, according to the train. Tickets good for one day on all trains, except limited express trains, $4; New York to Philadelphia and return, tickets good for one day on first-class Centennial excursion trains (leaving Jersey City prior to 7 o'clock A. M., and leaving Philadelphia after 6 o'clock P. M.), $3; New York to Philadelphia and return, tickets good for one day on second-class Centennial excursion trains (leaving Jersey City prior to 6 A. M. and leaving Philadelphia after 7 o'clock P. M.), $2, this will suit all purses. Sixty or more can make the round trip from San Francisco to Omaha for $130 each, and from thence to Philadelphia the regular 25 per cent. reduction obtains. The Fall River Line of steamboats will sell single tickets from Boston to Philadelphia for $11 for the round trip, or $10 each for companies of fifty or over. Space forbids further directions, but next week will be given complete details concerning all that the visitor should know regarding expenditures. YOUNG RURAL.

EXHIBITION OF POULTRY.

U. S. CENTENNIAL COMMISSION,
BUREAU OF AGRICULTURE,
PHILADELPHIA, April 1, 1876.

SIR:—The exhibition of poultry will open on Oct. 27 and close on Nov. 6.

The display will be made in coops provided by the Commission and located under the cattle stalls, which will be prepared for their reception.

To meet the expense of coops and feeding, an entry fee of one dollar upon each bird of the Gallinaceous division and two dollars upon each pair of the Aquatic division must be paid to the Commission before the Chief of Bureau finally signs the permit of entry.

Transportation and terminal charges must all be paid in advance, or the Commission will not receive Consignments.

Full information relative to transportation will be furnished upon application.

Each coop used in the transportation of birds must be of sufficient strength to serve for their return, and must be marked with the proper shipping directions.

Numbers alone will distinguish birds in the show yards preceding the award of prizes.

All specimens, except Games and Game Bantams, must be exhibited in natural condition; pulling, splicing or inserting feathers, coloring, or otherwise altering the appearance of birds, will bar them against entry.

Misstatements as to age or breed will cause the exclusion of birds from the stock yard.

Birds of evident inferiority will be denied admittance, even though the owners may have received a permit.

Birds may be sold at private sale at any time during their exhibition; but no bird, in the event of being sold, will be allowed to be removed prior to Nov. 7.

Special premiums from societies and individuals must be awarded through the hands of the Centennial Commission.

Application for entry must be accompanied by a certificate from a recognized Poultry Society to the effect that the birds offered are considered to be worthy of competition.

Application forms for space can be had from this office. Entries are now being made, and will be in order till July 1.

BURNET LANDRETH, Chief of Bureau.
Per HENRY C. RONEY.

CENTENNIAL COMMITTEE OF THE AMERICAN DAIRYMEN'S ASSOCIATION.

At a meeting of the Executive Committee of the Centennial Committee of the American Dairymen's Association, held at Utica, N. Y., March 17, 1876, the following resolution was adopted:

Resolved, That Josiah Shull of Ilion, N. Y., and Harris Lewis of Frankfort, N. Y., be and they are hereby appointed a committee to decide upon the merits of the necessary apparatus and outfit, including engine, vats, etc., to be placed in the Model Cheese and Butter Factory on the Centennial grounds.

No implement, machine or apparatus will be permitted to be put into the factory outfit, except it shall be first-class and such as shall be the best adapted for general use in cheese and butter manufacture.

For the purpose of paying the necessary expense in providing space for implements, dealers in dairy apparatus and equipments will be charged the contribution of the article or articles, or the wholesale value in cash.

On all freight charges on implements or apparatus prepayment must be made by the person or persons furnishing and sending the article. And all articles requiring skill to set up and properly arrange in position, the parties furnishing the same will be required to set them up at their own cost and expense, or pay such expense.

All applications for space for implements in the equipment of the factory should be made to the undersigned as soon as possible.

April 8, 1876. JOSIAH SHULL, Ilion, N. Y.
HARRIS LEWIS, Frankfort, N. Y.

AQUARIAS FOR THE DISPLAY OF FISH.

U. S. CENTENNIAL COMMISSION,
BUREAU OF AGRICULTURE,
PHILADELPHIA, April 10, 1876.

SIR:—The Centennial Commission has provided thirty aquaria for the display of the fish of our rivers, lakes and seas. The fresh and salt water will be of about equal quantities, the aggregation approximation to fifteen thousand gallons. Full preparations have been made for thorough filtration and aeration, and, when necessary, for refrigeration.

The expenses attendant upon the fish display will be assumed by the Centennial Commission, and it is expected that fish will be contributed by the various State Fish Commissions, by associations, and by individuals interested in fish culture.

Parties so desiring may exhibit fish in tanks of their own contribution, the care of which will be gratuitously assumed by the Commission.

In addition to the display of living fish, will be exhibited the processes of hatching fish, and a full series of all the apparatus used in hatching and transporting roe and young fish.

Those who are in a position to contribute rare fish to the display will receive all necessary information by addressing

BURNET LANDRETH,
Chief of Bureau of Agriculture.

Entomological.

HABITS OF CANKER WORMS.

P. PICKMAN MANN, writing to the New England Farmer says there are two very distinct species of what are generally termed "Canker Worms," and that the mode of destroying must also be different in order to be effectual.

He writes, in answer to questions asked in a previous issue of the Farmer as follows:

In the first place, he must know that under the name of canker worm, properly used, are included *two* kinds of insects at least as different as a cabbage and a turnip, or a pear and an apple, or a dog and a wolf, or a bull and a buffalo; that is, they are what naturalists call two species of one genus or even separate as belonging to different genera. One of these canker worms, called *Anisopteryx pometaria*, is the one erroneously supposed to be called *Anisopteryx vernata* by Dr. Harris, in his admirable work upon the "Insects Injurious to Vegetation." The perfect or breeding insects appear mostly in the fall and winter, from October to January, though a few individuals come out of the ground in the month of March and April. It is therefore called the fall canker worm. The males are winged and in general appearance are gray with two whitish bands edged with dark dots running across the front wings. The females are usually wingless, and have a general smooth shiny gray appearance. The eggs are laid on the bark of the trees, in patches like a pan of biscuit, are larger at the top than at the bottom, and are flat on top with a depression in the middle and a circular furrow near the edge. The caterpillars or "worms" have six fleshy legs under the hind part of the body, besides the six jointed horny legs which most insects have under the front end of the body.

The other one of these canker worms, called *Anisopteryx vernata*, or, on account of its great unlikeness, put into another genus and called *Paleacrita vernata*, is the one which Dr. Peck studied and described in 1795, in the prize essay written for the Massachusetts Society for the promotion of agriculture. The perfect insects appear only in the months of March, April and May, on which account it is called the spring canker worm. The males are winged and in general appearance are gray with three dark bands running across the front wings. The females are wingless and have a general hairy speckled gray appearance with more or less of a black line down the middle, and more or less of a red appearance on the back owing to the presence of fourteen rows of spines running across the body. These spines have not been found at all in the other kind of canker worm, but are present in both males and females of this kind. The female has a jointed egg-layer, which she can push out of her body, and with it she lays her eggs separately between the leaves of the buds or in cracks of the wood, or under loose scales of the bark. The eggs are shaped like the eggs of a dove, being of the same shape at both ends. The caterpillars have only four fleshy legs under the hind part of the body, making with the six jointed horny legs in front, ten in all.

There are very many other differences between the two kinds of canker worms, and many of these have been described already, so that, while it is much to be desired that further observation should be made, especially by farmers and other men in the fields, it would not be advisable for those persons to publish their notes without first learning from special students whether there is anything new in them, or whether greater knowledge has not shown that many things which seem to be in one way are after all in a different way. Hasty conclusions confuse knowledge, but no conclusions can be made at all till facts have been observed, and facts can be learned only by practical men.

If your correspondent knows what I have said above, he will put ink on his trees before October 24th, if he has the fall species, and as far as present knowledge goes, need not tend his trees between Jan 15th and March 23d, but must then look to them till May. If he has the spring species, he need only tend his trees from March 7th to May 7th; but if he has both, as is likely, he must watch both. You see already that there is room for new knowledge whether these dates embrace the whole of the period of the insects. I should be pleased to have observers communicate with me upon the subject. Your correspondent will postpone the scraping of his trees, if he does it at all, till May; he will know the eggs if he sees them, but he cannot be sure, without more knowledge, that he may not destroy the eggs of useful insects, if he does not attend to the matter within the time specified.

These are but two out of more than a hundred known enemies of the apple-tree. They are the most important ones. The habits of these and the very numerous other injurious insects are best known to professional students, and it is from them that the farmers should seek their information rather than from agricultural papers, the editors of which have enough, and estimable work, without undertaking to keep themselves familiar with the acts and relations of the thirty thousand kinds of insects which live in this country.

It is judged proper to employ lawyers, physicians and ministers, rather than to refer all questions of detail to the editors of special papers or magazines. The agriculturists must learn by experience, if in no other way, that it is more profitable for them to employ entomologists, who need to spend, in preparing for their profession, more time and labor than it is required to get a degree in any school of law, college or divinity in the land, than to rely upon the knowledge of such a special subject possessed by persons whose attention is otherwise engaged.

Insurance Department.

INSURANCE NOTES AND NEWS.

Antiquity of Insurance.—It appears from some investigations made by German insurance companies and published in the *Versicherungs Zeitung*, that insurance is not only not a modern invention but that it was practiced, chiefly in a mutual way, by the Hebrews and there are several modes that have not yet been re-invented.

The information in regard to this matter was derived from old copies of the Jewish Talmud, a sort of ecclesiastic-civil code of laws, and consisted of rules and regulations for almost everything, including some for the formation of trades' unions, co-operative societies and mutual insurance associations.

These regulations show that they had, at a date long anterior to the speech of DEMOSTHENES in the celebrated marine insurance case, settled the practice of insurance proceedings nearly as completely as modern insurers, and were as well posted in the tricks of the trade.

They insured ships, houses, goods in transit, beasts of burden against loss by theft, and where loss was sustained made restitution in kind only and not in money, and were quite as particular in stipulating that losses occurring through the negligence or fault of the owner should not become or constitute a claim for indemnity. Some of their regulations were founded in sound wisdom and complete equity, as for example that requiring that when a company of traveling merchants mutually insured each other's property against robbery, and being attacked were compelled to buy off the assailant with a ransom, each one should contribute, not *pro rata*, but in proportion to the loss each would have sustained had the robbers succeeded in capturing all the goods; whereas if a spy was employed to peril his life for a consideration each one must contribute *pro rata*, "for a life is a life." Another regulation, which has an odd look, was, that when it became necessary for the common good to lighten a ship by throwing freight overboard, each one must part with an equal weight regardless of the value; a hundred pounds of gold or silk counting for no more in such emergency than so much lead. All of which goes to prove that "there is no new thing under the sun." We should not be surprised after this to learn that archæologists had found pieces of steam-hoisting devices used in constructing the pyramids or that Joseph's captors found their way back to Egypt by the aid of a compass.

"Wait a While."—We had occasion in a former issue to caution our readers that quite a number of life companies, heretofore regarded as reliable would soon be compelled, by hard times, to relinquish business, and that no harm and possibly much good would result from deferring to insure until the New Year's reports indicated what companies would be found in this category. Since that time several companies of mature age and large assets have made arrangements to reinsure and amalgamate, not perhaps because they lacked means, but because their small incomes rendered their business profitless. Other companies are expected to follow their example for the same, or more serious reasons, and we repeat the advice to wait a month or so, until the reports are all in.

Accident Insurance for Tourists.—Ocean and other travel promises to be menaced by a new peril, that of infernal machines provided with clock-work that explodes a barrel of dynamite or gun-powder, after the ship or boat is at sea, in order that certain shippers may obtain over insurance. The moral is that no one should travel without an accident policy of the Old Travelers Insurance Company.

Domestic Economy.

HOME MANUFACTURE OF TABLE SIRUPS.

A CORRESPONDENT of the Sunny South offers the following suggestion in regard to making sirup for the table from sugar, which, we think, is worthy of consideration by all who value strict cleanliness in the preparation of food.

There are several reasons suggested by economy and convenience for making the manufacture of sirup from sugar a household practice. The dealer who retails sirup has to pay freight on the weight of its contained water. This he exacts from the consumer in the price at which it is offered. The package in which the sirup is transported is much more costly than that in which sugar is conveyed. The difference is added to the manufacturer's price, and is another element of cost to the consumer. The retailer of sugar adjusts his price at the lowest practicable rate of profit, because modern luxury has made it an article of prime necessity and which will not bear a profit. Not so, however, with sirup on which a rate of profit equal to the average of that made on the table supplies is required by the dealer.

To make a gallon of sirup of beautiful whiteness and crystal-like transparency, such as is known in our markets as silver drips, or rock-candy drips, there are required eight pounds of refined sugar, such as is known by its various names and grades of A. or B. or Extra C., and costing from ten to twelve-and-a-half cents per pound, according to locality and distance from the sugar refinery. To this quantity should be added three pints of boiling water, and the whole subjected to slow boiling for a period of fifteen to twenty minutes; after which, the solution, while warm, should be strained through a fabric of moderately close texture. This will produce a gallon of sirup, at much less cost than the price demanded in market for the grades of sirup named. For a light yellow or golden sirup the same quantity of light brown sugar may be employed, and so on through the lower grades of sugar and sirup; but no grade of sugar can be found which will produce so worthless an article as the Cuba molasses generally offered in all markets.

HOW TO CLEAN KID GLOVES, ETC.

LAWS of Life gives the following recipe for cleaning kid gloves, etc.:

Get gasoline which can be procured at the drug stores at 10 cents a gallon. Lay your glove in a long, flat-bottomed dish, like a common vegetable dish, and cover it with the gasoline; rub soiled spots with a clean white rag, squeeze, not wring it with your hand, as dry as you can, lay it on clean old muslin, take one corner of the muslin and rub the fingers and thumb out smooth, rub soiled spots if any remain, inflate by blowing into it, then pin on a cloth out-of-doors to dry. The process should be gone through with quickly, as the glove is injured by remaining in the liquid; not more than ten minutes being occupied in cleaning the pair of gloves. This will be found excellent economy.

Clean cashmere lace by dipping or rinsing it in the gasoline, being careful not to rub it so as to get the meshes and figures out of place. Dry it out of doors, then lay it on a cloth in good form, and place between the leaves of a book to press.

If it is desired to whiten unbleached Valenciennes lace, lay it on a cloth and cover with magnesia or baby powder, leaving it over night. Blow off the dust and repeat if need be.

SELECTED RECIPES.

WILL some lady reader of the RURAL give a recipe for Velvet Cream, also the proper preparation of salmon and its accompanying sauce for the table?—c. a.

Love Cake.—One and a half cups of sugar; a half cup of butter; one cup of sweet milk; two cups of flour; two eggs; one teaspoonful of soda; two teaspoonfuls of cream of tartar; flavor to taste. This makes a good jelly cake.

Puffs.—Six tablespoonfuls of flour, one pint of milk, two eggs. Bake in cups not quite half full, or in gem pans. Put in the oven when you sit down to dinner, and they will be ready for dessert. Serve with cream and sugar, or wine sauce.

Cement for Aquaria.—An adhesive cement for aquaria may be made by mixing equal parts of flowers of sulphur, pulverized sal ammoniac, and iron filings, with good linseed oil varnish, and then adding enough pure white lead to form a firm, easily worked mass.

Potato Balls for Breakfast.—To three cups of cold mashed potatoes add one cup of sweet cream, a little salt and two well-beaten eggs. Mold into little balls; put on a baking-pan, and set in the oven until done a delicate brown, or, if preferred, fry in boiling lard.

To Fasten Labels to Tin Cans.—Put a teaspoonful of brown sugar into a quart of paste, and it will fasten labels as securely to tin cans as to wood. Housekeepers may save themselves much annoyance in the loss of labels from their fruit cans when putting up their own fruit, by remembering this.

A Delicious Dish for Tea.—Three pounds of lean round steak, chopped very fine; one tablespoonful each of savory, thyme and parsly; one teaspoonful of salt, pepper; one tablespoonful of butter, two eggs; mix together; form into a loaf. Bake in a moderate oven one hour and a half. To be eaten cold.

Another Breakfast Dish.—Toast some slices of stale bread and lay on a platter. Hash very fine some cold beef, or mutton; put it in a pan; season with salt, pepper, butter, and any sweet herb which is agreeable; add as much water as you think the toast will absorb; put on the stove and let it boil ten minutes; then pour over the toast and serve immediately.

To Make Attar of Roses.—Gather the flowers of some of the most fragrant sorts, but the common Blush or other June roses are the best. Put the petals in a cask, or stone jar, with sufficient water to cover them. Then put the vessel out-doors where the sun will keep it warm. In a week or ten days the oil will be seen on the surface, and may be removed by the aid of a piece of cotton.

Hygienic Information.

FRUIT vs. MALARIA.

WE find (pp. 132) in the revised edition of "The Fruit Culturist," (J. J. THOMAS,) the following interesting note:

"Residents in the Western States and other regions where intermittents and similar diseases result from malaria, state that a regular supply of ripe, home-grown fruit, is almost a sure preventive. Eat the fruit only when fully ripe, and eat only moderate quantities at a time, and little need be feared. The residents of such regions should, therefore, not omit the earliest opportunity for a supply. Plant large quantities of strawberries for early summer—they will bear abundantly a year from the time they become established. Plant many currant bushes—for these are a most healthy and excellent fruit—very hardy—and if in abundance, will last through all the hottest parts of the summer. The Doolittle and Orange raspberries are profuse berries—the former very hardy, the latter generally so, but should be laid down and covered with an inch or two of earth for winter. The Rochelle blackberry, if pinched in when three or four feet high (about mid-summer) will bear abundantly, and prove hardier than if the canes run up without control.

"The Delaware, Clinton and Concord grapes are early and hardy, and will bear in two or three years from transplanting. Dwarf apples, on the Paradise and Doucin stock, will flourish in any locality, and begin to bear profusely in three or four years, and on the Paradise stock often in two years. Some varieties bear early on common stock; such, for example, as the Dyer, Lowell, Early Strawberry, Sops of Wine, Oldenburgh, Porter, Belmont, Jonathan, etc.; but these will, of course, bear much sooner as dwarfs. The Bartlett, Washington, Julienne, Flemish Beauty, Beurre d'Amalis, Onondaga, Howell and Seckel pears, produce early as standards, and the Louise Bonne of Jersey as a dwarf. Houghton's gooseberry grows with great vigor, is very hardy, and in two or three years affords almost solid masses of berries in the branches. Such fruits as the above should be planted out on every new place, as indispensable to health as well as to comfort and economy; and emigrants to new countries should take a supply with them, as the best medicine chest they can provide."

SLEEPLESSNESS.

DR. FERRIER has recently published some observations he has made in relation to sleeplessness, and he tells us that a large proportion of the blood from the heart flows to the brain, and the increase or diminution of this amount means excitement or quiet. Any exertion of the brain, such as deep thought, increases the flow of blood to the brain, and so long as such flow continues this organ is excited, and the body gets no sleep or rest. Anything tending to promote circulation of blood in the brain, such as worry or anxiety, means sleeplessness; while, on the other hand, any cause that tends to diminish this flow of blood induces sleep. The best promoters of sleep were warmth, darkness and monotony of sound, for in all these there was an absence of excitement. Dr. FERRIER thinks that eight hours' sleep is necessary every night for the average adult, to restore his organization after the wear and tear to which it is daily subjected. The more a man exercised his brain the greater necessity there was for rest to recuperate himself, for every act of thought entailed a certain loss or consumption of brain substance.

Dr. R. GREENE says it is important always to keep as free from colds as possible. Dress warm, and avoid as much as your business will permit all sudden exposures to a cold or damp atmosphere. Colds in summer are more liable to be followed by serious consequences than in winter; but a cold at any season of the year is productive of much evil, and should never be neglected.

The pores of the skin are necessarily more or less open at all times, and a great amount of impure and diseased matter is thus thrown from the system by the millions of outlets with which the skin is supplied.

Colds arrest this action, and hence become dangerous. One great cause of mortality among children may be traced directly to the want of proper clothing to protect their bodies and limbs from the inclemency of the weather.

The causes of colds are so numerous that no rule can be laid down to avoid them, other than to dress comfortably and with due attention to the state of the weather, the condition of the body, and the places where you are going. If you at any time find that you have taken a violent cold, immediately place yourself in a warm room and take warm herb teas, if you can get nothing better, to produce perspiration. Keep in a warm room, free from exposure, and the cold will soon disappear, without serious disarrangement to the system. This is the only safe course to be pursued.

HARD PHILOSOPHY, BUT DOUBTLESS TRUE.

THE Science of Health, in speaking of Nature's remedies for disease, says:

Although the doctrine that Nature or Providence has provided some remedy for every disease (if we could only find it) has been believed in all ages and is now taught in all the medical schools in the world, with the single exception of the Hygeio-Therapeutic College, we can conceive of nothing more absurd. Diseases are the penalties of disobedience to vital laws. Has Nature attached a penalty to disobedience of her laws, and then provided a remedy to do away with the penalty? That would be such a self-stultification as no human legislation has ever yet been guilty of. Yet there are in the civilized world half a million of physicians who are busily, but vainly, employed in trying to drug and dose away the penalties. In the light of true science this is simply ridiculous, while in effect it is terribly disastrous; for every dose of medicine, being itself a violation of vital law, has its own penalty to be suffered. Hence the maxims of the drug schools, that "every dose, being a poison, diminishes the vitality of the patient," and "we cure one disease by producing another." * * If Nature had provided calomel, antimony, jalap, strychnine, alcohol, ipecac, cod-liver oil, and two thousand other drugs, or even air, water, exercise, etc., as remedies to obviate the causes of our intemperance, gluttony and other disease-producing habits, she should, to be consistent, have also provided remedies for broken bones, dislocated joints, spinal curvatures, warts, cancers, burns, scalds, and all the "ills that flesh is heir to." But no one pretends that surgical remedies are provided by Nature, or are to be found anywhere except in human ingenuity.

And again—to carry the principle to its ultimatum—if Nature has provided remedies for our natural and bodily diseases, why not also against the effects of storms, tempests, earthquakes, volcanoes, fires, floods, etc., which sometimes destroy human beings by scores, or hundreds, or thousands? Why not against wars, famine and pestilence, which, combined, are almost as great a curse to the world as is the drug medical system?

Nature has provided all things for use, nothing for abuse. If we do and can use everything and misuse nothing, our life will be perfectly healthy and happy. But if we cannot or do not use and do misuse the materials of the universe, we shall inevitably be sick and miserable just to the extent of that misuse. And this is the lesson that is to redeem the world from diseases, drugs and premature death, if it ever is redeemed. It is the doctrine of the world's physical salvation.

NEURALGIA OF THE FACE.

MEN are less subject to this painful complaint than women, owing, without doubt, to the reason that they cover their heads better while in the open air. It may be observed that the surface of the head which is actually covered in man is at least three times that which fashion allows to woman. Indeed, the points of contact between the hat or bonnet and the head in the latter are so irregular as to practically destroy any protection that otherwise might be afforded.

PEOPLE frequently mistake ventilation to mean *cold* air instead of *fresh* air.

Scientific and Useful.

HOW GRASSHOPPER EGGS ARE DESTROYED.

MR. JOHN C. WISE, one of the Grasshopper Commissioners of Minnesota, and editor of The Mankato Review, says, in a recent number of his paper:

"The Watonwan County Record says that a farmer of that county, living in a locality where a great many grasshopper eggs were deposited, went out one day to dig some, and after an hour's search, without finding any, came to the conclusion that they had all decayed. Telling his conclusions to a neighbor, the latter took him to a field where he said there were millions, but after considerable digging, they found their search equally fruitless. If the eggs had decayed, we imagine that some trace of the decayed matter would be found in the ground. In our investigations in the frontier counties we found nearly the same state of affairs. The eggs were supposed to be deposited in the greatest numbers, and surprise was generally expressed at the comparatively few found. We are inclined to the belief that the blackbirds, which are unusually plenty in the grasshopper districts, and the prairie chickens, both of which dig and eat the eggs, have destroyed them. The blackbirds, especially, have a great fondness for the eggs, dig them with great energy, and consume large numbers of them. A farmer of Watonwan County told us the other day that every year his corn has been badly injured by the blackbirds, which light upon the stalks and peck the kernels from the end of the ears. This year they have not troubled him, and upon investigation he found them feeding upon grasshopper eggs.

"Another hopeful prospect is, that where the eggs have not been thus destroyed, in many places the coating surrounding the eggs and constituting the sack, composed of mucus matter, has been dissolved by the damp weather, and the eggs lie unprotected in the damp ground. Prof. Riley, the entomologist of Missouri, gives it as his opinion that an unusual amount of dampness will destroy their eggs, and that their present condition in Minnesota is favorable for that result.

"While we do not desire to mislead the people of the frontier, we do believe that the outlook is decidedly hopeful. We would urge upon them, where practical, to plow and harrow shallow this fall where eggs are deposited; also to make investigations of the extent and condition of the eggs in their localities, and if any unusual facts are noted, report the same to this office at Mankato."

COMPOUND FOR DESTROYING INSECTS.

THE following compound, recommended by a French chemist several years since, may be worth trying on potatoes for destroying the potato beetle.

Take 2½ lbs. of block soap, 2½ lbs. of flour of sulphur, 2 pounds of mushrooms, of the species generally found in low, moist grounds, and 30 quarts of water. Divide the water into two equal parts; put one-half into a cask with the soap and mushrooms, after they have been bruised; boil the other half of the water in a kettle, with the sulphur in a bag and kept down to the bottom of the water with a weight. The sulphur must be stirred about, in order to better saturate the water. The water thus boiled must be thrown into an ordinary sized cask until it has acquired a high degree of foul odor, and the cask then closed up tightly. This solution may be sprinkled over infested trees, or plants of any kind, and it is said to be certain death to all kinds of insects.

SCIENTIFIC AND USEFUL NOTES.

Cement for Steam Pipes.—Cheap and steam-tight cement can be produced by a mixture of rye flour and linseed oil, with an equal portion of white chalk.

Cement to Fasten Leather upon Metal.—Soak the leather in a hot solution of nut-galls, and apply it to the metal upon which it is to be fastened—the latter must be provided with a coat of glue. When dry, the leather will adhere so tight that it will tear before separating from the metal.

Harness, and other articles of leather that are injuriously acted upon by the ammoniacal exhalations common in stables may, according to Prof. Artus, be thoroughly and effectually protected by the addition of a little glycerine to the oil or blacking with which their surfaces are treated.

Dying Wood Mahogany Color.—Obtain a quantity of mahogany shavings or sawdust, and boil in soft water. This liquor makes an excellent dye for light-colored woods which it may be desirable to give a dark or mahogany shade. Basswood, poplar, pine, and similar light-colored woods, may be made to look like mahogany with this dye.

INTEGRITY IN CITIZENSHIP.

THE integrity of the citizen is the main pillar of a Republic.

It is not those who make or execute the laws that are alone responsible for the welfare of the masses. Granting this to be true, each and every citizen must be held in part responsible for the acts of the whole, and the individual becomes the leaven which in the end works good or evil, according to circumstances. Of late years (and we admit it with shame) official integrity has become almost a thing of the past, and the "noblest work of GOD" is found far less frequently in the political arena than formerly.

We may well ask ourselves, Why is this? Has honesty ceased to be a virtue? Or has its value depreciated in the estimation of the citizen? The latter we believe to be the true solution of whatever mystery there may be surrounding official dishonesty, and the subservience of principle to partisanship which has been so apparent during the past decade.

This depreciation of what has ever been held as a virtue in man, is perhaps but the outgrowth of national prosperity, together with the perfect freedom vouchsafed to every individual to work for his own exaltation and welfare. The general strife to accumulate wealth, tends not only to make all place a high valuation upon the talent required for its attainment, but also upon the thing itself; hence we come to place value upon a man's money instead of his integrity of character. There are few persons who will confess to such base worship; still it is to be feared that the taint has reached every grade of society, and the question, "How much is he worth?" is now more frequently asked than "What does he know? or what is his character?"

If we must continue in our "hero worship," well and good; but let the hero be a man who has not been made one by blind fate or inherited wealth, but gained the exalted distinction through his own individual exertions and integrity. We are not pleading for honesty alone, because a man may be as true as steel and yet lack other qualifications requisite to fill whatever station he may assume or be placed in by his fellow men, but sterling integrity must rank first and foremost.

Such men will not seek office nor will the office seek them, until the private citizen everywhere recognizes the priceless value of the attributes we have named. There is no lack of honest and intelligent men to fill every office in the gift of the people; but "money blindness" prevents the mass of voters from discriminating between the false and true, hence both enter where only one should ever be found.

The germ from which a reformation is to come, if at all in our political affairs, is at present in the possession of individuals, and we must all endeavor to encourage its growth by word and deed, and show by our own acts and dealings with our fellow men, what we would have reflected back to us from those called to positions of public trust. Parents must teach their children that desirable as riches may be in this world, there are things within easy grasp which are far more valuable. Mothers must cease to inculcate the idea that a good match for their daughters means a husband with money, while fathers point to our millionaires as the most noble examples of our race for their sons to emulate.

THE BETTER WAY.

How many people there are in the world who, under adverse circumstances, do just the wrong thing or, what is equally bad, do nothing at all! Occasionally we meet those in our social circle who reverse this rule and not only do something, but do exactly the right thing. Should we analyze such cases when they come under our observation, we should find almost always that it is the result of careful reflection.

We have in our mind's eye a sweet little woman of refinement and education, who married a poor man for love of him, believing him to be great and noble and all that was good. Alas! the disappointment! In a short time she learned to her sorrow that he never would be great, that nobility was a small part of his composition and that if ever he could be good such qualification was yet to come. Her idol did not fall to dust in a second; but by degrees the truth entered her soul. Did she sit down and bemoan her fate in having made such a fatal mistake? Did she wish she never had been born? Did she stand helpless and do nothing? No. Like a sensible little reflecting body as she was, she saw that a mistake had been made and then set about correcting it as best she could. She did not attempt at once to change the course of her whole domestic life nor did she take her friends and neighbors into her confidence for the purpose of getting that sympathy and condolence which is so sweet to many weak people in like circumstances. She reflected upon the matter and marked out for herself the course most likely in her opinion to bring the matter right. She started by degrees to lead that same husband who was not great, not noble and never had been very good, to see many great, noble and good things in life which he had never seen before. By constant and kindly endeavor she showed him that there was one good person in the world at least and that one his best friend on earth. He, with the germs of goodness in him which ALL men possess in some degree, finally perceived and appreciated the fact. He is not great nor perhaps noble in his character to-day; but he and his wife are very, very happy in their mutual exercise of kindliness and virtue. How easy it would have been for this young wife to have folded her hands and persuaded herself that she could do nothing under the adverse circumstances which cruel fate had brought to her; or, what would be infinitely worse, could have fought her terrible surroundings with their own weapons and thus inevitably wrecked two lives instead of saving one. The reflection showed her THE BETTER WAY, and the subsequent steps in that way made both of them better and happier. Can we not almost daily read such lessons in our intercourse with our neighbors, and can we not learn a lesson of reflection from them which shall produce equally good results? Let us try.

MAKING AND SAVING MONEY.

THERE are two ways of getting rich—one is to make money by speculating, and the other by saving a little constantly from whatever amount a person earns. The first is the quicker method, provided one is successful; the chances, however, with even the most shrewd speculators, are only about one in a hundred, and then not more than one in a thousand hold on to their gains, or any considerable portion of them, through life.

In all of our larger cities there are many rich speculators; but if we could only know the names of the thousands who have utterly failed to make a dollar in the same fields, the number of successful ones would appear ridiculously small. But the saving class far outnumber the speculating among those who are called rich or in comfortable circumstances both in city and country; besides, we can always count upon them as the solid and reliable portion of any community.

This being an indisputable fact, our young men and women who aspire to moderate wealth and respectability, should aim to save something from every week, month or year's earnings, no matter how small from necessity the sum may be.

The smallest sum put out at interest or safely invested in business, immediately commences to earn something for the possessor, adding just so much to his or her income.

There is another advantage of having something ahead; it is a credit among your fellow laborers or associates to nearly or quite the full amount of the accumulated capital, in case such accommodations are desired.

We will not pretend to say at what point savings should commence; but they who cannot save something out of a dollar or two dollars per day, will seldom do so from ten or twenty.

The habit of saving must be formed with that of earning; else it will seldom be practiced later in life. Nine-tenths of the men who have accumulated a competency for themselves and their families, owe their success to saving money, and not to what is generally termed making money by speculation.

RURAL NOTES AND QUERIES.

American Pomological Society. In a private note from the Hon. MARSHALL P. WILDER, President of the American Pomological Society, we learn that the notice which recently appeared in our columns in regard to the meeting of the above-named Society at Philadelphia, this year, was calculated to mislead. At the meeting of the Society in Chicago, last fall, it was decided not to hold an exhibition—as a Society—in connection with the Centennial, but go to Baltimore in 1877. The members will join in the exhibition of their several States, and the expectation is that a great display will be made from the 11th to 16th of September, in which all the States will unite. In conformity with this arrangement, the Pennsylvania Society extend an invitation to the American Pomological Society to become the guests of their Society at a grand social reunion to be held Sept. 15th, to which the members of the A. P. S. are invited, as well as to contribute fruits to the exhibition of the Penna. Soc. and participate in the hospitalities which are to be extended to the members of the oldest and most prominent Horticultural Society in the land.

The Phylloxera or Vine Louse.—M. DUMAS recently announced to the French Academy of Sciences that a mode of treating vines attacked by the phylloxera had been discovered, which is certain in its results in destroying the insect and in restoring the vine to health and fecundity. The remedy is the combined employment of sulpho-carbonate of potash, which kills the insect at any depth in the soil, and of potassic ammoniacal and sulphuretted manures. M. DUMAS himself is the fortunate discoverer, though his announcement to the Academy was not made until after his process had been tried by exhaustive experimenting by the commission appointed to examine into the various plans submitted. This being the case, DUMAS became the possessor of $60,000 reward, besides numberless other smaller prizes.

Planting Centennial Trees.—One can scarcely pass along the streets or ride in the cars without overhearing some one talking about planting a "centennial tree." It is certainly a good thing to do, but the time in which to do it is getting short, for the buds and leaves are coming forward very rapidly and it will soon be too late for planting this spring. Of course 1876 will give the negligent in this matter a chance to do a little tree-planting next fall, but then one will not be certain that they are going to live until the following spring, if death should ensue the opportunity cannot be made good for a hundred years. Just think of that, and hasten to plant your "centennial tree."

A Paradise for Farmers.—Brazil is the farmers' paradise. A young gentleman formerly from Georgia, writes:—"A planter's life in this country is agreeable and easy. In cultivating the land no plows are used; only the ax and hoe are needed—one for clearing the land, and the other for planting. My crop of coffee for this year is small on account of the frost; but I am now planting 20,000 trees, and when they bear they will give me 100,000 pounds of coffee annually—an income of $9,000 or $10,000.

Horse Beef.—During the past year 6,863 horses, asses, or mules were butchered for food in Paris, and averaged over four hundred pounds of meat each. It is said that the best Bologna sausage is made of asses' meat, but latterly it is seldom obtained unmixed with horses' flesh. It may interest some of our readers to know that several thousand pounds of the above edible yearly come to our markets from France.

Entomology at the Centennial.—The Entomological Society of Ontario forwarded a very fine collection of Canadian insects to Philadelphia, consisting of eighty-six cases—forty-five of which are Lepidoptera and twenty-seven Coleoptera—the remainder being occupied by other orders.

RURAL BREVITIES.

IT is said that a mixture of lime and strong brine is an excellent wash for all kinds of fruit trees, as it destroys lichens and other eppiphytic plants found on the bark.

THE BROTHERS GREEN, pisiculturists, are now experimenting with hybridized salmon—that is, they are trying to impregnate the ova of brook trout with the milt of the salmon. May they be successful!

DERRY'S IRISH GIANT, who is twenty-eight years old and stands seven feet five inches high, is on his way to the Centennial Exhibition. Philadelphians should engage him to pick cherries for them in June.

OWING to the press of advertisements for our last page this week, several favors in that line have to be laid over until our next issue. Advertisers wanting choice of page should take the hint and send in their favors early.

THOUSANDS of laborers in our larger cities have been made happy by the jingling of silver in their pockets during the past few weeks. Probably many a resolve to keep some of the glittering coin has also, ere this, been broken.

A DECREE has been issued by the Danish Ministry of the Interior, dated Feb. 25, laying down special regulations with regard to the exportation of domestic animals from Denmark to Great Britain, for the purpose of preventing the spread of contagious disease.

To all those readers who intend to visit the Centennial we recommend a careful perusal of the letter of YOUNG RURAL, on another page of this issue. By watching these letters every week much money and valuable time can probably be saved to those who go to Philadelphia as strangers there.

THE ILLUSTRATED CHAMPION—an eight-page paper, handsomely illustrated, and published by Messrs. WARDER, MITCHELL & CO. of Springfield, Ohio, in the interest of the CHAMPION MOWER—has just come to us. We like the machine talk, but advise the shooting of their funny man.

BRAMER, of Warrior Mower fame, showed his FRANK face in our publication office not long since. What the Central New-Yorker would do while he is absent we should never discover, had we not been informed that he left his scissors at home and that flour is comparatively cheap at Little Falls. Not that we wish to intimate that anyone from the Warrior establishment is a CLIPPER.

WE are in receipt of a handsome circular, issued by the AULTMAN & TAYLOR Mfg Co., Mansfield, O. It is illustrative and descriptive of their Threshers and Mounted Powers, and contains a large amount of information on the subject of Threshers that every farmer should know. It contains a brief but true history of that wonderful "rooster" which graces their advertisement in this number. Progressive agriculturists who keep abreast of the times should send for the pamphlet, which will be sent *free* on application.

BUSINESS NOTICES.

EVERY keg "Phœnix Pure White Lead" warranted *perfectly pure*—is white, fine, and has the very best body and covering properties.

SIDNEY LANIER'S CENTENNIAL CANTATA.

THE following is the cantata, written by Mr. SIDNEY LANIER and set to music by Mr. DUDLEY BUCK, which was sung at the opening of the Centennial Exhibition, May 10th:

The Centennial Meditation of Columbia.

I.

FROM this hundred-terraced hight
Sight more large with nobler light
Ranges down yon towering years:
Humbler smiles and lordlier tears
Shine and fall, shine and fall,
While old voices rise and call
Yonder where the to-and-fro
Weltering of my Long-Ago
Moves about the moveless base
Far below my resting-place.

II.

Mayflower, Mayflower, slowly hither flying,
Trembling Westward o'er yon balking sea,
Hearts within *Farewell dear England* sighing
Winds without *But dear in vain* replying,
Gray-lipp'd waves about the shouted, crying
No! It shall not be!

III.

Jamestown, out of thee
Plymouth, thee—thee, Albany—
Winter cries, *Ye freeze: Away!*
Fever cries, *Ye burn: Away!*
Hunger cries, *Ye starve: Away!*
Vengeance cries, *Your graves shall stay!*

IV.

Then old Shapes and Masks of Things,
Framed like Faiths or clothed like Kings—
Ghosts of Goods once fleshed and fair,
Grown foul Bads in alien air—
War, and his most noisy lords,
Tongued with filthe and poisoned swords—
Error, Terror, Rage and Crime,
All in a windy night of time
Cried to me from land and sea,
No! Thou shalt not be!

V.

Hark!
Huguenots whispering *yea* in the dark,
Puritans answering *yea* in the dark!
Yea, like an arrow shot true to his mark,
Darts through the tyrannous heart of Denial.
Patience and Labor and solemn-souled Trial,
Foiled, still beginning,
Soiled, but not sinning,
Toil through the stertorous death of the Night,
Toil, when wild brother-wars new-dark the Light,
Toil, and forgive, and kiss o'er, and replight.

VI.

Now Praise to God's oft-granted grace,
Now Praise to Man's undaunted face,
Despite the land, despite the sea,
I was: I am; and I shall be—
How long, Good Angel, O how long?
Sing me from Heaven a man's own song!

VII.

"Long as thine Art shall love true love,
Long as thy Science truth shall know,
Long as thine Eagle harms no Dove,
Long as thy Law by law shall grow,
Long as thy God is God above,
Thy brother every man below,
So long, dear Land of all my love,
Thy name shall shine, thy fame shall glow!"

VIII.

O Music, from this hight of time my Word unfold:
In thy large signals all men's hearts Man's Heart behold:
Mid-heaven unroll thy chords as friendly flags unfurled,
And wave the world's best lover's welcome to the world.

The Story-Teller.

FOR THE LAST TIME.

BY DUDU FLETCHER.

[Concluded from page 301, last No.]

"FOR joy once lost is pain," quoted Jack, absently. "Well, it is something, after all, to have had the joy! This morning, when I woke up, I said to myself:—'The pleasantness of life is not over for me yet. I have still a claim on it for one long, perfect day.' And now—I have had it; my day is well-nigh past!"

Eleanor made no answer.

As they rode on, the twilight deepened about them; a chill crept into the evening air; the color at the horizon faded to ashes of rose; a long, light wreath of mist ascended from the marshes and stole like the ghost of the dead day about the solitary fields. The scattered pools of water gleaming dimly through the dusk reflected the livid tone of the sky. The ineffable melancholy of an evening in the early spring fell upon them. They did not speak, but listened to the regular cadence of the horses' feet. That part of the road leads through a thicket of birches; every now and then a branch of the overhanging trees brushed against their faces, and a swarm of small white moths started up from under the leaves. Eleanor suddenly struck her horse sharply with her whip, and started down the hill at a mad gallop. The wind blew freshly in her face and there was exhilaration in the very movement; again and again she urged on her horse, taking a wild delight in the sensation of dashing along in the dark, not seeing where she went. It was with some difficulty that she checked her excited horse at the top of a long ascent in order to wait for Desmond, who had not dared to follow faster, for fear of frightening Olga beyond all control. Eleanor laughed gaily as he rode up a moment after her.

"I enjoyed that. It was great!" she said. "Did I startle you? Did you think Olga had run away with me?"

"If you had stumbled you would have killed yourself!" said Desmond, in a voice hoarse with suppressed emotion.

"Well, suppose I had," she retorted; "who would have cared? My friends? Rome would have talked for a week of that poor Miss Hardy, and how very shocking it was, how very distressing for Mr. Desmond!—she was killed under his very eyes, you know—and how careful one ought

"IF YOU HAD STUMBLED YOU WOULD HAVE KILLED YOURSELF!"

to be about accidents on horseback! So very unfortunate! And—and what a pity that those nice Tuesday evening receptions of Mrs. Van Cortlandt's will have to stop now for a time! such a loss to us all! As for my aunt—well, I'm afraid my poor aunt's chief despair would have been caused by the oddity and impropriety of my decease, and she would never be altogether comforted that I did not break my neck more decorously and with a proper escort. You're not an eligible escort, you know!" she added, with a reckless laugh.

"Don't talk in that way, please," said Desmond; "you don't know how much you pain me by doing so. Surely, my poor child, you must believe that there are people who care for you in another way than that."

"And why should there be?" she broke in passionately. "Have I ever cared for any one, myself? You have been cruel to me to-day, after a fashion," she added slowly. "I am sorry I ever came here with you. I don't think I am over-inclined to be romantic, but you have reminded me of what I had almost forgotten—that I am young and that it will be years and years before I shall outgrow the need of being loved. What good has it done you? What have you gained by it? This morning I was ready to marry Mr. Ross, if not with any great joy, at least without any great regret; and now—now you have forever ruined my contentment. I never shall feel as I did again, and I shall go on doing now what I would have done then, but without ever once shutting my eyes to the fact that I have missed my chance of happiness; that I shall die without ever having lived. Why could you not have left me alone? I am not going to change all my plans in life because of one day spent with you; why need you have taken the pleasure out of everything for me? Stop! I know what you are going to say, but it is of no use. This is our last ride together; to-night we say good-by. I may marry Mr. Ross without caring for him, but at least I will never see again a man I think I might have loved once; that is, if I had ever had a heart—which I haven't! Don't answer me; and let us go faster, please! I want to get home."

They put their horses to a sharp trot and rode on for several miles in silence. Behind them had risen a watery moon, that glimmered with an uncertain light through the sea of vapor in which it floated. Now and then the white wall of a farm house started out from the darkness, and the barking dogs made a dash at the horses as they passed. A dark line of trees against the sky marked the undulating course of the Tiber; now and then the moonlight glanced through their branches and cast a long, shining reflection on the water. Strange, fantastic shadows fell across the road, and more than once the horses shied violently at some mysterious black figure lying in their path. Before very long the houses succeeded each other at shorter intervals, and the distant city showed a pale circle of fire at the far-off horizon.

"We are nearing home. Do not go so fast," said Desmond suddenly; "this is our last ride, remember. Must it be the last, Eleanor?" he cried impulsively, laying his hand on the pommel of her saddle as he spoke.

"The very last," she said. "You may despise me now, but I should despise myself were I capable of giving up all the convictions of my life on the impulse of this day. I made a mistake of judgment when I consented to see you again after what had passed between us, and, like all other mistakes, it brings its own punishment with it.

"'Let what is broken so remain:
The gods are hard to reconcile.'

Do you like that quotation better than this morning's? And what do you think you will do with yourself to-morrow?" she added, with an abrupt transition to her customary voice. "By the way, are you going to the races, this year? I am."

"And so it is all over, and henceforth when we meet, we meet as strangers," said Jack, slowly. "Well, it was a pleasant dream while it lasted, only, as in all dreams, one must wake up awhile. Excuse me, Miss Hardy; not having had the advantage of frequenting your society all my life, I find I cannot hope to emulate your charming self-possession. How I envy you that praiseworthy habit of self-control! It is really an admirable triumph of good taste over those dangerous guides—the feelings! You ask about the races. I am so sorry I cannot say that I am going too; but we poor wretches cannot always afford to share in the amusements of our betters. It is quite pardonable, though, that you should forget this; a young lady with your brilliant prospects can hardly be expected to remember that we are not all blessed to the same degree."

Eleanor did not answer; indeed, she scarcely heard him. "It is our last ride, our last day together," she thought. "I must never see him again. I dare not! This is the last time, the very last time of all." She thought with a dull surprise of the change wrought in herself since that morning. "I wonder if we must altogether say good-by?" she mused. "Surely, surely he might still go on caring for me a little, be still my friend."

There came no answer to the question from out the night into whose melancholy depths she gazed with eyes brimming over with tears.

"Wait a moment," said Jack, reining in his horse suddenly; "those two lights at the end of the avenue are your gateway-lamps. The farewell to Bohemia must be said now, Miss Hardy." He held out his hand and clasped hers firmly for a moment, trying to pierce the darkness with eager eyes that could not be satisfied with taking a last long look. "Good-by," he said slowly, "good-by forever, Eleanor!"

The trees above them rustled in the darkness; the horses drooped their weary heads together; away in the marshes they heard the desolate, piercing cry of some lonely night-bird. "Good-by," he repeated softly, "good-by, and God bless you, Eleanor! Our paths part here: yours, I pray, may pass through all the sunny spots of life; mine—well, a man can always find enough to do if he is willing to work. Perhaps—who knows?—I may even learn to forget you, in time," he added, with a short, bitter laugh. "What do you say to comparing notes with me, this day ten years hence, Miss Hardy?"

Eleanor bent low down over her saddle-bow and played with the mane of her horse. "Do come and call on me to-morrow, Mr. Desmond," she said.

Jack burst out in a wild laugh. "Call on you?" he cried. "What! you want me to come and talk to you as another man would talk? Perhaps,—if my anecdotes are amusing enough and I know how to keep my place—perhaps you will even invite me to attend those Tuesday evenings when all Rome goes to the Palazzo Pini to admire the charming Miss Hardy! Heavens! Can't you understand that I love you! Have you lived so much in a drawing-room that you do not know there are passions in this world? Has your life been a parlor comedy for so long that you have forgotten that men are made of flesh and blood, and not merely of black coats and equally correct sentiments, manners, and neckties?" He flung her hand away from him with a sort of contempt. "And to think that I have thrown my heart, my life, my honor, at the feet of a woman so little capable of understanding their worth! Eleanor"—his voice grew gentle as he spoke her name—"have you never known what it is to love? *I* love you—do you know what that means to me? Just this—I love you. To me you are simply the one woman in the world, the one being whose presence is perfect joy, whose absence the world and all the glory thereof could not tempt me for an instant to forget. You are full of faults. I see them and love them for your sake! You are full of noble qualities, and I bow down and worship them! I love the very glove on your hand, the ribbon at your throat, the faded flower you have worn and thrown away. My feeling toward you is no dainty devotion, ready to fall gracefully into the background at a hint, and be the pleasing, tenderly remembered, lightly forgotten romance of a season. I love you as a man loves the woman he would make his wife—passionately, strongly, jealously. I want you all to myself, or not at all! Pardon me! I mean—I wanted you," he added, "I am speaking of the past. You need not tell me again you do not care for me; I know it now. I will not go and see you. I am your lover, Eleanor; I cannot play at being your friend."

Little fleecy clouds had been drifting fast across the face of the moon; now, as he ended, the wind blew them suddenly apart, and a flood of clear, soft light poured down on Eleanor's bowed head and tight-clasped hands. Some bird in the branches above them, awakened by the sound of Desmond's voice, gave a sleepy twitter as it turned in its warm nest. The horses shook themselves and stamped, impatient to be gone.

"Jack," said Eleanor, in a meek, small voice, "I don't think it's very kind of you to make me say it—but I wish you would come and see me to-morrow—for, look here, Jack—I've been thinking—I'm sorry for what I said—and—and I don't want you to come as my *friend*, you know!"—[*Atlantic Monthly.*

THE REWARD OF KINDNESS.

MRS. GORHAM put down a letter she had been reading, and looking around the table at her blooming daughters and two tall, handsome sons, she said in a doleful tone:

"Your Aunt Sabina is coming, and has invited herself here without ceremony."

"When?" asked Arabella, with an intonation of intense disgust.

"She will reach here this afternoon. Wilber, you will have to meet her."

"Sorry, ma; but I promised to drive Miss Caldwell to the park. Fred can go."

"Certainly, I will go," Fred said gravely, though there was a hot flush on his forehead. "I am very fond of aunt."

"Nonsense!" said his mother. "You have not seen her for fourteen years. I never went to the detestable old farm after your father died."

"Nevertheless, I have a vivid recollection of Aunt Sabina's kindness while we were there."

"Dear me, Fred," drawled Lucilla, "don't be sentimental. I wish the old thing would stay home. I can't imagine what she is coming here for."

"She is our father's sister," said Fred, "and I cannot find anything surprising in her looking for a welcome among her brother's children."

Mrs. Gorham shrugged her shoulders. If she had spoken her thoughts, it would have been—"Fred is so odd! Just like his father." But she only said—"I may depend upon you, then, to meet your aunt, Fred? I will see about her room."

It was a source of great satisfaction to Mrs. Gorham that her children were all like herself. "'Greers,' every one except Fred," she would say, congratulating herself that the blood of "Gorham pere" was not transmitted in the features of her elder son, Wilber, or any of the three girls.

That Greer pride meant intense selfishness; that Greer beauty was of a cold, hard type; that Greer disposition was tyrannical and narrow-minded—did not trouble Mrs. Gorham. That the son, who was "all Gorham," was proud to the core with the pride that knows no false shame—that he was noble in disposition, handsome in a frank, manly type, generous and self-sacrificing—she could not appreciate. His hands and feet were not so small as darling Wilber's, he had no fashionable affectations and no "Greer" look. So his mother thought him rough and coarse, and his sisters declared that he had no style at all. But outside the home, where a great show of wealth was made by many private economies, Fred was more appreciated.

When he became a man, and knew that his father's estate, though sufficient to give every comfort, was not large enough for the extravagance his mother indulged in, he fitted himself for business, and took a position in a counting house, thus becoming self-supporting. Darling Wilber had studied law, but his first client had not yet appeared, and Mrs. Gorham supported him, trusting his fascinations would touch the heart of some moneyed belle. Miss Caldwell was the present hope. She was her own mistress, an orphan-heiress, and very handsome. That she was proud and cold in manner was only an additional charm to Mrs. Gorham; and Lucilla, Arabella, and Corinne were enthusiastic in their admiration of "Cornelia Caldwell's queenly manner."

Nobody suspected that Fred, blunt, straightforward Fred, hid one secret in his heart, confessed to no living being. And that secret was a love, pure and true, for Cornelia Caldwell—a love that would shut itself closely away from any suspicion of fortune-hunting—that only drooped and mourned thinking of the heiress.

By four o'clock Fred was at the station, waiting for Aunt Sabina. What a little, old-fashioned figure she was, in her quaint black bonnet, and large-figure shawl. But Fred knew her kindly old face at once, though he had not seen it since he was twelve years old.

"You are aunt," he said, going quickly to meet her.

She looked at the handsome face, and caught a quick, gasping breath.

"You must be one of John's boys," she said. "How like you are to your father."

"I am Fred," he answered.

"Dear heart! How you've grown! Is your ma here?"

"She is watting for you at home."

The good old country woman had never had the least doubt of a warm welcome at her brother's house, and Fred certainly confirmed her expectations. He found the old black leather trunk, the bag, the band-box, the great bulging cotton umbrella, and put them all in the carriage. He made his aunt go to the restaurant and refresh herself before starting on the long drive home. He listened with respectful interest to all the mishaps of the long journey, and sympathized with the "Ruination of every mortal stitch I've got on, dear, in the dust and smoke."

And he chatted pleasantly of his childish recollections of the tiny house and wide farm where Sabina lived.

"You see," she told him, "I made up my mind this year I would come to see you all once more before I died. I've tried to before now, dear, but something or nuther allers hindered. Dear, dear! You're all grown up, I s'pose, and you was but a lot o' babies last time poor John brought you to see me."

"Corinne is the youngest, and she is eighteen. Wilbur is the only one older than I am."

"Yes, I remember. Well, dear, I'm glad that John's wife brought up such a fine family. I'm only an old maid, but I do love children and young folks."

But a chill fell upon the kindly old heart when home was reached at last, and four fashionably-dressed ladies gave her a strictly courteous greeting. But for the warm clasp of Fred's hand, I think she would have returned to the station in the same carriage she came, so wounded and sore she felt.

"Not one kiss," she thought, "and Fred kissed me at the train, right before all the folks."

Fred slipped a silver coin into the hands of the servant girl who was to wait upon his aunt, promising another if she was very attentive, and himself escorted the old lady to her room. It was not often the young man's indignation found voice, though it grew hot over many shameful acts of hard selfishness in the house of his mother; but he said some words on that day that called a blush to the cheeks of the worldly woman.

It was not a very busy season; and finding Sabina was likely to have a sorry time if left to the other members of the family, Fred asked for a holiday, and appointed himself the old lady's escort. He was too proud to care for the fact that the quaint little figure on his arm attracted many an amused glance, but gravely stood by while a new dress for Dolly the dairymaid, and a city necktie for Bob the hired man, were purchased.

He gave undivided attention to the more important selection of a new black silk for aunty herself, and pleasantly accepted a blue silk scarf, with large red spots, that was presented to him, appreciating the love that prompted the gift, and mentally resolving to wear it when he paid the promised visit to the farm. He drove Aunt Sabina to the park. He took her to see all the sights.

Once or twice, meeting some of his gentlemen friends, they had thought "the queer old party is some rich relation, Gorham is so very attentive," and had delighted Sabina by their deferential attention.

Once—Fred had not counted on that—in a picture gallery, Cornelia Caldwell sauntered in alone. She had heard of Sabina through the disgusted comments of Lucilla, and knew she had no property but a "miserable farm," but she greeted Fred with a smile far more cordial than she gave her admirers. A little lump came in Fred's throat. Then he gravely introduced the stately beauty in her rustling silk to the little old-fashioned figure on his arm.

"My aunt, Miss Gorham—Miss Caldwell."

They admired the pictures together, and the young lady was cordial and chatty.

After they came down the steps, Miss Caldwell said:

"You must let your aunt drive an hour or two with me, Mr. Gorham. I am going to do some shopping, so I will not tax your patience by inviting you to join us, but I shall be pleased if Miss Gorham will dine with me, and you will call for her this evening."

Then she smiled again, made Sabina comfortable in the carriage and drove off, leaving Fred forty times deeper in love than ever, as she intended he should be.

"He is a very prince of men," she thought, "and I will give him one day's rest. Bless the dear old soul! she has such blue eyes as my dear old grandmother had."

Then she won Sabina's confidence, and found she was worrying about the purchase of certain household matters that would not go in the black leather trunk, and that she did not like to worry Fred about it.

She drove to the places where the best goods could be had, keeping guard over the slender purse against all imposition till the last towel was satisfactorily chosen and directed. Then she drove her home and brought her to the room where "grandmother" was queen, knowing the stately old lady would make the country-woman welcome.

In the evening that followed Fred's heart was touched and warmed till, scarcely conscious of his own words, he told his long-cherished secret and knew that he had won love for love.

Aunt Sabina stayed two weeks and then went home, to the immense relief of the Gorhams, and carrying no regret at leaving any but Fred and Cornelia.

It was not even suspected that Cornelia spent four weeks in the light of the summer season, listening to the praises of Fred at Sabina's farm house; and Fred did not know it until he came too, after she was gone, and had his share of listening to loving commendation of one he loved.

He wore the necktie and made himself so much at home, that Sabina wept some of the bitterest tears of her life when he left.

"To have you both and lose you!" she sobbed.

"Next time we will come together," Fred whispered, and so consoled her.

But, alas! the next time Fred came was to superintend the funeral of the gentle old lady; and though Cornelia came too, his happy wife, there was no welcome in the pale lips, or the blue eyes closed forever.

But the will the old lady left, gave all her worldly possessions to her "dear nephew, Frederic Gorham"—the farm and farm house.

It was apparently no very great legacy, and Cornelia smiled at many of the old-fashioned treasures she touched, all with the tender reverence death leaves.

Ten years ago Sabina was laid to rest in her narrow coffin, and there is a busy, flourishing town around the site of the old farm.

Mr. Frederic Gorham lives there now, and handles large sums of money—the rents of stately buildings.

"Made his money, sir, by speculation," you will be told, if you inquire as to his source of income. "Fortunate purchase of ground before the town was thought of."

But I tell you that the only speculation he made was in the kindness of his heart, extending loving attentions to his father's sister, and that the only land he ever owned was Aunt Sabina's farm.—*"Standard."*

MISSING A FISH.

THE water was heavy, and no mistake, and as it dashed round the rock on which I stood, I rather hesitated whether to try that particular pool or not; for I knew by bitter experience the difficulty of following a fish, should he, as most probably he would, take down stream. However, I did the plucky, and in a few minutes my blue-bodied fly was swinging across the pool. Round it came floating on the top of the stream; so strong was the current that it would not sink. Two or three more throws, and then up came a noble fellow, half of him showing out of water as he boldly took my fly; the line tightened, and the steel struck home. A moment's pause as we both prepared for the tussel, and then off he dashed down stream. I groaned as yard after yard raced out, and I prepared to follow my friend in his reckless career. Fortunately, before I had moved, he turned and came straight back to me; fast as I reeled up, yet faster came the fish. I could not step back so as to regain the touch, and for a few agonizing moments I thought he was off; but no, I suppose the water kept the line taut, and prevented the fly coming away, as too often occurs in such a crisis; and I felt that the link that connected us still held good. Eagerly I watched the line as it slowly moved round and round the small pool, and made up my mind, if possible, to keep my antagonist within its narrow bounds. A short dash down was prevented by a little extra pressure. I dared not put on the strain too hard, for I was fishing with single gut and that little thicker than sewing gut. I began now to have hopes of killing him, and was chuckling over the idea of sending him home as a present to the friends I had left in the morning, and so have the laugh on my side; for of course they had made merry at the idea of my rushing off so frantically. "There's many a slip." The extra pressure had evidently riled the fish, and he made an angry dash up stream, followed by a grand leap clear out of the water; but he was unfortunately so close under my rod at the time that I could not slack sufficiently, the hold broke, and my fly came back to me. As if in derison, clear out of water again sprang my late antagonist. Was it my fancy, or was there a wriggle of his tail, and a cock of his eye, as much as to say, "Sold again, old fellow!"

INTERESTING SPIDER STORY.

QUITE a crowd gathered yesterday at a carpenter shop in this city, where a scene was transpiring that filled the spectators with astonishment. Near a bench in the shop hung a medium-sized mouse, head downward, and around its body was coiled a single thread of a spider's web, which reached to a corner of the bench above and had its fastening there. On the mouse's tail quietly sat the spider, which seemed to be manipulating the thread and working it as with a pulley. When caught the mouse was on the ground, and after five or six hours' work the spider managed to hoist it about an inch, and there it hung. The statement concerning this singular affair is that the mouse was accustomed, when on a predatory excursion, to emerge from a hole under the bench and pass to an inner room. The spider laid a trap in its path, it is conjectured, and yesterday morning, as the mouse was making its daily rounds, it was caught and securely held in the net set for it, the spider taking up position on its tail. Though the mouse hung suspended, a dead weight, the thread did not give way, and there it hung, helpless, between earth and heaven. At night the carpenter closed up his shop and dropped the curtain on the show, but the spider was still at work and had completed about an inch in the elevation.—*N. O. Picayune.*

A CURIOUS LAKE.

ONE of the most curious and interesting lakes in the world is Zirkwitz Lake, near Laybach, Illyria, at 1,115 yards above the level of the sea. It is 10,150 yards long, its greatest width is 4,750 yards, its greatest depth is 3½ yards. It presents the singular phenomena of being sometimes filled with water, and sometimes being perfectly dry, so that it can be cultivated like an ordinary field. How the water escapes has never satisfactorily been ascertained. Six brooks empty into it, but the greatest part of its water comes by infiltration. It often happens that there is not the least trace of rain in the valley and its environs, while an immense volume of water flows into the lake and speedily fills it. This is explained as follows: While fair weather prevails at Zirkwitz it rains on the higher table lands, and the water filters to the lake, filling it in seventy-two hours. It dries in thirty days.—*N. O. Picayune.*

RECENT LITERATURE.

Orchid Culture.—By E. S. RAND, Jr. Cambridge: Hurd & Houghton. [Price, $3.50.]

STRANGE flowers are Orchids—many of them beautiful—many of them, as Mr. RAND remarks, the weeds of the Tropics. In the desire to obtain many varieties on the part of those who suffer from or who enjoy (as may be) the Orchid fever, friends in the Tropics are sent to for collections, in which case, Mr. RAND thinks, we run about as much chance of getting something desirable as a foreigner would who should send to a New England farmer and request a consignment of the wild plants of New England.

Orchids grow slowly and when weak do not bloom. It is doubtless true that many are sickened of Orchid collecting and culture by indiscriminate catalogue selections, in which low-priced, insignificant plants are first chosen—while the same amount invested in half-a-dozen fine plants would lead to a just appreciation and increased knowledge of all that concerns them.

It is only for the past forty years that Orchids have been cultivated with success away from their tropical homes. "Now the number is so great that we may safely say there is no family of plants so rich in species and varieties."

Warmth, moisture and rest, are the conditions essential to Orchid culture; and the early failures with the plants at first introduced, resulted from uneven heat, too little moisture and an ignorance as to the necessity and period of rest. There are, however, many details as to their cultivation which vary decidedly with different species—more especially with the epiphytal Orchids.

"A close, dead air is fatal to the health of many" and a proper ventilation is of the first importance. Many (such as the *Phalaenopses, Aerides* and *Vandas*) "grow perpetually and should always be kept in the warmest houses." How to determine when the resting period should begin and when it should terminate—the quantity of water required for different species during rest, and the "regulations of syringing"—how and when to pot—the treatment after potting—their culture in baskets, pots and upon blocks—the diseases and insects that attack them, are but a few of the subjects with which the book deals. It comprises 476 octavo pages, of which 40 are devoted to a glossary—about 300 to descriptive lists, and the rest to the above and kindred topics. Besides the value of Mr. RAND'S own experience therein recorded, which has extended "over many years"—the compilations have been made with care, exactitude and patience, and we should think ought to prove serviceable to the Orchid grower.

Rural Hours. By SUSAN FENIMORE COOPER. 18vo.—pp. 539.] New York: G. P. Putnam's Sons.

THOUGH by no means a new book, it has been deemed sufficiently popular by its publishers to go into a new and handsome edition. The reader who opens it with the anticipation of something stirring or exciting will be sadly disappointed; but interesting it certainly is. It is a smoothly written, pleasant, personal diary of a quiet, intellectual, bucolic life comprised in the four seasons of the year, containing much information, imparted in an agreeable way. Thus writes the authoress on the 3d of July:

"How pleasantly things look about a farm-house! There is always much that is interesting and respectable connected with every better labor, every useful or harmless occupation of man. We esteem some trades for their usefulness, we admire others for their ingenuity, but it seems natural to like a farm or a garden beyond most workshops. It needs not to be a great agricultural establishment with scientific sheds and show dairies—for knowledge and experience are necessary to appreciate the merits of such a place;—a simple body, who goes to enjoy and not to criticise, will find enough to please him about any common farm, provided the goodman be sober and industrious, the housewife be neat and thrifty."

A Dilemma. By the author of the Battle of Dorking. Paper. New York: Harper & Bros.

PERHAPS no book created a greater sensation at the time than the Battle of Dorking, and in the volume before us Col. Chesney has worked out much the same idea, transferring the scene to India and dealing with the demoralization of the Sepoy contingent of the Indian Empire. The incidents are cleverly worked up, and sufficiently exciting to enchain the reader's attention to the end of the book. Being a novel, there is an amount of love and characterization, but we do not think the Colonel has shown much vigor in his treatment of this part of the subject. A Dilemma, however, will be found of an interest beyond the average novel. As an expression of the military view of the state of affairs in India, the book possesses some value.

Sabbath Reading.

A PRAYER.

MAKE known the Gospel truths, *our* Father King.
Yield us Thy grace, dear *Father*, from above.
Bless us with hearts *which* feelingly can sing,
"*Our* life Thou *art* for *ever*, God of Love!"
Assuage our grief in love *for* Christ, we pray.
Since the bright Prince of *Heaven* and *glory* died,
Took all our sins and *hallowed the* display,
Infant *being* first a man, *and* then was crucified,
Stupendous God! *Thy* grace and *power* make known:
In Jesus' *name* let all *the* world rejoice.
Now labor in *Thy* heavenly *kingdom* own—
That blessed *kingdom*, for Thy saints *the* choice.
How vile to *come* to Thee *is* all our cry!
Enemies to *Thyself* and all that's *Thine*,
Graceless our *will*, we live *for* vanity,
Loathing Thy very *being*, evil in design.
O God, Thy will be *done*, *from* earth to heaven;
Reclining *on* the Gospel let *us* live,
In *earth* from sin *delivered* and forgiven.
O! *as* Thyself *but* teach us to forgive,
Unless *its* power *temptation* doth destroy,
Sure is our fall *into* the depths of woe.
Carnal in mind, we've *not* a glimpse of joy,
Raised against *heaven*: in *us* no hope can flow.
Oh, *give* us grace and *lead* us in Thy ways;
Shine on *us* with Thy love and give *us* peace.
Self and *this* sin that rise *against* us slay.
Oh, grant each *day* our *trespasses* may cease.
Forgive *our* evil deeds *that* oft we do,
Convince us *daily* of *them* to our shame.
Help us with heavenly *bread*, *forgive* us, too,
Recurrent lusts, *and* we'll adore Thy name.
In thy *forgiveness* we *as* saints can die,
Since for *us* and our *trespasses* so high,
Thy Son, *our* Saviour, bled on Calvary.

This remarkable composition evinces an ingenuity of arrangement peculiarly its own. The initial capitals spell, "My boast is in the glorious Cross of Christ;" the words in italics, when read from top to bottom and bottom to top, form the Lord's Prayer complete.

AN ARAB LEGEND.

THE Arabs have a fable from which we may learn a lesson.

Once upon a time a miller, shortly after he had lain down for an afternoon's nap, was startled by a camel's nose being thrust in at the door of his house.

"It is very cold outside," said the camel; "I only wish to get my nose in."

The miller was an easy kind of a man, and so the nose was let in.

"The wind is very sharp," sighed the camel; "pray allow me to get my neck inside."

This request was also allowed, and the neck was thrust in.

"How fast the rain begins to fall! I shall get wet through. Will you let me place my shoulders under cover?"

This, too, was granted; and so the camel asked for a little, and a little more, until he had pushed his whole body inside the house.

The miller soon began to be put to much trouble by the rude companion he had got in his room, which was not large enough for both, and as the rain was over, civilly asked him to depart.

"If you don't like it, you may leave," saucily replied the beast. As for myself, I know when I am well off, and shall stay where I am."

This is a very good story; we hope the Arabs are all the wiser and better for it; but let us also try to turn it to a good account.

There is a camel knocking at the heart of us all, young and old, seeking to be let in; its name is sin. It comes silently and carefully, and knocks, "Let me in;" only a very small part at first. So in comes the nose, and it is not long before, little by little, it gains entire possession; like as it was with Achan of old, "I saw," "I coveted," "I took," "I hid," step by step, until he was "led captive by the devil." Once in possession, the master soon becomes the tyrant. Thus it is that bad thoughts enter the heart; then bad wishes arise; then wrong deeds; until evil habits rule us. The French say, "It is the first step that costs;" if the first step is not taken, the second will never be known.

WHAT A CHILD DID.

MR. MOODY tells the following story:—In one of our Western States, a good many years ago, a little girl heard she could do something for her Saviour, and her teacher said she could bring her father to the Sunday-school. At first she could not get him to the door of the little log house where the Sunday-school was kept. He had never been at a Sunday-school a day in his life. He was a great drunkard and blasphemer, but the little girl succeeded in getting him to that school; and what is the result to-day? He has planted eleven hundred and eighty Sabbath-schools throughout the Western States.

IT is a remarkable fact that every day in the week is observed by some nation for the public celebration of religious services. Sunday is devoted by the Christians, Monday by the Greeks, Tuesday by the Persians, Wednesday by the Assyrians, Thursday by the Egyptians, Friday by the Turks, Saturday by the Jews.

FAITH AND WORKS are the two oars of a boat. Row with the right oar alone, and the boat describes a useless circle on the water. Row with the left oar alone, and it merely goes in the opposite direction. But use both oars with equal force, and it moves swiftly and evenly forward.

Ladies' Portfolio.

ASK MOTHER.

WHERE is the sweetest pet,
The brightest birdie yet?
Whose are the prettiest eyes,
Most loving and most wise?
What form of fairest mold
Is worth its weight in gold?
You can't imagine? Well,
Ask mother—she can tell!

Where is the sunniest gleam
That makes her life a dream?
Where are the rosy toes,
And blessed little nose,
And dimpled hands and feet,
The models all complete,
Which nature can't excel?
Ask mother—she can tell!

Who is the grandest king,
Or queen, or anything
That may be great or high?
Who wandered from the sky
The best of girls or boys,
To be her joy of joys?
You guess—the baby? Well,
Ask mother—she can tell!

FASHION ITEMS.

NEW YORK, May 10, 1876.

THE Spring has been so coldly unfavorable to the budding styles that few novelties have appeared, except in the piece, in shop windows. The peculiarity of prints this season is the bewildering variety of plaids. Makers seem to have gone back to revolutionary times for patterns, and we have, therefore, fac-simile reproductions of the styles that captivated our ancestors. Prints are selling in this city as low as 5c. for the most approved brands of domestic mills. The "polonaise," formerly such a prime favorite, has again come in vogue, and I can do my readers no better service than to describe a model gown, which, with the necessary modifications of materials and trimmings, will answer admirably for the country.

The model is of quadrille cloth of blue-black tint, with pressed bars forming square figures that are almost invisible. The soft material drapes beautifully, and may be worn over a skirt of black silk. The waist and hips fit the figure as closely as any ordinary basque, and are therefore lined with the usual dress lining of silisia, or else with the strong black silk that dress makers now use for this purpose. There are no whalebones in these garments, but if the wearer prefers to have them, they should be of the most flexible sort, and instead of stopping at the waist line, should extend over the hips. The front has but one dart, and the long Gabrielle gore extends from the armhole to the bottom of the garment. The side form of the back is broadened below the waist, is not draped, nor is the skirt part of it sewed to the back form; it is merely hemmed or faced on the back edge (below the waist), and two sets of tapes are added to tie it back over the dress skirt, and thus keep the front and sides of the polonaise smooth, flat, and clinging. The skirt part of the back form is piped all around, and is draped from the lower edge in a cluster of pleats up the sides and at the top, and is laid on the side form, tacked up the sides, and the cluster of pleats is sewed on this side form just below the waist line. The waist of the back extends plainly over the tournure in Marguerite fashion. The quadrille cloth, of which the model is made, is a yard and a half wide, hence there is no seam down the middle of the skirt in the hollow box-pleat; but as goods three-quarters of a yard wide will be most used, it is necessary to have two breadths for the back form, as a quantity of the material is added to each side of the skirt below the waist line. As this back form is very long, it will be necessary to shorten it by a deep drapery pleat on each side of the middle; this will also prevent it from hooping when the lower edge is drawn up in the cluster of pleats at the top. The pockets are of the wool material, with the top turned over like a flap, and faced with silk; three button-holes are then worked or outlined by silk cord on this flap. The coat sleeves have a pretty cuff, with two buttons and mock button-holes. The collar and revers are of silk.

Gray or brown mohairs are being made up by furnishing houses in great quantity, and in very pleasing style. This material is wiry and durable, sheds dust, and will not crockle. The suits are sold as low as $12.50. Similar suits in alpaca can be bought for $15.

A marvel of cheapness is a suit for summer wear, made of gray linen and sold at $3.50. These, of course, are not very durable, but admirably adapted for use in visiting the Centennial, when the wearer may count on dusty travel and be subjected to such slings and arrows of fortune as would be the destruction of a nice gown.

Hats are displayed in all imaginable shapes, and never, perhaps, has the wearer been allowed such discretion and latitude in her fancy, as by Dame Fashion this year. The winter styles seem to be the most numerous, but one's own sweet will may be the criterion.

The conductors of this journal have decided to let me illustrate my ideas, and in subsequent issues I shall give my readers patterns of what, in my judgment, is most appropriate to wear.

FROLIC.

THE AWKWARD AGE.

A WISE and sweet woman suggests, as a sovereign remedy for the uncomfortableness of what we are wont to call the awkward age in boys and girls—that time when they are too large to feel like children, and not quite sure enough of themselves to feel like adults—that we should always treat the smallest children with the courtesy and consideration that we show to grown-up people, and then they will never feel at a loss as to their reception, thus quite escaping the uncertain and uncomfortable "awkward age." There are few things more important in the right development of a human creature than self-respect. But, how is a child to learn to respect itself if it sees that it is alone in the sentiment—that by no one else is it respected? More harm is perhaps done children by snubbing than by weak indulgence. We have all seen homes where the slightest expression of a child's idea on any point under discussion was greeted with—"Who asked you what you thought?" or with some sarcasm, such as—"Ah, now we shall have the matter settled—Miss Experience is freeing her mind." It is so difficult to hit the right mean. We do not want our children troublesome to visitors—grown-up people do not want to pause in their talk to listen to the unconsidered opinions of a child of thirteen—but what if we tried the experiment of respectful attention for a while? Would not the young folks cease talking until they had something to say, quite as surely if they saw that they were listened to with attention, as if they felt that their voices were but beating the air?

A WISE ANSWER.

SOME of the fancies of the Jewish Talmud are very witty and neat. Particularly so are those short apothegms which illustrate or defend some attribute of God by answering an infidel's objection. The following is a perfect specimen of Oriental retort:

A prince once said to Rabbi Gamaliel—"Your God is a thief; he surprised Adam in his sleep and stole a rib from him."

The Rabbi's daughter overheard this speech, and whispered a word or two in her father's ear, asking his permission to answer this singular opinion herself. He gave his consent.

The girl stepped forward, and, feigning terror and dismay, threw her arms aloft in supplication, and cried out.

"My liege, my liege! Justice! Revenge!"

"What has happened?" asked the prince. "A wicked theft has taken place," she replied. "A robber has crept secretly into our house, carried away a silver goblet, and left a gold one in its stead."

"What an upright thief!" exclaimed the prince. "Would that such robberies were of more frequent occurrence!"

"Behold, then, sire, the kind of thief that our Creator was. He stole a rib from Adam and gave him a beautiful wife instead."

"Well said!" avowed the prince.—*Selected.*

A WORD ABOUT MARRIAGE.

A PHYSICIAN writes the following sensible advice:—My profession has thrown me among women of all classes, and my experience teaches me that God never gave man a greater proof of His love than to place women here with him. My advice is, Go, propose to the most sensible girl you know. If she says yes, then tell her how much your income is, from what source derived, and tell her you will divide your last shilling with her and love her with all your heart. And then keep your promise. My word for it, she will live within your income, and to your last hour you will regret that you didn't marry sooner. Gentlemen, don't worry about feminine extravagance and feminine untruth. Just you be true to her, love her sincerely, and a more faithful, fond, foolish slave you will never meet anywhere. You won't deserve her, I know, but she will never know it. Now, throw aside selfishness, and see what will come of it.

TWO WOMEN IN A STREET CAR.

SHE was a pretty girl, nicely dressed, and she sat diagonally in a rear corner of a street car, occupying about two seats. Another lady came in and, turning herself sideways, sank into a swan-like dip across three of the adjoining seats. The young lady in the corner looked at the other's back and sniffed with her left nostril; looked at the languid contempt of the attitude and sniffed with her other nostril; then regarded the lady's costume, and finding it elegant, sniffed with both nostrils. Beginning to get mad, she rubbed her nose violently with the second joint of her forefinger, and subsequently with her handkerchief. Slowly their eyes met. One flashed the most undying hatred and scorn; the other irradiated lofty pity and disdain. They had never met before, and now they met but for a moment. What had happened? We give it up. By all means, let woman have the ballot.

THE London Pall Mall Gazette, speaking of the American girl in England, says:—Like the wind, she goeth where she listeth; but every man knoweth whence she cometh. She arouses the hostility of English matrons the moment she sets foot on British soil. Few of them are aware that she has been purposely trained to self-reliance and self-assertion, like her brother, from infancy. Such a training shows itself in her manner, which grates as harshly on British feelings as her voice too often does on British ears.

THE Women's Christian Temperance Union of Massachusetts are to have a Fair at Horticultural Hall, Boston. This organization is among the best of those now at work in the interest of Temperance.

Reading for the Young.

Now, who that is wise and witty,
Will tell this little maid
The thought—(it must have been pretty)—
And what the primrose said?

A LETTER FROM UNCLE MARK.

MY DEAR GIRLS AND BOYS:—Last week OLD UNCLE TRUE wrote you a letter which pleased me in part and displeased me in part. In the first place he said "Dear Boys and Girls." Now, he is a right nice old man; but I don't think age is an excuse for a lack of gallantry to the fair sex. Why did he not say "Girls and Boys" instead? However, we are both too old to quarrel, though I *do* think that all of us should never forget to display that polite respect to the opposite sex which has its origin away down in the deepest part of our better nature. But OLD UNCLE TRUE and I will not have any differences in this peaceful column, where we both should show the young how to be agreeable to each other. Speaking of that reminds me that I noticed in one of the letters published last week—the one from EMMA of Maryland—a strong argument against the use of tobacco. It pleased me. She seems to have begun at the right end of the subject. But I will tell you confidentially that I smoke cigars myself occasionally; though had I known in years gone by the expense and strength of the habit I should never have begun, and I sincerely hope that all my young boy friends who have not begun will avoid it. ELLA MILLER seems to have some little doubt of the truthfulness of YOUNG POTATO DIGGER'S statement about digging two hundred bushels a day. Well, that does sound a little steep. ANNIE LEE wants to know how many cousins are going to the Centennial. So do I. HENRY WELFARE is informed that eggs will not be admitted to the United States mails. ELLA LA MONTE wants YOUNG TOM to write again; but I fear he has produced almost too much flutter among his female Cousins by his strong language to reappear among you just yet.

Now, my dear little Nieces and Nephews, let me add a few words about the Centennial. Of course you all know that it means the hundredth anniversary of the beginning of these great United States. And you all must know, too, that we are to have an immense fair at Philadelphia, called the Centennial Exhibition. You may not know that in many places other than Philadelphia the Fourth of July is to be celebrated this year with greater show than ever before. In fact, at nearly every town and village in the United States special services and ceremonies will be the order of the day. Don't miss your nearest celebration if you can help it, for you will not probably be as happily situated as our Hibernian friend, who said he should not have time to attend *this* Centennial, but would certainly attend the *next one*. A large majority of you cannot go to Philadelphia, but you can read all about it in the RURAL. *That* you should not miss on any account, for next to seeing a thing is reading all about it in the newspapers, and your letters all show that you are readers. I shall be at the great Centennial Exhibition more or less while it lasts, and if you say so I will tell you about it occasionally. What do you say to a few words on the subject from

UNCLE MARK?

LETTERS FROM BOYS AND GIRLS.

From a Tioga Co. (N. Y.) Girl.

DEAR COUSINS:—As the Editor was so kind as to print my letter that I wrote so long ago, I will try again; and as it is quite customary for our Cousins to describe themselves, I will give you a minute description of myself. I am of medium light, have gray eyes, brown hair and light complexion; am by no means so slender as some of my girl Cousins—my weight is 142 pounds, and I am just fifteen years of age. I am a farmer's daughter, and am not afraid to milk the cows or feed the calves and pigs. I can do nearly all kinds of housework, and can bake bread fit to take to the Centennial Exhibition. I am very fond of music, and wish to become a good musician; but I will say no more in regard to myself. I like the way in which "Critic" puts down the filthy and disgusting habit of chewing tobacco. I would say for one that no young man is a gentleman in the true sense of the word that indulges in the habit. Then, dear girls, let us beware of those "tobacco distillers," as he justly calls them; they are not fit for our society. I should like to learn more of M. A. B., as we both reside in the same county. I think we should become acquainted. I hope she will write again and sign her full name and P. O. address, as I wish to correspond with her.—FLORENCE, *Owego, Tioga Co., N. Y.*

From a Madison Co. (N. Y.) Girl.

DEAR MR. EDITOR:—I am visiting at my grandfather's. He has taken the RURAL over twenty years. He has eighteen cows; two nice black horses, their names are "Prince" and "George," and a pet dog named "Nero." Grandpa makes maple sugar; it is lots of fun to go into the woods and see them boil the sap, but better still to help grandma "sugar off" in the house, when we have all we want to eat and make some little cakes; the only trouble about them is that they are too good to keep. I am twelve years old, and like to play ball, hide and seek and all sorts of games just as much as I ever did. I intend to study French and music this summer, as I like them very much. —A BLISSFUL GIRL.

From a Missouri Girl.

DEAR EDITOR:—I am a plump little girl, ten years old. My home is in Missouri. I go to the graded school. We have written examinations every month. I take six studies; my average is 93. I am visiting at Madison Co., N. Y. I have just begun a charm string, and there is room on it for all the buttons the RURAL Cousins wish to send me. I have a pet cat named "Flossy."—JENNIE M. B., *Cazenovia, N. Y.*

Another Bright New Yorker.

DEAR EDITOR:—I see that all the boys and girls are writing, and I thought I would write too. We have taken the RURAL a good many years, and like it the best of any paper we ever had. I like to make out the Puzzles. I went to school last winter, and studied Grammar, Arithmetic, Geography, Reading, Writing and Spelling. We had a large school; there were forty-five scholars.—C. H. W., *Oneida Co., N. Y.*

From a Livingston Co. (N. Y.) Girl.

DEAR RURAL:—I am a little girl ten years old. I go to school and study Arithmetic, Geography, Independent Fourth Reader, Spelling and Writing. I live in a village with my papa, mamma, brother and sister. I have not as many pets as most of the RURAL Cousins have. I have only a little black and white kitten. I think the letters from the boys and girls are splendid.—NELLIE, *Nunda, Liv. Co., N. Y.*

The Puzzler.

POETICAL ENIGMA.—No. 1.

I AM composed of 58 letters:

My 9, 5, 6, 11, 3, 22, 2, 27, 48, 18, 51, 30, 12, 41, 53, 13, 50 is a poem by Coleridge.

My 36, 15, 24, 44, 55, 52, 26, 4, 14, 20, 31, 53, 27 is the birthplace of a celebrated American poet.

My 10, 27, 40, 29, 34, 32, 17, 46, 31, 58, 39, 41, 16, 17, 33, 41, 58, 13 is one of his poems.

My 1, 46, 42, 19, 8, 34, 31, 52 is a poem by J. G. Holland.

My 45, 23, 35, 13, 16 was a Greek poet.

My 28, 38, 47, 44, 25, 21, 44, 43, 17, 54, 6, 40, 22, 45 is a poem by Whittier.

My 18, 15, 57, 35, 46, 10, 45, 49, 56, 32 was an English poet.

My 37, 2, 55, 37, 41, 20, 3 is the person to whom one of Bayard Taylor's poems is addressed.

My whole is a quotation from one of Alfred Tennyson's poems.

☞ Answer in two weeks. M. E. B.

CROSS-WORD ENIGMA. No. 10.

My first is in will but not in deed,
My second is in stalk but not in reed;
My third is in right but not in wrong,
My fourth is in whistle but not in gong;
My fifth is in short but not in long,
My sixth is in story but not in song;
My seventh is in throw but not in fling,
My eighth is in winter but not in spring;
My ninth is in pardon but not in forgive,
My whole is the city near which I live.

☞ Answer in two weeks. BERBIX.

SYNCOPATIONS.—No. 1.

1. SYNCOPATE agony, and leave a heathen god.
2. To put under ground, and leave to purchase.
3. To bend over, and part of an organ.
4. To swell, and leave a stain.
5. To demand, and leave a shell fish.
6. To draw tea, and leave part of a porch.
7. Part of a church, and leave an old man.
8. A table article, and leave early.
9. Part of a lady's dress, and leave part of an ox.

☞ Answer in two weeks. LITTLE ONE.

DIAMOND PUZZLE.—No. 3.

1. A CONSONANT. 2. To plunder. 3. Founded. 4. One who scolds. 5. Adorned with a beak. 6. Tardy. 7. To hinder. 8. A color. 9. A consonant. C. B. C.

☞ Answer in two weeks.

PUZZLER ANSWERS.—April 29.

DOUBLE CROSS-WORD ENIGMA No. 2.—Florida and Georgia.

PUBLISHER'S SPECIAL NOTICES.

The Rural is a very good present to send to a friend, and it pleasantly reminds the recipient of the donor fifty-two times a year—this year fifty-three times. Any *subscriber* can send it to a relative or friend, as a present, at our lowest club rate—only $2.15, including postage.

Officers of Agricultural Societies and Clubs, Granges, &c., can, if they will, materially aid in augmenting the circulation of the RURAL. Scores of such are already forming clubs; how many others will kindly do likewise?

Renew early if you would secure the uninterrupted continuance of the RURAL to your address; and pray don't forget to ask friends to join you in sending for the Fifty-three Numbers which we shall publish during 1876.

Back Numbers of this Year (from Jan. 1) can be furnished to all new subscribers, but we shall not send them hereafter unless specially requested. Those who desire can begin with any number, however.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper*, and in Premiums to Agents.

Select Your Premiums.—All persons entitled to Premiums will please designate what they prefer and notify us how and where to forward—whether by Freight or Express—if articles are not mailable.

Act as Agent!—Reader, if there is no agent for the RURAL in your locality please become one by forming a club. *It will pay.*

At Our Risk.—You can remit by Draft, P. O. Money Order or Registered Letter *at our risk.*

News of the Week.

DEATH OF HON. T. C. PETERS.

THE Hon. THEODORE C. PETERS, favorably known to many readers of this journal as a prominent agriculturist and an able and popular writer upon rural topics, died in Brooklyn, on Saturday last, aged 70 years. He was born in Warren, Ct., but in 1810 his father removed to Darien, Genesee Co., N. Y., being one of the pioneer settlers of the "Holland Purchase." On arriving at manhood, T. C. PETERS studied law with the late Judge LOVE of Buffalo, and was admitted to the bar in 1834, in the class with PRESTON KING and others. Though successful—holding the offices of City Clerk and City Attorney of Buffalo for several years—Mr. PETERS retired from the practice of the law in 1840, and was subsequently engaged in farming and other pursuits. He soon became widely and favorably known as a speaker and writer on agricultural subjects, in which field he was a leader and did much to promote rural improvement. For some years Mr. PETERS was one of the Special Contributors to the RURAL NEW-YORKER, and he continued to write for it occasionally to the time of his decease. Many of our readers will remember the ability, intelligence and rare practical sense displayed in his writings. A series of humorous and sarcastic articles over the signature of JOHN PLOWHANDLE attracted much attention, many of them being widely copied, and gave Mr. P. (as Major PLOWHANDLE) no little notoriety and popularity.

Mr. PETERS was for many years an active member and officer of the N. Y. State Ag. Society, and its President in 1865. He held many offices of trust and honor. He was twice (in 1852 and 1853) elected to the Assembly from Genesee Co., and on the passage of the law establishing the Board of Equalization of State Taxes, in 1859, he was appointed State Assessor by Gov. MORGAN, drew the short term, was re-appointed and retained the office until 1865. In 1866 Mr. PETERS sold his extensive farm in Darien and removed to Maryland, where he resided for about two years, being sent during the time through the South as the agent of the Department of Agriculture to re-establish agencies in the Southern States and report upon their condition, etc. Since 1868 he has resided most of the time in Brooklyn.

Personally, Mr. P. was a most agreeable man, his rare intelligence and amiable disposition rendering him a favorite in social circles. Though he had reached the full age allotted to mortals, his decease is a loss to the community, and will be lamented by thousands of personal friends and admirers. Mr. PETERS leaves a wife, daughter and three sons—two of the latter being competent journalists in this city.—D. D. T. M.

HOME NEWS PARAGRAPHS.

MR. SARGENT of California has made a speech in the Senate deprecating the evil results following the influx of Chinese on the Pacific Coast. He enumerates a long chain of evils which, he says, are directly traceable to the presence of the Mongolian, and urges the Government to effect a change in the existing treaty.

There has been a sale of thoroughbreds at the stock farm of Gen. Harding, near Nashville, Tenn. Nineteen lots were sold at prices under the average for the quality of the stock.

There has been a split in the Union League Club of New York. The seceding members propose to organize a Political Reform Club, whose purposes are indicated by its name.

As amateurs we have gone back a century, and revived stage-coaching. Col. KANE of New York, has made his initial journey, and henceforth will run regularly, daily, to Pelham—a village, about 15 miles from New York. The coach has been imported from London, and is a perfect model of the old-time mail coach. Everything is done regularly; there are three relays of thoroughbred horses, and altogether the scheme is as novel as it is pleasant. The route is one of the most beautiful drives out of New York.

There is a prospect of a very general war among the railway magnates, and already there has been a reduction of freight rates on through traffic. The indications are that the strife will be very acrimonious, and agents of the various lines report that a reduction in passenger fares is to be duly expected, in which event travel this summer will be *very* cheap, and the expense of attending the Centennial materially reduced.

The seventeenth Delegated General Conference of the Methodist Episcopal Church has assembled at the Academy of Music in Baltimore and was called to order at nine o'clock by Bishop JANES. Bishops SIMPSON, SCOTT, AMES, BOWMAN, HARRIS, FOSTER, HAVEN, ANDREWS, MERRILL and PECK occupied seats on the platform and the auditorium was filled with delegates.

The Emperor of Brazil has been impeded in his eastward progress at Promontory Station, Utah, by a very muscular bull who stood on the track and upset an engine and eleven cars composing a freight train. The accident happened at Blue Creek.

There has been a damaging flood in Utah. The track of the Union Pacific Railroad is washed out a few miles east of Ogden, and eight freight cars ran into the river. The bridge of the Utah Central Railroad across Weber River at Ogden is in peril, and the cars are pushed across by hand. All the streams are very high, and the prospect is that great damage will result therefrom.

The site on which Cincinnati is built was sold for less than fifty silver dollars in 1787.

The Connecticut Legislature and the newly elected Governor, Mr. INGERSOLL, have been installed with the usual ceremonies.

The Women's Prison Association of New York city, which preferred charges against the management of the Raymond street jail, Brooklyn which the Supervisors' committee have been examining, sent to the Supervisors a remonstrance against a report from the committee being accepted on the ex-parte testimony that had been taken. Several of the witnesses, they maintained, were unworthy of belief; others were interested persons.

Farmers in Lancaster, Ohio, report most unfavorably as to the wheat crop, averring that there will be no more than a fourth of a crop, and some are plowing up their wheat land, while others declare that the wheat is injured but slightly.

The fruit prospect is good yet in Southern Ohio. Apples so far, are not injured at all, peach, pear and cherry trees give promise of a fair crop, and it is quite probable that there will be an abundance of the various kinds of small fruits.

The Pennsylvania Steel Company cast the largest steel ingot ever molded in this country, and equal to any made in England. The ingot is ten feet long, and has 29 inches square section. Its solid contents are 100,000 cubical inches, and its weight is 24,000 pounds. This mass will be sent to the Centennial either in its present form or forged into a shaft under the Company's 14 ton hammer.

The Ohio Board of State Charities has directed Dr. BYERS, its Secretary, to visit all jails, city prisons and infirmaries in the State and report on their condition.

Belgravia, the London magazine, has been sold for £200, and the authoress, Miss BRADDON, is coming to this country to lecture.

Of Iowa's population over sixteen years of age, only one in 168 cannot read, and yet newspapers in that locality do not seem over prosperous.

The San Diego (Cal.) Union says that there are 158,852 fruit trees in that county, of which 44,985 are orange, and 27,800 olive.

Everything is quiet at the Massillon and other Ohio mining districts. Some threats were made and shots fired at Farmington mine. The new force of miners were at last accounts working in the Farmington mine under protection of the militia. The strikers declare they will never go to work at the reduced rates.

Miss LOGAN and Miss BEARD, two young revivalists from England, will continue the revival in New York, taking up and prosecuting the work after the manner of MOODY and SANKEY.

The mountains in the vicinity of Port Jervis, N. Y., have been full of fire during the past week, presenting a grand scene at night. Much valuable timber is being destroyed. In the northern part of Deer Park thousands of acres have been swept over. These fires are supposed to be the work of incendiaries, and measures have been taken to ferret out the vandals.

At a meeting of citizens held at the Mercantile Library in Philadelphia, a resolution expressing the opinion that the opening of the Centennial Exposition on Sundays would do much to promote every object for which the Exposition is held, without endangering any public interest whatever, was adopted. A committee for the purpose of calling future meetings was appointed.

The Navy Department is still under investigation.

A quantity of very beautiful lace, the work of Canadian ladies, will be a pleasing feature of the Centennial at Philadelphia, and from both provinces will be seen many articles in exquisite point and other laces, faithful copies of rare old laces, and some tasteful, original designs of the worker. Some of this is exquisitely crocheted, microscopically fine lace, and might be mistaken for Irish lace.

The Pennsylvania Legislature, at 12 M. Friday, March 5, adjourned *sine die*.

We give herewith a recapitulation of the Conventions, Republican and Democratic, held up to the present time and their complexion, also a summary of the candidates and their strength.

REPUBLICAN RECAPITULATION.

Arkansas—Twelve delegates for Senator Morton.

California—Ten delegates for Blaine, two for Bristow.

Connecticut—Ten delegates for Jewell, two for Bristow.

Colorado—Six delegates claimed for Blaine.

Georgia—Eight delegates for Conkling, seven for Morton, four for Bristow, three for Blaine.

Indiana—Thirty delegates for Morton.

Maryland—Sixteen delegates pledged to Blaine.

Massachusetts—Incomplete. Eight delegates claimed for Bristow, four for Blaine—fourteen to be elected.

Mississippi—Fourteen delegates for Morton, two for Bristow or Blaine.

Nevada—Six delegates claimed by Blaine.

New York—Sixty odd delegates for Conkling, the remaining ones of the 70 unknown.

Ohio—Forty-four delegates for Hayes, divided between Blaine and Bristow on the second ballot.

Oregon—Six delegates instructed for Blaine.

Pennsylvania—Fifty-eight delegates pledged for Hartranft—all claimed for Blaine on second choice.

Rhode Island—Eight delegates with preference unknown.

South Carolina—Nine delegates for Morton, five divided between Blaine, Bristow and Hayes.

Texas—Sixteen delegates claimed by Morton.

Vermont—Ten delegates, equally divided between Blaine and Bristow.

Virginia—Eighteen delegates for Blaine, four for Morton or Conkling.

Wisconsin—Twenty delegates for Blaine.

Montana—Two delegates instructed for Blaine.

Utah—Two delegates claimed by Blaine.

Wyoming—Two delegates instructed for Bristow.

STRENGTH OF EACH CANDIDATE.

	Instructed.	Claimed.	Total.
Conkling	—	79	79
Blaine	27	107	134
Bristow	2	46	48
Hartranft	58	—	58
Hayes	44	—	44
Morton	56	34	90
Jewell	—	10	10

DEMOCRATIC RECAPITULATION.

Connecticut—Twelve unpledged delegates, equally divided between Tilden and Bayard.

Georgia—Twenty-two delegates unpledged and claimed by Tilden.

Indiana—Thirty delegates instructed for Gov. Hendricks.

Louisiana—Sixteen delegates uninstructed, with preference unknown.

Massachusetts—Incomplete; claimed by Tilden.

Nebraska—Six delegates in favor of Tilden.

New Hampshire—Ten delegates uninstructed, and of unknown preference, claimed by Tilden.

New York—Seventy delegates in favor of Tilden.

Pennsylvania—Fifty-eight delegates uninstructed, but leaning toward Hendricks.

Rhode Island—Eight delegates uninstructed, and of unknown preference.

Texas—Sixteen delegates of unknown preference.

STRENGTH OF CANDIDATES.

	Instructed.	Claimed.	Total.
Hendricks	30	58	88
Tilden	70	48	113
Bayard	—	6	6

The field meeting of the Detroit Horse Association for 1876 will be held July 4th to 7th inclusive. Premiums amounting to $10,000 will be given.

Navigation had scarcely been resumed on the Erie Canal at West Troy when a break occurred at Port Schuyler, emptying the canal between West Troy and Albany.

Navigation is open on Lake Champlain.

FOREIGN NOTES.

THE Paris Salon has opened with the yearly exhibition of paintings. The display is brilliant. Many American artists contributing.

Latest advices from Cuba contain hopeful news for the friends of Cuban liberty. The Insurgents are burning estates, destroying crops and attacking railroad trains with success.

In the Committee on Foreign Affairs, Mr. CHITTENDEN for Gen. SCHENCK, said if the committee should be of opinion that certain correspondence of Park, Schenck and Fisher was proper to be considered he would waive all objection and leave the committee perfectly free to act. It was decided by the committee that the papers should not be received as evidence, but if Gen. Schenck desired to make a statement he was at liberty to do so.

Sir Henry James has given notice in the English Parliament that he is dissatisfied with the Royal Titles Act, and charged that the Government has not fulfilled the pledges given during the debate of the bill. The British Lion is wagging his august tail omenously.

England has called Spain to account for the murder, by her officials, of an English sailor at Malaga. Comparisons are not nice, but—that English Government does protect its subjects vigorously.

The Madrid Congress, by a vote of 163 to 12, rejected the proposition that Protestants should be restricted to private worship. They are to have equal privileges with Catholics.

The Liverpool grain market is very dull. Wheat has fallen off two pence, but corn is in better demand.

Dispatches from Belgrade state that the new Ministry received Prince Milan's approval, and then resigned at once.

Winslow, the forger, has been remanded to jail, neither Government having come to an understanding. They seem to have agreed to disagree, and the Treaty will probably be abrogated.

A serious riot took place in Salonica, European Turkey, last Saturday, between the Christians and Mohammedans. The trouble arose from the fact that a Christian girl wished to become a Mohammedan. She was forcibly taken from her Turkish friends by the Greeks. During the riot the French and German Consuls were assassinated by the Mohammedans. Further disturbances are apprehended. At last accounts the authorities had taken no measures to protect life and property, and no arrests had been made.

The Grand Operatic Festival, organized by the Franco-American Union to raise funds for the erection of the statue of Liberty in New York harbor, was very successful. The exterior and stage of the Opera House were decorated with American flags. The audience was a brilliant one, consisting of many distinguished persons and the elite of Parisian society. Among those present were Minister Washburne and all the members of the United States Legation, ex-President THIERS, MM. WADDINGTON, OSCAR DE LAFAYETTE, ROCHAMBEAU, and DE TOCQUEVILLE.

The steamer Pandora will sail from Portsmouth on the 25th of May next, to communicate with the Polar expedition.

Several Deputies have, on the strength of documentary evidence in their possession, informed the Ministers that they fear the French workmen going to Philadelphia will give attention mainly to politics. Accordingly, these Deputies have urged the Government to refuse the proposed grant of $20,000 for enabling them to visit the Centennial Exhibition.

Mother STEWART, the temperance advocate, obtained a public reception in Dundee, Scotland, on April 10, and was presented with an address expressive of the appreciation entertained there for her philanthropic labors. There was a very large audience, and Mrs STEWART was cordially received.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, May 6, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	57,852	Rice, bbls	540
Whisky	3,051	Cut meats, pkgs	7,375
Corn meal, bbls	2,949	Lard, pkgs	6,400
Corn meal, bags	2,212	Tobacco, hhds	2
Wheat, bush	537,400	do. cases	—
Corn, bush	504,250	Butter, pkgs	25,775
Oats, bush	246,150	Cheese, bxs	12,825
Rye, bush	28,250	Cotton, bales	10,830
Malt, bush	37,000	Rosin	3,101
Barley, bush	35,550	Spts. Turp., bbls	900
Beans, bbls	6,100	Dried Fruits, pkgs	100
Grass seed, bush	1,250	Eggs, bbls	21,100
Beef, pkgs	1,500	Peanuts, bags	1,308
Wool, bales	675	Dressed Hogs	7
Hops, bales	350	Leather, sides	87,000
Pork, bbls	8,680	Sugar, hhds	50
Tallow	1,425	Oil cake	9,500
Molasses	45		

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise, many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible; mixing always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else.

BEANS AND PEAS.—Exports of beans past week, 827 bbls.; since Jan. 1st, 23,630 do.; same time last year, 8,430 do. Exports of peas past week, 1,590 bush.; since Jan. 1st, 314,106 do.; same time last year, 175,890 do. The general tone of the bean market is dull. Sellers do not look for extra activity at this time. Still the stock is quite large that is stored and speculatively held, and the first lull in the demand is attended with weaker rates. Mediums are quoted 5c. lower. Marrows range as before, but the inside rate is about the selling one. Prime pea beans scarce and steady. White kidneys are not marked. Red ones have sold pretty freely, but at reduced prices. Canadian peas are quiet and easier. Green peas lower. We quote:

Beans—Prime pea, $1.30@1.35; fair to good, $1.60@1.65; prime mediums, $1.15@1.20; fair to good, 90c.@$1; poor, 50@90c.; prime marrows, $1.60@1.65; fair to good, $1.30@1.50; prime white kid., $1.50@1.55; other, $1.25@1.30; prime red kidney, $1.20@1.25; other, $1@1.10; Lima (Cal.), $2.80@3.00. Peas—Canadian, bbls., free, $1.18@1.20; do., in bulk and bond, 98c.@$1; green, $1.35@1.40; Southern B. E., 2-bush. bag, $2.70@2.75; split, ₱ bbl., $6.

BEESWAX.—Bleachers want choice lots for which they offer full rates. Offerings are small generally. Southern quoted 36½@37c.; and Western, 35@35½c.

Exports past week, none; since Jan. 1, 36,200 do.; same time last year, 34,950 do.

BROOM CORN is hard to sell, with prices a little irregular.

We quote Brush, short green, 8½@10c.; hurl, green, 8½@10c.; green, medium, 5@6½c.; red and red-tipped, 3@4c.

BUTTER.—The butter trade has remained in the sensitive condition which always attends the gradual crossing from white to yellow, and were it not for the very liberal trade to Eastern buyers early in the week, prices would have shown a greater decline. The trade thinks that the lowest points have been touched for parcels of table fitness. White will soon have to have a separate quotation. With May here buyers begin to look for color in both State and Western, they frequently get it in the latter, but it is oftener a chemical than meadow tint. The Producers' Price Current gives the following:

Comparative receipts and exports from June 1st.

	Receipts, pkgs.	Exports, pkgs.
June 1, '75, to May 1, '76	1,049,873	33,059
June 1, '74, to May 1, '75	951,036	49,880
June 1, '73, to May 1, '74	923,046	32,032
June 1, '72, to May 1, '73	664,143	47,082
June 1, '71, to May 1, '72	637,072	67,653
June 1, '70, to May 1, '71	503,135	22,076

New butter, Paris State, selected, 28@29c.; do., other 24@27c.; creamery, 27@30c.; half firkin tubs, prime, 27@28c.; fair to good, 24@26c.; Welsh tubs selected, 26@27c.; Welsh tubs, prime, 26@—c.; fair to good, 24@25c.; Falls, Western creamery, prime, 28@29c.; fair to good, 26@27c.; Western tubs, dairy, good to prime, 24@26c.; fair to good, 17@21c.

Western factory, choice, 24@25c.; do. fair to good, 21@23c.; poor, 17@21c. Some low grades of State, 19@21c.

CHEESE.—There is a very liberal export movement and a light home trade demand. Supplies are greatly reduced, yet, in their anxiety to close out before important arrivals of new, sellers name easy prices. We quote:

State factory, fancy, 12¼@13c.; fine, 12@12¾c.; do. good to prime, 11@12c.; fair to good, 9¾@10½c.; poor to fair, 6@8c. State Farm Dairy—fancy, 11@12½c.; good to prime, 10@11c.; fair to good, 9¾@10c.; Western factory, fine, 11¼@12½c.; good to prime, 10½@11¼c.; flat fair, 8@10c.; poor to fair, 3@7c.

Now is quotable as follows:—State factory, good, 11@11¼c.; fair, 9@10c.; half-skimmed, 7@9c.; skimmed, 3@5c. Exports of cheese past week, 19,963 bxs. The Producers' Price Current gives the following comparative receipts and exports from June 1:

	Receipts, pkgs.	Exports, pkgs.
June 1, '75, to May 1, '76	2,348,649	95,307,211
June 1, '74, to May 1, '75	1,936,310	93,235,511
June 1, '73, to May 1, '74	1,927,821	87,325,401
June 1, '72, to May 1, '73	1,696,014	75,399,207
June 1, '71, to May 1, '72	1,416,319	62,307,574
June 1, '70, to May 1, '71	1,455,873	60,912,215

COTTON.—Export movement has been small and prices have been weak, closing at 12½@12 17-32c. for May, 12¾@12 25-32c. for June, 12 31-32@13c. for July, 13¼@13 5-32c. for August, 13 1-16@13 3-32c. for September, 12 15-17c. for October, 12 27-32@12¾c. for November, and 12 27-32@12¾c. for December.

Quotations for spot cotton, based on American standard of classification:

	Uplands.	*Ala.*	*Orleans.*	*Texas*
Ordinary	9 1-16	9 1-16	9 1-16	9 1-16
Strict ordinary	9¾	9¾	9¾	9¾
Good ordinary	10⅜	10⅜	10⅜	10⅜
Strict good do	11⅜	11⅜	11⅜	11⅜
Low middling	11 11-16	11 13-16	11 15-16	11 15-16
Strict low middling	12 3-16	12 5-16	12 7-16	12 7-16
Middling	12 9-16	12 11-26	12¾	12¾
Good middling	13 1-16	13 3-16	13 5-16	13 5-16
Strict good middling	13 9-16	13 11-16	13 13-16	13 13-16
Middling fair	13 15 16	14 1-16	14 3-16	14 3-16
Fair	14 13-16	14 15-16	15 1-16	15 1-16

Stained.

Good ordinary	9 3-16
Strict ordinary	10 5-16
Low middling	10 13-16
Middling	11 11-16

DRIED FRUITS.—For apples, with some advance at the West, there has been inquiry here for straight lots quartered apples, which are offering reservedly at the advanced rates. Otherwise trade dragg, and prices about nominal.

Apples—State, sliced, 9½@9¾c.; do., quarters, 9c.; Western quarters at 8@8¼c.; Southern sliced, 9@9¼c. for prime; fair lots, 8@8¼c.; Tennessee quarters, 7¾@8c. Blackberries, 10c. Peeled peaches, good and prime Georgia, 14@15c.; do. fancy, 16@17c. Unpeeled peaches, new, 12@12½c. for halves, and 10@11c. for quarters. Plums, 20c. Raspberries, 27c. Cherries, 20@21c. Exports of dried apples, past week, 50 bbls. Since Jan. 1st, 1,400; same time last year, 9,005.

EGGS.—Receipts have been very large, and as the outlet is reduced at this season prices have ruled low. The extreme for best Western to-day is 15c., but there is no disposition on the part of holders of prime to recede further, as supplies will fall off at the low-ruling prices. Duck and goose eggs hardly wanted.

Near points, ₱ bbl., 17½@18c.; State and Penn., 15@16c.; Western, prime, 14½@15c.; do. fair marks, 14@14½c.; Southern and Southwestern, 14@14½c.; Canadian, 14½@15c.; duck, 18@19c.; goose, 28@30c.

ESSENTIAL OILS.—Oil Peppermint, in glass, $1 ₱ lb.; in tin, $1.50. Spearmint, in glass, $3.50; in tin, $3. Wintergreen, $3. Sassafras, 55c. The market for all oils is now very slow.

FLOUR.—There has been a larger business on export account, favored by easier prices, but at the close there is a more confident feeling, with the markets abroad in better shape.

Superfine State, $4.10@4.50; extra do., $4.90@5.50; superfine Western, $4.10@4.50; extra do., $4.60@5.70; No. 2, $3.85@4.50; extra round-hoop Ohio, $4.65@5.25; trade brands do., $5.25@7.00; white wheat extras, $5 75@7.00; St. Louis, $5.35@9.00; City Mills extra, $5.00@6.25; Southern at $4 15@4.65 for superfine; $5.00@6.25 for poor to choice shipping extras; $6.25@8.75 for trade and family brands. Corn meal selling at $2.75@3.25 for yellow Western; $3.00@3.35 for Pennsylvania; $3.65 for Brandywine.

FRESH FRUITS.—Exports of apples, since Jan. 1st, 4,315 bbls.; same time last year, 18,000 do. The stock of apples is now reduced to common sorts, and few parcels are good enough to bring the extreme. New arrivals do not add to the good quality that could be moved, and unless lots have saved first rate they had better not be shipped. Strawberries are lower with quite free arrivals; demand good. Peanuts are more buoyant and holders are firm, with a view to wholesale trade. Cranberries are running out; the stored lots are almost gone.

We quote:—Choice apples, $1.00@1.25; good, $2 50@3.75; fair mixed, $2.50@3.25. Strawberries, best, 35@40c.; other, 25@30c. Peanuts, Virginia, per bush., $1.60@1.70; Wilmington, $1.80@2.00; do. Tennessee, 95c.@$1.15. Cranberries—Jersey, choice, standard crates, $4.75@5; good, $4.50; extra Jersey crates, $4@4.50; bbls., $14@15.

FEATHERS.—The demand is moderate at 54@55c. for prime white live Western geese; 35@45c. for mixed.

FURS AND SKINS.—Most of the common grades of skins have been reduced in sympathy with the dull Leipsic Fair. We should remark that some holders have confidence in the market under the impression that the late decline and dullness abroad was more the result of antagonistic combination than through a natural course. We quote:

Otter, ₱ piece	$6 50@ 8 00	$4 00@ 5 50
Gray Fox	1 75@ 2 00	1 50@ 1 75
Red Fox	1 60@ 1 75	1 25@ 1 50
Black Bear	10 00@15 00	7 00@10 00
Brown cubs and ylgs.	4 00@ 5 00	2 00@ 3 00
Fisher	8 00@10 00	7 00@ 8 00
Mink, dark	2 00@ 3 00	1 25@ 1 75
pale	1 00@ 1 50	75@ 1 00
Muskrat, spring	28@ 30	25@ 27
winter	23@ 25	21@ 23
fall	18@ 20	16@ 18
Kitts	6@ 7	5@ 6
Beaver, ₱ lb	1 00@ 1 75	75@ 1 00
Raccoon	68@ 80	40@ 55
Opossum	12@ 15	12@ 15
Skunk, black		75@ 90
striped		10@ 40
Wolf, mountain		2 00@ 3 00
prairie		75@ 1 00

GRAIN.—For wheat, with the lower rates of freight from the West, there have been liberal receipts. This has led to easier prices; but, at the close, exporters are operating more freely, and there is some improvement from the lowest point.

Rye quoted at 81c. for Canada in bond. Corn is lower under larger supplies. Latest sales at 62½c. for steamer grade mixed Western; 60¾@64¾c. for ungraded mixed; 65c. for yellow Western. Oats are active at 39@46 for poor to choice mixed Western; 47@53c. for white Western. The latest sales are of No. 1 Milwaukee spring, in store, at $1.27; No. 2 Milwaukee spring, in store, at $1.19; Nos. 1 and 2 Milwaukee spring, afloat, of fresh receipt, at $1.21; No. 2 Milwaukee spring, in car lots, at $1.19@1.20; prime No. 1 Milwaukee spring, in store, at $1.27@1.28; strictly prime No. 2 Milwaukee, afloat, at $1 21; choice old No. 1 Minnesota spring, in store, crop 1874, at $1.35; choice No. 2 Northwest spring, in store, crop 1874, at $1.20; No. 3 Chicago spring, afloat, at $1.10; New York No. 1 spring at $1.20½; fair white Canada, in bond, at $1.23, and rejected winter at $1.01@1.05.

HAY AND STRAW.—Arrivals have been moderate and a good demand has prevailed; prices very firm.

Bale hay is quoted:—Shipping, 75@80c.; retail qualities, $1.00@1.10; clover, 70@75c.; salt, 60@70c. Straw is quoted at $1.05@1.10 for long rye; 75@80c. for short rye; 60@65c. for oat.

Exports past week, 777 bales. Since Jan. 1st, 15,737; same time last year, 12,311.

HIGHWINES selling at $1.11½.

HOPS.—Receipts for the week have been small, and exports 530 bales. Aside from the small shipments, there has been but little done. Stock have fallen off a trifle, and there is generally a steady range of prices.

N. Y. State, 12@18c.; Eastern, 10@16c.; Wisconsins; 10@16c.; Yearlings, 8@10c.; Olds, all growths, 4@6c.; Californias, 15@18c., ₱ lb.

MAPLE SUGAR.—The very low prices have pushed a good deal into use, but the surplus is large and sellers quote as before.

Choice new sugar bricks, 10c.; small, 11c.; fair, 8@9c.; old, 6@8c. Syrup, ₱ gallon, 70c.@90c.

OIL CAKE.—Western brings $40 per ton.

POULTRY AND GAME.—The market is low for all items of live poultry.

Fowls and turkeys, Jersey, ₱ lb., 13@15c.; do. Western, 12@13c.; Geese, Jersey, ₱ pair, $1.75@2.25; do. Western, 75c.@1.00; ducks, Western, ₱ pair, 65@75c.; ducks, Jersey, ₱ pair, $1.00@1.25; roosters, 8@10c. Spring chickens, ₱ pair, 40@90c.

Dressed poultry is in light supply, and but little seems to be wanted. Frozen stock is not put out to good trade owing to its low quality. Dressed ducks and geese need not be sent now.

We quote Philadelphia picked chickens at 18@20c.; for fowls, 23@27c. for winter chickens, 35c. for spring chickens, 25c. for small slips, 27@28c. for small capons, and 35c. for large capons; the latter quite scarce.

Chickens, Bucks Co., good to prime, 17@19c.; Jersey, good to prime, 15@17c.; State, good to prime, 14@15c.; Western, good to prime, 12@14c.; fair to good, 10@12c.; poor, 4@6c. Turkeys, Jersey, good to prime, 18@20c.; State, good to prime, 16@18c.; Western, good to prime, 11@17c.; inferior, 7@11c.

Less pigeons are offering, and prices are better, though still low enough to keep trade active in the absence of a long list of game.

Wild pigeons, feathered or dressed, ₱ doz., 75c.@$1. English snipe, ₱ doz., $1.25@150; plover, ₱ doz., $1@1.12; sand snipe, 35@45c.

PROVISIONS.—The market has been very much depressed, showing a marked decline, especially for pork and lard—through the heavier supplies of hogs at the West—closing with some reaction on the lowest prices. Mess pork is quoted at $21.60 for spot lots, $21.65 for May, $22.50 for June, and $21.90 for July. Extra prime, $27.50. Bacon at 11¼c. for Western long clear, and 12¾c. forshort clear. Western steam lard at $12.95 for spot lots, $12.97½ for June, $13.12½ for July, $13.25 for August, and $13.25 for September, Stearine at 11¼c. for Western. Tallow at 8¾c. for prime. Beef hams, $24@25. Beef—Extra mess $13; do. plain, $12.00@12 50; tierced at $21@22 for prime mess, and $24@24 for India mess. City extra India mess $26, and Philadelphia mess at $24@25.

SALT.—Quoted at $2.50 for Ashton's; $1.45@1.50 for Hoakin's; $1.40@1.45 for Marshall's, Washington & Worthington's.

SEED.—Grass are yet dull, yet with the small arrivals prices are well maintained. Choice State clover, @17c. and Western, 16½@17c.

SUGAR (Refined).—Soft yellow, 8¾@9¼c.; soft white, 9¾@9¾c.; crushed and powdered, 10¼c.; granulated, 10¼c.]

TOBACCO.—Kentucky leaf is strong at quotations, with a fairly active export movement. Seedleaf brings full figures, and meets with more attention. The closing prices are:

KENTUCKY LEAF—NEW CROP.

	Cents.
Common lugs	5½@ 6¼
Good lugs	6¾@ 7½

VEGETABLES.—Exports of potatoes past week, 5,076 bbls.; since Jan. 1st, 75,200 do.; same time last year, 32,800; onions, since Jan 1st, 5,427 bbls.; same time last year, 1,235 do. Old potatoes are very weak; only the best peachblows can be called steady. Bermudas are unusually cheap. The tendency is for low prices for new Southern when they show stock. Bermuda onions and potatoes are abundant and low. A full steamer arrives each week. The tomatoes are not as attractive as in some former seasons. Southern and near-by green stuff all begin to favor buyers as the season advances. Asparagus and spinach are coming from Northern gardens.

Early Rose, bulk, ₱ bbl., 87c.@$1; Peach Blows, $1.25@1.50; Prince Alberts, 75c.@$1.00; common, 50@75c. Bermuda, $4.00@5; Florida, $3@4. Cabbages, ₱ 100, $5@8; red, $7@11. Squash, Marrow, bbl., $2.25@2.50; Hubbard, $1.25@2.50. Onions, red, bbl., $1@2.10; do. yellow, $1@2.00. Russia Turnips, ₱ bbl., 75c.; white, 65c. Carrots, $1.00. Spinach, ₱ bbl., $1.25@1.50. Charleston green peas, ₱ bu., $1.00@2.00; Savannah, $1.00@2.25. Norfolk cabbage, ₱ bbl., $1.25@1.50. Bermuda tomatoes, 5-quart box, 50@60; beets, $1.25 ₱ crate. Mushrooms, ₱ lb., 60@70c. Rhubarb, ₱ doz., 75c. Bermuda tomatoes, 5-quart box, 50@60c.; onions, ₱ crate, $1.50@1.75. Florida string beans, $3@5. Asparagus, ₱ doz., $2@5. Florida cucumbers, crate, $2@4. String beans, crate, $3@3.50.

WOOL.—The market continues very dull. The decline made lately fails to start trade in other than small lots, as manufacturers find the goods market in poor shape. XX Ohio quoted 46c.; X do., 40c.; XX Pennsylvania, 45@46c.; X Michigan and Wisconsin fleeces, 35@36c.; new spring California, 22@24c.

Railroad Freights—Flour to Boston, 40c. ₱ bbl.; to New York, 30c.; to Albany, 25c. Wood, hard, ₱ cord, $8@9. Coal, $6.50@7.35 for stove.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., May 6, 1876.

THE market this week has been quite unsatisfactory to dairymen, though, with nothing offered but skim-cheese and much of it badly skimmed, high prices could not have been expected. About 2,000 boxes were on delivery, and sales dull at 5@8¾c. A large share of the offerings went forward to be sold on commission. We can hardly hope for much better prices until the skim cheese is disposed of and a better quality comes upon the market.

More than 200 packages of butter were delivered this week and prices are lower, the range being 25@27c.—the bulk going at 25c. This is a decline from last week of fully 6c. ₱ lb., on the average.

The country roads continue to be in a very bad condition for travel, and the snow drifts have not yet disappeared in places. The weather is cool, with raw winds, but frosts do not prevail. Cows are reported to be doing well for the season, and factories are making "every-day cheese," which puts an end to skimming, except at farm dairies.

We have advices from abroad for the third week in April. Our London correspondent reports American cheese in good demand, especially for good, firm sorts, at 56@62s., and also for extra-fine September make. English cheese is quiet.

The prices are for extra American, 67@68s.; fine, 64@66s.; good, 56@62s.; secondary and common, 36@46s. English cheddar brings 80@90s.; Wiltshire double, 76@80s.; Cheshire medium, 54@56s.; fine, 76@80s.; Scotch, 67@70s. Dutch cheese—Edams, 72@74s.

All the descriptions of butter except Friesland sold at the previous week's rates, that from Friesland having advanced in price.

Jersey sells for 136s.; Dorsets, 130s.; Friesland, 110@144s.; Swedish, 140s.; Normandy extra, 142s.; American and Canadian, 90@100s. ₱ cwt.

Oleomargarine or artificial butter sells for better prices than the genuine butter from America, the quotations of the artificial ranging at 100@116s. ₱ cwt.

LIVE STOCK MARKETS.

NEW YORK, May 6, 1876.

RECEIPTS OF LIVE STOCK.

	Beeves.	Cows.	Calves.	Sheep & Lambs.	Hogs

" last week	9,011	50	1,352	20,901	22,622

BEEVES.—Trade firm on a fractional advance on Monday last on the closing rates of the previous week; quality generally coarse but fat; prices ranged at 8½@12¾c. ₱ lb.; weights, 6@10 cwt. The herds on sale were sold off by noon. Wednesday, trade firm but slow at 8½@11c.; weights, 6@9 cwt. Thursday, trade slow at 10¾@11¾c.; weights, 7@7¾ cwt. Friday, the markets closed firm, with sales at 11¾@11¾c.; weights, 8¾@8¾ cwt. From 55@58 lbs., net, has been allowed to the cwt.; the largest number of cattle were sold at 56 lbs. net. Native steers, 8½@11¾c.; grade, 12@12¾c.; mixed herds, 9@10c.; oxen, 8¾@10¾c.; heifers, 8¾c.; bulls on live weight, $4@4.80 ₱ cwt.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	12 @12¾	12 @12¾
Fair	11 @11¾	11 @11¾
Poor	10 @10¾	10 @10¾
Poorest	8½@ 9¾	8 @ 9¾
Gen. selling rates	9¾@10¾	9¾@10¾

MILCH COWS.—Trade slow on light arrivals of generally inferior quality animals; 3 cows sold at $55 ₱ head; 4 at $50@55; 9 at $35@70; 7 at $45@70; 1 cow for $75—calves always included.

VEALS AND CALVES.—There have been no smooth quality veals received since our last weekly report. Poor and coarse quality calves in heavy supply and slow of sale at low rates. Extreme range, 4@8¾c. ₱ lb. State calves sold at 4@8¾c. ₱ lb.; Jersey, 6@7¾c.; Pennsylvania, 7¾@8c. A few lots of Western calves came to hand and were sold at 5½@5¾c.

SHEEP AND LAMBS.—Monday last sheep were in fair demand at 5½c.; yearling lambs, 8½c.; spring lambs, 12@14c. Wednesday, trade slow and sales generally effected in small lots; sheep, 5@8¾c.; yearling, 8c.; spring, 15c., also at $6.75@7 ₱ head. Thursday trade small; sheep, 5¾@7¾c.; lambs, 11@15c., also $6@8 ₱ head. Friday, the markets closed slow in sheep at 6¾@8¾c.; lambs, 15c. State sheep sold at 5¾@8¾c.; Ohio, 5¾c.; Colorado, 5c.; State lambs, 11@15c.; Virginia, 11@13c.; Jersey, 12½c.

HOGS.—Wednesday last, 150 Ohio hogs, live weight, 171 lbs. ₱ head, sold at 8 ₱ lb; Friday, 179 rough Indiana, 129 lbs., 7¾c. Trade in city dressed slow on a moderate run. Monday, prices were 9¾@10¾c.; Wednesday, 9¾@10c. Thursday, 9¾@10¾c. Friday, 9¾@10c.

HORSE MARKET.—City trade slow; in the best sales stables several pairs stylish carriage horses are held on sale; only two sales have been reported at $1.400@1,600 ₱ pair, quality choice; 15 pairs family, $350@700; 9 pairs coarse quality heavy draft horses, $275@450 ₱ pair; 5 pairs choice, $500@625; 3 saddle horses, $200@250; 18 head of roadsters, with fair trotting action, $270@500 ₱ head—not warranted sound; several lots of poor quality light harness horses were offered for sale and were bid in; 91 ordinary, $100@175 ₱ head; 40 head of city railroad horses sold at $125@200 ₱ head; 10 stage line, $150@210. Sixty-one horses arrived per Erie Railroad via Oak Cliff Station.

THE COATES LOCK LEVER HAY RAKE.

Manufactured of the best wood and iron, and put up in the staunchest manner. Shafts and rake head extra strong; thimble skein axles; wheels high, well built and finished; seats easy and thoroughly braced. The teeth made of **Refined Cast Steel, Tempered in Oil**, and every one tested at the factory. They readily adjust themselves to uneven surfaces. **Every Tooth is warranted.** The springs double coil, made with the body of the tooth, much stronger and better than the small separate wire coils so often used in inferior rakes. The Lock Lever has an ingeniously-contrived patented joint, which holds the rake rigid and firmly to its work, while down, WITHOUT USING THE HANDS OR FEET.

Discharging the Rake is effected by simply giving the slightest upward motion to the handle of the lever, which, unlocking it, causes the **Driver's weight** to tilt the rake and discharge the contents. A child can operate the Rake with ease. *It is easily regulated for any kind of ground.*

Twenty Acres per Day is a fair day's work with the "**Coates.**" and you can save enough grain from twenty-five acres of stubble to PAY FOR THE RAKE. Send for Illustrated Circular to the Manufacturers,

PERSONAL ITEMS.

THERE are said to be nearly 100 women preachers in this country.

LORD LYTTON as Viceroy of India receives a salary with "allowances" of $185,000 in gold a year.

CHIEF-JUSTICE GILPIN of Delaware, was taken ill in Court and died in about one hour afterwards of heart disease.

MADAME GUILLANDT, a French lady residing at Rome, has presented a portrait of Washington, wrought in mosaic, to the city of Philadelphia.

A PRETTY Boston girl who dotes on poetry and poets, declares that she has had twenty-two offers of marriage from authors of "Beautiful Snow."

GEN. SPINNER has been investing in real estate in Florida.

What fun the chickens will have forging the General's autograph.

MRS. CADY STANTON relates that when Senator Christiancy married his wife out of the Treasury Department, Washington fashionables hung back from the newly-made bride.

THE New York journalists will give Dom Pedro a $30,000 reception.

True! We have been eating sandwiches for a month to save up our quota.

DOM PEDRO has left San Francisco for Chicago direct by the Chicago and Northwestern Railroad. It is understood that he will proceed from Chicago in a special car to Oil City, Pa.

MR. BUTLER, according to the Lowell Courier, does not intend to run for Congress in that district with Mr. Ayer as his backer.

We have known him to use wind, however.

HANNAH COX, one of the small band of original Abolitionists, died on the 15th of April, at Longwood, near Kennet Square, Pennsylvania, in the room where she was born, nearly 80 years ago.

A correspondent in China writes, that a very rich man in that country sometimes spends $500 a year

On a diet of rice and tea we could come within that figure, now that clothing is so cheap.

LOUIS RIEL, the President of the Republic of Winnipeg, in the British Possessions, during the insurrection of 1870, is an inmate of an insane asylum in Montreal.

The Canadians say there never was a Riel President in it.

WE learn from the London Lancet that "chloral punch had become an 'institution' in the drinking saloons of New York scarcely a year after it (chloral's) introduction into medical practice."

We have taken nothing but "bell-punch" which is not punch in the head.

MR. WILLIAM M. EVARTS has gone up to his country place at Woodstock, Vt., where he purposes to spend the next fortnight in diligent work on his Centennial oration.

Oh, Mr. Evarts, please! Draw it mild. Give us a little one for a cent-ennial.

A BOY whose teacher proposed to give him "Wych Hazel," Miss Warner's new story, replied, "No you don't. I catch that often enough at home."

Good book, though, for inebriates. It warns them when they approach water!

"OLD UNCLE" Ben Greer, aged one hundred and thirteen years, was married recently to Mary Harrison, aged fifty-seven, in Marshall County, Ky.

Ben being a XVth amendment, this is a case of black frost lingering in the lap of spring.

THE heirs of the late George T. Cobb of New Jersey, have endowed the chair of New Testament Exegesis in the Drew Theological Seminary by the gift of $40,000.

That's what might be called a charitable deed. But what is the other name of the Ex-egesis?

MR. SEAMON of Chicago, one of the witnesses to Charlotte Cushman's will, is surprised that there has been so much searching for him. He has been at home all the while, and has only just learned that he is wanted in Newport.

Certainly a Newport is the proper place for a Seammon.

ELIHU BURRITT twenty years ago planted an acorn of the famous Charter Oak, and now it is a thrifty young tree in the garden of his sister, Mrs. Williams, at New Britain, Ct.

Yes, we planted acorn about the same time. It is now the famous Bunyan, and impedes this Pilgrim's Progress.

HENRY SHEMELL, the Chicago pedestrian, who is to walk against O'Leary, has arrived at San Francisco.

Is this the O'Leary that had the cow with the restive horn, that lived in a barn all forlorn, that ate the hay, that paved the way, to upsetting the lamp (the horrid old scamp!) that burned the town that Chicago built?

Matthews' Garden Seed Drills

and Matthews' Hand Cultivators, are the most reliable, durable, popular and salable ever produced. Sold separate or combined. Send for Circular Manufactured only by EVERETT & SMALL, Boston, Mass.

MOORE'S RURAL NEW-YORKER is an excellent Agricultural paper, and very popular. As a family visitant it is hard to beat in the attractions it holds forth for young and old. We are pleased to see that Mr. MOORE is full of his old enterprise and bent on making the paper better and better from year to year.—*Yates Co. Chronicle.*

ANSWERS TO CORRESPONDENTS.

J. H. C.—Alfalfa, Lucerne, and Chili clover are all one and the same thing. Botanically, it is the *Medicago sativa*, and one of the oldest plants known to be cultivated for fodder. Its leaflets are in threes, like the common species of clover; they are in shape obovate oblong, slightly toothed. The flowers are pale-blue, violet or purple, and pea-shaped. The seed is borne in downy pods, which are twisted into two or three twirls. It succeeds on deep, permeable soils, but not on hard, stiff clay. It will succeed well in the climate of Alabama if the soil is suitable.

Horticulturist.—You could not determine with any degree of certainty, whether the pear was a seedling or a grafted tree by the test proposed. If there is no sign on the stem of the tree that it has been grafted, and the suckers from the roots bear the same fruit as the parent tree, it might in ordinary instances be taken as very good evidence of its being a seedling; yet there is still room for a doubt.

Pear trees are sometimes budded or grafted close to the roots or, as usually termed, near to, or on the crown. Now it frequently happens that when such trees are transplanted, they are set a little or good deal deeper than formerly, the result being that new roots push out from above the junction of bud or graft with the stock, and in this case the old or original roots frequently die and entirely decay, leaving the tree upon its own roots. This will be the result nine times out of ten with pears worked upon quince roots, which are set deep enough to completely cover the point of junction in the earth.

Of course you can see how readily one might be deceived in supposing that an old tree propagated under such circumstances, was the original of a variety, or as some term it, "a seedling tree," because the roots were the same as the top.

James.—Do not be too sure that precious stones or minerals of great value are to be found in your locality. Thousands of persons have had their heads turned through finding specimens of quartz crystals, supposing them to be diamonds. We might tell you some funny stories about young men coming to New York with diamonds of great value in their pockets, which turned out to be nothing but quartz worth about $4 a cord. Be sure of value before building "air castles."

Potato Grower.—Dr. HUNTER was the man who is supposed to have first advanced the theory that the duration of a variety of potato is limited to about fourteen years. You will find that theory referred to in the Transactions of the London Horticultural Society for 1807, page 57.

J. M., Bradford Co., Pa.—We do not know who has the "Anautka, or Black Sea wheat," for sale. Perhaps you might find these varieties by addressing some of our seedsmen. Toulouse geese are sometimes offered for sale in our columns, but at present we do not know of any one having a stock to dispose of.

Mrs. P. W. H.—The plants sent are as follows:—No. 1, acute-leaved Liverwort (*Hepatica acutiloba*). No. 2, Rue anemone (*Thalictrum anemonoides*). Both are very pretty early spring flowering plants, and common in most of the Northern States.

Insects from Minnesota.—Mrs. S. A. M., New London, Minn.—The insects you send are:—No. 1, *Cucujus clavipes*, one of the common beetles which lives under the bark of old dead trees.

No. 2—*Pasimachus elongatus*, one of the large ground beetles which is quite common all over the country. It is a friend to the farmer and gardener, as it feeds on some of our noxious species.

No. 3—Is the well known Bombardier beetle *Brachynus fumans*. If you look sharp when one is caught, the reason why it was named the Bombardier will be apparent.

No. 4—Is a water beetle. The peculiar, gyrating motion as it swims on the surface suggested the name of the genus, *Gyrinus*. The species you send is the *G. emarginatus*.

No. 5—Is a gigantic water bug and not a beetle. It is known to entomologists as *Belostoma giganteus*.

No. 6—*Elodes opaca* of SAY; and like many other species of the same genus, inhabits the prairies and plains west of the Mississippi.

No. 7—Is a dark variety of the purple Tiger beetle, *Cincindela purpurea*. This variety was formerly known in cabinets under the name of *C. Auduboni*. The Tiger beetles, of which there are some seventy or more species, are supposed to be beneficial, as they feed on other insects.

No. 8—Belongs to the great family of Scavenger beetles, many of which, like the common May beetle, are injurious to vegetation both in the larval and imago stages. The one you send is sometimes called the Indian Cetonia, but by late authorities it is placed in the genus *Euryomia*, and will generally be found in cabinets labeled as *E. inda*. This insect is sometimes quite destructive to corn, eating off the silk; it also attacks ripening peaches and other fruits.

Fertilizers.

These goods are analyzed by Professor G. A. Liebig of Baltimore and other eminent chemists, and their quality guaranteed. Send for Circular.

Traveler's Guide.

CALIFORNIA.

Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?

The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTH-WESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oshkosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.

This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.

This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.

For rates or information not attainable from your home ticket agents, apply to
MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

WILLARD'S
Practical Dairy Husbandry.

A Complete Treatise on Dairy Farms and Farming,
Dairy Stock and Stock Feeding,
Milk, its Management and Manufacture into Butter and Cheese,
History and Mode of Organization of Butter and Cheese Factories,
Dairy Utensils, Etc., Etc.

BY X. A. WILLARD, A. M.,
Dairy Husbandry Editor of Moore's Rural New-Yorker, Lecturer in Cornell University, Maine Agricultural College, Etc., Etc.

THIS is the most full, practical and reliable work on Dairy Husbandry extant; indeed the only one which describes the recent great improvements in the Dairy Business. It is highly commended by leading Agricultural and other influential Journals, and must speedily become (in fact is already) the *Standard and Only Authority.* It will pay every one engaged in any branch of dairy business, or who keeps a single cow to obtain and study this work.

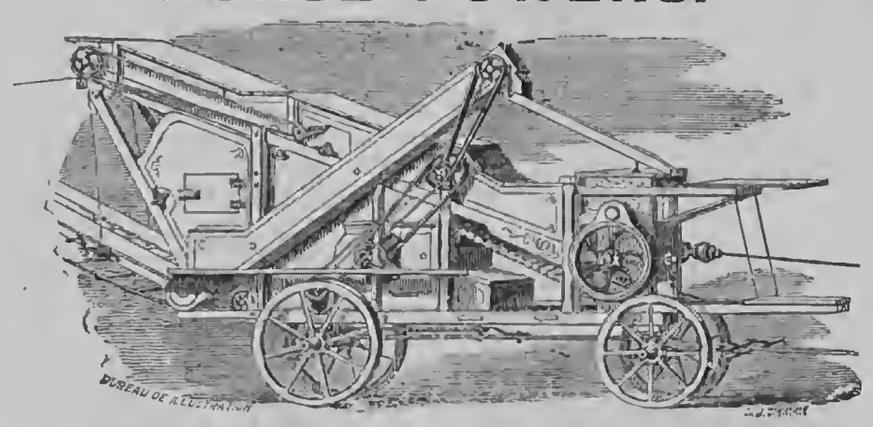
The Buffalo Pitts Threshers

AND

HORSE POWERS.



MANUFACTURED AT

The Pitts Agricultural Works, Buffalo, N. Y.,

Have been known throughout the United States for over thirty years as the

MOST PERFECT AND LIGHTEST-RUNNING THRESHERS

in the world.

FOR THE HARVEST OF 1876

I am offering a large assortment of these **Celebrated and Popular Machines,** adapted to either **Steam, Water or Horse Power.**

They combine all the latest improvements which are to be found in other threshers, and some which are found in the Buffalo Pitts alone.

They are built under the direct supervision of PRACTICAL THRESHERMEN (who have followed threshing as a business), and all changes made are the suggestions of experience in the field, and are thoroughly tested there before adoption.

Threshers will appreciate the great advantage of this over

Theoretical Threshing Machine Building.

The greatest care is given to using the very *best material* and to having the work done in the *most thorough* manner.

My facilities for purchasing materials at lowest figures and for economical building are surpassed by none and the machines are offered at the lowest prices at which

The Best Material, put up in the Best Manner, can be Afforded.

In comparing prices Threshers will please note differences in material, workmanship and finish and bear in mind that

The Best is the Cheapest in the end, even though the first cost is greater.

Various sizes are made:—24-in., 28-in., 32-in., and 36-in. Cylinder Threshers and 4-horse, 8-horse, 10-horse and 12-Horse Powers.

Repairs are for sale in almost every county in the wheat-growing country, *at my list price.* For Catalogues, Prices, &c., &c., address

JAMES BRAYLEY, Buffalo, N. Y.,

or 44 South Canal St., Chicago, Ill.

FATTENED

ON AN

Aultman-Taylor Straw Stack.

FARMERS who wish to SAVE what grain they raise and secure several bushels more to a field than they ordinarily get, should write to THE AULTMAN & TAYLOR COMPANY, Mansfield, Ohio, for their Illustrated Pamphlet, which will be sent free to all who apply, saying that they saw this advertisement in Moore's Rural New-Yorker.

(CIRCULAR.

Consumers Importing Tea Co.,

No. 8 Church Street,

P. O. Box 5,509. New York City.

This is a combination of capitalists to supply the consumers of Teas throughout the United States on the mutual principle.

We have experienced agents in all the best districts of China and Japan to select Teas especially for our trade.

We expect every consumer of Teas to render us all the assistance they can in carrying out our enterprise, as we make a specialty of SUPPLYING CONSUMERS ONLY (and allow no middlemen to make any profit on our importations), which will enable us to supply them with Teas at prices lower than have ever been known, and of those fine qualities that seldom reach the interior, being sold only to the large cities and among the very wealthy.

Hoping the consumer will take an interest in our enterprise, and send at once for a circular with full explanations of how to proceed to obtain our goods, we remain,

Most respectfully yours,

Consumers Importing Tea Co.,

No. 8 Church St.,

P. O. Box 5,509. New York City.

Entered, according to Act of Congress, in January, 1874, by the Consumers Importing Tea Co., in the Office of the Librarian of Congress, Washington, D.C.

RURAL AND HOME AFFAIRS. ARTS, SCIENCE, LITERATURE, NEWS, MARKETS, ETC.

VOL. XXXIII. No. 21. WHOLE No. 1373.

NEW YORK CITY, MAY 20, 1876.

PRICE SIX CENTS. $2.65 PER YEAR.

[Entered according to Act of Congress, in the year 1876, by the Rural Publishing Company, in the office of the Librarian of Congress at Washington.]

Rural Architecture.

DESIGN FOR A COUNTRY RESIDENCE.

Few persons, in selecting a house to their "liking," ever consider the question of adaptation to surroundings. A Swiss cottage does not look well in the plain, level streets of a country village in an open, level field; neither will a tall city residence fit in or harmonize with country scenery. It is supposed, however, that the readers of the Rural New-Yorker possess too much good taste to fall into any such absurdities as are far too frequently seen where attempts at making some kind of a show without the least regard to harmony or adaptation of architecture to the surroundings are indulged in.

A house of moderate cost and surrounded by lawn trees and shrubbery, properly arranged, will usually be more creditable to the possessor than a very expensive one with no such pleasant and all-important adjuncts to a country house.

In the accompanying design the architect has endeavored as far as practicable to convey an idea of what may be done in the way of a plain and substantial, as well as convenient, house without expensiveness.

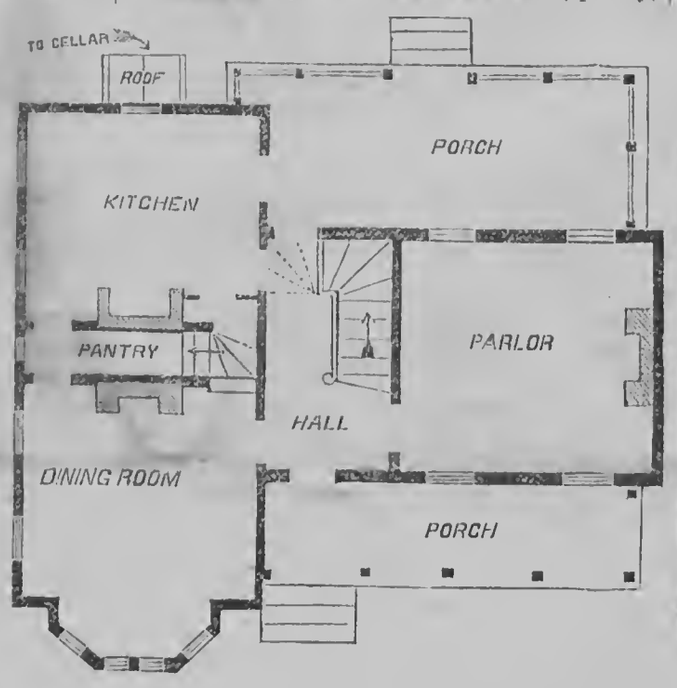
Every one cannot possess extensive domains, or erect with the most expensive materials large and showy houses, but all can alike exercise correct taste, and, by a judicious use of the means in their power, collect in and around their dwellings, however humble, those attractions that contribute to make home happy and desirable. There are thousands of persons in all parts of the country who wish to impart something of beauty and comfort to their dwellings. In the selection of this plan, the architect has avoided all useless and unsuitable ornaments, and chosen cheap, but at the same time substantial, materials, so that not a dollar more will be expended in the execution of this design than the same accommodation would cost in the usual plain modes of building. The rooms are all large and airy, being in size as follows:

First floor—Parlor, 15x17; dining-room, 15x14, exclusive of bay window: kitchen, 15x14; pantry, 3x11; hall, 8 feet wide; front porch, 6 feet 6 inches wide; back porch, 11 feet wide. Second floor—Chamber, 15x17; chamber, 15x14; chamber, 15x14; bath-room, 5½x8. The porches on the front and side and the neat bay window in the dining-room preserve the symmetrical form of the building.

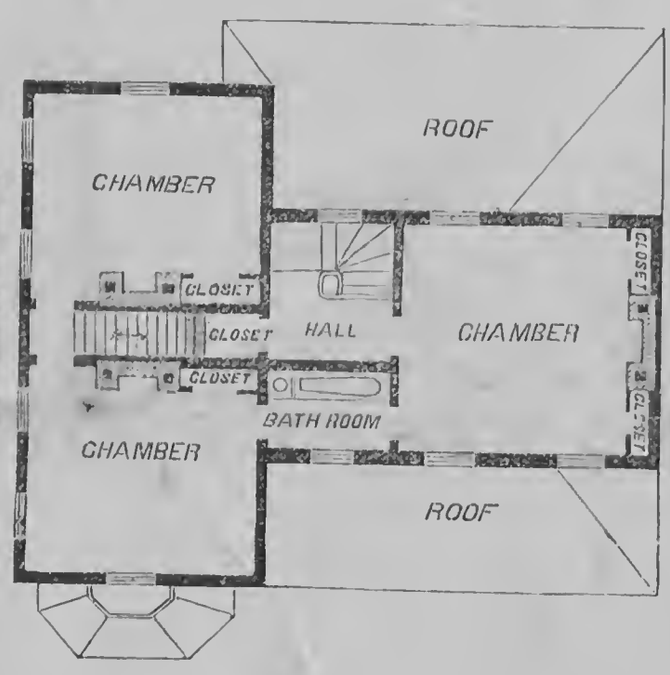
The inner arrangement of the structure is worthy of careful study. We think the architect has utilized every inch of space to the greatest possible advantage and without additional expense in the construction.

The building is intended to be built of wood, but brick could be used with some additional expense, and if finished in good style, with cellar throughout, would cost about $3,000 perhaps a little less in some localities, and in others a few hundred dollars more.

This variation in the cost of materials must always be taken into consideration when selecting a plan from our own pages or from those of other journals.



FIRST FLOOR.



SECOND FLOOR.

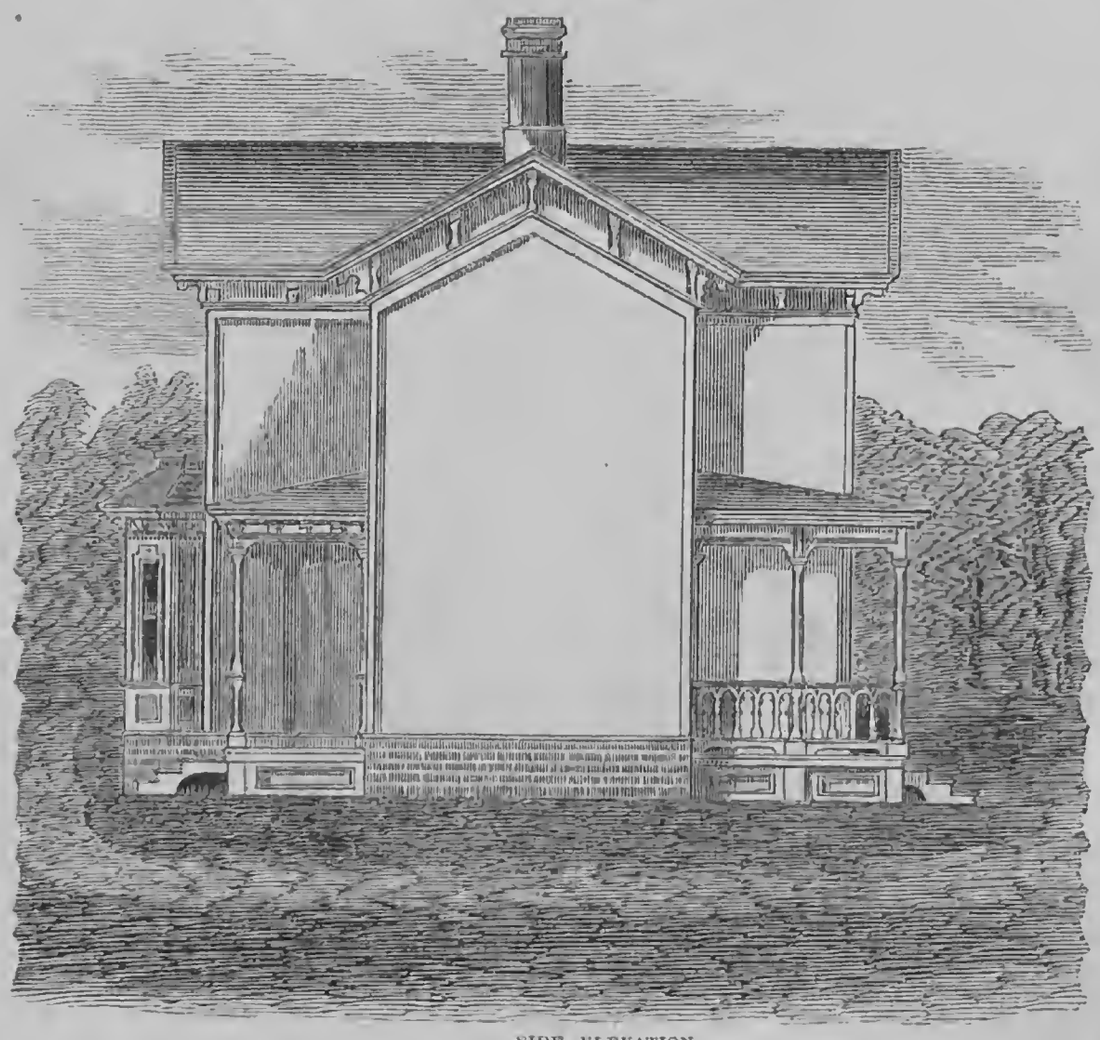
RURAL TASTE IN BUILDING.

It is not too much to say that a country seat should combine and express the real uses which are required by the intellectual and social conditions of its occupants, and not attract attention as blazoning the wealth and money importance of the owner. If he is rich, let him make it as complete as he will, and this he may do without proclaiming to every passer-by his miserable pride and contemptible worship of wealth. A man should have the privilege of spending his money in any way he may choose, whether in quack show or in simple but rich surroundings, still those who possess taste in such matters will ever judge of the man by the use he makes of his money.

It does not require wealth, or even any considerable sum of money, to enable one to evince excellent taste in the furnishing of a house or the arrangement of its surroundings. The true artistic taste of a man or woman will always creep to the surface, no matter how small their means or cramped the field of operations. The neatly-arranged plants near the walks or in a window, harmony in the colors of the same, as well as in the furniture of the rooms, carpets and hangings—all these exhibit true taste and art, even though evidence of impecuniosity is apparent in all.

Interior arrangements of a house, such as provisions for heating and ventilating in summer and warmth in winter, need careful consideration at the time of erecting a dwelling; but if anything of importance has been overlooked, modifications can easily be made afterward. A late writer, in speaking of the taste and comfort of country residences, very truthfully remarks that the uses of country seats depend mainly upon the tastes and habitudes of the occupants, and the adaptation of style, size and arrangement should be accordingly. There is certainly no law against a man's building an elegant library and picture gallery, though he may have no taste for literature or art, but having plenty of money, chooses to make this display with it for his own gratification.

FRONT ELEVATION.



SIDE ELEVATION.

DESIGN FOR A $3,000 RESIDENCE.

Field Crops.

ROOT PRUNING CORN.

In a report of experiments made at Waisharum Farm, Mass., given in the Scientific Farmer, we find some remarks on root pruning corn, which are quite at variance with the belief held by many of our practical farmers. Still we have always contended that cultivating corn late in the season was more beneficial than injurious, even if a few of the longer roots were cut or broken off. But here is what our scientists have to say on the subject:

With reference to the corn crop, to cultivate well is to cultivate close to the growing crop, and this that we may cut or sever the young rootlets, cause them to branch, and thus more completely occupy the interstices of the soil. When the root of an apple tree is cut off, numerous small roots are pushed from the buds latent in the bark on the tree side, and in the place of the removed root we have soon developed numerous fibrous branches which proceed to extend their feeding fibrils into the soil, and we find an immense amount of fresh feeding surface occupying the place of the removed portion, whose functions had become inert through age. In a similar manner with the corn plant; the long, straggling roots which occur in natural course through the root pruning are caused to branch, and thus offer a larger feeding surface to the soil than they otherwise would.

That this is so we have reason to believe through a course of experiments on plants growing in water, and in pots during the past winter, as well as from careful observation in the field plants which occupied last year's corn field. When germinating corn was suspended over a glass of water, the roots were perceived to extend, without developing root hairs, until the nutriment contained in the seed had apparently been exhausted. When this period arrived, root hairs soon showed themselves on the smooth, white and cylindrical roots appearing first at a distance from the extremity, and developing downward with the growth of the root. When the extremity of the root was nipped off, the effect was to develop the root hairs on the remaining portion to a large extent, and in many instances the straight root became branched before the experiment was closed, through an inability from inexperience and want of the proper facilities for continuing the growth in a properly fertilized media.

When the corn was planted in pots, the same effects appeared upon pruning the roots, and likewise whenever the extending roots came plump against the side of the pot. Upon washing the earth carefully from the roots by means of a gentle stream of water, the influence of the pruning in giving the roots a fibrous character was very perceptible.

It was also a matter of observation in the field, that those portions which were the best cultivated, produced the largest crop; and a careful examination of authorities shows beyond question, that under judicious practice, the nearer to the plant and the deeper the cultivator stirs the soil, the better the crop—provided common sense is used, and the plant is not killed through following the letter of the law, or the maturity of the crop delayed by its unseasonable practice.

Strange as it may seem, we are unable to find, in any of the books and authorities at our disposal, any reference to the root pruning of annual plants, as a beneficial practice. The whole object of cultivation is given as the stirring and aerating of the soil, its pulverization, and destruction of weeds. Indeed, the mention is occasionally made of the root cutting, but it is propounded most sagely that the benefits of the tillage so far exceed the injury of the root cutting of the plants, that we must till, till, till—the more the better. Yet the secret of the success of the new husbandry as originated and practiced by Jethro Lull, must be explained by the root pruning—the success of the Louis Weeden husbandry, in the hands of its originator and his disciples; and its failure when tried experimentally by Messrs. Lawes, must be explained by the presence or root pruning in the one case, and its absence in the other. The profitableness of drilling of wheat in England over the broadcasting, and the fact that there appears to be no prominent difference between these methods of sowing, in our country, may be legitimately ascribed to the root pruning effected by the English method of spring hoeing. When we come to the practice of the florist and the gardener, we find with them an empirical practice, which, in part, accomplishes the same result, and produces their success.

TOBACCO PLANTS UNDER GLASS.

The Planter and Farmer says:—Every spring both the planter and seller of tobacco are kept in a state of great anxiety, for several weeks on account of the damage apprehended to plant beds from cold weather and the fly. It seems to us that this might, in some practicable way, be avoided. The immense growth of the trucking interest has made the use of glass a matter of so much moment, that every device to reduce the expense of its provision has been resorted to. The frame is now made without the use at all of putty, the strips holding the glass being merely grooved on both sides, allowing the glass to be slipped backward or forward at will. It is so simple that any "jack-leg" could make it. As loss by cold weather and the fly both would be saved by such an arrangement, it would seem that the space necessary to produce plants for quite a large crop would not be very great; besides, it would provide for both cabbage and tomato plants for the kitchen garden; and, of course, every farmer has or ought to have a first-rate garden. We mention this matter, believing it is practicable, and trust that our friends will find it so.

PREMIUMS FOR TOBACCO.

We see by the papers that Mr. Geo. J. Sumner of Louisa Co., Va., has offered a premium of one hundred dollars in silver, for the best crop of tobacco produced this year, by a young white man, the work to be done so far as possible by himself; and another premium of fifty dollars in silver, for the best crop by a colored man. We learn, also, that it has caused much excitement throughout the County, and that Mr. Sumner has every reason to expect results that will make our hearts glad. The negro, a worker, is our friend, and we are his; but the negro, a politician, is our enemy, and we are his; because, being an absurdity in such a position, and acting as the servant of unprincipled white men, he not only produces nothing, and thus becomes a cumberer of the ground, but he interferes with production by others, by seducing them from their work, and putting notions into their heads that are evil, and only "evil continually." As a question of right, we owe the negro nothing. No laboring man, in any country, ever got as good a living for as little work.

NUTRITIVE VALUE OF CORN.

The Boston Journal of Chemistry, speaking in praise of corn, says: The prejudice existing against the use of maize as an article of human food, among certain classes of people, is surprising, and this prejudice is based on ignorance. Our corn is seldom found in Irish or English kitchens, although millions of bushels are exported to England every year. The people there are strangers to those New England luxuries, corn bread and puddings, and we suppose it will be a long time before they will know anything of them.

Indian corn is one of the most important and healthful articles of human food that a beneficent Providence has bestowed upon man; and to its high nutritive value is due, in a large degree, the strength and vigor of the race of men who laid the foundations of this great republic. It was much more largely used fifty or one hundred years ago than now, as fine wheat flour, for some not well-founded reason, has usurped its place in bread-making. In the several forms, however, of hulled corn, popped corn, hominy, samp, corn starch, maizena, etc., vast quantities are consumed by all classes of people.

Meal from Indian corn contains more than four times as much oleaginous matter as wheat flour, more starch, and nearly as much nitrogenous material; consequently in all cold climates it is admirably adapted to sustain the system by furnishing heat-forming compounds. The oil gives warmth, the nitrogenous principle gives muscular strength. The combination of alimentary compounds in Indian corn renders it alone the mixed diet capable of sustaining man under the most extraordinary circumstances. It holds the elementary principles which constitute the basis of organic life. In this particular it is more remarkable than any other vegetable production known to man. There is a large number of dishes of which corn meal forms the basis, which are exceedingly palatable. What, for instance, is more delicious than cold corn pudding cut in slices and fried in sweet butter and lard? Hot corn-cakes, when properly and skillfully made, are almost universally regarded as a luxury, and Boston brown-bread is famous everywhere in the country. The reason why corn meal is not more largely used at the present time is that it is quite difficult to obtain it of dealers or grocers in a perfectly pure and sweet state. Millers grind the corn as it comes from the West, mixed with portions of the cob and saturated with dust and dirt, and this is sold for kitchen as well as for stable use. Much of the Western corn is damaged in transportation, and this is ground up with that which is sound. If good, sweet, Northern corn is properly ground in an old-fashioned stone mill, after being winnowed to free it from dust, a meal will result of a rich golden color, and no dish can be prepared from it which will not be palatable and most nutritious. In our family we use the Lakeside-grown corn, selected for domestic use, pass it after it is shelled through a winnowing machine, and have it ground between millstones which have been revolving for probably half a century. In this way we secure meal in its highest perfection, and this is what ought to be accessible to all families.

In trials at the farm to test the comparative value of meal from home-grown corn and that from commercial sources, when fed to cows and other animals, we have learned that the nutritive value of the former is nearly double that of the latter, and this practical result confirms analytical results. The difference between the specimens from the two sources is most surprising. Farmers who are so foolish as to go into the market to purchase corn and meal for their animals should understand the great difference in nutritive value between what they can raise and what they purchase.

Farm Economy.

SEEDING LOW MEADOW.

I have about ten acres of bottom land that was drained last year by a county ditch being put through it. The ditch is about four feet deep. During the summer months the water is about six inches deep, but in a time of high water it overflows the banks.

This land has always grown up to flags and scratch grass. After we were through with the ditch, I mowed it for bedding. The soil is muck to the depth of two or three feet, and clay under. Now, I want to get it into pasture and meadow. What kind of grass had I better sow? Would it do to sow red top and blue grass? How would the land want to be fitted, and when should the seed be sown? Would it do to sow this spring on the land as it is now? Will it eventually come into grass if let alone?

By answering the above, you will oblige

A Subscriber.

The one main ditch through the center will scarcely be sufficient to make the land dry enough for the better kind of cultivated grasses. You should open smaller ditches at right angles with the main one and about 100 feet apart. Then plow and cultivate the land for two or three years, or until all the coarse sedge grasses and cat-tail flag roots are completely killed out. After this you can seed down in spring with oats or sow the grass seed alone, with a fair prospect of success.

It is useless to try to seed down by sowing upon the natural seed, or before thoroughly subduing the land by culture and draining.

Just so long as the land remains wet enough to keep the sedge and cat-tail flags alive, just so long will they remain and crowd out the more delicate grasses, which thrive best upon moderately dry soil.

Low bog and peat lands, such as you describe, make excellent meadows when properly prepared or subdued; but good drainage is the first requisite, in order to kill out the natural bog plants.

We have seen such lands, which were pruned and cultivated for two or three years before seeding, afterward become overrun with wild grasses, through the choking up of the ditches, showing that as soon as the proper conditions were restored, the native wild plants would take possession of it again.

Sometimes the sods and dry grasses can be killed by burning in a dry time, and grass seed made to take by sowing on the exposed soil; but there is some danger of burning too deep if the peat has become very dry, leaving deep holes to be filled with water.

Upon the whole, the best way to reclaim such lands is to drain them, plow up and cultivate afterward, and seed down in the usual manner.

Red Top and Blue Grass, equal parts, will probably do as well as any other species on such lands, for both hay and pasturage.

A FARMER'S EXPERIENCE.

R. W. in the Cincinnati Gazette relates in a brief but interesting way the story of his life as a farmer. He says:

In 1838 I rented a field of ground for which I paid $3 per acre, and sowed it to wheat, working the field with my father's team. In 1839 I harvested 300 bushels of wheat, selling it to a merchant on credit, for 50 cents per bushel. The merchant failed, and I only received a suit of clothes worth $20, and $52 in money for 300 bushels of wheat. In that year, 1839, my father died. He left me 83 acres of land. I had no money, horses, or farm implements. The first crop of wheat I sowed was a failure. My second crop promised fair until late in May, when it was killed by frost, the wheat being then out in the head. During my first ten years of farming I saved $400 in money and accumulated $400 in chattel property. In 1850 I bought a farm of 100 acres, for which I agreed to pay $3,000, I paid $400 down and the remainng $2,600 in annual payments with interest. Since 1850 I have paid $10,650 for land, $5,000 for buildings, $1,000 for railroads and free pikes, $5,000 for taxes and $5,000 for interest, and $1,200 for doctor's bill. I have lost in that time three crops of grass with high water, equivalent to 100 tons of hay. I have lost two crops of barley, and one crop of wheat by freezing, and a crop of barley and a crop of wheat very much damaged by excessive wet weather. My entire loss would be equivalent to $3,000. I have raised a family and sold $60,000 worth of produce in twenty-six years.

I am now 59 years of age. I have good health, am free from aches and pains, and I do not think I have worked excessively hard. Indeed, I would rather now do a moderate day's work than to do nothing. Neither has my family been worked to death. My habits have been regular. I do not use tobacco. I never was drunk. I have now 320 acres of good land. This has been my success in farming.

VEGETABLE MOLD PREVENTS LEACHING.

A correspondent of the American Agriculturist throws out a useful hint to farmers who have light, sandy soils, when he says:

Almost all thin soils are peculiarly subject to leaching — that is, to having their goodness washed through them. The remedy is to make a soil full of fine mold. To this end the land must have a crop upon it all the time. A growing crop fills the soil with roots. The roots decompose and form mold. Red clover is pre-eminent as a mold-making and soil-making plant. Buckwheat is useful chiefly when it is plowed under. Corn sowed as for fodder, being scattered in every third furrow when plowing, may be plowed under, or it may be cut and fed or cured; in either case it is beneficial. The roots and stubs make a great mass of mold in the soil, and where it is all made use of as a green manuring the result is most satisfactory. Turnips cover the land quickly, and if plowed under are of marked benefit. In any event they prevent the growth of weeds, and as summer fallowing is always detrimental to such land, quick-growing green manure crops are our only resource, for by their use we work the soil, we kill the weeds and we improve the land, all at the same time and with little labor.

WOOLEN RAGS FOR MANURE.

The use of wool for manure is almost as well known as guano. They are slow to decompose, but act powerfully when decomposition has been secured. Mons. Gaunn advises treating woolen rags with a weak caustic soda lye and then spread out and dry. Afterwards they are pulverized, passed through a coarse sieve, and in this condition spread upon the land. A hundred pounds of this manure is sufficient for an acre, and is especially well suited for turnips, beets and all such plants as require strong stimulants to hasten their development and maturity.

The Herdsman.

TEXAS CATTLE.

The Kansas City Price Current publishes a letter from a prominent cattle trader and banker of Kansas, giving as accurate information of the cattle drive from Texas the coming season as can be obtained. The letter is from San Antonia, Tex., and gives the names of owners and number of cattle in each herd, footing up in aggregate 258,000 head. This does not include cattle which have been wintered in the Indian Territory. About one-third of the whole number will be contract cattle, and one-half stock cattle. The most of the drive will be concentrated in Kansas, between Dodge City and Ellis, so that advantage may be taken of rates over either the Kansas Pacific or Atchison, Topeka, and Santa Fe Railroads.

NOTES FOR HERDSMEN.

Reversion of Thoroughbreds.—What is a thoroughbred? All domesticated races are artificial, and therefore less firmly fixed than those formed by Nature on Darwin's principle. Any cultivated breed is certain, if deprived of human skill in matching suitable parents, to degenerate, and probably in time (though this would require a long period) would reassume the form of one or other of the wild races of which it was made up; this, however, being modified by the climate and soil of the country where it became feral.—*London Agricultural Gazette.*

Australia is becoming largely interested in cattle breeding, and several stockmen have had the purest bred Short-Horns and Herefords. Some of the best Short-Horn blood of England has gone to Australia. American cattle-growers may expect as lively competition in beef as we have for some years had in wool-growing.

Dairy Husbandry.

PLAIN WORDS ABOUT MILKING.

A FRIEND of ours recently purchased a tub of butter for family use which turned out to be so tainted with the filth of the cow barn as to be entirely unfit for the table and could not be used for culinary purposes. This butter was of good color and texture and was so well made as to have commanded the highest price in market had the flavor been perfect.

A merchant recently showed us a few cheeses which he had purchased to supply customers who desired something choice. The cheese was well made, very rich in fat, but it had a well marked taste of the cow stable, and customers who had taken one piece wanted no more, as it was unfit for the table. These are by no means exceptional cases. Our attention has been called to like cases over a wide extent of country in the dairy districts, and we are quite certain that large amounts of both butter and cheese are injured from this cause alone, and which would otherwise take the place of a first-class article.

At the late meeting of the American Dairymen's Association, Mr. ROBERT MCADAM, a well known factoryman and cheese expert, gave an account of the various kinds of filth which he had found in the factory strainer after receiving milk from his patrons. And yet some people wonder why progress is so slow in improving the flavor and character of our dairy products. At this time, when prices have depreciated and are unsatisfactory, it behooves dairymen to make every effort possible for improving the flavor and quality of their goods. The responsibility must not be shifted wholly upon the manufacturer. In most cases it lies back of this and rests with the dairyman in his management at the farm.

The defect to which we have alluded comes from uncleanliness in milking; and especially is this the case during spring and fall, when the cows are more or less confined to the stable. Some dairymen, even if they do not themselves milk upon their hands and wet the teats of the cow before commencing to draw the milk, they allow those in their employ to do so, and the result is, more or less filth drops into the pail to taint its contents. It is a very nasty practice, and should be guarded against in the most rigid manner.

If a cow's bag is besmeared with dung and dirt from the stable, it should be washed with water and wiped with a cloth, and then the operation of milking should be done with *dry hands*. A person who has once adopted the practice of milking with dry hands, finds the milk can be drawn quite as easily and rapidly as by constantly wetting the hands; while the latter practice must always result in more or less filth falling in the milk to give it a taint of the stables and thus injure the product which is manufactured from it.

In summer, when cows are at pasture, and when they are not allowed to run through swamps and muddy places, the udder will be generally clean and will require only a few brushes with the hands to free it from dust and loose hairs. One fault common to many dairies is that accumulations of manure or mud are allowed to remain at the entrance of the milking stables, and the cows, tramping through this every time they go to and from the stable, bespatter their udders and teats with the filth, and as the milkers do not properly cleanse the cow's bag before milking, the dirt falls into the pail and causes trouble. There is no way of avoiding this difficulty except by planking or stoning the space in front of the stable doors and keeping it dry and clean. This it pays well to do, even if no considerations be taken into account beyond the comfort of those who do the milking.

This story of cleanliness has been very often urged in connection with other advice on the dairy; but it needs to be urged much oftener before it will be properly heeded. One great fault complained of in American cheese is its defective flavor, and there can be no doubt that if taints could be traced directly to the cause, they would often be found to come from the source we have named. If taints are so distinct and pronounced as to leave no doubt as to their origin in stable filth, there cannot be much doubt but that there must be various gradations of this taint affecting the flavor of cheese, according as the milkers have been more or less clean in their milking.

This question was never more important than now. The low price of dairy products requires more attention to the details of handling milk at the farm, higher skill in manufacturing and curing our dairy products, so that we may put a better article before consumers at home and abroad and thus make up the loss so far as possible caused by depreciation in prices.

SALTING DAIRY COWS.

A CORRESPONDENT writes us that he "has been advised that salt is not necessary for cattle, and that in some sections in England as well as in this country also, salt is never given to cows, and they thrive well without its use;" and he adds, "why should one class of animals require rations of salt more than another?"

So far as regards dairy stock, this may be regarded as very poor advice, especially for all points in the interior, and which are removed from the ocean or where its influence on vegetation is not felt.

We presume that cattle kept near the sea shore do not require rations of salt to be given from time to time because they get their supply from the food in such localities which contains a much larger proportion of saline matter than in places far removed from the sea. During and after heavy storms, blowing from the sea inland, the salt spray has been carried many miles over the land, leaving a deposit of salt more or less on vegetation, and in this way and from salt marshes cattle will obtain all that is needed; but it is quite different with animals far removed from such influences where the feeding of salt seems to be absolutely required if the health and thrift of the animals and a good degree of profit from their product be sought.

Salt undoubtedly has some beneficial influence besides its use as a condiment, and this seems to be indicated by the fact that animals have a natural desire for it, and seem to suffer if for a length of time they are deprived of it. And this is not confined to domesticated animals, as the buffalo and deer of the Western prairies make paths to the salt licks by their frequent visits after salt.

LIEBIG has well remarked that the presence of free muriatic acid in the stomach and that of soda in the blood, prove beyond doubt the necessity of common salt for the organic processes; but the quantities of soda required by animals of different classes to support the vital processes, are very unequal.

"If we suppose," he adds, "that a given amount of blood—considered as a compound of soda—passes in the body of a carnivorous animal in consequence of the change of matter into a new compound of soda—namely, the bile—we must assume that in the normal condition of health the proportion of soda in the blood is amply sufficient to form bile with the products of transformation. The soda which has been used in the vital processes and any excess of soda, must be expelled in the form of a salt, after being separated from the blood by the kidneys.

"Now, if it be true that in the body of an herbivorous animal a much larger quantity of bile is produced than corresponds to the amount of blood formed or transformed in the vital processes—if the greater part of the bile in this case proceeds from the non-azotized constituent of the food—then the soda of the blood, which has been formed into organized tissue (assimilated or metamorphosed) cannot possibly suffice for the supply of the daily secretions of bile. The soda, therefore, of the bile of the herbivora, must be supplied directly in the food; their organism must possess the power of applying directly to the formation of bile all the compounds of soda present in the food and decomposable by the organic process. All the soda of the animal body evidently proceeds from the food; but the food of the carnivora contains at most only the amount of soda necessary to the formation of blood; and in most cases among animals of this class, we may assume that only as much soda as corresponds to the proportion employed to form the blood, is expelled in the urine. When the carnivora obtain in their food as much soda as suffices for the production of their blood, an equal amount is excreted in their urine; when the food contains less, a part of that which would otherwise be excreted is retained by the organism. All these statements are unequivocally confirmed by the composition of the urine in these different classes of animals."

Cows in milk require more salt than when not in milk, because the constant drain from the system of saline elements in the milk must be replaced. In the spring, when grass is young and "flashy," cows need more salt than later in the season, when grass becomes more mature, as it then contains more mineral matter.

We have frequently made experiments in withholding salt from dairy stock, and have invariably found the yield of milk falling off in consequence. In salting dairy stock, the best plan is to keep salt at all times within the reach of the animals. This may be done by placing the salt in troughs or boxes under cover, where the animals can have access to it daily. They then take it in moderate quantities, or just so much as nature requires; whereas, if fed at stated intervals, they not unfrequently overfeed, causing scouring and derangement of health which, in the case of dairy stock, should always be avoided.

CURING CHEESE.

MR. FISH of Herkimer says:—"The temperature in curing cheese should not be allowed to rise above 70° or fall below 60° during the process of cheesing the curd. Breaking down of the curd into marketable cheese is affected by rennet and heat in combined action. Too much heat makes the rennet too active, the cheese porous, and if carried too far separates the oil and caseine; if too cold, the curd sours and the water dries or leaks out before the curd breaks down into cheese. It is therefore essential to keep a constant even heat, which cannot be done without excluding outside influences at pleasure."

The Poultry Yard.

PROFITS OF POULTRY.

THERE are few words in the English language more attractive, or that will command more attention than "profit," and we confess to a weakness for seeing what follows, wherever it appears in the title of a book or article in a newspaper. An enthusiastic poultry breeder and correspondent of the Maryland Farmer, talks of the profits of poultry as follows:

Poultry as a source of profit, is generally under-valued by most farmers, for, from the hap-hazzard style they are kept in, perhaps there is not much profit—nor would there be in any other farm stock—if no more care or attention was devoted to them than there is usually bestowed upon poultry. If only the multitude of insects destroyed by poultry, (so injurious to the crops of the farmer) are considered they are of great value, while their guano, if properly saved, is worth five times what it costs to feed them.

Farmers are too prone to conclude that, "chickens eat their heads off"—when, if they had kept a correct account of all food furnished, the number of eggs laid, chickens sold, and those eaten by their families, they would discover evidence sufficient to convince them, that their prejudice, was without reason or foundation.

When poultry have to roost in trees, scratch in a neighbor's garden for a living, and are not considered worthy of attention, they are truly of—not much account. Common fowls, which may possess good laying qualities—derive those good traits from some strain of pure bred fowls, but if allowed to intermingle promiscuously, will eventually become so crossed that the laying propensity is destroyed or bred out. It would be the same with pure-bred herd-book cattle unless kept pure. There are several varieties of pure-bred fowls, that are very profitable as egg producers, some laying as many as eighteen dozen in one year. At the average price of thirty cents per dozen, this amounts to $5.40 per hen. This is not more surmising, for I have had hens that laid twenty-one dozen in a year.

If farmers who think poultry does not pay, would give their feathered stock, to their sons or daughters, with permission to enjoy and own any profit that might accrue from keeping them, they would soon be convinced that "there's something in it." Poultry rearing in some parts of our country, by ladies, is indeed quite extensively carried on. There is certainly no more health-promoting exercise than that afforded by caring for, or having the management of a flock of poultry, and if the flock is one of any of the pure breeds—there is in addition to the exhilarating influence, an enthusiasm that causes what might otherwise be considered a task, to become a pleasure,—and therefore profit and pleasure are happily combined. A young lady in Bethel, Pennsylvania, during the year 1874, kept a strict account of all the expenditures for feed, &c., for her yard of fowls, and at the regular market prices for eggs and chickens, she cleared above all expenses three hundred and sixty dollars, besides having more stock on hand than she started with. Is not this an incentive sufficient to awaken an interest among the numerous fair readers of the "Farmer" in favor of gallinaceous stock? It is certainly worthy of emulation.

THE LANGUAGE OF FOWLS.

MR. HENRY HALES, a poultry breeder of experience, gives some notes on the above subject in the Poultry Bulletin, which reminds us of Scudder's "Songs of the Grasshoppers," although the "chicken talk," is a little more intelligible to our unscientific ears:

Is there any one, who keeps fowls, who has not noticed the great variety of sounds they make, expressive of their feelings? It amounts almost, if not quite, to a language; probably more so than any other creature, except man.

Even the modulation of noises made is very significant of meaning. First, there is the piping of the little chick, calling for the care of its stately mother, who continually keeps answering with the assuring "cluck, cluck!" As the chick grows a little older, the piping is succeeded by a chirrup; then there is the trilling song of pleasure they make under their mother's wings, when sitting down to rest; but just put your hand under the mother, and pull out one of the little chicks, and hear its sharp cry of terror, mingled with the defiance and abuse of its parent.

Throw a large beetle into their coop, and hear the consternation uttered by all the little family, mingled with the warning voice of their matron. Now, throw them some dainty bit, and hear how soon her voice changes; her children understand there is something extra nice for them by her peculiar declamation, which brings in all stragglers in a great hurry. How well the little things comprehend the peculiar cry of their mother in case of danger, such as the approach of cats or hawks; or let a little straggling waif peep into the coop, and hear her timely warning to keep out.

In the course of time, the mother tires of her charge, and gives her children the slip, who express their forlorn feelings by a whining cry, while hunting around for her.

In due time the young gentleman chick tries his voice at a crow. Could any one ever believe that such stammering, such straining and croaking would ever reach that clear, rich song, that has been celebrated in the history and poetry of all the great nations of the earth, and caused so many great "awakenings" in all classes of society?

Soon he begins to feel gallant, and if, by chance, he finds some rare bit, he calls some of the nearest belles to partake of it, but they frequently arrive just in time to see him bolt it himself.

One of the next musical strains is the prating of pullets, when they feel happy and well; then there is the alarm, when startled by anything strange; also the shrill cry raised by all, should a hawk appear. Another peculiar noise is made when you approach their roosts at night, uttered and answered all round,—a slight, trilling noise, as much as to say, hark! What's that strange noise, which is deepened into a sharp tut-tut, if danger is suspected, and into a shrill, piercing cry, if taken from their perches, evidently suspecting that you may be thinking of chicken pot-pie?

I think there is no domestic animal that has a less offensive voice than the domestic fowl. It will compare favorably with the voice of the duck, turkey, guinea fowl, goose, or pea fowl. Their loudest noise has a charm for many a fancier, when they set up the cry, "Come! Come! Come! Take the egg."

TURKEY BREEDING.

THE Rural World in urging its readers to pay more attention to rearing turkeys says:—A flock of well grown turkeys makes such an agreeable addition to the receipts of the farm, and they are often raised with so little trouble, that I wonder at the seeming indifference of so many farmers with reference to them. The rules for breeding are simple and easily understood, and failures are due to two prominent causes—one, the weather, which, in some seasons, puts at fault the utmost possible care; the other negligence.

A hot and dry season is well nigh an essential for success with turkeys. This is so important that it is of little use to be in haste to get turkeys hatched early, as we may do with chickens; though old birds are tough enough, young ones are exceedingly tender. If brought out by the first of June, it will, in most cases, be early enough. Even if they live through such chilly and damp weather as is common in May, they will not grow much until hot weather and bugs come to their relief; but let them hatch out in June, in weather which drives the breeder to the shade, and little turkeys just enjoy it; they will stretch themselves in the sun and "lay off" with every token of delight. Damp, chilly weather is their ruin; rain their abomination; morning dew a poison sure to blight the hopes of inexperienced or careless breeders. Turkeys must be allowed to range very freely to insure success, but not while the grass is wet—that is, during the first two months or so of their lives. After that, one need not be quite so particular.

Early turkeys not being advisable, the first litter of eggs from a hen may be reserved for a common hen in May, and the turkey hen be invited to lay a second litter, which she will do if broken up. I think the earliest turkeys do better in any case with a common hen, as she roams less and the chicks become more tractable, and the females from among them make more manageable mothers for next year.

POULTRY NOTES.

Cure for Chicken Cholera.—If not too far gone, give each chicken one teaspoonful of castor oil; it is never known to fail.—M. BECHTEL, *Hanover, Pa.*

A Big Hatch.—J. W. STEVENS writes to the Fanciers' Journal:—March 10 set 16 game eggs; March 31, 17 chicks hatched out and doing well. He asks, "Can this be beaten?"

The Garden.

WHIFFS FROM CANADA.

Whew! what a whiff sweeps over the garden to-day. It is no use making English rhymes to suit this country. Here it should be: April winds and May showers bring forth June flowers. The wind, the southwest wind is the one that is just now careening the evergreens and sighing its mournful rain notes. I wonder if the flower roots know that this rough treatment is just what they need to make them grow, that it is the wind which brings

"Life, sunshine and desire,
And o'er every mount and meadow
Breathes aromatic fire."

We too, like the rootlets, do not always feel that the stirring and shaking, and roughness of sorrow or disappointment are for our good. We murmur as the trees do now in the strong breeze. We get a good "whiff" from the West when it blows, for the Canadians do not revere a forest, and have cut down the strip of woodland that intervened between our pleasant river and the St. Lawrence. Where years ago we saw but waving trees, we can now see the white far-off steamers as they flit up and down on the blue green water of our beautiful, yes, magnificent river, for if there is anything we are proud of in Canada it is the grand St. Lawrence.

But this is not gardening. How the fall bulbs are coming above the ground. Those we planted in late September are nearly in flower, while those put in a fortnight later are only just above the ground. In that way a succession is kept up until other flowers come on.

I put a box of loose earth in the cellar last fall, and awhile ago, before we could get at a hot-bed to sow, I filled some little pots with part of the earth and dropped three tomato seeds in each, covered lightly, and set the pots in the earth in the box, covering them to the rim. This plan prevents drying. They are easily lifted to transplant, and can be carried to any place where the sunshine, heat and moisture of the house are best suited for their growth. My only fear is that they will be too large before settled weather comes, for the mornings are very cold and frosty, and MAYSIE and I have more trouble blanketing the hot-bed than we do ourselves, and the long, green rows of tender plants make us long for weather to transplant them.

The birds have come back in great numbers. They seem to know we protect them, and follow almost close to the plow or harrow looking for earth worms. Yesterday I saw papa stop when he was harrowing between the rows of currant bushes, he picked up something in his hand, it was a dead bird. Poor thing! he said, and made a deep hole and put it in, under the shade of a maple, where no cat could get it for a breakfast. He is very kind to our feathered friends and so are all the boys. I have often seen them when the little gray birds had made their nests in the long grass go around the spot, or gently remove the nest to a safer place, when the plow or harrow was likely to disturb it.

We are all mourning the loss of our strawberry plants. The winter was, in the early part, so open, that the freezing and thawing destroyed the long rows of green plants, from which we had the promise of much ruby fruit. Why didn't we cover them? well, papa has a dislike to straw, which is often full of weeds, and it was difficult to get the right thing. We talked of forest leaves, knowing them to be the best, but the hurry of fall work, with 1,800 bushels of apples to pick, and as many potatoes, besides the gathering in of a large garden, did not leave the spare day required, and we trusted to the snow.

Our main crop is the Wilson, but for a choice late variety we like the "Seth Boyden" very much, only it is too tender for this climate, where frost comes on in early October and does not leave us till late in May, and last year we had only one month (August) in which there was no frost. Yet so attractive is our home in summer time that we love it, perhaps, "not wisely but too well," to "go West."

It is too early for squashes, which require warmth before being planted, but when the ground is ready we make hills eight feet apart each way, and, putting in well-rotted manure, cover up, and drop the seed, eight or nine in a hill, to be thinned out if they survive their enemies. The young plants need protection from the squash bug, and we try various devices.

A box with a pane of glass for the bottom, and inverted, will be of great use in the early stage, or old wire covers, such as are used at table, are serviceable. Old hoop-skirt wire, covered with mosquito netting, is good, but if a high wind prevail they are apt to be blown away. The best thing I know is a boy, who, with thumb and finger, catches the bugs in early morning before they are dried from the dew.

We grow some years "Hubbard" others "Marblehead," taking care to have the squash edge away from melons or cucumbers, and to grow only one variety in the garden. In this way we keep pure seed, and after we eat the squashes, wash and dry the seed, hang it up in paper bags in the loft, and when a quantity is gathered, put it through the riddle, and send to Montreal to be sold to the seedsmen, who are always ready to buy it, knowing it to be reliable.

But if we want any summer squash, we have to grow them in the fields far away from the garden, or they would mix and spoil our seed. Perhaps one thing in our favor is, that none of our neighbors grow squashes or have gardens near us.

Mice are very fond of these seeds, and even while they are drying will carry them off, and while they are stored in the cellar, sometimes get inside and eat out all the seed. But this chapter on squashes has kept me busy till the tea bell rings, and a "whiff" of gems and new maple sirup comes from the dining-room, so no more gardening for to-day.

ANNIE L. JACK.

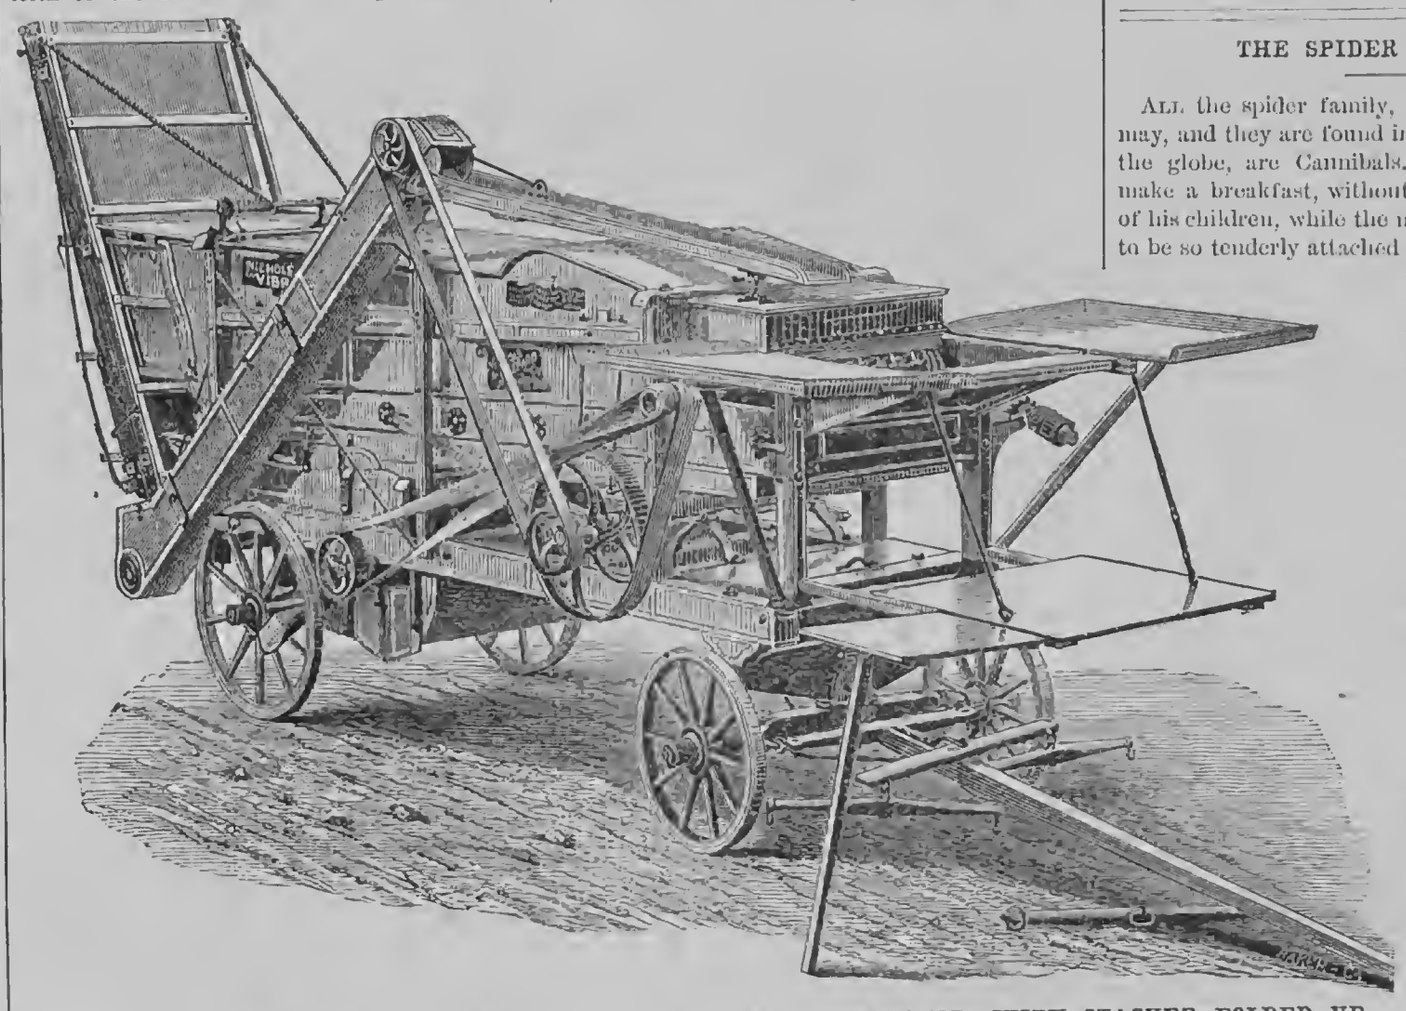
ARRANGING A MARKET GARDEN.

A MARKET GARDENER writes to the Evening Post as follows:—"Much labor may be saved by arranging the garden in long, narrow beds, running north and south, instead of irregular and dispersed patches. The fruit should be placed in rows so disposed that they as well as other rows can be cultivated readily and easily by horse and hand machines, of which there are several excellent ones. When thus arranged, the garden can be well plowed and harrowed by one horse, without injury to the fruit or beds of permanent vegetables or herbs. It will be found very convenient to have a broad plat of grass at each end of the garden, upon which the horse may be turned. These should be kept closely shaven with a lawn-mower. Most of the sowing and planting may be done with a hand-drill, which, with arrangements to enable it to be used as a weeder or a cultivator, can be procured for a few dollars. These implements are a great relief to the labor of gardening, and prevent the necessity of much stooping. They are certainly as necessary to the wife and daughters of the homestead, upon whom the gardening mainly falls, as the horse rake or mower to the boys and the father."

Industrial Implements.

THE "VIBRATOR" THRESHING MACHINE.

NEXT to harvesting a crop, the most important item to the farmer is in saving it after it is gathered and preparing it for the market. The threshing machine fills an important place among the implements used on the farm. Few farmers do business on a scale large enough to have a threshing machine for their own exclusive use. The great bulk of grain is threshed by traveling threshers, carrying their machines from farm to farm through the neighborhood. It is quite as well that this should be so. The threshing machine is used so short a time each year that the interest on its cost will often pay for threshing the grain an ordinary farm will produce. None the less, however, is every farmer interested in employing only the most perfect thresher to be found in the market. It is very easy in a single season to waste more good grain than would buy a new machine. This waste is well understood by farmers, and only tolerated because too many suppose that it is necessary. If farmers were only more particular, itinerant threshers would be forced to have the best machines or go without jobs.



VIEW OF THE NICHOLS, SHEPARD & CO. "VIBRATOR" SEPARATOR, WITH STACKER FOLDED UP.

Some years ago Messrs. NICHOLS, SHEPARD & Co. of Battle Creek, Mich., took a "new departure" in the Thresher line. They originated, invented and developed a new kind of Thresher, which they christened and named the "Vibrator." It differs from the "old style" machines in dispensing with all Aprons, Beaters, Pickers, Raddles, etc., and performs the functions of separating the grain by "uplifting fingers" which "shake up" the straw and "shake out" the interminglod grain very much as our forefathers used to do it with the rakes and pitchforks of those days, after the grain was "flailed" out, or had gone through the more modern "chaff piler."

Messrs. NICHOLS, SHEPARD & Co. had the advantage of long experience and unusual skill in the machinery line (the firm having a continuous business, without change of name or locality, back to 1848), and they have developed and built up a remarkable business in their "Vibrator."

Few farmers have not heard good reports of this machine, and though a Western production, it seems to be well known and appreciated in the East. The sales have steadily increased at the rate of 30 to 60 per cent. a year, and the works of the company at Battle Creek, Mich., comprise acres of brick buildings filled with appropriate machinery, and are probably among the most extensive and well-appointed in the country. The sales last year, despite the hard times, were much larger than ever before, and it is believed that the orders for this season will be still more extensive. Men who are unable to obtain work in any other way are sure of constant employment if they own and manage a strictly *first-class* Threshing Machine. Such a thresher can be paid for in a single season, besides making good wages for the man who buys it. Send to Messrs. NICHOLS, SHEPARD & Co., Battle Creek, Mich., for their illustrated circulars and price list, giving full information.

THE OSBORN SULKY PLOW.

WE remember, when a young man, seeing a picture of a rude wooden plow hitched to and drawn by an elephant. It was a most primitive affair, and the power seemed out of all proportion to the strength of the plow. When we regard the advance in this department of agriculture and its latest expression as shown by the accompanying illustration, we are inclined to think that the world is progressing indeed. We have painful recollections of "following the plow." It was not an agreeable occupation, and as for guiding the erratic course of the implement—well, could as justly have laid claim to directing a Bengal tiger by gently twisting his tail. Mr. OSBORN has made a decided step in advance in his invention, and Messrs. GREGG & Co., Trumansburg, N. Y., the manufacturers of the Osborn Sulky Plow, deserve success.

THE OSBORN SULKY PLOW.

The machine was patented in 1869, but not thoroughly introduced till 1870. Although carrying a driver, its draft, it is claimed, is no heavier than the ordinary plow, and almost any style of right-hand plow can be secured to the sulky, which is a great point in its favor. The vibrating frame to which the plow is attached is pivoted to the axle and is so arranged as to be frictionless. The axle itself is adjustable, and can be raised, lowered or tipped in either direction at will, throwing the plow on the moldboard, precisely as is done by hand, enabling the driver to regulate the depth and width of furrow without difficulty.

The plow is handled by the driver from his seat by a simple system of levers. It works quite as satisfactorily in stony and hard land, and the makers claim that it even shows to better advantage on such land. Our readers should investigate improvements of this nature, and Messrs. GREGG & Co. will be happy to furnish full particulars, free, on application.

OF the PRIZE CHURN, manufactured by A. B. CONE at 197 Water St., New York, Mr. WILLARD says:—It differs from other churns in general use. It is simple in its construction, very compact, easily operated, not liable to get out of repair and has the merit of being easily cleaned. In testing this churn we find the butter comes with a good grain, and is in a condition to be readily separated from the buttermilk and washed in the churn. It is a churn that does good work and can not fail to give satisfaction.

The Naturalist.

THE SPIDER FAMILY.

ALL the spider family, find them where you may, and they are found in all habitable parts of the globe, are Cannibals. Father spider will make a breakfast, without the least hesitation, of his children, while the mother seems at times to be so tenderly attached to her young, that she would prefer to perish with them! She does not seem to have the same love for her mate however, for she has been known after a vain endeavor to prevent "hubby" from eating the children, to come to the conclusion that he would make a good meal, and falling upon him would gobble him up in short order.

Even in the reproducing season will madam spider attack her lord, and conquering him in fair fight, will at once devour him. Certain of the small spiders are supplied with a small bladder, somewhat similar to a drum, and the sound made by it, called by the superstitious the "dead watch," is nothing more than the spider drumming for his mistress to come forth from her hiding place. Allusion is made to this by Lacon, where he says "an old man like the spider, can never make love without beating his own dead watch."

A DEAD APE.—Mafuka, a celebrated apo of the Dresden Zoological Garden, is dead.

Floricultural.

THE GARDENER'S SOLILOQUY OVER THE SEED CATALOGUES.

To sow or not to sow? that is the question;
Whether 'tis nobler in the mind to suffer
The greatest torment of a gardener's life
In poring yearly through "fat catalogues,"
Or to take means by popping them, when sent,
In the waste basket—to be looked to
No more; and by doing so, to say we end
The thirst for new and "special novelties"
That flesh is heir to. 'Tis a consummation
Devoutly to be wished. To grow—to sow?
To grow? perchance to cram our beds and borders
With useless rubbish. Aye there's the rub!

[*W. Tillery, in London Garden.*

QUI VIVE.

Now blooms the wide-awake *Hepatica triloba*. A mass of little six-petaled, sky-blue flowers three or four inches high. When the petals fall, the achenia and three large involucral leaves resemble small green clover-heads. It is bright and full of the essence of early spring.

Spiræa tomentosa may still be removed from the fields and roadsides and bloom this season. It is fully as pretty as *S. callosa, Nobleana, lanceolata* and others which are offered in nursery catalogues at 50c. each. The leaves are smallish, ovate-lanceolate, and the flowers are borne in dense racemes of purple, which form pyramidal clusters of fruit for the birds of winter.

Vernation.—Our young friends (and old ones, too,) just beginning the study of botany, may now study what is technically termed Vernation—i. e., the arrangement of the leaves in the bud—a distinctive mark of great use in determining the order to which a given plant belongs. If the unbotanical reader thinks this subject is not one to arouse a deal of interest, we ask him to pluck two buds—one from a Tulip tree, the other from the Wayfaring tree (*Viburnum lantanoides*), and examine them. In the Tulip tree, when the outer scales separate, we shall see what appears an oblong, flattened pouch, somewhat like a young pea-pod, seamless and entire. This may be made to divide into two roundish stipules, and within we find a conduplicately-folded leaf bent over upon its petiole. Beneath this leaf we shall find another pod—and within this pod another leaf—and beneath this leaf another pod—growing smaller and smaller, until the tiny embryonal stipules, leaves, petioles and stems for the whole season's growth are disclosed.

In the Viburnum, the buds are quite naked. No scale-clothing exits to protect them in winter. The bud is itself the leaf entire, and its development is as simple as possible.

Thus are different plants differently organized, and early spring alone offers an opportunity for a comparative examination of what no words or books can so well explain.

CORRECTION.

In the article entitled "A visit to Mr. Peter Henderson" we gave items of the great amount of work accomplished by his lightning potter. In one of these there was an important error. In the statement that he potted a day or so previously 1,000 plants as no more than an average day's work from 7 'till 6—allowing half-an-hour for noon—the one thousand ought to have been *ten* thousand, as an average day's work.

NOTES.

A New Shrub.—In the Washington Market, (this city,) a sign a foot square is hung over a quantity of shrubs upon which is painted in large capitals, Hydra Ranchas. Though the clumps wear a familiar look, we do not find any such genus or species in the usual references. It must be a new shrub (!)

Pancratium Rotatum.—This native bulb is quite as handsome as many of the imported Lilies and other grand plants from abroad. Our enterprising friend who has taken in hand to push *Agave Virginica*, might do a similar good work by working up this which also grows wild in his region. It is not at all abundant in cultivation and, practically, it has yet to be introduced. Still, not to excite the ire of those of us who love to have things correctly expressed, he had better not, in his Pancratium circular, claim the honor of a "first discovery."

Thus kindly suggestive and gently admonitory is the Gardener's Monthly to our friend, Mr. Gunn of Tennessee.

Gladioli.—Plant the corms deep if the soil is light—five inches from the top for large, three for medium, two for small. This will give support to the leaves at least until the flowering stalk is well advanced and render stakes, which mar the appearance of the beds or borders in which they are planted, unnecessary.

Gladioli may be planted in groups, in plots to themselves, among low-growing annuals, among roses or scattered here and there if not too shaded and the soil is not too stiff.

Little is gained by early planting. Those planted before the first of April bloom no sooner than those planted two weeks later. For a succession of bloom, continue planting as late as July 1st. We may count upon an average of three months between planting and blooming.

One of the first charms about this plant of

DATURA STRAMONIUM.

many charms, is that the flowers open nearly as well even to the topmost bud when cut off and placed in water as when left to mature upon the stems. As the lower flowers fade and wither, pull the corolla out, leaving only the fresh ones above.

Cut off the flowering stem six inches below the spike and place it in water. A spray of enduring green for contrast is all that is needed to form a bouquet of exquisite beauty. A single flower is as pretty as that of many of the famed and costly Amaryllis. And yet each stalk bears twenty—more or less—and each bulb gives several stalks forming garden bouquets far more graceful than the stiff pugs into which flowers are usually squeezed.

It is a good plan—when they are planted in full sunshine—to cover the ground about the stem with freshly-cut grass in seasons of dryness.

Spiræa Prunifolia.—Of all the Spiræas, give us this one, if only one we are to have. Balloon-shaped is exactly the phrase to express its figure; its foliage is thick—though constituted of little leaves and these are of the smoothest, glossiest texture.

Last summer we estimated that there were ten thousand flowers upon one bush three feet high. The petals have minute splashings of green. Sessile upon the branch is an involucre of four or five very small leaves. From these from two to five thread-like peduncles grow an inch in length, each bearing a flower. These clusters of involucres are scarcely quarter of an inch apart, so that the bush is literally a mass of flowers. In the inflorescence, first is a calyciform involucre star-shaped—then an inner or true calyx forming a smaller star that alternates with the other—then the whorls of roundish white petals forming an oval agate-button half an inch in diameter. The whorl of leaves at first apparently sessile upon the branch, consists of nodes which do not develop until the flowers have disappeared, when the inter-nodes lengthen into regular branches and the tiny leaves grow to usual size.

It is one of the earliest to bloom and is now in bud (May 1st).

Speaking of Orchids, Humboldt tells us: "Such is their number and variety in the valleys of the Peruvian Andes, that the entire life of a painter would be too short to delineate all the magnificent forms which adorn those deep recesses."

[This is vague for Humboldt. Painters as a class are possessed of an insatiable thirst for "Mountain Dew" that sometimes eventuates in their working by "fits and starts!" If this sublimation were more abundant upon the crags and peaks—thither we should count upon our painter's spending a liberal share of his time maugre the Orchids in the "deep recesses" beneath. Again, one slashing artist might paint in an hour what another artist of precision might not paint in a day. Humboldt does but mystify us as to the number of Orchids in the "deep recesses of the Andes."]

Zinnia Darwini.—The Gardeners' Monthly for May says of this:

"Under this name a new race of Double Zinnias has come into existence through the skill of the hybridizer, and is illustrated in the February number of the London Florist and Pomologist. The habit is much better than the old race of Double Zinnias, and they will be no doubt great favorites. We believe our seedsmen will soon be able to offer them to American cultivators."

[The Gardeners' Monthly for once is not alert. We purchased seeds of Z. Darwini in several varieties this spring of home seedsmen and saw them offered in at least three catalogues. We called attention to the seeds being offered at 50c. per packet of 25 seeds in Rural of March 25.]

Scientific and Useful.

POISONING TOBACCO-WORM MOTHS.

Throughout the Middle and Southern States the tobacco crop is more or less injured every year by an insect known as the Tobacco Worm. Another and closely allied species, commonly known as the Potato Worm, frequently attacks the tobacco plant in the more Northern States and extends to some distance south, the two being frequently found in the same field near what may be termed the dividing line between the natural domain of either.

These caterpillars—or worms, as they are more generally called—are the product of "eggs" laid by moths belonging to what entomologists term the *Sphinx* family. The first, or true Tobacco Worm, is the larva of the Carolina Sphinx (*Sphinx Carolina*), and the second, or Potato Worm, that of the Five-Spotted Sphinx (*S. quinquemaculata*).

These moths are of large size, the wings spreading three to five inches, and are of a dull, grayish color, the body marked with patches or spots of yellow. The moths can do vegetation no direct harm, as they do not possess mandibles for eating solid food, but are provided with a long, flexible tube for sucking liquids, especially the sweet secretions of flowers.

With this knowledge of their habits, we are enabled to destroy them whenever the number becomes so great as to require it. But few men will take the trouble to kill off the moths, thereby saving themselves the much more laborious task of hand-gathering the worms.

Both the Sphinxes named frequent the flowers of the common Stramonium (*Datura stramonium*), also known as the Jamestown Weed, Thorn Apple, &c., for the purpose of obtaining food from its flowers. This coarse weed is probably well known to all of our readers by some one of the above names; if not, they will doubtless recognize it from the accompanying illustration of a branch containing a flower and one of its large, rough seed-pods.

Now, every farmer and planter who desires to protect his tobacco, potatoes or tomatoes from the ravages of the large, ugly, green worms so frequently found upon those plants in summer can do so by following our directions. Sow in spring a small number of the Datura seed in different places about the field to be occupied with the crops named, and then, when the plants come into bloom, proceed to charge the flowers with the following liquid poison:

Dissolve an ounce of cobalt (to be had at any drug store), in about a pint of water, adding enough sirup to make the mixture sweet. Now take a small bottle and fill it with the liquid, and to aid in distributing it put a goose-quill through the center of the cork, and you are ready for work. Go round among the Datura plants and drop a little of the liquid into each open flower. This should be done about sundown, as the moths come at this time or a little later to feed, and every one sucking up a drop of this poisoned liquid will be killed.

To some this may seem to be a slow and impracticable way to rid a locality of those pests, but when the fact that each female moth lays several hundred eggs is taken into account, the practicability of fighting this pest by poisoning becomes apparent. A boy can charge the flowers as well as a man, and it will take but a few minutes every evening while the moths are about to prepare for them their final feast.

We are assured by those who have tried this process of poisoning flowers, as moth traps, that it works well, especially if all the planters in a neighborhood will act together in the matter.

HOW TO BOTTLE LIGHT.

Countless accidents, as every one knows, arise from the use of matches. To obtain light without employing them, and so without the danger of setting things on fire, an ingenious contrivance is now used by the watchmen of Paris in all magazines where explosive or inflammable materials are kept. Any one may easily make trial of it. Take an oblong phial of the whitest and clearest glass, and put into it a piece of phosphorus about the size of a pea. Pour some olive oil, heated to the boiling point, upon the phosphorus; fill the phial about one-third full and then cork it tightly. To use this novel light, remove the cork, allow the air to enter the phial, and then recork it. The empty space in the phial will become luminous, and the light obtained will be equal to that of a lamp. When the light grows dim, its power can be increased by taking out the cork and allowing a fresh supply of air to enter the phial. In winter it is sometimes necessary to heat the phial between the hands in order to increase the fluidity of the oil. The apparatus thus prepared may be used for six months.

PREDICTIONS OF NINETY YEARS AGO.

The great Linnæus in a "Dissertation on the Sexes of Plants," written in 1786, predicts in the following selection what time and botanical investigation have most amply proved: "Here is a new employment for botanists, to attempt the production of new species of vegetables by scattering the pollen of various plants over various unfertile flowers. And if these remarks should meet with a favorable reception, I shall be the more induced to dedicate what remains of my life to such experiments which recommend themselves by being at the same time agreeable and useful. I am persuaded by many considerations, that those numerous and most valuable varieties of plants which are used for culinary purposes have been produced in this manner, as the several kinds of cabbage, lettuces, etc., and I apprehend this is the reason of their not being changed by a difference of soil. Hence I cannot give my assent to the opinion of those who imagine all varieties to have been occasioned by change of soil; for, if this were the case, the plants would return to their original form if removed again to their original situation."

AVERILL CHEMICAL PAINT.

By letters from various subscribers, who have used the Averill Chemical Paint made by Seeley & Stevens of 32 Burling Slip, New York City, we are informed that it is all it is represented to be and they advise us to recommend it to our readers. From our own use of it; and from the letters received by us from time to time, we are led to believe that an order filled by that firm cannot fail to give satisfaction. It is no new thing; but has been tried and found *not* wanting. Messrs. Seeley & Stevens will furnish samples and circulars on application.

The Centennial.

CENTENNIAL CORRESPONDENCE.

COLONNADE HOTEL, PHILA., May 13, 1876.

FINALLY the great Centennial Exhibition is formally opened, and visitors are now at liberty to inspect the buildings and note how, gradually, the exhibits take on most attractive forms until, finally, the American viewing these things in their full-blown excellence, may well feel proud to be the citizen of a country that has created an Exhibition of such grand proportions. Considering that, as a nation, we are yet in leading strings, this is surely a proud reflection.

As might have been expected, the opening ceremonies were more remarkable for the crowd that was attracted to the grounds than for what was to be seen, as not a moiety of the exhibitors were in a position to display their wares. The rain of the previous 24 hours had rendered the walks almost impassable and the mud was of a depth to discourage the most adventuresome; yet, at the appointed time, the Master of Ceremonies, followed by the President and the Empress of Brazil, DOM PEDRO and Mrs. GRANT, the members of the Foreign Legations, distinguished politicians, poets, philosophers, and members of the Press, took their appointed places on the platform that was erected for the occasion opposite the middle transept of the Main Hall and facing Memorial Hall, on the broad plaza of which was stationed the orchestra and chorus under the conductorship of THEODORE THOMAS. The order of ceremonies was as follows:

1. Centennial inauguration march by RICHARD WAGNER of Germany.
2. Prayer by the Right. Rev. BISHOP SIMPSON.
3. Hymn by JOHN G. WHITTIER; music by JOHN K. PAYNE of Massachusetts. Orchestral and organ accompaniment.
4. Cantata—the words by SIDNEY LANIER of Georgia; music by DUDLEY BUCK of Connecticut. Orchestral and organ accompaniment.
5. Presentation of the exhibition by the President of the Centennial Commission.
6. Address by the President of the United States.

The President read his address from manuscript and owing to the low key in which his voice was pitched, was entirely inaudible to all who did not immediately surround him. The music—both choral and instrumental—was rendered with great spirit and precision, and to the majority was about the only compensation for the sufferings they endured. The crowd at this time and point was so dense that it became literally impossible to move hand or foot, and the embrace of a bear might well seem a gentle pressure by comparison. Following the addresses came the general inspection, and by the time the President and party had reached Machinery Hall and the doors were thrown open to the public, it was 2 P. M.

The military, that for the occasion, undertook to maintain order, were not as well directed as could have been desired. At one time the ranks were broken, and the crowd shot through into the open, as if fired from a catapult. When they were finally forced back, it was done in a manner that would not have been tolerated by any but Americans,—incontestibly the best natured people on the face of the globe. At 12 M. the cannon pealed forth, and the chimes in the tower of Machinery Hall rang out jubilantly but not very harmoniously: the ringer, perhaps, feeling nervous, and oppressed by the grandeur of the occasion. Some twenty thousand people lined the limits of the grounds, and St. George's Hall was black with humanity, who preferred to take their sight seeing without the usual formula of paying for it, and this suggests the novel arrangements that are provided for ingress to the grounds.

There are 106 turnstiles, and 42 exit gates. The entrances and exits are in juxtaposition, so that when you wish to leave the grounds you merely direct your steps to where you see a crowd pouring in. Of the turnstiles seventy-six are for money only; six are for those who hold complimentary tickets, such as the press, officials, &c., and twenty-four are for exhibitors and attendants. The turnstiles are marked with a letter, so that those who have passes may go in under their letter. Complimentary ticket-holders pass in under the letter C, which will be found in two places in the main entrance, one place in the eastern entrance, one in the drive near the Vienna Bakery entrance, one in the drive near the Belmont Avenue entrance, on the northwest side of enclosure, and one in the Machinery Hall entrance near the Main Concourse.

By an ingenious contrivance of W. S. Phillips, Superintendent of the Telegraph, these turnstiles are connected by wire with a dial in the main office of the Centennial Commission. When a person enters through a turnstile he is instantly registered on this dial. At any instant of the day, therefore, it will be possible to know, by glancing at the dial, the exact number of people who have passed the gates and are within the exhibition grounds and buildings.

The Centennial Bank established for the convenience of visitors is prepared to change money and furnish those who desire it with 50-cent script, being the only and exact amount that can be deposited, stile-keepers being forbidden to make change. So great was the run on the bank, at the opening, that speculators availed themselves of the opportunity to sell small change at a premium of $1.10 for one dollar.

The great Corliss Engine was put in motion at the command of the President, and in a twinkling this enormous motor, started the miles of shafting as easily and quietly as if it was quite the simplest thing in existence. This giant piece of machinery will be one of the greatest objects of interest at the Exposition, and it may well excite the surprise and admiration of scientific and non-scientific sight-seekers.

GREAT stress was laid upon the assertion of *quid nunes* that the crowd at the opening would be so large as to cause hotel proprietors to sigh for houses of india rubber. This prediction was partly fulfilled; the crowd *was* very great, but Philadelphia, like another ÆNEAS, was equal to any fate, taking in and doing for the stranger handsomely. The Colonnade entertained 586 guests, but there was room for more; and while on the subject of hotels, I should like to say right here that the genial proprietor of this hotel do make it wonderfully comfortable and home-like for the stranger. And judging by their manner, one would suppose that each new arrival was one of those much-abused country cousins, and that he *was* quite welcome. The Colonnade is among the most centrally located of the city hotels, being but two miles distant from the Exhibition grounds, and we believe quite the nearest of any of them. On Wednesday the prominent arrivals at the hotel were Gen. JOHN H. KING, Albany; V. DARDON, Guatemalian Minister: Gen. LAFAVRE, Capt. FRANK ARNOLD, Gen. ELIJAH WARD, Dr. STODDARD from Australia, Gen. FRANK REEDER, Gov. INGERSOLL (Conn.) and staff, Gov. LITTITT (R. I.) and staff, Admirals SCOTT, JENKINS and D. B. PORTER and Commodore KANE, U. S. N.; Prof. ABBE, Washington, Hon. HEISTER CLYMER, and many others.

I regret that the length of this letter delays the fulfillment of my promise made last week until the next issue, when I shall endeavor to make it very plain how to avoid the petty annoyances that beset the traveler in a strange city.

YOUNG RURAL.

CENTURY BLOSSOMS.

THE horses and dogs will have their day in September.

ON an average 150 car-loads of Centennial goods are now unloaded daily.

THE monster Krupp gun carries a 1,600-pound ball and weighs sixty-four tons.

A BOAT constructed from the timbers of the wrecked Polaris will attract attention.

THE Coast Survey Service exhibits models of lighthouses, with the lights revolving, flash, and steady.

Patrons of Husbandry.

THE GRANGE AN EDUCATOR.

J. MUNGER, Lecturer of Agricola Grange No. 9 of Warren County, Ohio, makes the following very sensible remark in a recent lecture upon the above named topic:

Let us always bear in mind that the Grange is to become just what we shall choose to make it. Either it is a high-toned school of morals and a perpetual fountain of knowledge, wherein improvement and refinement shall go hand in hand with social and intellectual culture; moral and physical development, for herein all these must receive attention and the whole man must be educated, or it must become a mockery in the name of progress.

But more than this, we stop not here! Within the folds of the Grange we must gather the youth of the land. Here we must shield and protect them from the snares and temptations to which they are exposed—wooing and winning them from the follies and vices of the world, by providing for them innocent amusements, and furnishing them with rational enjoyment, inculcating in their minds and instilling into their young hearts the ennobling principles of virtue; not the least of which is the love of the heaven-ordained and inexorable law of labor; the necessity and the duty of industry; the glory and reward of plain, downright, blunt, honest, hard work—work both of body and mind—work, in the library and in the field, in the office and in the shop, at the desk and at the bench; obeying the injunction, "Whatsoever thy hand findeth to do, do it with all thy might," work of the head, hand and heart, whereby we shall be kept from retrograding toward ignorance, be saved from besotting superstitions, and be prevented from degrading into wretchedness and barbarism.

The frequent occurrence of fraud, theft, robbery, forgery, burglary and murder, the commission of all this black catalogue of crimes for the purpose of evading the great law of labor, is but a poor commentary on the present state of public morals, and it shows clearly our line of duty in this direction. The reformatory power of the Grange is invoked to rear up a generation of men and women that shall emulate each other in their love of labor.

Mrs. Livermore may lecture upon "What shall we do with our Daughters," but I would lecture upon what shall we do with our sons and daughters.

THE WAY TO DO IT.

THE Grange Visitor gives the following very sensible advise to farmers who desire to purchase supplies cheap as well as sell their products at good prices:

Why is it that it is so difficult for farmers to deal directly with each other in exchanging the products of one section for those of another without passing such commodities through the hands of one or more speculators? In a recent report of the State Business Agent of Ohio, he stated that rates could not be given on grass seeds, as they were in the hands of speculators. Why were these seeds which the farmers of this country produce and consume, held by middlemen? Is there not some way of correcting this evil? The whole difficulty arises from the very unbusiness-like way in which a majority of farmers do business. Farmers must get in the habit of doing their own thinking and of making their calculations a little further ahead than they now do. How many farmers who had to buy clover seed this spring did not know or might not have known with reasonable forethought last fall, that they would want it in the spring, and who do not know that it would have paid them well to have purchased it at that time even at an advance on the ruling prices? Clover seed, for instance, could have been bought for about two-thirds of the price paid for it this spring, which would give about fifty per cent. for the use of the money for six months. If farmers had taken the trouble to give the matter thought, they might have foreseen that the result would be just what it has been, and made their arrangements accordingly, thus saving to themselves a few dollars that would be very acceptable these hard times. Had a Grange in this section, for instance, where no clover was raised last year, made their wants known to the members of other Granges where it was for sale, could they not have bought it as low as any one, and would it not have been an advantage to both parties?

But grass seed is not the only thing that requires forethought and good management, and in which co-operation may be used to advantage. There are many things of even more importance. The selling of the next clip of wool might be made the subject for consideration at present. If the entire clip of the State could be collected into a few large lots properly graded and sacked, it could be sold to much better advantage, and the commissions of two or three agents be saved to the producer. In order to accomplish this, each Grange should obtain from the members an estimate of the quantity and quality each will have to sell, which should be reported to the State Agent, or some one appointed for that purpose, who should immediately enter into negotiations with Business Agents in the East, or with the manufacturers, themselves. If large lots of well-graded wool could thus be offered to the manufacturers, there is no doubt but the best prices could be obtained. This is but a single item of the many that might be named. Every article of sale or purchase should be bought or sold in a systematic and economical manner, and often an exchange might be effected that would be advantageous to both parties; for instance, if the Business Agent were authorized to take a certain part of the price of the wool in cloth.

The way to success is to look ahead, systematise the business of purchase and sale, and practice the true principles of co-operation.

THE DUES.

A PATRON writing to the Prairie Farmer, reminds his brother that "dues," should be paid promptly. Many Granges hold their meetings in school-houses, and the expense is light. Some have built halls, while others are yet renting halls. Each subordinate Grange is the best judge of the amount of dues necessary for its expenses. Patrons are not generally so "flush of money" as to wish an accumulation of it to be still in their treasury. Let the Brethren speak on this subject, so that the National Grange at its next meeting may take renewed action upon it.

Entomological.

ENTOMOLOGY AS A STUDY.

PROF. CHAS. V. RILEY in his late lecture delivered in the Hall of Washington University, St. Louis, Mo., said of "Entomology as a Study."

That there exists a certain contempt in the public mind for what are derisively termed bugs, in America, is too evident, particularly in our cities, where the word is associated only with a troublesome or offensive species. Yet this contempt is unwarranted. The whole class should not be judged by the exceptional few. There is scarcely one of those creatures but, when carefully examined, presents a perfect microcosm of wonder and beauty, and the structure of most of them is more complicated than that of man himself. They are possessed of senses which we no sense have to conceive. We find assembled among them all the striking peculiarities of other animals. The piercing, but simple eye of the eagle or the lynx will not compare to the stereoscopic and compound eye of the dragon-fly, that sees in all directions at one time; the sharp snout of the sword-fish is, comparatively, a feeble weapon by the side of that of a pirate or soldier bug; the jaws of a lion weak in comparison with those of an ant or of a tiger-beetle; the tongue of a lizard short compared to that of a hawk-moth. What is the architecture of the beaver by the side of that of the bee? Compare the jumping of the kangaroo with that of a flea or a Pœciloptera; the fecundity of a hare with that of the aphis, or of the female termite, which has been known to lay an egg a second for twenty-four hours; the climbing of the squirrel with that of the fly; the swiftness of the antelope with that of a Cicindela or carabus—and you will find that, if the acts be measured by the size of the actors, insects invariably carry off the palm. The electricty of the gymnotus or of the torpedo, the horns of the stag and rhinoceros, the burrowing of the mole, the phosphorescence of the jelly-fish, the changing colors of the chameleon, are reproduced in the *Rednvius serratus*, in the stag and rhinoceros beetles, the mole cricket, the glow-worm and the tortoise beetles. In short, there is hardly a striking peculiarity among other animals that does not find its counterpart in insects while these, again, present us with many most remarkable habits and peculiarities which find no parellel in the rest of the animal kingdom, and prove them to be most worthy the student's attention.

I could dwell for hours on the remakable diversity of their habits. From the æsthetic side, the study of insects as the study of any other branch of natural history, elevates and enlightens. It dispels prejudice and superstition, and affords happiness and instruction. It more quickly than any other teaches us to "find tongues in trees, books in the running brooks, sermons in stones, and good in everything." In my own experience I have known of several hypochondriacs made happy and hearty by the mental enjoyment and the physical exercise that resulted from getting interested in the collecting and study of natural history objects; and it is a significant fact that many of our greatest scientific minds, as Charles Darwin, Herbert Spencer, etc., began their scientific careers and developed their love of investigation by the study of insects.

The prosperity of a people does not depend solely on its material wealth, but to a great extent on its mental activty. If you would inspire your children with a love of rural influences: if you would make of them thinking, reflecting, observing men and women, then teach them, among other things, some of the wonders of insects and plant life about them; teach them to read the great book prepared by the Almighty. There is an inexpressible charm in animated nature for those who have learned to commune with and understand her. *They* read in the air, in the water, in the vast sky above, in the bowels of the unfathomable earth beneath. They see everywhere around them significance, harmonies, chains of cause and effect endlessly interlinked, which inspire them with a joy and contentment most desirable to possess. No wonder Carlyle exclaims:—"For many years it has been one of my constant regrets that no school master of mine had a knowledge of natural history, so far as to have taught me the grasses that grow by the wayside, and the little wingless neighbors that are continually meeting me with a salutation which I cannot answer, as things are." Yes those who have learned to unlock the arcana of Nature, ever find there new inspirations and pleasures, and you cannot leave your children a better legacy than the love and habit of studying her manfold wonders. Under every stone, under every clod, there is a little world in minature, if we but know how to look for it: and there scarcely grows a plant but what contains in nature's own hieroglyphs a whole volume of natural history, written by the Great Author of our being. Deep insight into nature's truths is not, therefore, of practical value only, it is ennobling and purifying, and leads to sublimest contemplation of the infinite. The study of nature is not only a struggle for the mastery of the external world, but as Agassiz said, "it is a struggle of man for the intellectual assimilation of the thought of God."

Domestic Economy.

FANCY COOKERY.

A CORRESPONDENT who signs herself "Farmer Girl," in writing to the New England Farmer, gives some excellent hints on fancy cookery, to wit:

Housekeepers who do their own work avoid much inconvenience by always keeping one or two kinds of pastry in the house made rich enough to keep some time, so that if unexpected company finds them with a small stock of food (as it is apt to do in warm weather), they will not have to cook everything for a meal.

TART CRUSTS

are excellent for this purpose, as they look nice on the table and are relished by most people better than cake. By the following rule they will remain good many months in a place dry enough to prevent their molding. I think a cellar would be too damp, though I never tried it, having always kept them in a stone jar set in a cool cupboard; unless to be kept a great while, it is needless to make them so rich.

With one pint of flour use one-half pint of lard, a pinch of salt and the beaten white of one egg, adding a little water, if any liquid is needed; roll thin and cut in rounds, wetting the edge of each before putting on the rim, which is made from a strip of dough cut one-third or one-half inch wide, set up edgewise and neatly fitted on. Another very pretty way of making them is to take two round pieces of dough, cut three or five holes in them with a thimble, and lay it on the other so they will hold together firmly when baked; when wanted for the table, fill each tiny hole with jelly. This is an easier method than the first, but not as good, if one wishes to fill them to carry to a levee or supper away from home, as they cannot be placed one upon another when filled, like those having high rims around them.

GINGER-SNAPS

are another kind that are excellent to keep. A friend told me she meant never to be without them; she had kept them six months by moving them down cellar when they became dry, and if they grew too moist there, would dry them a little in the oven.

Boil two cups of molasses, and when slightly cooled, add one cup of lard, pork fat or butter, one large teaspoonful of soda, and some ginger; mix hard as possible, roll thin and cut in rounds. For immediate use, they are good enough if one-half cup of water is added to the mixture.

APPLE PUFFS.

These are nice for party suppers, and, in fact, are good any time, but rather too tedious to make for frequent use. The quickest way of making them is to roll two large sheets of dough on separate boards, and put as many tiny spots of mashed or sifted sauce upon one of them as you judge there will be room to make puffs; then cover it all with the other sheet, which should be a trifle larger, and cut out with the biscuit cutter wherever there is a bunch of sauce. If too much sauce is put in, it will stew out badly and disfigure them; print around them with a three-tined fork — if you have nothing better—to press the edges together and keep in the juice.

By the way, an old wooden clock wheel is quite a handy thing to roll around pies, and makes a very pretty margin; cheap, isn't it? and it is never out of order.

NOTIONS.

I would like to ask if any one knows a sensible reason for the idea that, to make nice cake or pastry, the butter or lard should not be melted, but rubbed in cold with the hands? My mother (whom I have seen sit half an hour rubbing a cup or two of butter and sugar together) has faithfully labored to convert me to that doctrine, but as she can give no reason other than, "Old cake makers would tell you to do so," or, "Melting the lard for pastry makes it look gray," I am still an unbeliever. I know such pastry looks more gray before it is baked, but can see no reason why it should after, if the grease is merely warmed enough to melt it, and experience convinces me it does not; though perhaps if it were poured very hot upon flour or beaten eggs, it might, by partially cooking them, affect the color or quality when baked. I can never think it other than a foolish waste of time and strength to work half an hour or more on dough which, had the shortening been warmed a little, would have mixed equally as well in about two minutes.

Another foolish whim is indulged in by some when making sponge cake. I refer to the practice of beating whites and yelks of eggs separately until they are a stiff froth and one's body and patience are well nigh exhausted. By the old-fashioned method this was undoubtedly necessary, as, no cream of tartar being used, the lightness of the cake depended upon a foamy condition of the eggs; but with cream of tartar, as most people make it at the present time, it is good enough when beaten but a moment. One lady who makes a great deal of sponge cake tells me she beats them no more or differently than for anything else, and thinks she has just as good success as when she beat it a long time and had a lame arm for several days afterward.

Perhaps, when giving directions for making tarts and puffs, I should have spoken of reserving a portion of the shortening to roll in after it is mixed up, as it is possible some may not know how much more flaky that makes it.

A friend who makes very flaky pie crust with but little lard kindly gave me what she thinks is the secret of it. She mixes a little lard with flour and cold water till quite stiff; then rolls it out, spreads on a little lard, sprinkles flour over it and folds it over so it is double; then rolls out and spreads on again, repeating the process two or three times; after the last time, instead of rolling it up, as some do, she folds it over once or twice and cuts the pieces for use from the edge.

Her idea is to keep the layers of shortening as near horizontal as possible, avoiding mixing them up, as one does in molding or rolling, and there seems to be a deal of reason in it.

POT-PIES.

ADMIRING your noble effort to help M. L. S. over her difficulty in making ginger-snaps and cookies, and I, in my somewhat short experience in housekeeping, having had many such grievances, some of which are still a source of trouble, will try and assist you in the art of making those "puffy crusts." Though I cannot do it as spicily as your instructions were given, perhaps not wholly because I am not dealing with so spicy an article, yet if you will follow my directions, all the "Bells" in your vicinity will ring merrily when you bring your pot-pies on the table. Here let me caution you against two things. They are, that you do not make too many of them at one time, for it is very bad indeed for digestion to overload the stomach, though the food may be light and wholesome; also, if, in case of any indisposition of the "Bells," you should have any left, don't try to scare the chickens with them, for the feathered creation have an appreciation of good food as well as humans, and thereafter it would be very annoying to be continually driving chickens out of the house during the warm weather, when it is absolutely necessary to have the doors and windows open, as you would be obliged to should they discover from whence such a luxury came.

Perhaps you have been taught that you must not raise the cover of the kettle while they are cooking. Such were my instructions when a New York maid, but since I have become a Maine matron I have learned better, and am desirous of imparting this item of my "Down East" knowledge.

But I must hurry up those "puffy crusts," and that, too, very lightly and without shortening. Proceed in the ordinary way to mix the crusts; then see that you have a good fire, so that the kettle will not stop boiling when the crusts are put in; then be sure that they do not cook a moment after they are done. In order to know when they are done, it is necessary to turn them over and occasionally break one; this can be done with a fork, without detriment to them; in fact, I am of the opinion that they are all the better for turning. Usually from seven to ten minutes is ample time to cook them.

Now, my dear little "Bell," when you have again tried your skill in making pot-pie, let us hear of your success through the RURAL, and if you do not acknowledge that the surrounding "Bells" ring merrily, the heart of at least one "Reed"-er will be amazed.

Gardiner, Me. ESTHER P. REED.

ORIGINAL RECIPES.

M. A. BAILEY, Onondago Co., N. Y., contributes the five following recipes:

My Ginger Snaps.—A cup of butter, a cup of molasses, a teaspoonful of soda, a teaspoonful of cloves, two tablespoonfuls of ginger, an egg; mix very soft.

My Gingerbread.—A cup of water, a cup of molasses, six tablespoonfuls of melted butter, one and a half cups of flour, a teaspoonful of soda, two of cream of tartar, two of ginger; bake very quick.

Mrs. Jones' Gingerbread.—A cup of buttermilk, two of molasses, four even teaspoonfuls of soda, six tablespoonfuls of butter, two of ginger; mix as soft as it can be rolled out; bake 20 minutes.

Fruit Cake Without Eggs.—A cup of molasses, one of sugar, one of butter (beat till the butter is melted), two tablespoonfuls of cloves, four of cinnamon, a nutmeg, a coffee cup of chopped raisins, one-third of a cup of citron, a teaspoonful of soda, a cup of sour milk, one and a half pints of flour; bake one hour.

Bread Hash.—Chop any kind of cold meat fine, scald and add twice as much dry bread, add butter, salt, pepper and sweet cream; mix thoroughly and warm up well.

The four following are furnished by Mrs. E. M. HAVEN:

Fried Cakes.—Two cups of sugar, one pint of cream, two-thirds of a cup of buttermilk, three eggs, one teaspoonful of soda, nutmeg, a little salt. These are nice.

Ginger Cookies.—One teacupful of butter or lard, two cups of molasses, two-thirds of a cup of water, one tablespoonful of ginger and one of saleratus.

Corn Starch Cake.—One and a half cups of sugar, one-half cup of butter, two-thirds of a cup of corn starch, two-thirds of a cup of milk, whites of four eggs, one and a half cups of flour, with three teaspoonfuls of baking powder; flavor with vanilla.

Frost Cake.—One cup of sugar, two even tablespoonfuls of butter, seven tablespoonfuls of milk, yelks of four eggs, one and two-third cups of flour, one teaspoonful of soda, two of cream of tartar; bake in layers and put frosting between.

The following come to us from a correspondent in New Jersey:

Root Beer—(F. A. Johnson).—The following is a good recipe for "root beer:"—A handful each of sweet fern, yellow-dock, dandelion, sassafras and plantain roots, a small handful of hops, three or four sprigs of hemlock. Boil in two gallons of water until the strength is extracted; add molasses or brown sugar to suit the taste; strain; when cold, add a dissolved yeast cake, or a teacup of bakers' yeast; cover tight and it will be fit for use in twenty-four hours.

French Rolls—One pint of milk, one small cup of home-made yeast, and flour enough to make a stiff batter; raise over night; in the morning add one egg, one tablespoonful of butter and flour enough to make it stiff to roll. Mix it well and let it raise; then knead it again, roll out, cut with a biscuit cutter, fold over. Set them in a warm place until very light; bake quickly.

Hygienic Information.

MEDICAL FASHIONS.

IT is a trite old saying that "one might as well be out of the world as out of the fashion," and it seems to be getting more true every day. The latest phase of this mania is in "medical fashions," which is elaborately treated by a contributor to the Atlantic Monthly. From his extensive lucubrations on the subject we condense a few of the more salient points.

The ancients had their unsical medicine, as well as their unguents and baths, their purgings and fastings, their bloodletting and their hellebore; the Middle Ages had their metaphysical medicine, as well as their mummies and their magnets, their amulets and their salves, then antimony and their mithridatics; while to-day, contemporary with orthodoxy, homœopathy and hydropathy, we have the medicine of clairvoyance, a spiritualistic medicine, and a newspaper medicine, all enacting miraculous cures, and all having followers most profitably numerous. We know more about anatomy than was known of old; we know more about pathology; and our *materia medica* ranges somewhat more rationally over a wider field than did that of the past generation. It must be admitted, however, that practice is as imperfect, diagnostic as bewildered, and pharmacy as absurd to-day as it was in the days of Dioscorides, or when the "white witches" of old England culled simples beneath a favoring moon. Disease is as rife now as it was then; treatment is of as little efficacy; and people take as many medicines, and are duped as grossly and as blindly in their mad pursuit of health, in the days of telegraphs, railroads, and universal suffrage, as in the days of Theophrastus and Galen.

The remarkable circumstance about medical literature is, that its authorities stand to-day almost precisely where they stood in the first ages of medicine, upon the very threshold of a science into which they cannot enter, but where each age fancies itself to have safely arrived. The utmost possible action of medicine, it would seem, is to increase, diminish, or in some way modify the motions natural to the viscera with which it can be brought in contact, an effect which, as Montaigne has said, there are a thousand simples in every herb-garden to produce; yet, what a weight of materials for fostering the diversity and adding to the confusion of prescriptions, do the shelves of our apothecaries groan under!

True, the superstition in regard to these things is not quite so apparent as it was formerly; drugs do not have to be gathered in certain stages of the moon and prescribed aspect of the stars, nor approached backward with annointed bodies; nor are our pharmacopœias so full as those of th ancients were of heterogenous and incompatible compounds, such as that venetian mithridate which was made up of two hundred and fifty ingredients, ranging from aloes and red oak bark to the oil of live swallows and the moss from a human skull.

But that certain incongruities palpable to the eye have been expunged, is no proof that the essential superstition which regulates the use of substances has been dispensed with in favor of a more rational theory of practice consonant with the demands of a more enlightened age. On the contrary, there is just as much sortilegery in physic, just as much wild conjecture and haphazard experiment with all of the products of the vegetable and animal kingdoms, in an insane pursuit of the impossible, as ever there was. There is no new herb, or root, nowadays fresh-brought to notice from California or Australia, but the faculty run just as mad about it, as the populace run mad after the well-advertised new nostrum in the papers.

It is a nice question, in many cases, which has done the most injury, the disease or remedy: whether cancer or the knife produces death more speedily; whether calomel and quinine be not pretty much such friends to the sick man as La Fontaine's good-natured bear was to the gardener, whose mouth he crushed while trying to brush the flies off as he slept. It is an equally nice question to determine whether there ever really does occur a critical period in any disease, when the direct action of any actual medicine, *per se*, can turn back the wavering life from the jaws of death to the flowery meads of re-established health; or, granting the possibility of such a rare occurrence, do we not run too great risk, as a rule, to be able to profit by it? These are nice questions, as I have called them, nor does the present condition of medicine entitle us to expect to see them answered. For these reasons, among many others, medicine cannot be called a science.

It must not be supposed, however, that the doctor's office is to become a sinecure because his drugs are voted rubbish and his methods false. On the contrary, we shall need him quite as much, and his advice will be more valuable to us than ever. He will not have it in his power to do harm, and consequently can give his undivided energies to the pursuit of good. It shall be his office to teach us the fallacy of physic. He shall present to our minds in all its horrid array the atrocious enormity of medicine as once it was practiced, and so shall save many a poor sufferer among us from unconscious suicide. He shall be our perpetual beacon-light against the iron-bound, inmitigable load-stone rock of quackery, where so many fair keels lie untimely wrecked. In fine, he shall become to us the counterpart of that invaluable member of another profession, known as the chamber-lawyer, a quiet man of skill and experience, who abounds with all the wisdom and unction of pertinent counsel, and who never takes his client into court, where he is bound to lose, no matter how his case is decided.—*Edward Spencer.*

POISON IVY.

STRANGE advice sometimes appears in our exchanges in regard to poisonous plants, and especially about "poison ivy." If what is called poison ivy (which, by the way, is not an ivy, but a species of sumac) was the only plant growing wild likely to poison a person by contact, we might excuse some of the mistakes made by writers upon this subject. But the facts are, that the so-called "Ivy" is the most harmless of the two virulent species found in all our moist-woods and low grounds. Even so good an authority as Dr. JAMES C. WHITE writes to the Boston Medical and Surgical Journal, advising "all who are unacquainted with the poisons of ivy to avoid any vine or bush growing by rocks, fences and woodsides, and having glossy leaves arranged in *threes*." Now this climbing or trailing species of sumac, or poison ivy is the *Rhus Toxicodendron*, and ninety persons out of every hundred can handle it with impunity.

But growing in similar localities, and frequently side by side with it, there is another species known as poison elder. Poison sumac, or poison dogwood, is botanically the *Rhus venenata*, which few persons can handle without being poisoned. This virulent species is not, however, a "vine having three leaves," but a shrub, growing ten to twenty feet high, with long pinnate leaves of 7 to 13 ovate entire leaflets. Pinnate leaves are those which have small leaflets on each side of the mid-rib, as shown in the accompanying figure.

Now, when any of our readers are searching for wild plants, or fruits, in moist grounds, we would warn them to give this plant a wide berth, if they are at all susceptible to sumac poison.

"PROGRESS AND IMPROVEMENT."

SHRUNKEN FORTUNES.

THERE are doubtless many of our readers residing in the country, and especially in the Western States, who think the "hard times" do not affect the wealthy men in our larger cities. We are the more strongly impressed that there is such an idea prevalent among the masses from the tone of the leaders in some of our country contemporaries, who frequently denounce the capitalists in our great moneyed centers for not pushing business as they did years ago—thereby, to use a common phrase, "make the times better."

But we can assure our readers that it is all a gross mistake to assume that capitalists have not suffered by the depression of trade, as much in proportion to this means, as the poorest man in the land, or that they would not be as much pleased and as anxious to see business of all kinds revive, as any other class of our people.

There is scarcely a man of means in our great cities—and especially those owning real estate or engaged in trade of any kind—who has not seen his property gradually shrink in value from twenty-five to fifty per cent. during the past half dozen years, with no power to prevent it. Men who owned real estate valued at a million of dollars five years ago, could not realize one half that sum for it to-day, and to add to their misfortune, the income from the same has also declined in proportion, while taxes are continually on the increase.

Money flows into our banks and other depositories, simply because there is no demand for it elsewhere, and hundreds of capitalists who a few years since were using their money in trade where it brought them ten or fifteen per cent., are only too glad to invest in safe securities at four or five. This certainly does not show great prosperity, even among our most wealthy citizens, or that the present depression of business is owing to the scarcity of a circulating medium or high rates of interest.

In fact, money is about the cheapest and most abundant thing in the market, and the reason why it circulates so slowly is that there are comparatively few men in any kind of business at the present time who can find opportunities for employing it with a fair prospect of a moderate return upon the investment.

It is not reasonable to suppose that men who prefer to put their spare capital out at interest instead of employing in trade, would accept five or six per cent. per annum if they could on equally as good security get more.

The same rule holds good in all branches of trade; hence it is unreasonable to assert, as many have done, that capitalists are combining to depress trade for the purpose of making money out of the pecuniary necessities of the masses, as it is not possible that any considerable number of our people can suffer financial embarrassment without the whole being affected.

If there is an Eastern demand for the products of the West, capitalists will come forward and furnish the funds necessary to move them, provided there is sufficient margin for profit to cover the risk incurred, otherwise capital seeks other channels. The all-powerful law of "supply and demand" rules in money matters as it does in the price of potatoes, and we can see only one way out of our present financial difficulties as a people, and that is to practice the strictest economy until all shall live within their income, whether it be more or less, thereby lessening the demand for money.

Men who do this can usually "bridge over" a panic, or a few years of hard times, because they are very likely to have good credit and means of holding their possessions, even if the market value shrinks to a very low figure.

Real estate, which is generally considered as substantial property as a man can own, besides being less liable to be affected by the periodical fluctuations of the money market, has not escaped depreciation during the present "hard times," and we may safely say that in all of our great cities and their suburbs the estimated value of houses and lots as well as farms, have depreciated fully fifty per cent. during the past three years. This fact may be some consolation to those residing at a distance from our great moneyed centers, and who complain to us of "hard times" as though they alone were sufferers from the shrinkage in the values of all kinds of property.

WHO IS RESPONSIBLE?

"The child is father to the man," has been sagely remarked. With this constantly before our eyes, what a terrible generation can we see for the future! The press teems with descriptions of juvenile criminals and their horrible crimes. Child pickpockets of both sexes infest the large city, while the boy incendiary and burglar are not absent always from rural population. These, then, are fathers to the future men? Undeniably so! Look however, at the homes—when perchance, the poor things have any—in which one of this criminal class has been reared, and ask yourself if you would have been much better, reared from infancy in a similiar place and with similar surroundings. Nursed by an ignorant, low mother, possessing none but the vilest instincts, who in turn draws largely for her information upon the stock possessed by a drunken husband, the child's impressible mind soon absorbs its daily lesson of immorality and crime without even a thought of anything better. Shall we blame that child for his acts? This is a social problem which all can solve correctly at once. A difference of opinion can hardly arise upon the subject. Some will here put the question:—"But suppose the child has good parents and good surroundings and then goes to the bad as is frequently the case? How will you account for that?" Here we are brought to the heart of the matter and must account for it if possible.

Upon the question of good parents and good surroundings, there is an opening for differences of opinion. A girl or a boy may be well fed, well clothed, sent regularly to school and carefully housed, and yet be in a state of absolute starvation for the very food upon which alone nobility of soul, greatness of heart, grandness of mind, and all other virtues are fed—and that is love. Not the love which corrects with severity nor yet that which indulges with weakness; but the love that watches the little opening human flower from its birth to its cradle, thence to its books and thence to its stronger adult development—which studies its needs and notes its necessities. Mothers do not make good children with the rod nor do fathers with a frown. How many of you after a hard day's work, are willing to devote an hour or so to PLAY with the child or children? It knows nothing else. As a little kitten will stop lapping her milk to play with the string which you draw across the floor, so will the child leave almost everything for a romp with its father or mother. In these romps and during these moments of recreation the great lesson of love is learned by the child. This close companionship makes the bond between parent and child which results in the future acceptance of advice and guidance. Perhaps you are naturally a dignified person and unaccustomed to play, so when your infant first came to you were you unaccustomed to its care; but you did not for that reason allow it to go uncared for. Perhaps you are harrassed by matters in your daily life which do not go altogether as you would wish them to; but the recreation will be of quite as much benefit to you as to the child. Your sleep will be the sounder and your dreams the sweeter for it. How many mothers there are who scrupulously care for the physical and outward morals of their offspring, but withhold from them that love and personal intimacy which builds up perfect confidence between them! How many fathers there are who provide all the needful clothes, food, instruction, and indeed money his child can wish, and yet withholds from it that loving companionship which is never forgotten through life and which is the main spring of so much that is good and noble! You have a bad boy, have you? Well! who is responsible?

RURAL NOTES AND QUERIES.

More Money for Fish.—The United States Fish Commissioners have asked Congress to appropriate $17,000 for continuing the propagation and introduction of fish into the public waters of the United States. While we have no particular objection to seeing our lakes and rivers stocked with fish at the expense of the public and for the accommodation of certain sporting gentlemen, and give employment to fish breeders and fishermen, still when our Western farmers asked for a like sum to aid them in fighting insect foes, which destroy millions of dollars' worth of their crops annually, Congress refused it. We hope they will remember this, if Prof. BAIRD, the Chief of the Fish Commissioners obtains the appropriation he has asked for. We also understand that the said Fish Commissioners object to any restrictions being placed upon the Fishermen who slaughter unnecessarily millions of the finny tribe in our larger lakes and rivers, as it is claimed that a new stock can be put in by the fish breeders for a less sum than it would cost to enforce restrictive laws. This may appear very plausible from the fish breeders standpoint; but those who furnish the funds to keep these gentlemen employed, may think differently.

Rates of Postage in Canada.—If the present high rates of postage on seeds, plants, and cuttings and other third-class matter is continued, our seedsmen and nurserymen may find it cheaper to send their mailable stock over to Canada and pay the postage from there instead of putting it into the mail at home. In Canada the rates of postage on third-class matter is only four cents per pound, while in this country it is sixteen, and we can take advantage of the treaty between the two countries in this way: Seedsmen and others, having large quantities of third-class matter to send out can send it to a Canadian post-office, prepay the four cents a pound, and from thence it will go free to any part of the United States. This has already been done by some of our seedsmen, and unless a change is soon made in the postal treaty between the two countries it will soon be practiced to an extent which must show our Congressmen that they have made a mistake in increasing the old rates one hundred per cent.

Flax Culture in the West.—Increased interest is manifested in several of the Western States in regard to flax culture which, we believe, will be of vast benefit to the farmers in the regions entering into the culture of this crop. It requires a rich soil, and nowhere else in the world is there such a vast area of it as in the West; hence the farmers there should take advantage of these circumstances and reap a profit therefrom. In regard to the introduction of this plant into America, it is supposed that the first seed was brought over from England as early as 1629, soon soon after the fiber commenced to be used and woven by hand, and about fifty years later factories were erected in Massachusetts. It is time, however, that we were enabled to raise all the flax required for home use, either for thread or cloth, and that the importation of Irish linens cease.

Interesting to Scribblers.—It is reported that a river of genuine ink has been discovered in Algeria. It is formed by the union of two streams, one coming from a region of ferruginous soil, the other draining a peat swamp. The water of the former is strongly impregnated with iron, that of the latter with gallic acid. When the two waters mingle, the acid of the one unites with the iron of the other, forming a true ink. If somebody would only find a river of printers' ink, then publishers might rejoice as well as editors.

Dogs and Sheep.—Some men will keep a dog or dogs—that's a settled question. Now, let those who desire to keep sheep also keep dogs, but of breeds which will protect their flocks. A good well trained shepherd dog is an animal worthy of the affection of mankind and especially valuable to the farmer, as he can usually do more work of a certain kind than a man, and will guard flocks against intruding curs of low degree.

Glazed Butter.—We have heard considerable about "gilt-edged" butter of late, but a later invention is glazed butter. The butter is first put up in nice rolls, and then just before being sent to market a little sugar is dissolved in warm water and then a small quantity of the mixture poured over each roll, or just enough to melt the surface and leave a glossy polish.

Castor Oil Beans.—It is stated that Kansas now leads in the culture of castor beans, and her last year's crop was not less than $250,000. Grasshoppers refuse to eat the leaves of this plant, and as it grows thriftily and yields well on the prairies, there is no good reason why Kansas should not supply the world with castor oil.

RURAL BREVITIES.

THE demand for stock and feeding cattle is reported to be steady and satisfactory in the Western States.

THE potato beetles are coming to the surface in great numbers in New Jersey, and cutting off the potato sprouts as soon as they appear above ground.

A WESTERN cotemporary recommends getting the best of everything, but what puzzles most people is to know how to distinguish as well as to find the means to purchase it.

IT is said by those who have tried it that Jute grown about a cotton plantation will protect it from the cotton worm. Will some of our readers try it this season and report results?

WE have inquiries for Sonerat's jungle fowls, also Fin-back jungle fowls, Toulouse geese, and several other breeds of birds. Will some one having these breeds for sale make it known through our advertising columns?

WE notice that one of our contemporaries is greatly distressed for fear the late A. T. STEWART did not make money-getting pay. We think a man who could accumulate fifty to one hundred million dollars in half a century was paid pretty well for his labor.

THE Dutch Government has adopted a plan for draining the Zuyder Zee at an expense of nearly $50,000,000. The area to be drained is estimated at 759 square miles. When we run short of land, the Dutch will come over and drain the Dismal Swamp or Lake Erie for us.

PRINTERS' rollers are manufactured from a composition consisting mainly of glue and molasses, and this has been found to be an excellent manure. Large quantities of the old waste material can sometimes be obtained at the manufactories in our large cities, and it should not be permitted to go to waste, as it is valuable for composting with muck or common soil.

BUSINESS NOTICES.

MUCH of the White Lead sold as pure is adulterated from 20 to 50 per cent. Every keg of Eckstein, Hills & Co.'s **"Phœnix" brand White Lead** is warranted *perfectly pure*, white, fine and durable.

WHITTIER'S CENTENNIAL HYMN.

Sung at the Opening of the International Exhibition, Philadelphia, May 10, 1876.

Our fathers' God! from out whose hand
The centuries fall like grains of sand,
We meet to-day, united, free,
And loyal to our land and Thee,
To thank Thee for the era done,
And trust Thee for the opening one.

Here, where of old, by Thy design,
The fathers spake that word of Thine
Whose echo is the glad refrain
Of rended bolt and falling chain,
To grace our festal time, from all
The zones of earth our guests we call.

Be with us while the New World greets
The Old World thronging all its streets,
Unveiling all the triumphs won
By art or toil beneath the sun;
And unto common good ordain
This rivalship of hand and brain.

Thou, who hast here in concord furled
The war flags of a gathered world,
Beneath our Western skies fulfill
The Orient's mission of good-will,
And, freighted with love's Golden Fleece,
Send back its Argonauts of peace.

For art and labor met in truce,
For beauty made the bride of use,
We thank Thee; but, withal, we crave
The austere virtues strong to save,
The honor proof to place or gold,
The manhood never bought nor sold!

Oh make Thou us, through centuries long,
In peace secure, in justice strong;
Around our gift of freedom draw
The safeguards of Thy righteous law:
And, cast in some diviner mold,
Let the new cycle shame the old!

The Story-Teller.

ARTHUR SETON.

SCENE—A country tavern near the city of C——; a young man having a great-coat over his arm, a light bag in one hand and a stick in the other, presents himself at the door and asks languidly if he can be accommodated with a bed and sitting-room.

"A bed, sir!" replied Mr. Hunter, a big man with red face and gray hair, "yes, I think we can manage to give you a bed."

"And a sitting-room?" continued the stranger.

"A sitting-room!" echoed the landlord, in the tone of one who is considering some great undertaking; "one minute, if you please, sir;" and Mr. Hunter disappeared into a little room immediately adjoining the bar, there to hold counsel with some second person, the upshot being that in a few minutes Mrs. Hunter, Miss Hunter, and a few Hunters just out of the crawling state, issued forth, bearing respectively working materials, socks in process of being mended, tin whistles and decapitated dolls.

"You can have this room all to yourself, sir," said Mr. Hunter, triumphantly.

"You really must not let me disturb you," rejoined the traveler.

"Don't you mention it," replied the landlord, in a tone which was at once genial and confidential. "We would not turn a customer away from our doors. You see, we do not have much parlor company."

"And this is the only room you have disengaged?"

"Well, yes, sir; this is the only room at present. Susan, make a fire for the gentleman."

The traveler having as he thought shown a due amount of consideration for the comfort of Mrs. Hunter and the young Hunters, was glad enough to enter the apartment before alluded to and to draw close to the fire the one dilapidated arm-chair.

Arthur Seton, lawyer by profession and literary by choice, was not really more than thirty, though he looked considerably older; for the dark hair and beard were streaked with gray and the face, with its regular, handsome features, wore habitually a look of such intense mental weariness as would have saddened the most hopeful man had he looked on it for long.

For some time he leant indolently back, his hands clasped behind his head; at length he rose and took from his bag a locked-up diary, which he opened, and availing himself of pens and ink which stood upon the table, made the following entry:

"*Oct.* 17, 1874.—Got up late. Called on the Brianstones; George was out. Had a pleasant chat with Annie; went, like a fool, to G——, and, like a fool, haunted the Q—— House. It looked just the same as in the old, dear days, but I heard children playing in the garden. The house is let, I believe, to city people. Came back to C——; dined with the Frasers; went to the club. Got back home late. Wrote a column —— Review. A weary, weary day. Shall I never know a moment's forgetfulness?"

He then drew from the leaves of the diary a letter written in a delicate feminine hand and addressed, "Arthur Seton, Esq." This letter he regarded with a long, sad, loving look; then, resting his head on his hand, he read it through very slowly. It ran as follows:

MY DEAR ARTHUR:—If you will be so suspicious, so jealous and exacting, I cannot see how we are ever to be happy. Faith without works is dead, and love without faith is no blessing, but a weary burden. I am tired of cross words and dark looks. Some women I believe, like the feverish excitement of quarrels, but I only wish for peace. This miserable, petty jealousy is quite unworthy of you. Do try and put it from you; and remember that love, once wounded, is sometimes hurt past hope of recovery. I received your article quite safely, but I cannot speak about it now. You have made me too sad, too weary, and even a little indignant. Yours affectionately,

ALICE CLAREFIELD.

He replaced the letter, closed the diary, took up his pipe, and began smoking. The early part of this day had been fine and mild, but toward the afternoon the sky grew all at once leaden and the wind shifted to the north-east; now the wind was rising and the rain was falling—a cold, penetrating, impetuous, determined rain. The country, which but a brief while since had looked so fair in a bland October sunlight, now seemed a thing to shudder at. The dun-colored woods, wet and forlorn, seemed to have no hope of any returning summer and to know the utter desolation of the end. It was impossible indeed to imagine that in the green, soaking fields, where now a few cows were huddling together and lowing disconsolately, glad children could ever have tossed each other in the warm, sweet-smelling hay; the rain drove drearily against the window, and the wind shrieked round the house and occasionally thundered in the chimney; and the wagons lumbered by or drew up in front of the door, and while the drivers availed themselves of the tavern's hospitality, the large, broad-backed horses beat the miry roads with heavy hoofs. There was not much to occupy a man's thoughts in the dreary little parlor. A great variety of whips hung against the wall, and over the mantel-piece was a photograph of a fine chestnut mare. Under it was written, "Being Mr. Hunter's favorite mare, who died in her fourteenth year." A short way on was a photograph of Mrs. Hunter in full holiday costume. A large Bible and photograph album lay upon the table.

Seton mechanically opened the album. Here was a tinted photograph of a young girl with profuse gold ringlets, a large, round face, and meaningless blue eyes. Under it was written, "Presented to Miss Hunter by her affectionate friend, Isabella Grant." Poor Isabella! How many honest country hearts, I wonder, had she caused to ache while the hair was gold and the buxom figure still shapely!

For want of something better to do Seton began to write a letter; but he made slow way with it. For minutes together he sat holding the pen listlessly in his hand, leaning his arm wearily upon the table listening, as we all listen when alone, to what sounds may be going on near us, from a feeling which is not curiosity, but more overpowering.

Suddenly what must have been a very light vehicle dashed swiftly down the road and drew up with great precision at the door of the house, while the voice of a new-comer became audible. Seton, however, could only catch a few disconnected words, such as "Caught in the rain—delicate—shelter—a closed carriage."

Then the door opened, the landlord presented himself upon the threshold and said, in a very polished manner, "If you please, sir, a young lady driving over to Covington in a light, open carriage, has been caught in the rain, and her servants want to know if I can give her a sitting-room while he drives back for a closed carriage."

"And this is the only one you have?" rejoined Seton. "Oh! ask her in by all means. However, I am sorry the room smells so of smoke," he added, knocking the ashes from his pipe.

"Don't you mention it, sir, and thank you very much," replied the landlord, retiring.

In another moment the door opened again, and the unexpected intruder entered—a lady, tall and very graceful, having a pale, Madonna-like face, and gold hair shining like an aureole round a small, classical head.

Seton's face had grown white to the lips, and his voice quivered perceptibly as, extending his hand, he said—

"This is a very unexpected meeting."

"Very unexpected," echoed the lady, removing her wet mantle, and sitting down on the worn leather sofa. The recognition had been mutual, but women as a rule, are more self-composed than men.

"Let me recommend this chair," said Seton, laying his hand upon the one from which he had just risen.

"No, thank you; I prefer sitting away from the fire."

"I am sorry the room should smell so of tobacco," observed Seton, after a pause; "but you see, I did not expect the pleasure of a visitor."

She smiled a rather forced smile by way of answer, and Seton folded elaborately and put into an envelope a sheet of blank paper.

"The country is very beautiful around here," he observed, writing his own name, with great care, upon the envelope.

"We have only been back from Europe about six weeks," she observed, after a pause. "Mamma has taken a house near C——. I was driving over to Covington this morning and I was caught in the rain and induced to ask for shelter here."

"And how is Mrs. Clarefield?"

"Mamma is quite well, thank you." Then, after a pause, in a full, sweet, low contralto voice, which had a ring of infinite pathos, "Are you stopping here?"

"Hardly," said Seton, with an assumption of gaiety in his tone; "but I'll tell you all about it. My friends kindly took it into their heads that I was sticking too closely to work—that I wanted fresh air and exercise—so they bound me over, on my word of honor, to walk from C—— to this place daily. I acquiesce in everything now, so of course I acquiesced in this, and this is my first day of hard labor and imprisonment."

"But you used——" began the lady; then she colored a little, and seemed unwilling to finish her sentence; "you used to be so fond of walking."

"But a man changes a good deal in three years," he replied wearily.

Then came a long silence, broken at last by the pop of an ale cork, at which they started as if an explosion had taken place.

"Oh! you grow used to it in time," observed Seton.

It seemed impossible to imagine these two persons, more formal to each other in manner than the most distant acquaintances, could ever have been passionate and devoted lovers. What thoughts had they, I wonder, as they sat together and yet so far apart, of the old days wherein love led them and all was well? It would weary you, dear reader, and to no purpose, were I to set down here the dreary commonplaces with which these two tried to beguile the time for over an hour. At length, worn out by the arduous effort of trying to entertain each other while their thoughts were so far away, they took refuge in silence; and the wind roared, and the rain lashed the window, and the dusk came on prematurely, and Seton, looking out on the cheerless prospect, shivered as with the cold. Then that other person in the room rose very quietly and stirred the fire into a blaze, and resumed her seat on the sofa.

"No, you shouldn't really," said Seton, not turning round, however, though with a look of great pain upon his face. It is wonderful what suffering some small, common-place word or action may cause us. What vistas of impossible joys, again, may they not open up to us!

"I suppose the carriage will soon be back," said Alice presently, and speaking with effort, "and our new coachman drives so fast, too."

"Yes, and your term of imprisonment will soon be up," rejoined Seton, resting his arms upon the mantelpiece, and examining with critical interest the photograph of Mr. Hunter's defunct mare.

"How the time passes," said Alice, in a low voice, as if speaking to herself. Then with sudden energy, "I cannot tell when we shall meet again. Before we part, answer me one question. You are looking worn and weary—are you happy?"

Now he stood before her, and through the dusk and the firelight his eyes flashed on her, as he said, in a low, harsh voice—"From your lips this question is an insult."

"Of which you need not fear the repetition," she rejoined promptly, with cutting formality.

"No, it can't end like this," he went on. "Do you know, ever since you have been here, I have bitten my lips through and through to keep them from speaking of the past. This meeting was not of your seeking, and it seems to me unmanly and dastardly to take advantage of this opportunity."

"We are sometimes so mistaken," she said hurriedly, but her words were hardly audible, and he continued—

"Alice! you have treated me very ill. On that day, now three years ago, when I gave you my love, and believed in yours, I was frank with you. I told you how wild and irregular my life had been, and how full of faults I was. You reclaimed me—you transformed my days—you made my life, all at once, pure and fair; and then, because some thorn in my love hurt you, you threw it all away, and left me to perish miserably." She would have interrupted him, but he silenced her by a gesture and went on; "and now when we meet, after three years, you ask me if I am happy? If I loved you once, I shall love you forever. Do I look happy?"

"I think there were faults on both sides," she said quietly.

"Yes, perhaps there were," he replied: "but I was reading your last letter over only to-day. Oh! how terribly bitter it was!"

"And have you forgotten your answer to that letter?" she said, almost passionately, her voice quivering, and her breast heaving.

"I don't remember it word for word," he returned quickly; "I know it was written on the impulse of the moment."

"But I have it by heart;" then, very slowly, "you said, if your love, in its heart and strength was a little exacting, mine was cold and tideless; in fact, no love, only a slow, sluggish affection. You almost thought I was right, and that we could not be happy. I am naturally proud," she went on; "but a woman with less pride than I have could not have acted differently. Only one course was left me—to be silent."

"Well it is all over now," he rejoined; "we shall never, never meet again."

"You won't take my friendship, then?"

"No, thank you; you are very generous, but I do not want this gift."

He threw himself wearily into a chair, and for some time there was a complete silence. Hope is so subtle, so intangible, that we are often only aware of its existence when it has ceased to be. Arthur Seton looked upon himself as a man quite without hope. It seemed to him that his life could hardly be more gray and desolate than it was, yet who shall say what feeling, of which he was not directly conscious, may have sustained him through the last three years. Now everything seemed gone—there was nothing but death left.

Presently carriage wheels came down the road; carriage lamps flashed through the dusk, and grew stationary opposite the window. Mr. Hunter bustled in, and announced, in a tone of triumph, that the carriage had come for the young lady, and done the distance wonderfully quick. Then the door shut, and they were alone together again.

Very softly and distinctly Seton heard her say his name, "Arthur;" but he did not move. It seemed to him that he would keep back all his love, clinch fast his heart till she were gone, and then die swiftly of the pain.

"Arthur, I am waiting, dear. Won't you come? Are not you going to forgive me?"

Now he rose and groped his way toward her like a blind man. She stretched out her hands and drew him to her. Then he bent down. She raised her face, and the hearts and the lips, so long disunited, came together in a prolonged passionate kiss. He knelt down by her, her head sank upon his shoulder, and for several minutes they remained thus, lost in love's profound peace and mystery. They were soon disturbed by the landlord's summons, and as Arthur folded Alice's mantle round her, she said, half shyly, "You are coming back with me to see mamma, are you not?"

"May I?" he answered, great joy evident in face and voice.

So the bedroom which Mrs. Hunter had been preparing all the afternoon, and of which she was not a little proud, remained unoccupied; but the payment was lavish, and the day's labor was not regretted.

Oh! that never-to-be-forgotten ride to C—— through the wild, windy evening. Between it and the last three years lay all the pains of hell. And the rain ceased, and strange voices were abroad in the wind, singing jubilantly over love risen and redeeming. And the clouds drifted away and the pure, sweet, windy moonlight quivered over wet fields and trees, and seemed love's benediction.

I leave you to imagine the arrival home. Arthur had always been a favorite with Mrs. Clarefield, and in the old days of quarrels she used always to take his part. When dinner had at last been disposed of, Mrs. Clarefield pleaded household duties and went to her bedroom. There she sat down before the bright fire and wept profusely, dear soul, over the happiness of her children. And down stairs these two were very quiet. To them love was a solemn thing, and they were solemn lovers. And the wonderful, priceless moments went silently and swiftly by.

Presently, however, Alice said, looking up in Arthur's face, and pressing his hand very tightly, "You won't continue your walks this week?"

And he answered, with a bright smile, "But I have pledged my word of honor to do so."

"And I command you to break it."

Yes, he did break it; but none of his friends brought it as an accusation against him that for once in his life he had broken his word of honor!

DOT'S VISIT.

A STORY FOR THE LITTLE FOLKS.

BY EBEN E. REXFORD.

"GOOD-BYE, little DOT," Grandma said, as she stooped down to kiss the round, pink cheeks that were held up for a parting kiss. "Come and see Grandma before long, won't you, little Dot?"

"'Es," answered Dot, in her birdlike way, much the same as a robin would talk to its neighbors on a cherry tree, if they were eating cherries together. Dot's cherries happened to be bread and milk. "'Es, I'll tome an' stay one, two—ever so many days."

"That's right," said Grandma. "Don't forget now, will you?" and with another kiss she started for home.

Dot sat down and watched her till she was out of sight, wondering how many thousand miles away Grandma's house was 'way off in the other end of the world, Dot thought. Her ideas of matters and things were somewhat vague, sometimes. Never having been any farther away from home than to Grandma's, her knowledge of the world was very limited, and she rather imagined there wasn't much in it except the place where Grandma lived, and her own pretty home. But very soon she got tired of puzzling her little head over the problem, and turned her attention to her bowl of bread and milk.

The next afternoon Dot was out in the garden at play with Spot. Spot was her kitten; and a pretty little thing she was, too—white all over with the exception of a cunning black spot over one eye that gave her the most knowing look imaginable. Dot loved her kitten very, very much. She would say, "I love mamma ever so much, an' papa a bushel; but Spot I love—oh, I love Spotty *lots!*"

And Spot returned the affection of her little mistress, for she followed her all day and slept with her at night, and very often Dot allowed her a share of her bread and milk.

I don't know what put the idea into Dot's head, but she determined to pay Grandma a visit that afternoon. She never once thought of the possibility of her losing her way. Hadn't she been there, and hadn't she watched Grandma over so many times and knew just the way she went?

So, calling Spot, Dot crawled through an opening in the garden fence and trudged off along the grassy highway, singing and talking to the kitten, who trotted along by the side of her little mistress, seeming to enjoy the walk quite as much as Dot herself.

Dot went along very slowly. Her eyes caught sight of too many strange and beautiful things along the road to allow of her getting over the ground very fast. Here she found a pretty flower and there a curious old stone, covered all over with moss as soft and green as the velvet on papa's easy chair at home. Then she heard the birds singing away up in the trees, and wondered why they weren't taking their afternoon nap.

Pretty soon she came along to a place where a company of blackbirds were holding a concert, and of course she had to stop and listen to them, and when they had finished she thought it only fair that she should return their favor, so she sang them one of her little songs that was almost as birdlike and silvery as theirs.

Then Dot trudged on again. Pretty soon she got tired, and sat down to rest for a little while. Then she happened to catch sight of some pretty red flowers growing just a little way off from the road, and went to get them to carry to Grandma, for she loved flowers very much, Dot knew. And when she had, with a great deal of labor, broken the flowers from their stems, she spied some lilies farther on, looking like great cups of gold held up to catch the sunshine of the summer day. She determined that she must have them, and started off to get them. Oh, they were *such* beautiful things when she came near to them, such great, golden blossoms, speckled all over inside with velvetty spots of brown. But they were higher than her head. She tried to reach them, but her little arms were too short.

At last, tired out by her fruitless efforts, she sat down under them and laid her curly little head on the moss that made a beautiful carpet for the ground. Spotty crept up and nestled closely down in Dot's arms and began to purr. And in a little while the blue eyes of the little traveler were half closed; in a moment more she would have been asleep; but Spotty happened to see a bird flying close to the ground and away she dashed in hot pursuit. Dot sat up, her eyes wide open in an instant, and concluded she ought to follow Spot, and see what the result of the chase was.

She ran a little ways and reached the prettiest little brook she had ever seen, and found Spot on the banks in great trouble. The bird had flown across, and how to get over without wetting her white feet was a problem the kitten was unable to solve.

"Oh, oh!" cried Dot, in great delight. If there was anything she liked to do it was to splash and wade in brooks. She stepped in and danced about to the great detriment of her clean dress, sending the water splashing high over her head in her very enthusiastic demonstrations of delight, while Spot looked on with evident disapproval.

"Nice, nice," said Dot to Spot kicking about, and sending sand and mud from the brook-bottom flying in every direction. "Oo ought to wade, Spot."

But Spot couldn't be induced to wade. Dot kept up her sport for half an hour, and then sat down on the bank, all tired out. She leaned her head down by Spot, who was much relieved at having her mistress safe on dry land again, and before two minutes had gone by she was fast asleep.

"I wonder where Dot is?" her mother said, along in the afternoon, looking for the first time that all was still in the garden. "Dot! Dot!"

But Dot didn't answer.

She went out and sought through the garden without finding her. Then she saw the opening in the fence and print of little feet in the sand outside. She followed on the crooked, halting trail, and found, at last, where it branched off from the road. Then she found the broken stems of the red blossoms and farther on the footprints about the lilies. She went in, wondering how much farther her little girl had wandered. All at once she caught sight of her under a tree by the brook, fast asleep, with Spot curled up like a ball of white wool beside her.

"Dot!" she called softly.

Dot opened her blue eyes sleepily and sat up, half awake.

"I dess we've got to Dranma's, Spot," she said, rubbing her eyes open with her chubby hands; "we's tired most to deff, ain't we, Spot?"

And that's the way Dot went to visit Grandma.

VITAL STATISTICS.

I attended one of the Cooper Institute lectures. The subject was the "Atmosphere," and the speaker read a tabular statement of the condition of the air in school-rooms, lyceum halls and churches, that made my hair stand on end.

Vital Statistics will be the death of me. My father understood them as little as did his stone wall, and lived to be ninety. When I was a boy I used to eat fat pork, year in and year out, lie on feathers, and have a regular set-to with apples, doughnuts and hard cider before turning in at night, and then sleep like a Polar bear. I was as jolly as a Spitzenberg apple, always bursting the buttons from my jacket, to get laughing and growing room.

Did you ask about the sleeping? Well, I slept with my big brother, under a leaden heap of woolen comforters, upon a bed whose billows let us down into a vortex and ridged round us like a brooding hen. Our chamber was a seven by nine cubby, six feet high, out of which the roof sliced a section, so that the boy nearest the wall had to stoop low or get a sounding bump, and our window was often hermetically sealed with ice and snow for days together. Now, why were we not suffocated, like French lovers? Why did father's voice, calling us by starlight, make us fling off the blankets like a colt kicking a dashboard, tumble into our trowsers and cowhide boots, and "pile" down stairs like a charge of cavalry?

I never could understand chemistry, but it's my opinion there's a great deal more of this dreadful carbonic acid gas afloat than there used to be and if our furnaces and hot-air stoves don't stop puffing it into our faces, I expect we shall wake up some morning and find ourselves all asphyxiated. Then there'll be a pretty fix, with nobody to dash on cold water, and nobody to summon the Coroner!

It positively hurts one's feelings to see the "heathen Chinee," sleeping thick "as leaves in Valambrosa," fly in the face of Hygiene and go on age after age to multiply as the sands of the sea. Then consider those German peasants who repose summer and winter between feather beds weighing from fifty to one hundred pounds, sandwiched between Pelion and Ossa, without sheets, and these beds descending from father to son for generations. Is not that a powerful way to conserve the *odors*, not to say the *memory*, of one's ancestors, especially as these beds are religiously shut up in unventilated alcoves during the day?

Then there's the *food* question. One prophet comes in and puffs out his oleaginous cheeks at me as he insists that people are dropping into their graves from want of fat;—that I must eat fat, lubricate with fat, and ooze fat at every pore. He tells me, with insinuating oiliness of speech, that the only reason people ever reach the death point is because they will keep shivering over the brush fires of vegetarianism. I immediately order a roast of pork, with apple sauce, for dinner, as a sort of hickory back-log for my interior hearth-stone, when in rushes the slandered vegetarian, warning me, with harrowing earnestness, that pork is a very fricasee of the Evil One. He goes on to show what a disgusting animal the hog is, and how swine-abjuring nations are beloved of the gods and never have dyspepsia.

"But," I exclaim, ruefully, as savory odors from the kitchen steal in, "what is to become of my dinner?"

"Nothing easier," replied my friend; "just toss the roast into the gutter, where it belongs, and dine on the apple sauce."

And by this time swine and scrofula are so blended in my imagination that I feel as if I had swallowed a bolus of infection, and gladly follow his suggestion.

With some the hobby is not *qualitative*, but *quantitative*, and they slip away your haunch of venison or leg of Southdown just as you are inhaling the exquisite aroma of the first mouthful, blandly offering to weigh all your comestibles with Lilliputian scales, and your drinks with a minim glass.

And here comes a new savant, Dr. Fadies, who exhorts me to shrivel up my stomach, like a dried rennet-skin, with his Hunger-Cure. Did anybody ever hunt up the vital statistics of Leyden during her famous siege, or of other famine-striken places? What a low death-rate they should have shown! But, meanwhile, Dr. Aqua Pura stands at my other ear, insisting that in water alone lies the balsam of eternal youth, and the prophets of the whole bath genus, medicated, sun, compressed air, magnetic, etc., button-hole me in the street and thrust marvelous testimonials into my pockets.

Then the *drink* question perplexes me. Here I have just put a filtering apparatus, at great expense, into my cistern, in order to drink the pure nectar of the heavens, although I have in the yard a well of as crystal-clear water as ever dimpled on a pebbly bottom. Of course it was my luck, just after, to stumble on another "vital statistic," which told me the death-rate in soft-water districts is 4 per cent. greater than in limestone regions.

The hydropathist tells me that coffee is a nerve exhauster and brain enfeebler, while the turbaned son of Mohammed lifts devoted hands and exclaims: "Oh, coffee! thou dispellest the cares of the great, thou bringest back those who wander from the paths of knowledge. Thou art the beverage of the people of God, and the cordial of his servants who thirst for wisdom." But then Haroun had never studied hygiene.

Now if these apostles of reform would all speak the same word; but each has an interpretation—a revelation, and four wild horses could not rend one's limbs more effectually than they rend one's opinions. Oh! if somebody would but calculate all the winds and cross currents of medical belief, and build at their focal center an oscillating chamber like that which Bremer has been seeking for qualmish warriors, how gladly would we creep into it and be at rest! But, meanwhile, from *Vital Statistics* deliver us! Pendulum.

A FEW SPRING THOUGHTS, AS OTHERS SEE IT.

Summer is coming! We hear the sweet prophecy in the song of the blue-bird and feel it in the softened touch of the south wind; and soon we shall see, in springing grass blade and opening blossom, surer evidences of the approach of that welcome guest. And when the golden days are come, how sweet to be free to enjoy them; free, with the careless freedom of a child, or the lambs sporting on the hillside! Ah me! *Must* the sweet pictures all be blotted out by visions of heated, wearying toil? Not much time for the average farmer's wife to enjoy the beautiful and poetic. Her part is eminently practical. Strains of sweetest bird-music may waken her in the fresh, early dawn, but only to remind her that another work-day is awaiting her; the morning brings light to work by—that is all. Hard for her to pursue the dull round of duties, generally unaided, and, alas! too often unappreciated, while every blossom-scented breeze that fans her heated forehead seems to whisper lovingly, come away!

Oh! how pleasant to stray off into the wild, unfrequented places, and wandering at will over moss-grown rocks and under wide-spreading forest trees, to feel that sweet sense of isolation—a solitude, which yet is not loneliness—a feeling that you, and the trees and birds, and all the dumb things around you, animate and inanimate, somehow belonged together, and that the great, toiling, planning, sinning, suffering world, were something afar off, and altogether apart. And then how hard to feel that all such sweet trifles must be crushed out of one's life, and to realize that, what, to the dainty daughters of wealth and pleasure, means beauty, and the opportunity to enjoy it to the utmost, to you only means a season of toil which shall know no cessation, until leafless trees and chilling forests shall tell us that Winter has come again. Very, very hard; and a thought which must sometimes bring a little bitterness into the meekest heart. Yet, come to us, sweet golden summer! Come, with waving grass, and changing cloud, and singing rivulet! For thou shalt speak to us in sweetest language of the "green pastures and still waters of the "land that is very far off," where, with tired heart soothed into infinite peace, and tired hands folded in infinite rest, "we shall be satisfied."

Jonesville, 1876. Ermengarde.

RUSSIAN DINNERS.

It is worth while to go to St. Petersburg, if only to eat a Russian dinner. Like all Northern nations, the Russians rejoice in raw food and startling contrasts. Some of their favorite soups are eaten cold, and their tea is drank so hot as to be impossible to an ordinary palate. As a preparation for dinner, some of a long list of relishes are chosen and washed down by strong liqueurs. You may take caviar, raw radishes, or even, like a seasoned Russian, sevo-herrings, raw smoked salmon, raw dried sturgeon, raw smoked goose, cheese, butter, or all of these delicacies. They are followed by cold iced soup of "kyas" (a beverage made of fermented rye), with pieces of herring, cucumber and meat floating in it; or another cold soup of a green color, or, what is really good, "stchi," a cabbage soup, to be eaten with sour cream, or fish soup. For your next course—fish—you are recommended to select either Rastagai patties, very much like muffins with fish, or "solianka"—a dish composed of fish and cabbage. By this time you should be broken in sufficiently to face with equanimity both the words "porosionok pod knerenom," or their manifestations in the flesh, namely, cold boiled sucking pig, with horse-radish sauce. You may then add the really delicious chicken or veal cutlets and roast mutton stuffed with buckwheat, passing on to capercailzie, riabchick (a kind of grouse), or double snipe, with salted cucumbers for salad, and various sweet dishes, including Nesselrode pudding in the land of its birth. If digestion requires it, you may return to cheese and caviar; but if indeed you have succeeded in eating all these dishes with relish, there can be no apparent reason on the scores of digestion why you should not go on again with the cold soup and spend a few hours more or less in dining in a circle. You ought meanwhile to be drinking the wines of the Crimea, the Caucasus or the Don, but you will not find it easy to get them unless you pay for them under the names of Bordeaux, Burgundy, or Champagne. It is far better to try the cider, perry, or raspberry klas, or the cool Lompopo. Coffee, yellow tea, liqueurs and cigarettes complete the repast.

CHINESE BARBER-SHOPS.

The Chinese barber-shops in San Francisco are more numerous than those of any other calling. On Dupont street, between Sacramento and Clay streets, there are not less than fifty basement apartments devoted to tonsorial operations. At first blush the wonder arises why so many of those establishments are needed; but stand on the street in the quarter and glance at the head of each passing Chinaman and the mystery is dispelled. Among them no toilet is considered complete which does not involve a shaving of a greater portion of the head and neck, a thorough cleansing of the eyes, ears and nostrils, and even a trimming and pencilling of the eyebrows and lashes. Razors, probes, and lances of peculiar construction, are among the instruments used by these skillful artists. The process of shaving and cleansing is necessarily a long one, and when a Chinaman emerges from one of these shops he may be safely counted as thoroughly clean—above the shoulders. The combing and braiding of cues consumes no little time. Every Chinaman of adult years regards an occasional tonsorial experience as a sacred duty. The closely-shaven head must be scraped over often to preserve the appearance so much desired, and all this, in a place so populous as the "quarter" in this city, requires the constant service of a numerous force. All the barber-shops of the Chinese have a peculiar sign at the door-way indicative of the occupation. It is a four-legged frame, the legs painted green and the top knobs red.

BOOKS RECEIVED.

From G. P. Putnam's Sons, New York:
The Physical Basis of Immortality. By A. B. Blackwell. [Cloth.—pp. 324. Price $1.50.]

James R. Osgood & Co., Boston:
The Complete Poetical Works of J. G. Whittier. [Paper.—pp. 293. Illustrated.]

Evening Service in C, Henry Wilson.

Sabbath Reading.

ONE DEED!

If I might do one deed of good,
One little deed before I die,
Or think one noble thought that should
Hereafter not forgotten lie,
I would not murmur, though I must
Be lost in Death's unnumbered dust.

The filmy wing that wafts the seed
Upon the careless wind to earth,
Of its short life has only need
To find the gem fit place for birth;
For one swift moment of delight
It whirls, then withers out of sight.

[*F. W. Bourdillon.*

HOW TO MAKE SUNSHINE.

"Sunshine! why, we have plenty of that every day," says a dear little friend at my side.

Yes, we certainly have plenty of it outside of us, and it is the most beautiful thing in the world, because it makes everything pleasant that it looks upon. Do the young people who read this paper ever think how beautiful and how useful the sunlight is? how it wraps the world in its bright mantle, till the earth's old heart grows warm and young again, and the grass and flowers spring forth? how it wanders all over the world, into every nook and corner, with its cheerful smile? how it glances in the trees and plays through the thick branches, till the little birds twitter and warble with delight in their leafy nests?

But it is another kind of sunshine I mean we are to make. Your own heart is the sun, and your home is the little world which you are to fill with happiness.

Do you suppose the sun ever sees anything dark with that great, bright eye of his? why, no; for the moment he looks at anything it grows bright, and nothing can be dark where he is looking. Just so, if you always carry a heart full of sunshine with you, everything will seem beautiful and bright. But if your own heart gets clouded with impatience or discontent you will find the pleasantest place on earth very gloomy and disagreeable.

How different would our life be, if we were only determined, in spite of discouragements, to be cheerful and happy ourselves, and to add, by every possible means, to the welfare and happiness of those around us!

But can every one be happy who wishes it? Surely, every one desires happiness; then why do so many fail in the attempt to gain it?

Because they do not try in the right way. Our only way to be happy is the one in which God is happy, and that is by *being good* and *doing good*. Those who earnestly try this, never fail of success.

"But can *every one* be good?" says my little friend, thoughtfully, and with downcast eyes.

Yes, dear, every one can be good, by the help of God, who willingly gives the help of His Spirit to all who sincerely ask for it.—*Early Days.*

KIND WORDS—WHY USE THEM?

I. Because they always cheer him to whom they are addressed. They soothe him if he is wretched; they comfort him if he is sad. They keep him out of the slough of despond, or help him out if he happens to be in.

II. There are words enough of the opposite kind flying in all directions—sour words—cross words—fretful words—insulting words—overbearing words—irritating words. Now, let kind words have a chance to get abroad, since so many and so different are on the wing.

III. Kind words bless him that uses them. A sweet sound on the tongue tends to make the heart mellow. Kind words react upon the kind feelings which prompted them, and make them more kind. They add fresh fuel to the fire of benevolent emotion in the soul.

IV. Kind words beget kind feelings toward him that loves to use them. People love to see the face and hear the voice of such a man.

Kind words are therefore of great value in these hard times.

RESTITUTION.

You have defrauded your neighbor. You have done him an injury, not accidentally but on purpose. You have sought your own profit by inflicting a loss upon him. You have taken what does not belong to you but to him. You must then proceed to make restitution. Go at once. Go to-day, if you can. State the facts frankly and honestly. Acknowledge your wrong-doing, and repair the harm as fully as you can. It will cost you a struggle to do this. When, however, you have made up your mind to the struggle, you will probably find it easier than you expect. But whatever you do, don't keep this burden upon your conscience. It will stand between you and God. It is an obstacle which you cannot get over. You may forget that it is there; but there it is; and you are on one side, and Almighty God is on the other.—*Dean Howson.*

The Secret of Peace.—The permission in all things to let our requests be made known to God would be a fatal one for us if it meant that God would always give us what we ask. When we come to see the record of our life as it is written in heaven, we shall see some of our best occasions of thankfulness under the head of "prayers denied."

Love God and everything will come right.

Ladies' Portfolio.

THE OLD HOME, WITH FATHER AND MOTHER.

BY MRS. HATTIE F. BELL.

THERE'S one hallowed place in our childhood,
Where we ever feel free from ill—
Where the sweet, holy hush of the twilight
Seems a whisper of "Peace, be still,"—
While a fond mother's kind, gentle teachings
Fall lovingly then on our ears,
And a father's dear smile of affection
Is a balm for all sorrows and tears.
Once severed from this, there is never another
That seems like the Old Home with Father and Mother.

Sometimes we grow tired of the old ways,
And like robins that flit from the nest,
The world seems so smiling and sunny,
We think its broad highway the best,—
So we leave a good-by with the homestead,
And fly out where gaiety sings,
But we find there's a world full of danger
For poor, little, unfledged wings.
But one path seems brighter to us than another—
The path that leads homeward to Father and Mother.

The years as they come up to meet us,
May furrow our brows with their care,
But they cannot blot out from our memory
The touch of a mother's kiss there:
And tho' Time may reach out his old fingers,
And weave in our hair silver thread,
Yet he never can mar our first blessing—
A father's dear hand on our head.
These sweet thoughts still linger above every other,
When we think of the Old Home with Father and Mother.

GERMAN WIVES.

THE culinary art forms a part of the education of the women in Germany. The well-to-do tradesman, like the mechanic, takes pride in seeing his daughters good housekeepers. To effect this object the girl, on leaving school, which she does when about fourteen years of age, goes through the ceremony of confirmation, and then is placed by her parents with a country gentleman, or in a large family, where she remains one or two years, filling what may also be called the post of servant, or doing the work of one. This is looked upon as an apprenticeship to domestic economy. She differs from a servant, however, in this—she receives no wages; on the contrary, her parents often pay for the care taken of her, as well as her clothing. This is the first step in her education as housekeeper. She next passes, on the same conditions, into the kitchen of a rich private family, or into that of a hotel of good repute. Here she has control of the expenditures of the servants employed in it, and assists personally in the cooking, but is always addressed as Miss, and is treated by the family with deference and consideration. Many daughters of rich families receive similar training, with this difference, however, that they receive it in a princely mansion or a royal residence. There is a reigning queen in Germany at the present time who was trained in this way. Consequently the women in Germany are perfect models of economy.

A GIRL'S POCKET.

WE found one lying on the sidewalk yesterday, says the Omaha Herald, and give an inventory for the purpose of enabling the proprietor to obtain the pocket:—Two white cotton handkerchiefs, the hems of which are bigger than the balance; a candy fish, of many colors; one short slate pencil, black, chewed at the end, too hard at the other; one slate pencil, mode color, chewed at both ends, and very short and slabsided; one bit of sky-blue ribbon; two bits in currency; one garter, without buckle, very elastic, but not long; one piece of short, black, scolloped ribbon; two short pieces of barber-pole candy, one of peppermint, the other lemon one pair of small black kid gloves; one parasol tassel; a camel's hair brush; one love letter, very tender, praising the recipient and running down another girl, hence very valuable; three hair pins; one horse-hair ring, unfinished; one perfumery bottle stopper; a box of breath perfume; a ball of floss and a broken crochet needle; a small piece of raw cotton full of white powder; the left heel of a No. 2 gaiter; one stocking with a hole in the toe; a thimble and a nut cracker. The pocket is of yellow nankeen, and can be obtained on application at this office.

A NEW REMEDY.

THE Dubuque Herald says of a resident of that city:—He and his new wife visited his good old aunt and she asked a hundred questions on the all-important subject to her. He was profuse in his answers, being only too happy to extol the good qualities of his young wife. He concluded the eulogy by telling the old lady that his wife had a wonderfully sweet voice, and a "mezzo soprano of extraordinary compass." The good aunt looked over her spectacles with concern in her eyes and said, "Hez she? Well, now, yer aunt Lucy used to be troubled with jest such a complaint, a long while ago, and she used to put a mustard plaster to the soles of her feet and take catnip tea, and it gave her a sight of easiness. Jest have your wife try that and I'm sure she will git better."

THE CULTURE OF THE AFFECTIONS.

THERE is a famous passage in the writings of Rousseau, that great delineator of the human heart, which is as true to human nature as it is true and beautiful in expression. He says:—Were I in a desert, I would find something to call forth my affections. If I could do no better, I would fasten them upon some sweet myrtle, or some melancholy cypress. I would write my name upon them, and declare that they were the sweetest trees in all the wilderness. If their leaves withered, I would teach myself to mourn, and when they rejoiced, I would rejoice with them."

TRUTHS FROM THE TALMUD.

IF thy wife be small, bend down to her and speak to her; do nothing without her advice.

EVERYTHING in life can be replaced; the wife of early days is irreplaceable.

AN honorable man honors his wife; a contemptible one despiseth her.

THE loss of a first wife is like the loss of a man's sanctuary in his lifetime.

IF a man divorces his wife, the altar itself sheds tears over him.

MAN and wife well matched have heaven's glory as their companion; man and woman ill matched are encircled by a devouring fire.

FOR AND ABOUT WOMEN.

THERE is in the heart of woman such a deep well of love that no winter of age can freeze it.

A NEWLY married couple in Paducah, Ky., a few days since, made their bridal tour in a skiff—the bridegroom at the oars.

ACCORDING to Dr. Mary Walker if the American girls in San Francisco were not closely watched many of them would marry Chinamen.

THAT old Norse king hit the nail on the head who, when asked what his religion was, answered, "Ask my wife. Our women are nearer to God than we are."

PLEASURE is to women what the sun is to the flower; if moderately enjoyed it beautifies, it refreshes and improves; if immoderately, it withers, desolates and destroys.

ANNA DICKINSON devoted last winter to perfect rest, and as a result, says a correspondent, she is once more plump, rosy, young, thoroughly cheerful, exuberant and full of vitality.

THE widow of ex-President Polk has been tendered the free use of a palace car from her home at Nashville, Tenn., to Philadelphia, if she wishes to visit the Centennial Exhibition.

AN enthusiast who had been to hear Anna Dickinson lecture wrote her, saying, "With you, I could be happy in a desert." And she wrote back, "No man will ever have a chance to desert me."

THE Wolverhampton rate-payers have elected Miss Lloyd of that town a member of the Board of Guardians. There were forty candidates, thirty-nine gentleman and one lady, for the twelve vacant seats, and the lady came out at the head of the poll, with 3,031 votes.

MRS. OTTER of Davenport remarked to a neighbor the other day, "My husband is the hardest man to reason with that ever lived. I had to smash up my china teapot and throw a milk-pitcher through the looking-glass before I could make him promise to take me to the Centennial."

MISS SMITH of Reading (Pa.) who lost the use of her limbs through sickness when a child, is now twenty years of age, and has a coach and twin goats, with which she drives out nearly every day. The little animals were trained specially for her use, and she guides them well with the reins.

HERBERT SPENCER says that the gold ring now worn by married women is the sign of the iron ring that was worn about the neck or ankle in olden times, and indicates the submission of the wearer. Herbert Spencer is an impracticable dreamer. The gold ring a woman wears now is simply indicative of the ring her husband must join in order to foot the bills.

"Is it becoming to me?" asked she, as she paraded in the costume of a hundred years ago, before the man who is not her lord and master, but is her husband. "Yes, my dear," said he, meekly. "Don't you wish I could dress this way all the time?" she asked. "No, my dear," he answered, "but I wish you had lived when that was the style."

EGYPTIAN ladies would regard it as highly indecorous to display upon the streets the magnificence of their dress. When they go about the streets of Cairo on shopping expeditions, they cover themselves with a dismal robe of black. As a general rule, whatever they are compelled to exhibit to the public gaze is simplicity itself, while what they reserve for private inspection is gorgeous and ornate in the extreme.

THEY pay female school teachers good salaries in England. Miss Buss, head of the North London Collegiate School for Girls, is paid £1,000 per annum, with a properly furnished and convenient suite of apartments. The head mistress of St. Paul's School, also in London, receives the same liberal compensation. There are at least twenty school-mistress-ships in England, the compensation for which is from £300 to £500 a year in each case.

MME. SUZANNE LAGIER, a good actress, but extremely stout, was one night enacting a part in a melodrama with Taillade, the original *Pierre* of "The Two Orphans," and thus had, at one moment, to carry her fainting off the stage. He tried with all his might to lift the fair heroine, but although she helped her little comrade by standing on tiptoe in the usual manner he was unable to move an inch. At this juncture a boy in the gallery cried out, "Take what you can, and come back for the rest."

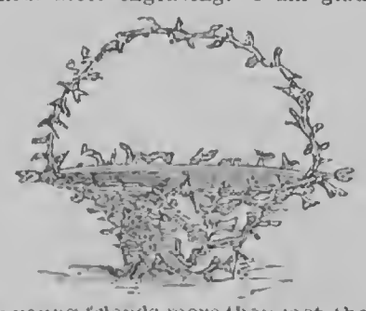
Reading for the Young.

WINKUM, WINKUM.

WINKUM, Winkum, shut your eye,
Sweet my baby, lullaby,
For the dews are falling soft,
Lights are flickering up aloft,
And the head-light's peeping over
Yonder hill-top, capped with clover;
Chickens long have gone to rest,
Birds lie snug within their nest,
And my birdy soon will be
Sleeping like a chick-a-dee;
For with only half a try,
Winkum, Winkum shuts her eye.

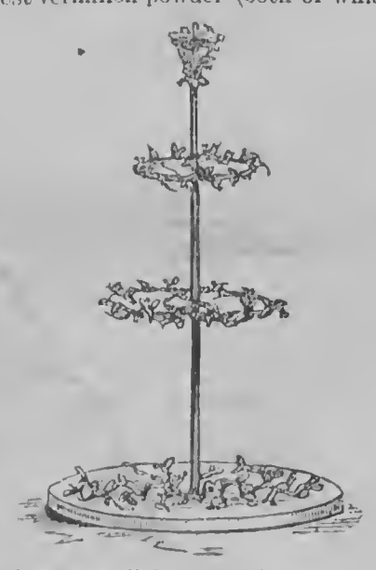
LETTER FROM UNCLE TRUE.

MY DEAR NIECES AND NEPHEWS:—I feel flattered and grateful at the popularity of our PRIZE JOURNEY, and I take this opportunity to say that Miss MYRA CASE, Johnstown, N. Y., is the successful little girl, and she will, therefore, receive a beautiful steel engraving. I am glad to say



that my young friends more than met the expectations of the old man, and mother and I had a pleasant time reading the answers to the Journey, which were in the main correct. But what could I do? I only had one picture. Next time I shall give you a real hard one; and meantime, to make up, in a measure, to the disappointed nieces and nephews, I have had our artist make some pictures showing how to construct, at very little expense, really beautiful ornaments, which only require care and taste. I am sure you will enjoy trying your hands at coral work.

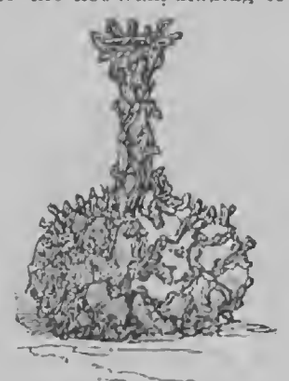
The materials required are some white wax, some best vermilion powder (both of which you



can obtain very easily), some cotton-covered wire, such as is used in straw bonnets, and some white cotton cord.

The first thing to be done is to twist the wire into the required shape—a basket, for instance. When done, tie the cord all over it in short, unequal lengths, which will presently represent bits of coral sticking about the basket.

When so far ready, put the wax into a very clean, dry saucepan, and let it melt; then sprinkle in it the vermilion, mixing them together until they form a bright red paste. Then, having tied a string to your basket, so as not to touch it, lower it into the hot wax, dipping it in and out



until it is all well covered. Then place it on something cold to dry quickly. If well done, it will look like real coral.

All these things are made in the same way; but when you want to make a flower-stand you will require a stronger stem, such as a thin stick.

The short bits of cord tied all round the top can be bent to support the little vase, which, filled with artificial flowers or sea-weed, will look very pretty under a glass shade.

Some prefer pure white coral. If such be your taste, all you have to do is to leave out the vermilion. Mind that you melt enough wax to completely cover the object you wish to dip into it.

UNCLE TRUE.

WHO WAS THE BAD BOY?

LITTLE Annie was prettily dressed, and standing in front of the house waiting for her mother to go out to ride.

A tidy boy, dressed in coarse clothes, was passing, when the little girl said:

"Come here, boy, and s'ake hands wi' me. I dot a boy dus' like you, named Bobby."

The boy laughed, shook hands with her, and said:

"I've got a little girl just like you, only she hasn't any little cloak with pussy fur on it."

Here a lady came out of the door and said:

"Annie, you must not talk with bad boys on the street. I hope you haven't taken anything from her? Go right along, and never stop here again, boy!"

That evening the lady was called down to speak with a boy in the hall. He was very neatly dressed, and stood with his cap in hand. It was the enemy of the morning.

"I came to tell you that I am not a bad boy," he said. "I go to Sunday School, and help my mother all I can. I never tell lies, nor quarrel, nor say bad words; and I don't like a lady to call me names, and ask me if I have stolen her little girl's clothes off of her!"

"I'm very glad you're so good," said the lady, laughing at the boy's earnestness. "Here's a quarter of a dollar for you."

"I don't want that!" said Bob, holding his head very high. "My father works in a foundry, and has lots of money. You've got a boy bigger than I, haven't you?"

"Yes; why?"

"Does he know the Commandments?"

"I'm afraid not very well."

"Can he say the Sermon on the Mount, and the Twenty-third Psalm, and the Golden Rule?"

"I'm very much afraid he cannot," said the lady, laughing at the boys bravery.

"Doesn't he ride on his pony on Sunday instead of going to church?"

"I'm afraid he does, but he ought not," said the lady, blushing a little.

"Mother don't know I came here," said the bright little rogue, "but I thought I would just come around and see what kind of folks you were, and—and—I guess mother would rather your boy wouldn't come round our doors, because she don't like Mamie to talk to bad boys in the street. Good-bye." And the little boy was gone.—*Watchman.*

A LITTLE HERO.

A BOY in the town of Weser, in Germany, playing one day with his sister of four years old, was alarmed by the cry of some men who were in pursuit of a mad dog. The boy, suddenly looking round, saw the dog running towards him, but instead of making his escape, he calmly took off his coat, and, wrapping it round his arm, he boldly faced the dog, and holding out the arm covered with the coat, the animal attacked it, and worried the coat till the men came up and killed the dog. The men reproachfully asked the boy why he did not run and avoid the dog, which he could so easily have done. "Yes," said the little hero, "I could have run from the dog; but if I had he would have attacked *my sister*. To protect her I offered him my coat that he might tear at it."

The Puzzler.

CROSS-WORD ENIGMA.—No. 11.

My first is in want but not in need,
My second is in plant but not in seed;
My third is in sea but not in bay,
My fourth is in think but not in say;
My fifth is in weak but not in strong,
My sixth is in brief but not in long;
My seventh is in leaf but not in tree,
My eighth is in us but not in we;
My ninth is in seek but not in find,
My tenth is in heart but not in mind;
My eleventh is in tear but not in rend,
In my whole many letters find an end.

☞ Answer in two weeks. J. M. A.

SYNCOPATIONS.—No. 2.

1. SYNCOPATE a tree, and leave an article of food.
2. An article of food, and leave a small nail.
3. A string, and leave a fish.
4. A gem, and leave a loud noise.
5. A small river, and leave a motive power.
6. A point of the compass, and leave what we all do.
7. An animal, an leave an article of clothing.
8. A measure of surface, and leave a measure of length.
9. A measure of surface, and leave a unit.

☞ Answer in two weeks. ISOLA.

MISCELLANEOUS ENIGMA.—No. 3.

I AM composed of 20 letters:
My 3, 10, 11, 7, 20, 18, 14, 20 is something we have cause to be proud of.
My 5, 11, 17, 10 a man's name.
My 2, 8, 19, 20 a mineral of great value.
My 12, 11, 8, 12, 11, 15 one famed in history.
My 19, 6, 11 a river in Asia.
My 6, 14, 5, 15 a title given to a notorious swindler.
My 4, 18, 1, 13, 11, 3 worn by ladies.
My whole was quite a success in 1875.

☞ Answer in two weeks. J. W. P.

PUBLISHER'S SPECIAL NOTICES.

The Rural is a very good present to send to a friend, and it pleasantly reminds the recipient of the donor fifty-two times a year—this year fifty-three times. Any *subscriber* can send it to a relative or friend, as a present, at our lowest club rate—only $2.15, including postage.

Officers of Agricultural Societies and Clubs, Granges, &c., can, if they will, materially aid in augmenting the circulation of the RURAL. Scores of such are already forming clubs; how many others will kindly do likewise?

Renew early if you would secure the uninterrupted continuance of the RURAL to your address; and pray don't forget to ask friends to join you in sending for the Fifty-three Numbers which we shall publish during 1876.

Back Numbers of this Year (from Jan. 1) can be furnished to all new subscribers, but we shall not send them hereafter unless specially requested. Those who desire can begin with any number, however.

The Best Paper, and the Best Premiums to Agents, is our motto. We ignore Chromos and all other cheap colored pictures, preferring to put our money *in the paper*, and in Premiums to Agents.

Select Your Premiums.—All persons entitled to Premiums will please designate what they prefer and notify us how and where to forward—whether by Freight or Express—if articles are not mailable.

Act as Agent!—Reader, if there is no agent for the RURAL in your locality please become one by forming a club. *It will pay.*

At Our Risk.—You can remit by Draft, P. O. Money Order or Registered Letter *at our risk.*

News of the Week.

HOME NEWS PARAGRAPHS.

TEXAS revels in the glories of her Seventh Annual Fair at Houston.

Anna Dickinson, the noted lecturer, has made her first appearance as an actress in the Globe Theatre, Boston. The play, a "Crown of Thorns," was written by herself. As an actress, she is a complete failure. Her reception was very cordial.

A Correspondent of the Courier Journal writes from St. Bethlehem, Montgomery Co., Tenn.: The farmers in this section are generally up with their work, having finished planting corn, and those who have planted are preparing their tobacco land. But plants are very scarce, the fly having destroyed them, and there are no prospects of more than half a crop. Many of the farmers are preparing their land for grasses, potatoes, etc. Wheat is looking remarkably well and promises a large yield.

Thos. W. Piper, the Boston fiend, has made a full confession. He says he killed Mabel Young and Bridget Landregan for no motive, except the desire to kill some one. His confession in detail is quite too horrible to print.

The Custom House officers have been informed that the jewels sent to Gen. Sherman's daughter by the Khedive of Egypt are to be re-exported to Europe in June by Drexel, Morgan & Co., the consignees as otherwise they might be sold at auction to pay the duties. The Senate has exempted them from duty, but the House will not concur.

Rubenstein the muderer is dead. He died in his cell. His death is ascribed to exhaustion of vitality from disease, insufficient nourishment and filthy habits.

Concerts conducted by the famous Maestro Offenbach, are nightly pleasing thousands in Gilmore's Concert Garden New York.

It has been decided, at law, that railroads are at liberty to eject gamblers from their trains.

Mr. Hoyne has just qualified as Mayor of Chicago. It is a beginning, being the first syllable in hon-es-ty.

Rev. A. S. Rosecrans, son of Gen. Rosecrans is dead. He was a Catholic missionary priest, of the Paulist order and died suddenly in N. Y. of apoplexy, at the age of 27.

Serious floods in New Hampshire. Connecticut river farmers heavy losers. Fears are entertained for the safety of mill dams.

Messrs. Moody and Whittle are preaching in Nashville, Tenn.

The Southern Baptist Convention met at Richmond, Va., May 11.

Provisions were shipped from Chicago to Liverpool via Philadelphia in 15 days. Extraordinary time.

76,133 is the correct number of *paying* vistors on the opening day.

Wm. Smyth, Austin, Texas, reports crops looking finely and well advanced. Wheat and oats ready to harvest. Prospects bright.

The Congressional Committee are examining the Brooklyn Navy Yard. In eight days the Committee has examined 100 witnesses, taken 2,000 pages of testimony, and all at an expense of $200.

The Grand Jury of the D. of C. has found a true bill against ex-Secretary Belknap. The bill enumerates charges already familiar to our readers.

A suit will soon be brought in the Supreme Court against the Western Union Telegraph Company by Thomas A. Edison, to determine the question of ownership of the duplex and quadruplex system of telegraphy claimed as the invention of Edison.

Judge Dowling, for many years a Justice of one of the lower courts in New York, is dead.

The N. Y. State canals are said by Commissioner Thayer to be at present in better working order than they have ever been before at this time of the year. With the absence of extraordinary repairs, and the consequent lack of contracts and bids, business in the Canal Commissioner's office has been so dull that in accordance with the general spirit of reform the Commissioners have reduced the salaries of the two clerks who have had charge of the office by $1,000 each.

A special dispatch to the Galveston News, regarding the Mexican trouble says:—Escobedo has left Mier with his force, and it is reported there has been hard fighting near Camargo. It is not known which side gained the day. It is reported that 300 were killed and 1,000 wounded. A shell struck a church in Camargo, killing a priest and four women, who were at prayers. Four large boats landed infantry opposite Camargo, on the San Juan river.

United States District Attorney Dyer has reported to the Attorney-General unfavorably in the matter of the applications of ex-Collector Maguire and Mr. McKee for pardon.

Up to the close of business hours on May 12, the aggregate of silver coin paid out at the various Sub-Treasuries amounted to $4,500,000, of which $1,280,000 belonged to the amount of silver on hand at the date of the passage of the Resumption act of the 14th of January, 1875, and was used to meet drafts on the Treasury. Treasury officers say that one noticeable feature of silver resumption is the very small amount of dimes paid out, the demand being for quarters and half dollars. At the New York Sub-Treasury alone there are more than six hundred thousand dollars of dimes in the vaults, or about one-half of the total amount of silver on hand. The officers of the Treasury are now satisfied that it will take fully three months to make silver resumption a practical success, and even longer if silver is not paid out to the amount of $30,000,000.

The sixteenth anniversary of the Baptist Sunday Schools of the Southern New York Association has been celebrated by the various schools. The annual meeting took place in New York City at the Madison Avenue Baptist Church, at which addresses were made by Rev. P. S. Henson of Philadelphia; Rev. J. D. Herr, Rev. J. F. Elder, Rev. W. C. Van Meter and others.

The first Presbyterian Church in Arizona Territory has just been organized at Tucson.

Judge Emmons of the United States Circuit Court has granted a decree for the sale of the Paducah and Memphis Railroad, which will, it is said, insure speedy completion of the road.

A considerable portion of the business section of Kenduskeag, Me., has been consumed by fire. The loss is about $10,000.

The Committee on Civil Service Reform continued the investigation of the Chicago Pension Agency case, and examined George W. Campbell, David Blakely and B. M. Johnson. The testimony corroborated the story told by Miss Sweet in every important particular. A dispatch was received from Chicago, which states that B. H. Campbell has refunded to Miss Sweet the entire amount of money paid by her to him, under the arrangement by which she was to pay Blakeley's debt.

The Albany Argus says that the fastest time that has been made on the Central-Hudson Railroad with the Fast Mail Train since it has been on the road was made with the eastward bound train by locomotive No. 386, in charge of Frederick H. Hortsman, engineer, and C. M. Waleigh, fireman. The train left Syracuse fifty-seven minutes late, and arrived in Albany three minutes ahead of card time, the train having struck its regular time at Schenectady. The run from Syracuse to Utica, distance fifty-three miles, was made in sixty-six minutes, or nineteen minutes faster than the regular running time. From Utica to Fonda, distance fifty-one miles, the run was made in seventy minutes, or eighteen minutes faster than the card time. From Fonda to Albany, distance forty-four miles, the run was made in fifty-seven minutes, or twenty minutes faster than the regular running time. From these figures it is seen that the run from Syracuse to Albany, distance 147¾ miles, was made in three hours and eighteen minutes. Deducting from this seventeen minutes lost in stops at Utica and Palatine Bridge, and the 147¾ miles are found to have been run in 181 minutes. This is not only the fastest time that has been made with this train on this road but faster than upon any road in the whole country through which the Fast Mail passes.

A Chicago correspondent, speaking of trade prospects in the Northwest, says the outlook is dismal. Spring trade has fallen off. Grain is not moving briskly, and bank statements show a surplus of loanable funds. Discounts at the rate of 7 ₱ cent. for 90 days are reported—a thing almost unknown before in the Northwest. One of the causes ascribed is that Presidential years are always bad for business. The farmers, however, have sold their products for fair prices, and are of all classes the best able to combat financial depression.

The Coal and Iron Police have done excellent service in breaking up the Molly Maguires in the coal fields of Pennsylvania. At the trial in Pottsville of those ruffians, a detective gave a history of the organization, as noted by himself, and it is an awful exhibit. The precious five will undoubtedly be hanged.

The lawyers for the defense have each made a speech; the Impeachment Managers have replied; the Senators have taken notes and notes. Proceedings continue—nothing accomplished yet.

Representative advocates of woman suffrage, in speaking for their hobby before the House Committee on the District of Columbia, were asked if they were willing to submit the question whether women should be allowed to vote in the District or not to the women of Washington, and they replied in the negative. They said that the women were so much under the influence of the men in their families that they could not vote independently on the subject.

The amount of silver in the Treasury Department at Washington at the time of the passage of the Specie Resumption of Jan. 14, 1875, was about $2,500,000.

Nine counties in Minnesota last summer destroyed 56,356 bushels of locust or grasshopper larvæ, at a cost of $87,505 in bounties paid.

It is stated that the cattle drive from Texas this year will number 350,000.

It is stated that $40,000 will keep the Genesee Valley Canal open for a short season.

Fifteen States will send altogether about a battalion of troops each to the Exposition.

The new silver coin is worth about 84 cents on the dollar in gold and 94 cents in greenbacks.

The amount of legal-tender notes deposited with the United States Treasurer, by National banks, during the month of April, for the purpose of redeeming and withdrawing their circulation, was $3,001,600. The amount of bonds deposited to secure circulation, withdrawn during the same time, was $3,529,000. The amount of legal tender notes now on hand for the redemption of National Bank circulation, is $28,382,401. The amount of legal-tender notes deposited with the Treasurer for the purpose of redeeming circulation from the passage of the act of June 20, 1874, to the 1st of April, 1876, was $52,657,372, including $3,813,000 previously deposited. The total amount of National Bank circulation thus far withdrawn is, therefore, $55,658,972. The contraction of the currency under this act has not been as rapid during the past month as during March, although nothing has occurred in the mean time to make the profit on the National Bank circulation any the greater or the necessities of the banks to convert their cash any the less. It is possible that the sale of bonds belonging to the Geneva award fund may have had some influence on the action of banks in regard to the withdrawal of their circulation. The managers of those institutions who intend to recover their bonds and surrender their circulation of course watch the market with great care in order to dispose of their bonds at the best prices, and the sale of a few millions by the Treasury Department during the past week may have caused some of them to suppose that a slight decline in the market value of their securities might take place.

FOREIGN NOTES.

At the opening of the session of the Chamber of Deputies a Versailles bookseller, named Rastoun, cried out from the gallery, "In the name of God and Joan of Arc, live Napoleon the Fourth! Down with the Gambettists and Orleanists." He was arrested amid considerable confusion, the majority, however, considering the episode as a freak of insanity. On appearing before the Questor, Rastoun said, "I have fulfilled my duty. You can do what you please with me." He was released.

Lord Derby, Secretary of State for Foreign Affairs has sent an answer to Secretary Fish's letter of March 31 in regard to the Winslow case.

The Pope has written a reply to King Alfonso's last letter, which gave assurances that Spain was Catholic, and that Catholics need fear nothing from the new Constitution, and maintained that the religious liberty clause was not inconsistent with the spirit of the Concordat of 1851. The Pope thanks the King for his letter, but avoids discussion of the questions at issue.

Advices from Rio Grande City report Gen. Diaz as retreating. Command suffering from scarcity of water, and desertions of daily occurrence.

The Porte is truly in a sea of troubles, with fine prospects of never emerging therefrom. The latest is that a Bulgarian insurrection has broken out near Philippopolis. The insurgents are estimated at from 1,000 to 10,000.

The Sultan of Morocco has punished the parties who committed aggressions on the neutral territory of Africa.

Ninety members of the House of Commons have signed a memorial, asking the release of the Fenian prisoners.

All quiet at Barbadoes, but trouble in the Island of Tobago.

Mark Lane Express reports grain market as very quiet.

The Russian Telegraph Agency reports that the Salonica affair has caused a panic throughout Turkey. The Foreign Embassadors at Constantinople have resolved to meet every day to consider the state of affairs. Upon later intelligence the Embassadors have agreed to ask their respective governments to send additional men-of-war to Constantinople.

A special dispatch from Berlin says it is understood that Count Andrassy, the Austrian Premier, has expressed views strongly adverse to Austrian armed intervention in the Turkish complications.

The Sultan has dismissed the Grand Vizier and summoned to Constantinople Hussein Avni Pasha, who is considered the head of the war party, and who, it is rumored, is to be appointed either Grand Vizier or Generalissimo of the Turkish armies.

The Serapis, with the Prince of Wales on board, together with the Royal yacht Osborne and the steam frigate Raleigh have arrived in England. The yacht Alberta, on board of which was the Princess of Wales and the Royal children met the Prince in the Solent, and the vessels proceeded to Portsmouth, where they arrived in the afternoon. The Prince accompanied by the Princess and Royal children, landed at the dock-yard, where a vast assemblage was gathered to meet them. There was great cheering as His Royal Highness stepped ashore. The Mayor of Portsmouth read an address, and a chorus of 300 ladies and gentlemen sang "Welcome Home." On the conclusion of the ceremonies of the reception the Prince and Princess and suite took a special train for London. An immense crowd surrounded the building and cheered with great enthusiasm as the Prince passed through the station to the carriage in waiting.

THE MARKETS.

PRODUCE AND PROVISIONS.

NEW YORK, Saturday, May 13, 1876.

RECEIPTS.—The receipts of Produce for the week were as follows:

Flour, bbls	60,350	Molasses	124
Whisky	2,405	Rice, bbls	418
Corn meal, bbls	3,186	Cut meats, pkgs	7,100
Corn meal, bags	1,627	Lard, pkgs	10,350
Wheat, bush	561,000	Tobacco, hhds	
Corn, bush	533,300	do. cases	—
Oats, bush	388,300	Butter, pkgs	24,060
Rye, bush	15,000	Cheese, bxs	10,550
Malt, bush	52,500	Cotton, bales	8,026
Barley, bush	61,900	Rosin	14
Beans, bbls	4,920	Spts. turp., bbls	2,000
Grass seed, bush	1,734	Dried Fruits, pkgs	60
Beef, pkgs	1,525	Eggs, bbls	22,403
Wool, bales	540	Peanuts, bags	1,200
Hops, bales	353	Leather, sides	83,850
Pork, bbls	8,475	Sugar, hhds	151
Tallow	719	Oil cake	7,751

HINTS TO SHIPPERS.—Pack produce as firmly as its nature allows; otherwise, many items suffer in appearance, if not in quality, through the jostling incident to transportation. Do not mark packages with any material that will smudge. A good paint for marking purposes can be made of bichromate of potash and extract of logwood. Nailed cards are very insecure. For long lines of goods a marking plate or brand is preferable to ordinary lettering. At the time of shipment put a complete list of the lot into one of the packages if it can be done; but be sure to mail to consignee a full list, naming date, style of packages and contents. Aim to have each parcel of uniform quality as far as possible: mixing always injures sale. Roll butter should be wrapped in clean white muslin. Dressed poultry should be packed in well shaken dry straw. When poultry sweats in boxes straw-dust gives a mean look. Break off nail points from the inside of old barrels when they are used in order to prevent property from tearing. Short cut dry straw is better for packing eggs than anything else. Try and avoid the arrival of summer items here on Saturday.

BEANS AND PEAS.—Exports of beans past week, 1,225 bbls.; since Jan. 1st, 24,230 do.; same time last year, 3,300 do. Exports of peas past week, 2,318 bush.; since Jan. 1st, 316,400 do.; same time last year, 191,540 do. The light receipts, together with a liberal export demand, give the market a degree of firmness, though the local and Eastern demand is moderate. Prime mediums are held for $1.20, and marrows cannot be bought much under the outside rate. Choice pea beans would find buyers. Other grades heavy. White kidneys are lower. Red kidneys moving at the low quotations. Canadian peas are tending downward, with prospective free receipts per canal. Green peas and Southern B. E. peas dull and favor buyers. We quote:

Beans—Prime pea, $1.30@1.35; fair to good, $1.00@$1.25; prime mediums, $1.15@1.20; fair to good, 90c.@$1.10; poor, 50@60c.; prime marrows, $1.60@1.65; fair to good, $1.30@1.50; prime white kid., $1.40@1.50; other, $1.15@1.30; prime red kidney, $1.20@1.25; other, $1@1.10; Lima (Cal.), $3.00. Peas—Canadian, bbls., free, $1.18@1.20; do., in bulk and bond, 95c.; green, $1.35@1.40; Southern B. E., 2-bush. bag, $2.55@2.70; split, ₹ bbl., $6.

BEESWAX.—The high prices have brought some few pounds forward, and prices are a trifle easier. Southern quoted at 36½@37c.; Western, 35@35½c.

Exports past week, none; since Jan. 1, 36,194 do.; same time last year, 92,481 do.

BROOM CORN—Is altogether nominal. The moderate stocks are held as before.

We quote Brush, short green, 8½@10c.; hurl, green, 8½@10c.; green, medium, 5@6½c.; red and red-tipped, 3@4c.

BUTTER.—Receipts have been large and with the dull trade of the past week dealers have been threatened with a surplus. They have trimmed accordingly and have been quite successful in preventing alarming remnants from holding over. To do this last week's quotations for State had to be kept easy and Western had to be marked down. White butter is daily losing chance of ready sale; as enough yellow arrives to make buyers expect a good offering by the next time they appear for supplies, and it is not safe to look for any steady price for white from this time forward. Very few pails sell at the extreme figure. Other packages are quite their equal in quality and in many cases the buyer has a better bargain where deeper color is a desired feature. Welsh packages are in good demand, though their lack of uniform size at this season is not in their favor. The spring is backward in this particular section. The near-by dairy districts look green, but grass is not high enough for full feeding.

New butter, Dairy State, selected, 28@29c.; do., other 23@27c.; creamery, 27@30c.; half firkin tubs, prime, 27@28c.; fair to good, 24@26c.; Welsh tubs selected, 26@27c.; Welsh tubs, prime, 26@—c.; fair to good, 25@26c.; Pails, Western creamery, prime, 28@29c.; fair to good, 26@27c.; Western tubs, dairy, good to prime, 24@—c.; fair to good, 18@20c.

Western factory choice, 21@—c.; do. fair to good, 18@20c.; poor, 17@21c. Some low grades of State, 19@21c. Old Western, 15@20c.

CHEESE.—Exports, past week, 13,409 boxes. Old have been more urgently offered, particularly parcels that are showing some loss in quality, and consequently prices are irregular and lower. New are more plenty. It is presumed that next week's supplies will be sufficient to allow some export. The few transactions of best lots new are at 11c. Quotations are as follows:

New, prime, 11c.; good, 10@10½c.; fair, 9@9½c.; half-skimmed, 7@9c.; skimmed, 5@6c. Old at 12@12½c. for choice; 10@11½c. for good to prime; 8@9c. for fair lots.

COTTON.—A sharp decline in prices is noted on the slow export movement. May, 12 5-32@12 5-32c.; June, 12 5-16c.; July, 12 17-32c.; August, 12 21-32@12 11-16c.; September, 12½@12 21-32c.; October, 12 17-32c.; November, 12 13-32@12 7-16c.; December, 12 13-32@12 7-16c.

Quotations for spot cotton, based on American standard of classification:

	Uplands.	*Ala.*	*Orleans.*	*Texas*
Ordinary	8 13-16	8 13-16	8 13-16	8 13-16
Strict ordinary	9⅜	9⅜	9⅜	9⅜
Good ordinary	10 3-16	10 3-16	10 5-16	10 5-16
Strict good do	10⅜	10⅜	11	11
Low middling	11 5-16	11 7-16	11 9-16	11 9-16
Strict low middling	11⅜	12	12⅛	12⅛
Middling	12⅜	12⅜	12 7-16	12 7-16
Good middling	12⅝	12⅝	13	13
Strict good middling	13⅛	13⅜	13⅜	13⅜
Middling fair	13⅝	13⅝	13⅝	13⅝
Fair	14⅜	14⅜	14⅜	14⅜

Stained.

Good ordinary	8⅛	Low middling	10¼
Strict ordinary	10	Middling	11⅛

DOMESTIC DRIED FRUITS.—Apples have further important demands from the West, and prices are strong. Otherwise there is but little doing; the jobbing trade still dealing chiefly in Turkey prunes.

Apples—State, sliced, 9¾@10c.; do., quarters, 9¼c.; Western quarters, 8½@8¾c.; Southern sliced, 9¾@9¾c. for prime; fair lots, 8½@8¾c.; Tennessee quarters, 8¼c. Blackberries, 10@10½c. Peeled peaches, good and prime Georgia, 14@15c.; do. fancy, 16@17c. Unpeeled peaches, new, 12@12½c. for halves, and 10@11c. for quarters. Plums, 20c. Raspberries, 27c. Cherries, 20@21c.

EGGS.—Unusually low prices fail to bring out any extra demand. During the week prime Western have sold down to 13½c., and to-day 14c. is all the

market will bear. Dealers do not look for the market to recuperate until receipts fall off. Duck and geese eggs not wanted.

Near points, ₱ bbl., 16½@17c.; State and Penn., 15@—c.; Western, prime, 11@—c.; do. fair marks, 13@13½c.; Southern and Southwestern, 13@13½c.; Canadian, 14@—c.; duck, 18@19c.; goose, 24@25c.

ESSENTIAL OILS.—Oil Peppermint, in glass, $3.75 ₱ lb.; in tin, $3.25. Spearmint, in glass, $3.50; in tin, $3. Wintergreen, $3. Sassafras, 55c. The market for all oils is now very slow.

FEATHERS.—There is no wholesale demand. We quote prime white live Western geese at 52@55c., which is easier; mixed, 35@45c. No call whatever for common poultry feathers.

FLOUR.—The sympathy with the improved position of the wheat market, a more general trade is in progress, largely for export orders for the English and West India markets; prices strong at the advance.

Superfine State, $4.10@4.50; extra do., $4.90@5.50; superfine Western, $4.10@4.50; extra do., $4.60@5.70; No. 2, $3.85@3.90; extra round-hoop Ohio, $4.05@5.25; trade brands do., $5.25@7.00; white wheat extras, $5.75@7.00; St. Louis, $5.35@9.00; City Mills extra, $5.00@6.25; Southern at $4.15@4.85 for superfine; $5.00@6.25 for poor to choice shipping extras; $6.25@8.75 for trade and family brands. Corn meal selling at $3.75@3.25 for yellow Western; $3.00@3.35 for Pennsylvania; $3.65 for Brandywine.

FRESH FRUITS.—Exports of apples, since Jan. 1st, 4,345 bbls.; same time last year, 19,177 do. Prime Russets are firmer; for a while, there was quite an offering of Baldwins, but they have become unsightly if not unsound, and Roxburys outsell them for all trade. Cranberries nominal; rhubarb takes away some of their baking and hotel trade. Strawberries are in good supply and sell regularly; Norfolks begin to arrive in lots. There is only a fair demand for peanuts.

We quote:—Choice apples, $4.00@4.50; good, $3.00@3.50; fair mixed, $2.00@3.00. Strawberries, best, 35@40c.; other, 20@30c. Peanuts—Virginia, per bush., $1.50@1.70; Wilmington, $1.80@2.00; do. Tennessee, 95c.@$1.15. Cranberries—Jersey, choice, standard crates, $1.75@5; good, $4.50; extra Jersey crates, $1@1.50; bbls., $14@15.

FURS AND SKINS.—There are a few unimportant changes in common skins. Odds and ends in outside hands are pressing upon the market to get them out of the way. It is better to send raw skins to regular houses.

Otter, ₱ piece	$6 50@ 8 00	$1 00@ 5 50

prairie		75@ 1 00

GRAIN.—Advices from abroad are of a much more invigorating nature, starting export purchasers to a liberal amount. The cable yesterday quoted cold weather in English sections and backwardness in farm work, with the markets there all higher. Prices have shown a decided advance at the close. Latest sales are of No. 2 Chicago spring at $1.22; No. 1 Minnesota at $1.20, afloat; choice No. 1 Sheboygan spring in store, at $1.32; choice Northwest spring, called No. 2 Milwaukee, at $1.25; prime No. 2 Milwaukee spring, here, at $1.22; mixed spring, in lots, $1.15@$1.20; prime No. 3 Milwaukee spring afloat, at $1.17; fair ordinary Minnesota spring, afloat, mainly at $1.13@1.17; No. 3 Chicago spring, afloat, at $1.10@1.13; ungraded spring at $1.10@1.18; prime red Western, in store, at $1.30; good white Western at $1.41. Rye wanted for shipment at better sales; good Western at 73@80c. Corn has been in active export demand at stronger rates. Sales at 60½@62c. for mixed Western; 57½@62c. for ungraded mixed; 53c. for fair yellow Southern. Oats are higher and fairly active. Sales at 39½@45c. for Western; 46@50 for white Western.

HAY AND STRAW.—There has been an active moderate shipping business and a fair home trade; prices are well maintained. Some 5,000 bales of hay have been taken through the week for the West Indies.

Bale hay is quoted:—Shipping, 80c.; retail qualities, $1.00@1.10; clover, 70@75c.; salt, 60@70c. Straw is quoted at $1.05@1.10 for long rye; 75@80c. for short rye; 60@65c. for oat.

Exports past week, 2,156 bales. Since Jan. 1st, 18,200; same time last year, 12,630.

HOPS.—The business is moderate from the home trade, partially owing to the cool weather. Exporters have done but little through the week, but at the close show more of a disposition to operate. There are reports that the roots and vine in some of the English plantations show signs of weakness. This is tending to increased trade from shippers. We have shipped 43,100 to 50,000 bales since September last, and have yet to spare 5,000 to 7,000 bales of good quality without drawing upon the supplies held in reserve for home use. We have to spare a few Californias; these may not be as good as New York State for carrying over as yearlings, but for present use they would be found very desirable. The keeping qualities of New York State hops are superior to any other variety, either domestic or foreign, and this is why they are so much liked as yearlings by English brewers. The quotations are:

N. Y. State, 12@18c.; Eastern, 10@15c.; Wisconsins; 10@16c.; Yearlings, 8@10c.; Olds, all growths, 4@6c.; Californias (nominal), 15@18c., ₱ lb.

HIGHWINES selling at $1.11½.

LEATHER.—Hemlock sole at 20@31½c. for light; middle, 21@23c.; heavy, 21½@23½c.; good damaged, 18½@20c.

MAPLE SUGAR.—Seldom if ever was this item quoted so low, yet no large receiver has been able to clear up. Syrup not wanted.

Choice new sugar brickx, 10c.; small, 11c.; fair, 8@9c.; old, 6@9c. Syrup, ₱ gallon, 75c.@$1.

MILK.—The average price to farmers for April was 3c., ranging at 2½@3½c. ₱ quart.

OIL CAKE.—Western brings $30.50@40 per ton.

POULTRY AND GAME.—We append quotations for dressed poultry, but the season might be said to be over. City killers can furnish the market and hotel trade with about all that is needed in addition to the contracted lots of Pa. and N. J.

We quote Philadelphia picked chickens at 18@20c.; for fowls, 15@—c. winter chickens, 30@32c. spring chickens, 25c. for small slips, 28@30c. for small capons and 33@35c. for large capons; the latter quite scarce.

Chickens, Bucks Co., good to prime, 17@18c.; Jersey, good to prime, 15@17c.; State, good to prime, 14@16c.; Western, good to prime, 12@14c.; fair to good, 10@12c.; poor, 4@6c. Turkeys, Jersey, good to prime, 17@19c.; State, good to prime, 15@17c.; Western, good to prime, 13@15c.; inferior, 7@10c.

Live poultry are in good demand as city killers have began operations. Prices will now have more stability with ordinary receipts. Chickens should not run less than 3@4½ lbs. ₱ pair to be saleable. We quote.

Fowls, ₱ lb., 13@14c.; turkeys, N. J., 12@15c.; Western, 12@14c.; Geese, Jersey, ₱ pair, $1.75@2.25; do, Western, 75c.@1.00; ducks, Western, ₱ pair, 65@75c.; ducks, Jersey, ₱ pair, $1.00@1.25; roosters, 7@8c. Spring chickens, ₱ pair, 60@$1 12.

Wild pigeons have been so plentiful that it does not take many to overstock the market now, hence the low prices. Snipe firm. A few wild squab quoted at $1 ₱ doz.

Wild pigeons, feathered or dressed, ₱ doz., 55@60c. English snipe, ₱ doz., $1.50@1.75; plover, ₱ doz., $1@1.12; sand snipe, 20@10c.

PROVISIONS.—An active export movement has been noted in pork and lard, prices for which are higher. Spot lots quoted at $21; June, $21; July, $21.25; August, $21.50; extra prime, $17.50; prime mess, $21.25. Bacon at 11½c. for Western long clear; 12c. for city do. Western steam lard at $12.75 for spot, May and June; $13.00 for July $13 for August. Stearin at 13½c. for Western. Beef hams at $22@24. Tallow at 8¼@8½c. Beef—Extra mess, $13; do. plain, $12.00@12 50; tierced at $21@23 for prime mess, and $23@24 for India mess. City extra India mess at $24.75@25, and Philadelphia mess at $23@24.

REFINED SUGAR.—Quoted 8¼@9¼c. for soft yellow; 9¼@9½c. for soft white; 10½c. for crushed; 10¼@10½c. for powdered; 10½c. for granulated.

SEED.—Grass dull: clover is quoted at 16½c. for Western, and 17c. for State. Rough flax, $1.60@1.60. Timothy, $2.80@2.90.

TOBACCO.—There has been a stronger export movement and prices favoring the seller, with some advance on Kentucky leaf.

VEGETABLES.—Exports of potatoes past week, 495 bbls.; since Jan. 1st, 75,687 do.; same time last year, 36,901; onions, since Jan 1st, 5,432 bbls.; same time last year, 1,275 do. Old potatoes are nominal at the low prices. Bermuda and Florida are low for the season and sell well. The latter must be of good size to bring $1. Florida tomatoes are a feature, as Bermuda ran poor. Peas arrive in poor order; Norfolk begins to send, and the market will be steadier next week. Asparagus is abundant and lower; the higher price is for Oyster Bay. Old onions not quoted. Bermudas take their place.

Early Rose, bulk, ₱ bbl., 81c.@$1; Peach Blows, $1.25@1.50; Prince Alberts, 75c.@$1.00; common, 50@75c. Bermuda, $4.00@5; Florida, $2@4. Cabbages, ₱ 100, $6@8; red, $5@11. Squash, Marrow, bbl., $2.25@2.50; Hubbard, $1.25@2.50. Russia Turnips, bbl. 50@75c.; white, 60c. Carrots, $1.00. Spinach, ₱ bbl., $1.00@1.25. Charleston green peas, ₱ bu., 50c.@$1.50; Savannah, 50c.@$1.50. Norfolk cabbage, ₱ bbl., $1.25@1.50. Bermuda tomatoes, 5-quart box, 50@60; heats, 100, $1.25 ₱ crate. Mushrooms, ₱ lb., 50@60c. Rhubarb, ₱ doz., $1@3.50. Bermuda tomatoes, 5-quart box, 50@60c.; onions, ₱ crate, $1.50@1.75. Florida string beans, $3@5. Asparagus, ₱ doz., $1@3.50. Florida cucumbers, crate, $2.00@3.50. String beans, crate, $1.50@2.50.

WOOL.—There has been a moderate movement in Ohio and California grades at easy prices; otherwise a dull feeling. X and XX Ohio fleeces quoted at 40@42c.; XX Ohio sold at 42½c. for prime lots; X Michigan fleeces, 38c., new spring California, 22@26c.

COUNTRY CHEESE MARKET.

LITTLE FALLS, N. Y., May 13, 1876.

TRADE this week has improved a trifle, on account of the improved quality of the cheese offered, but there is no material change on badly-skimmed goods. The great bulk of the cheese in market this week was more or less skimmed, though factories and farm dairies that had sent shipments of their first make offered goods that showed more cream, and upon such there was an improvement in price over last week. The offerings of factory amounted to about 3,000 boxes, nearly one-third of which was sent forward on commission. Prices ranged from 6 to 9c., the bulk of those only partly skimmed bringing 8c. Farm dairies went at from 6 to 8c.

Butter continues to come forward in considerable quantities, and sales were made at prices ranging from 2c to 20c., only a few tubs reaching the last figure, 25c. being considered a top price for best goods.

The country roads leading in this market are in the worst condition known at this season for years. The ground was very deeply frozen during the winter, and as the frost comes out it leaves the roads in many places with "no bottom," except soft mud and slush, which take the wagons up to the hubs. The weather is warm, and we are having frequent showers, which start grass rapidly. Cows are reported to be in good condition and are making a good yield of milk.

We have late advices from abroad. Our London correspondent reports a good sale for all sorts of American cheese. English cheese is quiet, and for secondary sorts the market is easier. Dutch cheese is firm for the best sorts.

The prices are for extra American, 67@68s.; fine, 61@63s.; good, 56@58s.; secondary and common, 33@46s. English cheddar brings 80@90s.; Wiltshire double, 70@80s.; Cheshire medium, 38@56s.; fine, 70@80s.; Scotch, 67@70s. Dutch cheese—Edams, 72@75s.; Gondus, 58@62s.

Butter sells as it comes to hand. We quote:

Dorsets, 150s.; Jersey, 120@130s.; Friesland, 140s.; Danish and Swedish, 126@130s.; Normandy extra, 130@142@160s.; American and Canadian, 90@100s. ₱ cwt. Oleomargarine, or artificial butter, sells for 80@112s. ₱ cwt.

ROCHESTER, May 13.—Flour market dull; spring, $6.75; amber winter, $7,00; white winter, $7.25; double extra, $7.50. Rye flour quiet at $5.00. Wheat lower: Milwaukee club, $1.25@1.30; amber winter, $1.20@1.25; white winter, $1.25@1.35. Oats, nominal at 35@40c. Corn quiet at 70@75c. Corn meal, $1.50@1.75. Butter, 24@25c. Cheese, 12@14c. Eggs, 13@14c. Lard, 14½@15c. Apples, bu., 75c.@$1.50. Potatoes, bu., 20@@25c. Beans, ₱ bu., 60c.@$1.10. Mess pork, $23.50. Wool, 25@40c. Hay, $10@17. Straw, $6@10. Timothy seed, $2.75@3.00; clover, $6.50@9.75. Mill feed dull at $16 for shorts, $18 for shipstuffs, and $23 for middlings. Railroad Freights—Flour to Boston, 40c. ₱ bbl.; to New York, 30c.; to Albany, 25c. Wood, hard, ₱ cord, $8@9. Coal, $6.05@6.45 for stove.

LIVE STOCK MARKETS.

" last week	8,845	702	2,836	14,989	18,108

BEEVES.—Trade on Monday last was extremely slow on a small run of horned cattle, the quality of which was from common to good, being in the aggregate better than the herds received for several weeks past; prices were at 8¾@12c. ₱ lb.; weights, 6@9¼ cwt. No actual reduction was effected, but the markets closed weak, with an off feeling. Wednesday, there was no change in the condition of trade; sales were slow, with several lots unsold at noon quality from coarse to good; prices at 9½@11¾c.; weights, 6@9 cwt. Thursday, trade slow at 8¾@10¾c.; weights, 5¾@8 cwt. Friday the markets closed weak, with sales at 9@11½c.; weights, 5¾@8¼ cwt. From 50@50 lbs., net, has been allowed to the cwt.; only the top steers sold at retail obtained at 58@60 lbs. net. Native steers, 8¼@11c.; grade, 11¼@12c.; mixed herds, 10@11c.; oxen, 9@11¼c.; heifers, 10¼@11c.; bulls on live weight, $4.70@4.90 ₱ cwt.

COMPARATIVE RATES.

Quality.	This week. Cents.	Last week. Cents.
Good	12 @12¾	12 @12¾
Fair	11 @11¾	11 @11¾
Poor	10 @10¾	10 @10¾
Poorest	8½@ 9¾	8½@ 9¾
Gen. selling rates	9¾@10¾	9¾@10¾

MILCH COWS.—Sales slow at low rates; quality generally inferior; 9 cows sold at $32@50 ₱ head; 10 at $40@55; 10 at $60@75; 1 at $100; 3 springers held at $65 ₱ head—calves always included.

VEALS AND CALVES.—There were no smooth quality veals on sale during this past week. Coarse quality calves in heavy supply and slow of sale at 1½@8c. ₱ lb. State calves, buttermilk fed, sold at 4½c.; State, extreme range, 4½@8c.; Pennsylvania, 6@8c.; Jersey, 7½@8c.

SHEEP AND LAMBS.—Monday last trade in sheep was very slow at 6¾@8¾c.; yearling lambs, 8½@8¾c.; spring lambs, 11c. Wednesday, trade slow and rates firm; sheep, 6@8¾c.; lambs, 12c. Thursday trade dull in sheep at 6¾@8¾c.; lambs, 9@11c. Friday, the markets closed weak; sheep at 6¾@8¼c.; lambs, 10@15c. The quality of the flocks as above quoted was from fair to good, and they were largely in the aggregate. sheep sold at 6¾@8¼c.; lambs, 10@15c. The quality of the flocks as above quoted was from fair to good, and they were largely in the aggregate shorn; the woolly sheep to hand were in mixed flocks. State sheep sold at 6¾@8¼c.; Massachusetts, 7¾@8¾c.; Illinois, 7@7¾c.; Ohio, 6¾@7¾c.; Kentucky, 6¾c.; Michigan yearling lambs, 8¼@8¾c.; Virginia spring lambs, 11c.; State, 12c.

HOGS.—Wednesday last, 108 Ohio hogs, live weight, 156 lbs. ₱ head, sold at 7¾ ₱ lb. Monday, city dressed sold at 9@10c., there being scarcely any demand for heavy hogs. Wednesday, 9@9¾c., with a slightly improved demand. Thursday and Friday, 9@9¾c.

HORSE MARKET.—Trade fallen off in stylish carriage horses; only 1 pair sold at $1,300, General city trade slow: 40 head of poor quality light harness horses sold at $55@92 ₱ head; 35 ordinary, $100@155; 17 roadsters, not warranted sound, with fair trotting action, $225@475 ₱ head; 9 head of coarse quality heavy draft horses, $200@300; choice quality in demand but not quoted; city railroad horses sold in small lots at $90@125 ₱ head; a few stage line horses at $115@150 ₱ head. No arrivals per Erie Railway.

PERSONAL ITEMS.

"KING POPPY," is the title of Lord Lytton's latest poem.

GEN. PIERCE, a Massachusetts man, intends to have himself buried alongside of his horse.

PARTON is to have his revenge. His is to write the life of Governor Rice, who vetoed the marriage bill.

THE girls at the Washington Seminary, Va., play foot-ball. They kick the ball and cry "Hall," just like the boys.

CARL SCHURZ has been invited to deliver the oration, and Whittier the poem, at the literary anniversaries at Dartmouth this year.

MISS EMMA ABBOT'S recent debut in opera from the first was highly favorable, and with the progress of the opera became enthusiastic.

IF anybody was crowned Queen of May in this neighborhood we don't know whether she wore a buffalo robe or simply sat on her throne with hot bricks at her feet.

Two hundred petrified cats have been found by Prof. Hayden in an Aztec village. Each one had a convivial expression of countenance, and each clasped a petrified boot-jack.

ONE dollar a year is the salary of the mayor of Oil City, Penn.

Oil City is an odoriferous place, but a mayor with one hundred (s) cents a year!

A. F. TIFIELD, clerk of the Water Board at Cambridge, Mass., has absconded, leaving a deficit of $9,000.

We presume he left the deficit as a receipt.

THE Sultan of Turkey pays $46,000 for music in the harem.

Notwithstanding the wives of this much married Sultan, continually do cry "he's not the Bosphorous!"

Is is not a little rough on George Washington that his artificial teeth should be exhibited at the Centennial?—*Cincinnati Commercial.*

Certainly not. It is what may be called high art official.

GRASSHOPPERS have bad habits this year. They are chewing up the Kentucky tobacco crop.

This is all wrong. They must not expectorate among the bugs, but rather take their chances of roasting on the spit.

THE children of Israel, under a Pharaoh, were oppressed with Egyptian bondage. Now it seems they are in a position to ask the Khedive 22 per cent. on Egyptian bonds.

Only a question of "age."

MARY CLEMMER AMES has returned to Washington cured of the affection of the eyes which has prevented her from doing any work for a twelvemonth past.

Lo! another case of affection at sight.

THE original manuscript of Thomas Moore's Lalla Rookh and several of his autograph letters will soon be offered for sale in London.

Thomas had two autographs. The one least sought after by financial Collectors was I. O. U.

MRS. LILLIE DEVEREUX BLAKE and Mr. Grinfill Blake were congratulated recently by their friends upon the felicitous completion of ten years of matrimonial partnership.

The firm remains unchanged. No accessions to date.

VINNIE REAM has made a model of the bust of L. Q. C. Lamar, and his wife wants to know how she got it so accurate, lips and all.

That is a *labelious* question. There will be trouble though. Mrs. Lamar exclaimed 'L! when she heard about it.

SAN FRANCISCO desires to have one of her big bugs go to Washington to lay the Chinese question before Congress, and that's why she sends Mr. Roach.

If this Roach can lay a? before Congress, we want to be there to see.

AN unbroken sheet of paper four miles long and weighing half a ton was recently wound by the Montague Paper Company.

Editors can now write articles of length and weight, without the petty annoyance of a paper mill at their right hand.

IT has been estimated that it costs two dollars a minute to run the South Carolina Legislature.

At the present price of dynamite we will guarantee to run the entire body at a discount of 50 per cent. from above price, and then assemble them miscellaneously all over the state in vulgar f(r)actions.

CAMERON, the returned English explorer, says that the Africans have no idea of the value of land. He could buy as much as there is in Rhode Island for a string of beads and six darning-needles.

As much as there is in Rhode Island? Would have to pin it down with his darning needles, then, to find it.

GEN. PLEASANTON announces that by the use of the violet ray he has succeeded in curing a mule of rheumatism and deafness.

This is not a subject to be made light of. Gen. P. will not receive the thanks of teamsters, who swear till all is blue-ray to super-induce rheumatism in the hind legs.

NORRISTOWN HERALD: There is still another serious objection to silver money. A man can't stand on his head without the "quarters" and "halves" rolling out of his pockets. Women can't either, unless they have lids on their pockets.

The Norristown man should know by this time where ladies carry their money. Pockets, forsooth!

A CAPITALIST who has money invested in the Keely motor recently told a reporter that there was not the slightest doubt of the success of the invention. For a long time the great difficulty was to find anything strong enough to hold the force when generated. But the credulity of the stockholders has been found equal to the requirements.

Traveler's Guide.

JOHN CRUMP, - - Proprietor,
Chestnut St., cor. 15th,
PHILADELPHIA.

CALIFORNIA.

Have you any thought of going to California?
Are you going West, North or Northwest?
You want to know the best routes to take?
The shortest, safest, quickest and most comfortable routes are those owned by the Chicago and North-Western Railway Company. It owns over two thousand miles of the best road there is in the country. Ask any ticket agent to show you its maps and time cards. All ticket agents can sell you through tickets by this route. Buy your tickets via the CHICAGO & NORTH-WESTERN RAILWAY for San Francisco, Sacramento, Ogden, Salt Lake City, Cheyenne, Denver, Omaha, Lincoln, Council Bluffs, Yankton, Sioux City, Dubuque, Winona, St. Paul, Duluth, Marquette, Green Bay, Oskosh, Madison, Milwaukee, and all points west or northwest of Chicago. If you wish the best traveling accommodations, you will buy your tickets by this route, and will take no other.
This popular route is unsurpassed for Speed, Comfort and Safety. The Smooth, Well-Ballasted and Perfect Track of Steel Rails, Westinghouse Air Brakes, Miller's Safety Platform and Couplers, the celebrated Pullman Palace Sleeping Cars, the Perfect Telegraph System of Moving Trains, the regularity with which they run, the admirable arrangement for running Through Cars from Chicago to all points West, North and Northwest, secures to passengers all the COMFORTS IN MODERN RAILWAY TRAVELING. *Pullman Palace Cars* are run on all trains of this road.
This is the ONLY LINE running these cars between Chicago and St. Paul or Chicago and Milwaukee. At Omaha our sleepers connect with the Overland Sleepers on the Union Pacific Railroad for all points west of the Missouri River.
For rates or information not attainable from your home ticket agents, apply to
MARVIN HUGHITT, Gen'l Superintendent. W. H. STENNETT, Gen'l Passen'r Agt.

ANSWERS TO CORRESPONDENTS.

C. H. S., Snohomish City, W. T.—The flower head is that of our common white clover (*Trifolium repens*). The finding of two seeds in a pod is not unusual where this species is cultivated in rich soils and in a congenial climate. Now the clovers are closely allied to the common pea, both being included in the Pulse family, although the flowers are produced in a close, compact head or cluster, and not distributed over the plant as in the cultivated or wild pea. The pods although comparatively small, are still true pea pods—the common white clover producing one or two seeds while the wild Buffalo clover has three to five in each pod.

Perhaps some of the designs of houses given in the RURAL will suit you for the position named.

W. F., Md.—The clematis may be had of almost any of our florists or nurserymen. The prices of the varieties vary from 50c. to $2 per plant.

The *Xanthoceras sorbifolia* is not yet offered in this country, as we have already stated twice before. Our florists will probably not be able to procure and propagate a stock for sale in less time than one or two years from the present date.

J. J. Hall.—The simplest way of manufacturing superphosphate of lime is to break up the bones as finely as possible, put them into a large vat or kettle, and add sufficient sulphuric acid to dissolve them.

The quantity of acid depends somewhat upon the kind and condition of the bones, whether large or small, new or old. But we do not think a man with no machinery to grind the bones or fixtures for preparing superphosphates, can afford to undertake its manufacture. A few years since there was much talk going the rounds of the press about "home made" superphosphates, but it is one of those impracticable operations which had better be left to the regular manufacturers of such articles.

Mrs. Van D.—We have an American Mistletoe, which resembles the foreign species in leaf and manner of growths, although it is botanically quite a different plant. Its scientific name is *Phoradendron flavescens*, while that of the exotic one is *Viscum album*. The American Mistletoe is found growing upon various kinds of trees in the Middle and Southern States. It may be propagated by grafting upon the wild thorn apple, ash, honey locust, also the common apple and several other trees. The operation is performed by making an incision in the bark of the tree and insert into it a thin, wedge-shaped cion of the Mistletoe, having upon it a bud or two and at least one leaf. Early spring is the proper time for grafting.

James.—However preposterous it may seem to you, it is nevertheless a fact that we have several species of butterflies and moths which are capable of withstanding the cold of our most severe Northern winters and coming out all right in spring. One of the best known and most common of our large butterflies, the caterpillar of which feeds upon the willow, poplar and elm, remains alive all winter, hiding away in barns and other outbuildings, as well as in old willow trees and stumps. The name of this butterfly is *Vanessa antiopa*. Its wings expand about three inches and they are of a dark purplish-brown, with a broad border of buff-yellow and near the inner edge there is a row of pale-blue spots. The caterpillars of the Antiopa butterfly are black, minutely dotted with white, with a row of brick-red spots on the top of the back. When fully grown they are nearly two inches in length. The eggs, caterpillars or chrysalids of this species would probably perish if exposed to a light frost, but the butterfly or perfect insect withstands a low degree of temperature without injury.

Katie M.—The correct pronunciation of the word Bouquet is *bo-kay*, as you claim; but it is not of French origin, although it is usually considered as such. This word as spelled, is a perversion of two Tartar-Arabic words—*bo*, beautiful, *ka*, perfume; consequently, to say a beautiful bouquet would be equivalent to repeating the adjective, or saying "beautiful, beautiful perfume." Still, under the circumstances, it could hardly be termed improper to speak of a bunch of flowers as a beautiful bouquet.

Fanchon.—Crickets about the hearthstone may all be well enough in poetry, but when they become so numerous as to eat up one's stockings at night, it is time to descend to a lower level and take a practical view of their doings. They may be poisoned by mixing two ounces of arsenic with a pound of oatmeal, putting in some ground anise seed and caraway for flavoring; spread the mixture on a plate or thick paper, and put in or near their haunts, where the crickets can partake of it at their convenience. But put the poison where the cat and dog, or other household pets, cannot reach it.

Geo. W. B.—An excellent, cheap and durable varnish for iron or coarse woodwork can be made of one gallon of coal tar, half a pint of spirits of turpentine, and two ounces oil of vitriol. After mixing and stirring well put on with a brush.

Fertilizers.

These goods are analyzed by Professor G. A. Liebig of Baltimore and other eminent chemists, and their quality guaranteed. Send for Circular.

78 Duane St., New York.

Wit and Humor.

SPARKS AND SPLINTERS.

The individual who was accidentally injured by the discharge of his duty is still very low.

Barbers can afford to sin twice as much as other people, for they are always willing to hone up, and "a sin confessed is half-forgiven."—*Boston Advertiser.*

An Indiana editor says spring is approaching, because he saw two snakes the other day. But when an editor sees snakes it is a stronger sign of a fall than spring.

A German actor refused to learn English on the ground that he could make nothing of a language where people wrote "ass" and pronounced it "donkey."

"Mamma, don't you want some nice candy?" said a shrewd little child. "Yes, dear, I should like some." "Then, if you'll buy some, I'll give you half!" lisped the little girl.

Josh Billings says: "The mewl is a larger burd than the guse or turkey. It has two legs to walk with, and two more to kick with, and it wears its wings on the side of its hed."

When you see a bare-headed man following a cow through the front gate, and filling the air with garden implements and profanity, you may know that his cabbage plants have been set out.

"Get out, you ornithorhynchus!" The man departed meekly. "Who's that?" said his friend. "An ornithorhynchus." "How's that?" "Well, Webster defines him as 'A beast with a bill.'"

A lady found her tongue entirely paralysed last week, the result, it is believed of playing the harmonica. The opinion seems to be gaining ground that a harmonica is of more real value in a family than a stalled ox.

A gentleman in the city has a pair of pantaloons which were worn by one of his ancestors a hundred years ago. They are made of homespun cloth, except the seat, which is of thick leather. It is inferred from this that the original owner was a book agent.

Who shtands der streets and goners around
Mit sefrel agzes to be ground
Und schmiled, und bowed, und nefer frowned!
Der Gandidate.

Who hold your hand ven you would start
Und told you you was mighty shmart,
Und how he loved you mit his heart?
Der Gandidate.

An Illinois girl has just been appointed assistant instructor of elocution in the Boston University. Just imagine for one moment, if you can the transition from "Dad, gimme half a dollar to go'n see the surkus 'n the wile animil show," to "Fathah, provide me with the funds necessary to procuah admittance to the wonderful zoological collection and puffformance of athletic and acrobatic feats which will be exhibited at hawf phast foah this awftanoon," which was necessary in that girl's elocutionary style before she could get her diploma.

A DOWNEASTER AT THE CENTENNIAL.

Downeaster.—"Friend, where's this yer Show? Cal'late Sall and I'd like to have a look."

Philadelphian.—"Friend, shows and vanities are not for me. But, if thee wouldst like to tarry here, thee mayst find good accommodation at my domicil, at reasonable charge."

FRANZ XAVIER REISSINGER,
PRACTICAL
Landscape & Garden Architect
196 *BROADWAY, NEW YORK.*
